Mr. Blades, like a writer in the *Times* on the same subject, does some injustice to Dibdin, the great bibliographer, in his interesting letter on the newly discovered fragment of Caxton's 'Four Sons of Aymon.' Both writers insist with more or less emphasis on the omission from Dibdin's bibliographical works of all reference to the unique copy of the book now at Althorp, and Mr. Blades claims in your columns to have given the first account of it in his 'Life of Caxton' in 1863. But in Dibdin's supplement to his 'Bibliotheca Spenceriana' (*vide* his 'Ædes Althorpianæ,' 1822, ii. 298–9) a full description of the work is to be found. Nor does Dibdin only mention it there. In his 'Bibliographical Decameron' (1817) it forms the subject of a long digression (ii. 436–8), following some advice to book collectors—very similar to that given by Mr. Blades last week—when examining old bindings "in order to make discovery of some precious fragment of a long-panted-after work." Dibdin there shows that in 1813, some years before Lord Spencer acquired his 'Four Sons' by Caxton, he had obtained documentary evidence to prove that the romance, known then only in Copland's edition of 1554, had been originally printed by Caxton. In the same paragraph Dibdin endeavours to show that six other works, including a 'Bevys of Hampton' and a 'Gesta Romanorum,' with which Caxton had not before been credited, might justly be ascribed to him. The passage is the more worthy of notice as the 'Decameron' does not appear among the books referred to by Mr. Blades in his 'Life of Caxton,' nor is any mention made of it in his later books on the subject, and these important conjectures, with the argument upon which they are based, would seem to have been overlooked by him. Their value therefore remains unappraised.

Perhaps you will allow me, in conclusion, to supplement Mr. Blades's history of the romance in this country during the sixteenth century. Copland's edition of 1554 appears to be the latest and the only sixteenth century edition extant. It is the only one mentioned by the chief bibliographers (Dibdin, Lowndes, Grässe, and Brunet), but the book would appear to have been twice reprinted before the close of the century. In the Stationers' Register licences to reprint it occur among the entries for March, 1582 (Arber's 'Transcript,' ii. 408), and February, 1598/9 (iii. 137). On February 22nd, 1598/9, a printer whose name is not connected with the other editions was licensed to print "the last part of the ffowre sons of Aymon" (iii. 139). That, like 'Huon of Bordeaux' and other Charlemagne romances, it was highly popular in Shakspeare's day is easily capable of proof from independent testimony. In Laneham's letter describing the Kenilworth pageants of 1575, Cox, the quixotic old captain of Coventry, is declared to have the book *inter alios* at his fingers' ends (Nichols's 'Progresses of Queen Elizabeth,' i. 449); and Francis Meres in his 'Palladis Tamia,' 1598 (p. 268*b*), mentions the work among other popular story-books as one that is "to be censured of" as "being no lesse hurtfull to youth then the workes of Machiavell to age." It is hardly necessary to refer to the important place the romance has held for almost five centuries in French popular literature. As recently as 1859 it was published at Paris in a modernized form for a few centimes. Other countries on the Continent have given the story an almost equally warm welcome; and it is, it will be remembered, upon an Italian version of it that Tasso has based his 'Rinaldo.'

S. L. Lee.

SHAKSPEARE IN GREECE.

For some years past there has been shown in Greece a praiseworthy activity in the matter of translating the classical authors of other countries. A slight external stimulus has been given by a prize bestowed by the University for translations. This prize brought into existence some translations from Dante and Lessing, but it did not contribute to make the great English poet familiar with the Greeks, for nothing had been done for Shakspeare when the prize ceased to be awarded owing to the death of the donor, a wealthy Greek settled in Trieste. The greatness of Shakspeare has not been impressed on the Greeks by examiners for prizes, but has gradually made itself felt.

Franz Thimm has in the second edition (1872) of his 'Bibliotheca Shakspeareana' mentioned only a single translation of a play of Shakspeare's into modern Greek. One swallow does not make a spring, but luckily our young literature is not so poor in versions of Shakspeare as Thimm would lead his readers to suppose. I therefore append a list of the versions of Shakspeare which have been published.

The earliest is Τρικυμία, δρᾶμα Οὐϊλελμου Σαικσπὴρ, μετάφρασις Ι. Πολυλᾶ, Κερκυραίου, Κερύρα, 1855. Then in 1858 appeared at Athens translations of 'Julius Cæsar' by N. K. Ionides and of 'Hamlet' by I. P. Perbanoglos. In 1862 appeared a version of 'Macbeth' by N. T. K[ontopoulos]; in 1873 'Romeo and Juliet,' translated by A. Skalides. A version of 'Othello' was printed in the *feuilleton* of the Smyrniote journal Ὁ Φιλόκαλος Σμυρναῖος, now deceased. Versions of 'Macbeth' and 'Hamlet' were printed in 1875 in the supplement of the Ἐθνικὴ ἐπιθεώρησις, an illustrated Greek journal published in Paris. Lastly, M. Demetrius Bikelas published in 1876 translations of 'Romeo and Juliet,' 'Othello,' and 'King Lear.' So till lately we had versions of only seven plays—'The Tempest,' 'Julius Cæsar,' 'King Lear,' 'Romeo and Juliet,' 'Hamlet,' 'Macbeth,' and 'Othello,' the last four having been rendered twice.

It is curious to observe that the spelling of the poet's name is as little of a settled point in Greece as in England; it is spelt on the title-pages of the translations in five different ways. The genitive is transliterated Σαικσπὴρ, Σαικσπήρου, Σαιξπήρου, Σακεσπήρου, and Σαικσπείρου. Of all these translations, some of which are in prose and some in verse, that of M. Bikelas is the best. Demetrius Bikelas is one of our best authors, known not only for a *brochure* on the Byzantines, but especially for his historical novel 'Loukis Laras,' which has been translated into English and several other languages. He has made the translating of Shakspeare the work of his life. During a long residence in London he made himself familiar with English literature, especially poetry, and he at the same time possesses a thorough knowledge and mastery of the popular speech of modern Greece, and this he has chosen for his translation and used with great tact. So the first volume of his translation, containing 'Romeo and Juliet,' 'King Lear,' and 'Othello,' became speedily popular, and every one desired that the skilful translator should continue his work. His example found imitators, and, after a brief pause, there appeared last year a new version of 'Antony and Cleopatra' by a young philologist, M. Damiralis, who promises to continue to work for the diffusion of a knowledge of Shakspeare in Greece. At the same time, however, Bikelas has not rested and has kept his word, having printed his version of two more plays, 'Hamlet' and 'Macbeth.' The version of these two pieces is even more successful than that of those which were issued in 1876. A specimen was a little time before publication given to the world, on the occasion of the representation of the second act of 'Hamlet.' For some time past there has been living at Athens a Greek actor named Lekatsas, a native of Ithaca, who has hitherto appeared on the English stage under a pseudonym. He is particularly fond of Shakspeare and plays decidedly better than our actors. Engaged by the Musical and Dramatic Association of this city, he is trying to improve our style of acting, and has also got together a tolerable troupe and drilled it, although he himself, during a long residence in England, has grown somewhat rusty in his mother tongue. He has given a public performance, producing Bulwer's 'Richelieu,' and the second act of 'Hamlet' in the translation of Bikelas, which was at once hailed by the public as superior to the previous translations. 'Hamlet' and Shakspeare have since been so popular among playgoers that it is proposed to establish a regular Shakspeare company and a Shakspeare Society.

After all, little has been done hitherto to spread a knowledge of Shakspeare in Greece. If one reflects, however, how little has been achieved as yet for our own classics, that we have only lately had a complete verse translation of the Odyssey, it will not be matter for surprise that the immortal English poet is not better known to the modern Greeks.

Sp. P. Lambros.

THE COMING PUBLISHING SEASON.

Mr. John Hogg, of Paternoster Row, promises for the ensuing season 'A Book of Boyhoods,' by Mr. Ascott R. Hope; 'Landmarks of English Literature,' by Mr. H. J. Nicoll, author of 'Great Movements,' &c.; a new volume of stories by Mr. Hope, entitled 'Homespun Stories'; and 'Facts and Phases of Animal Life,' by Mr. Vernon S. Morwood, lecturer to the Royal Society for the Prevention of Cruelty to Animals.

Mr. Hodges has nearly ready for publication 'The Service of Humanity, and other Sermons,' by Mr. Stewart D. Headlam, B.A., author of 'Priestcraft and Progress'; and 'Theology and Life,' sermons preached in Newcastle-on-Tyne, by Prof. Symes, M.A.

Literary Gossip.

The September number of the *Nineteenth Century* will contain a poem 'To Virgil' by Mr. Tennyson.

At the annual meeting of the Library Association, which is to be held at Cam-

bridge on the 5th of next month and three following days, there will be discussed, among other subjects, bookbinding and the more complicated topic of classification. A paper is promised on the subject of 'English Music and its Bibliography.' The University and the various college libraries will naturally be objects of great interest that will meet with due attention. Mr. Henry Bradshaw, Librarian to the University, will preside over the meetings, which will take place in King's College Hall. Reports on size notation and on the training of library assistants, together with illustrations of the cataloguing rules of the Association, will be laid before the meeting.

The second volume of Dr. Ginsburg's work on the Massorah, finishing the text, is complete. As an appendix to this second volume Dr. Ginsburg has reprinted the entire Massorah, both Magna and Finalis, as it is given in the first edition of Jacob ben Chayim's Rabbinic Bible, Venice, 1524–5, thus furnishing the Biblical student with a clue to the extant printed Massorahs. This appendix is also intended to enable students to decipher the Massorah in the various manuscripts of the Bible. The second volume contains upwards of 800 pages. The third volume, which contains the English translation and explanation of the two volumes of text, is already in the printer's hands.

'Gabrielle de Bourdaine' is the title of a new novel by Mrs. Spender, the author of 'Godwyn's Ordeal,' &c., to be shortly published by Messrs. Hurst & Blackett in three volumes. The same publishers will issue during September a new novel by the Right Hon. A. J. B. Beresford Hope, M.P., author of 'Strictly Tied Up,' under the title of 'The Brandreths.'

The latest additions to the Egerton Library of MSS. in the British Museum comprise a 'Liber Prosarum' for the use of the Dominican nuns of Poissy, fifteenth century; a 'Missale Parvum' from the convent of the Cellites of Ghent, also of the fifteenth century; an interesting collection of miscellaneous historical and other letters and papers, 1494–1696, from the Ouvry sale; a Royal Household Book, 17 Henry VIII., 1525–1526; the Expenses of the Revels at Richmond and Greenwich, 1527; the Earl of Essex's Rebellion, 1601; Rules for the Office of Ordnance, 1683; curious domestic recipes of the sixteenth and seventeenth centuries; and the four Gospels in Greek, with illuminations of the twelfth century.

Mr. J. H. Round, to whose paper on 'The Barony of Arklow' we lately called attention, has been continuing his researches among the Irish dignities, and will contribute studies on 'The Earldoms of Ormonde' and on 'The Baronies of Kingsale and Howth' to the forthcoming numbers of Mr. Foster's *Collectanea Genealogica*.

The death is announced in his eightieth year of Mr. James Murray, author of 'The Maid of Galloway,' a tale of Thrieve and Otterburn—a poem which some thirty years ago attracted considerable attention. The deceased, who lost his sight at the age of five years, was known as "the blind poet of Galloway."

There is a talk of putting up a monument to Longfellow in Westminster Abbey.

Messrs. Hansard's Monthly List of Parliamentary Papers for July, 1882, contains the titles of 51 Reports and Papers, 35 Bills, and 49 Papers by Command. Under the first head we call attention to the Report and Evidence (with plans) on Artisans' and Labourers' Dwellings; to Report and Evidence (with plans) on the Public Offices Site Bill; to the First Report, with Evidence, of the Select Committee of the House of Lords on the Land Law (Ireland); and to a Return of all Real Property held in Mortmain, or for Charitable, Public, or Perpetual Uses. Among the Bills is one headed Parcels Post. The Papers by Command comprise the Reports of the Inspectors of Mines for the Year 1881 (with plans); Reports as to the Hours of Labour permitted by Law in Factories, and the Regulations as to the Employment, by Relays or during the Night, of Men, Women, and Young Persons in the United States of America, and in France, Germany, Austria-Hungary, and Belgium; the Statistical Abstract for the United Kingdom (twenty-ninth number); and Returns of Traffic, and General Report on Accidents, on the Railways of the United Kingdom for the Year 1881.

From the report of the Record Society, read at the fourth annual meeting, recently held in Manchester under the presidentship of Mr. James Crossley, F.S.A., we learn that the seventh and eighth volumes of the Society's publications will shortly be in the hands of the members. They will contain an account of the various classes of records relating to Lancashire and Cheshire which are found in the Public Record Office, London. The balance sheet was said to be of a satisfactory character, showing a balance in hand of upwards of 100*l*.

The Rev. J. R. Boyle, of Cottingham, near Hull, of whose forthcoming 'History of Accrington' we recently made mention, has in preparation a comprehensive bibliography of Swedenborgian literature.

Sir J. H. Ramsay has continued his investigations of the national finances in the fourteenth and fifteenth centuries, and an article on the accounts of Henry IV. (in continuation of a former one on the accounts of Richard II.) will appear in the September number of the *Antiquary*.

The publication of a curious collection of the London signs of booksellers, publishers, and printers, up to the end of the seventeenth century, will be commenced in the September number of the *Bibliographer*.

Messrs. Marcus Ward & Co.'s Christmas book 'At Home,' issued last season, is to be followed this year by a companion volume, entitled 'Abroad.' The subject of the book is a trip to Paris and through old towns of Normandy, supposed to be made at Easter time by English children. It is to be full of pictures from drawings specially made on a recent sketching tour. Mr. Thomas Crane is the chief designer of the book, which will be printed in colours.

A parcel of manuscript of Poole and Fletcher's 'Index to Periodicals,' containing the material for about twenty printed pages, was stolen on its way to the printer. Manuscript of that kind cannot be written out from the imagination of an editor. The indexes of some periodicals might, so far as they were concerned, furnish an imperfect substitute; but the twenty pages could never be entirely replaced without going over from beginning to end all represented in the 'Index'—over 4,000 volumes, the three years' work of some fifty co-operators. But fortunately, while the editors were considering how much of this could be undertaken, the manuscript was found under a street counter, where it had been thrown by the disappointed thief.

The work on Folk-Etymology by the Rev. A. Smythe Palmer, for which the author has been long collecting materials, will be published this autumn by Messrs. Bell & Sons. There has hitherto been no book in English devoted to this interesting subject of the influence of popular speech upon language.

It is stated that the Madras Government has granted a subsidy to meet the expenses of bringing out a Konkani-English dictionary, compiled by Father Maffei, S.J., of the Mangalore Mission. It is only six months since Father Maffei's 'Konkani Grammar' was published.

We are informed that M. Maspero, before he left Cairo, found several hundreds of Coptic MSS., which had been walled in since Woide's time. Unfortunately they are not Sahidic, and are therefore of no great value for the New Testament text.

From the United States comes the announcement of a translation of 'The Historical, Political, and Diplomatic Writings of Nicholas Machiavelli,' by Mr. Charles E. Detmold, of New York.

Prof. Wellhausen, the well-known theologian, has removed of his own motion from Greifswald to Halle.

The deaths are announced of M. le Comte F. de Bourgoing, the diplomatist, and author of a 'Histoire Diplomatique de l'Europe pendant la Révolution Française,' of which the fourth volume is in the press; of Hermann Francke, a high official in the Prussian Post Office, known as a poet and dramatist under the pseudonym of "Heinrich Lindau"; and of Frédéric Gaillardet, the inventor of 'La Tour de Nesle.'

The late well-known Russian Orientalist, V. V. Grigorief, during his official career as chief administrator of the border Kirghiz tribes, drew up a scheme for a Kirghiz training school for teachers. After twelve years' delay this project is about to be realized, and a Kirghiz school is to be opened this autumn in the town of Orsk.

In Turkey the political poet still exists, and the poet is a politician subject to party vicissitudes, and may meet the fate of Ovid. Khairi Effendi, one of the most distinguished poets, was a few years ago, like some of his predecessors, exiled to Kasireyeh. The present Sultan having recalled him, he immediately on landing proceeded to the palace, and we may next hear of him as a guest in the palace and favourite of the sovereign.

The *Eastern Express* announces three Turkish illustrated publications. The *Mirat-i-alem* is a fortnightly quarto of sixteen pages, copiously illustrated, issued by the Society of Arts and Sciences. The engravings do not appear to be original. The *Chojuklarara*

XUM

Kraat is a child's paper. In Turkish with Armenian characters is the *Felek*. The subjects of these papers are miscellaneous.

A 'History of the Mathesons,' by Mr. A. Mackenzie, editor of the *Celtic Magazine*, will be published shortly.

SCIENCE

Address delivered at the Southampton Meeting of the British Association for the Advancement of Science, August 23rd, 1882. By C. W. Siemens, D.C.L., President.

The task of preparing a presidential address to the British Association is one of exceptional difficulty, owing to the nature of the audience, which, as our readers are aware, is composed in about equal parts of "associates and ladies" who are unacquainted with scientific matters, and of "members," most of whom have a special and technical knowledge of one branch of science joined to a general knowledge of one or two more.

An address to be successful must therefore be in the main within the comprehension of the associates, and yet be of interest to the specialists and scientific men who form the great body of the members. In the address delivered at Southampton last Wednesday, Dr. Siemens has very wisely made no attempt to review the whole domain of science, but has confined himself almost entirely to a subject which interests alike all classes of his audience, namely, the relation between scientific investigation and practical engineering, or, as it may be called, "applied science." The change which has taken place in this relation in the last fifty, or we might almost say in the last ten, years amounts to little less than a social and industrial revolution.

Not many years ago scientific men were a class apart, enunciating their discoveries in terms comprehensible only to themselves and to their colleagues, and looking down upon the engineering and industrial classes in much the same spirit as a Hypatia might have looked upon them, as "the many ignoble who toil for the noble few." Shall "Science descend from her imperial throne," wrote one of them, "and mix with the base ambition of the world?"

On the other hand, engineers and workmen groping along without scientific guidance made blunder after blunder, and consequently the progress of the nation to wealth and prosperity was pitiably slow, and its manufacturers had to be protected against foreign competition not by the superiority of their products, but by duties on imports, with the natural accompaniment of dearness of all the necessaries of life. And, further, it must be remembered that slow progress towards prosperity means slow progress in culture and civilization, for a man whose wages will barely buy him daily bread cannot, like a prosperous man, give up a portion of his time to the study of the liberal arts.

Gradually, however, a change has occurred, partly caused by the necessities of the times and partly by the personal influence of a few men of the highest scientific attainments, among whom it may not be invidious to mention Sir William Thomson and of Dr. Siemens himself. Science has "descended from her imperial throne" into the market-place, and has found herself all the better for it. Mixture with the world has given to scientific thought a robustness and — we say it deliberately — a habit of accuracy which it never had before. If the mathematician made a mistake in enunciating the properties of eight circles on a sphere, his reputation suffered among such persons as could detect his error, but the world was not much the worse; but if he makes a mistake in calculating the centrifugal force acting on a wheel, he may wreck a factory and perhaps kill or wound a number of workmen. The consciousness that life and property depend on his calculations is surely a greater inducement to accuracy than any fear of scientific criticism.

With this change of spirit has come a corresponding change in the *personnel* of the scientific world. The pallid student burning the midnight oil has disappeared, and in his place we have the active and self-reliant engineer, fertile in expedient, cowed by no difficulty or accident, able to instruct the workmen in the use of their own tools, now swimming through tropical surf at the head of his men with the shore end of a telegraph cable, and now working out abstruse mathematical calculations undisturbed by the roar of the factory or the clang of the boilermakers' hammers.

But if the more intimate connexion between science and practice has benefited science, it has been of no less value to practice. Money and energy are now seldom wasted in attempting the impossible. Where one patent is now taken for perpetual motion a hundred were taken thirty years ago. Now that mechanical strains can be accurately calculated, engineering work is not only much safer, but much cheaper; for when we are doubtful whether the strain on a particular part of the work will be large or small, we must make the strength sufficient for the large strain, whereas when we know that the strain is small a cheaper construction is sufficient.

Turning now to the more technical portion of the address, we see that Dr. Siemens has taken as an illustration of the application of science to engineering the system of electrical units adopted by the International Congress of Electricians which met in Paris last year. Dr. Siemens proposes to add to these units four new ones, as follows: (1) a new unit of power, to be called a "Watt," and to be equal to $\frac{1}{746}$ of a horse-power; (2) a unit of magnetic pole, to be called a "Weber"; (3) a unit of magnetic field, to be called a "Gauss"; (4) a unit of heat, to be called a "Joule," and to be defined as the quantity of heat generated by an ampère flowing through an ohm for one second.

The first unit, the Watt, would be very acceptable to electrical engineers, as it would eliminate the factor 746, which often has to be used either as a multiplier or divisor four or five times in a series of calculations, but which, if the new unit were introduced, would only require to be used once, if at all.

With regard to the Gauss and Weber, it is certain that some unit of magnetic field or magnetic pole is urgently required; but we doubt if the proposed units are the best possible, and, further, if two units are adopted it will have to be carefully considered which is to be the fundamental unit and which the derived one. We believe that the most useful unit of this kind would be a unit of magnetic field based on its action on a moving wire. We would suggest that the unit magnetic field should be the field in which a wire one centimètre long, moving at right angles to the lines of force with a velocity of one centimètre per second, should have an electro-motive force of one volt induced between its ends. As this unit would be inconveniently large, its millionth* or ten-millionth part might be used in practice. The unit of pole could then be derived from it.

The proposed Joule, or heat unit, is, we venture to think, unnecessary, as it is merely the Watt under another name with the element of time added. A Joule would be simply the heat generated by a Watt in one second. If the factor introduced by the specific heat of water is to be omitted from the definition, it would be better to express the heat unit simply in foot pounds.

The common practice of engineers at present in determining, for instance, what current an electro-magnet of certain proposed dimensions will carry is to calculate how much horse-power will be expended in it and to compare the result with the cooling surface available. The use of the Watt in this class of calculation will be a great convenience, as a horse-power is an inconveniently large unit, but no advantage as far as we can see would be derived from a unit such as the proposed Joule.

While speaking of electric units Dr. Siemens mentions without disapproval a proposal which was made by Prof. Clausius to base our units on the statical system, and to use the velocity factor (v) for obtaining the practical units from them. We may remind Dr. Siemens that at a meeting of the Units Committee appointed by the International Congress in Paris last year this proposition was fully discussed, and its impracticability was so completely demonstrated that Prof. Clausius himself formally withdrew it.

Dr. Siemens speaks of the application of electricity to the transmission of power, and shows that, even with the large loss that now takes place, it is probably more economical to use a central steam engine, and transmit power to neighbouring shops by electricity, than to use a number of small engines. The comparatively slow development of this branch of industry has been often commented on during the last year or two. The causes of the delay are not difficult to detect. In the first place, although the theory of transmission is now well understood, practical knowledge is wanting, and can only be obtained by experiments conducted on a large scale and in large works. Secondly, the number of engineers competent to conduct such experiments is as yet small, and all of these are entirely occupied with electric lighting, which offers a more immediate prospect of success and profit. We have no doubt that in a year or two, as soon as electric lighting work has passed out of the experimental stage and can be trusted in its details to pupils and assistants, an enormous and rapid progress will be made in the application of electricity to the transmission of power.

No address or lecture dealing with me-

* If the Gauss be taken as one-ten-millionth (10^{-7}) of the unit of field as defined above, the field of an ordinary Gramme machine would have a strength of from 150 to 300 Gausses on a rough calculation.

chanical progress would now be considered complete if it did not contain some allusion to electric lighting, but we confess to a feeling of disappointment as we read Dr. Siemens's remarks upon the subject, as they tell his audience nothing new, and merely speak in very general terms about what has been done already. Several pages of the address are, however, devoted to gas lighting and to the importance of the waste products of its manufacture.

Dr. Siemens points out the importance of gas as a heating agent, and how by the use of it London smoke may be abated. He, however, says very truly that gas as prepared for illuminating purposes is necessarily much more expensive than a gas prepared for heating only would be. He therefore suggests that two separate systems of mains should be laid, and that in one illuminating gas should be supplied, as at present, and in the other heating gas at say one shilling per 1,000 cubic feet. Very probably the second system of pipes will never be laid, as the great superiority of electricity over gas for lighting purposes will before long be universally recognized. It is not unlikely that in a very few years the supply of illuminating gas will be discontinued, that gas suitable for heating purposes will be supplied instead of it, and that all domestic lighting will be done by incandescent lamps.

The address deals further with the relative values of gas and steam as motive powers, and the result of Dr. Siemens's calculations is decidedly in favour of the gas engine. This is a conclusion on which it would be premature to offer any criticism, for, granting the correctness of the theoretical conclusions, the practical considerations which limit the application of theory have not as yet in the case of the gas engine received any adequate test.

We are glad to see that Dr. Siemens mentions the introduction of mild steel into engineering work as one of the most important of recent advances, for there appears no doubt that when its properties are a little better known, and when more confidence is felt in different samples being of the same nature, it will be very widely used, and will render possible methods of construction which cannot now be attempted.

Dr. Siemens briefly reviews some of the more important engineering enterprises and investigations which have either recently been brought to a conclusion or are now in progress or proposed; and the address concludes with an account of some of the investigations recently made by Mr. Crookes, by Mr. De La Rue, and by Mr. Spottiswoode and Mr. Moulton, on the phenomena displayed by matter in a state of extreme subdivision. Here we are apparently deserting engineering and turning our attention to some of the most abstruse problems in purely theoretic science; but we must remember that it is only by theoretic study that the foundations of engineering are laid. A nation or a community which has no care for natural truths, irrespective of their applications, will not be successful in making those applications. The experiments in question are not only wonderful in themselves, with their beautiful complexity of radiant matter and sensitive striæ, but they even offer us a prospect of determining the nature of electricity. The practical results that might follow such a determination may be estimated by a generation which has seen electric lighting developed from Faraday's research on electro-magnetic induction.

BOTANICAL BOOKS.

Vegetable Technology: a Contribution towards a Bibliography of Economic Botany, with a Comprehensive Subject-Index. By B. D. Jackson, Sec. L.S. (Longmans & Co.)—This publication is issued under the auspices of the Index Society, and is based upon catalogues formed by Messrs. G. J. Symons and P. L. Simmonds. These catalogues have been edited by Mr. Jackson, who tells us he has omitted many references for various reasons and has added others. Moreover, he has given a very useful subject-index. It is a most ungracious task to criticize such a book, for, however imperfectly executed it may be, it is sure to be of service in any case, and on the whole it is calculated to save much time and trouble to the student. The work undertaken by an index-maker is so irksome, so little calculated to satisfy justifiable feelings of self-complacency, that every possible allowance ought to be made for imperfect performance, and no tribute of thanks omitted to those who undertake such tasks. While making these admissions, as in duty bound, we cannot conceal the difficulty we have in coming to the conclusion whether the volume before us is most remarkable for what it does contain, or most noteworthy for what it does not include. In ordinary cases an index-maker is not expected to select what he shall or what he shall not insert. Within the prescribed limitations he must insert everything, without even attempting to select or gauge the relative merits of the publications he proposes to index. But Mr. Jackson has, unfortunately, not conformed to this safe and wholesome rule. He has been something more than index-maker; he has acted as editor, and as such has laid himself open to criticism. Thus a whole literature, so to speak, of some subjects is dismissed with one or two entries, as in the case of the "guaco" or the "argan tree." If it be alleged that these are among those therapeutical subjects expressly intended to be excluded, why insert any reference to them at all? By inserting one or two references only, and those not of primary importance, the student is misled, and is liable to form inadequate notions of the importance of the subject and of the extent of the literature pertaining to it. Again, the reader will sorely miss references to the annual reports of the gardens at Kew, which teem with original articles on economic plants. Surely Mr. Jackson will not allege that these reports do not contain a sufficient account of the raw products, their cultivation and origin, to warrant him in inserting them in his bibliographical list? While if it be alleged that these publications are relatively unknown and comparatively difficult of access, that would, to our thinking, only furnish an additional reason for including reference to them in such a volume as the present. On what principle, again, Mr. Jackson has omitted the name of Mr. Dyer in connexion with the subject of caoutchouc we cannot determine, unless, indeed, there be some limitation as to date which is not made apparent. While we cannot but think the omissions rather remarkable, we are even more puzzled as to the relevance of some of the matters included. Why, for instance, is the paper by Mr. Bartley on the cultivation of common fruits inserted, while the earlier and more practical papers of Mr. Roach Smith and a whole host of technical books on the same subject are omitted? How is it that Loebe's work on the diseases of plants is inserted, while Ré, Berkeley, Frank, Prillieux, Sorauer, and Paget are not so much as mentioned in this connexion? How comes it that forestry in England is represented by only a single entry, and that, as it happens, an inappropriate one? Why has Mr. Zanon's work been picked out as the sole representative of the literature of potato culture? What special qualification has Mr. Fekele's paper, in Hungarian, to be the sole, or almost the sole, representative of the literature pertaining to the larch? We cannot but feel that criticism of this kind, however justifiable, is, under the circumstances, ungracious. We would prefer to offer our thanks to Mr. Jackson for what he has done, and trust that, so far from being discouraged, he will take new heart of grace, and, with the present work as a nucleus, and a more rigid application of his own rules of selection, produce, as he can, a thoroughly good bibliography of economic botany.

A Dictionary of Popular Names of the Plants which furnish the Natural and Acquired Wants of Man in all Matters of Domestic and General Economy, their History, Products, and Uses. By John Smith, A.L.S. (Macmillan & Co.)—From the preface we learn that this volume is a revision of the author's previously published work 'Domestic Botany'; and, if we may judge from a few articles that we have referred to for the purpose, it is not only revised, but extended and improved. The order, as is appropriate in a dictionary, is alphabetical. As the title by no means clearly indicates the nature of the book, we may say that it consists of a series of short descriptive notices of the principal subjects derived from the vegetable kingdom which are employed in medicine and the arts. Thus, under the heading "Nutmeg," we find a popular account of the tree and of the nut, the localities where it is grown, and the products derived from it. We also find that in addition to the common nutmeg (*Myristica fragrans*) no less than five other plants yield "nutmegs" so called. Although it makes no pretence to completeness or to scientific accuracy, this work will be found useful by the general reader, and affords another example of the undaunted spirit of the author under circumstances which would almost of necessity compel abstinence from literary labour on the part of most people. So far, however, from advanced age and deprivation of sight putting a stop to his labours, the author hopes "his book will be the forerunner of a more extensive work." It is impossible not to admire the spirit here displayed, and we may add that while many writers so circumstanced would have deprecated criticism, Mr. Smith is above any such weakness, and he is justifiably so.

Micro-Fungi: When and Where to Find Them. By Thomas Brittain, President of the Manchester Microscopical Society. (Manchester, A. Heywood.)—We are loth to speak disrespectfully of a president, and, indeed, we have neither the intention nor the right to do so, but it may be permissible to remind him that to write a book is no necessary part of a president's duty, and that if he does so far commit himself he endangers his reputation. We can only congratulate the reader that the author has, as he says, "carefully avoided adding scientific names and structure." What, if he had been careless in the matter, would have been the result we can hardly estimate, for as it is a very large proportion of the names he does include are misspelt.

Elementary Botany, Theoretical and Practical. By Henry Edmonds, B.Sc. Lond. (Longmans & Co.)—The question whether it is better in teaching the elements of a science like botany to begin with the details alone, or to inculcate general principles and illustrate them by reference to the details on which they are founded, seems no nearer solution than ever it was. Moreover, in the careful study of certain representative types—a plan which finds many advocates nowadays—unless general principles are constantly referred to, and unless the types are sufficiently varied, and especially unless they are sufficiently contrasted as to their reciprocal agreements and as to their differences, there is a great risk of the pupil being quite unable to apply the knowledge he has obtained of one par-

ticular type to the comprehension of another which he has not previously met with. Instruction by means of type specimens, if not very completely carried out, becomes as much an affair of "cram" as was the old system of beginning with the enumeration of all possible forms of cell, and going on to the description of all possible forms of leaves, and the classification of all possible kinds of fruit. The student who had a predilection for botany survived this ill treatment, but he who had no fancy for the subject literally learned nothing but a string of hard words, which he gladly forgot the moment that the necessity for their retention was past. The little book before us, which, on the whole, is well done, is not free from the paralyzing vice of terminology. Thus we are told that "in the rose we have an etærio of achenes contained within a hollow receptacle, and the whole pseudocarp is called a cynarrhodum." What possible notion does this convey as to the real nature of the fruit of the rose, its mode of formation, or its relation to other fruits? Again, we have the old and quite incorrect definition of the term "monadelphous," and many others might be mentioned, not so much to the discredit of the compiler as of the system he has thought it right to adopt. Mr. Edmonds seems to have consulted some old and some relatively new text-books, and to have "boiled them down" to form a text-book designed, as he tells us, primarily for students of science classes connected with the Science and Art Department of the Committee of Council on Education; and from his own point of view he has succeeded in producing a useful condensation. Whether it will be of any service in promoting a knowledge of botany out of the examination room is open to considerable doubt.

Cottage Gardening. By E. Hobday.—*The Art of Grafting and Budding.* By Charles Baltet. Translated from the French.—*Garden Receipts.* Edited by Charles W. Quin. (Crosby Lockwood & Co.)—These useful and handy little books form three volumes of "Weale's Rudimentary Series." They contain a good deal of valuable information, and 'The Art of Grafting and Budding' will be found especially serviceable. One or two of the 'Garden Receipts,' such as "Nature Printing" and "Scalds and Burns," are a little out of place.

THE RETURN OF MR. LEIGH SMITH.

It is seldom that a private expedition receives such a spontaneous and hearty welcome as that accorded to Mr. Leigh Smith and the crew of the Eira. Their safe return has, indeed, relieved a very general feeling of serious anxiety which we now know to have been well founded. Mr. Leigh Smith left Peterhead in his steam yacht the Eira on the 14th of June last year, with the intention of extending his discoveries in Franz Josef Land, for which he had already received one of the gold medals of the Royal Geographical Society. Two months later the Eira was so heavily nipped against the land-floe off Cape Flora, on the south side of Franz Josef Land, that she sank in eleven fathoms of water in less than two hours. It is difficult to imagine a more desperate situation than that of the men who were thus cut off from all the comforts of civilized life, and left to face the savage desolation of an Arctic winter with such stores as they had been able to snatch from the sinking ship before she went down, nothing coming up afterwards "except a few spars and a young polar bear in a cask." But they set to work with the cheerful courage and resolution which are only to be found among well-disciplined crews; and after spending sixteen nights in a tent, sometimes almost floated out by rain, at others holding on to their miserable shelter for hours together to prevent it from being blown away by the wild gales, they had the satisfaction of moving into a comparatively comfortable house built of stones and turf, a sail saved from the ship serving as a roof. For food they depended almost entirely on walrus and bear meat, which was boiled with vegetables, and served out three times a day in twenty-five plates made out of old provision tins. A few pieces of drift-wood were found, but very little coal or wood had been saved from the ship, so the fire was chiefly kept up with blubber and old rope. The cooking had to be done inside the house, and many a time all hands had to rush out to escape suffocation from the smoke. The sun went down on the 21st of October and did not again appear till the 23rd of March. During the wild winter gales the house was occasionally buried in snow, and the temperature indoors went down to zero, while the thermometer outside showed 80° of frost. The only sources of excitement during these long dark days were the frequent visits of bears, which tried to scrape through the snow to get into the house. "Every bear that was seen was eagerly watched, and woe to the man who missed a shot." It was fortunate for the expedition that they had a dog with them, since he not only warned them when a bear was in the neighbourhood, but on more than one occasion saved the lives of the whole party by discovering walruses on the ice when starvation seemed imminent. Miserable, and often to all appearance hopeless, as their situation was, however, Capt. Lofley, the sailing master, says that "all the men maintained cheerful spirits, and never gave way to the least despondency." No better testimony could be borne to the high qualities of the leader of the expedition than this simple statement; and if we compare it with the account in Churchill's collection of the sufferings of the seven men who were landed in 1643 upon Amsterdam Island, and with other attempts to colonize Spitzbergen and Jan Mayen Island, we shall better appreciate the full value of this fresh page of Arctic history.

The patience and fortitude of the Eira's crew were at last rewarded. A strong gale cleared the ice away in twenty-four hours, and walruses were swimming in the water in hundreds. Provisions for two months were laid in, and on the 21st of June the four boats of the Eira started from Cape Flora on their homeward voyage, eighty miles of water being crossed before they encountered ice. Then the troubles began again, and the boats were sometimes hauled up for days on a floe to wait for an opening in the ice, as they were too heavy to be dragged over it. But after toiling in this way for six weeks they once more reached open water, and joyfully shaped course for Novaya Zemlya, staggering before a fresh south-westerly gale. On the evening of August 2nd, twenty-four hours after leaving the ice, the boats were safely hauled up on the beach in Matoshkin Strait, and next morning the castaways were picked up by Sir Allen Young in the Hope.

The interest of Mr. Leigh Smith's five Arctic voyages fairly culminates in this latest adventure, which, indeed, is in some respects without a parallel. After the ill luck of losing their vessel, "good fortune," as the leader of the expedition himself says, "seemed never to desert the party." Twenty-nine walruses and thirty-six bears were killed and eaten, and they seem not only to have kept the wolf from the door, but, in combination with active exercise, to have saved the men from even a trace of scurvy. Payer tells us that when the Tegethoff was abandoned the retreating parties were not more than eight miles from the ship after two months of incessant labour, although they had the advantage of a first-rate equipment. Mr. Leigh Smith was certainly less encumbered with luggage, but his boats were too heavy to drag, and had he not found open water his only chance of escape would have lain in the efforts of Sir Allen Young. It is not to be expected that the cause of science will have gained much from this enterprise, which has now ended so happily, but it teaches one or two useful lessons as to the absolute necessity of securing a retreat by means of depôts of provisions, &c., when bound even for a summer cruise to the icy recesses of the Far North. It also strengthens the arguments already brought forward by high Arctic authorities in favour of Franz Josef Land as a basis for further exploration towards the Pole should another expedition be sent in that direction. Opinions will always differ as to the practical utility of Arctic discovery, but there can be no doubt, to quote the opinion of the late Lord Beaconsfield, that it encourages "that maritime enterprise which has ever distinguished the English people," an object which must always be appreciated by all true Englishmen in all time. The crew of the Eira have returned without accomplishing the scientific objects of their voyage, but not without giving another proof that British seamen are still animated by the same spirit that, three hundred years ago, inspired Martin Frobisher to hold on across the unknown waste of waters with one mast sprung and the other overboard, feeling confident, to use his own words, "that the sea at length must needs have an ending, and that some land should have a beginning that way."

ASTRONOMICAL NOTES.

The August number of *Copernicus* contains a very elaborate 'New Determination of the Constant of Precession,' by Dr. Dreyer, of the Dunsink Observatory. It is satisfactory to find it in such close agreement with the value found by Struve and Peters, which has been used in the *Nautical Almanac* since 1857, and is now also used in all the other large national ephemerides. For the year 1800 Dr. Dreyer's value amounts to 50″·2365.

Mr. C. E. Burton, who was shortly to have started for South Africa to observe the transit of Venus in December, and who observed that in 1874 at the island of Rodriguez, died very suddenly in Castleknock Church, co. Dublin, on Sunday, the 9th of July. He was born at Barnton, in Cheshire, on September 16th, 1846; worked at Lord Rosse's Observatory in 1868–9, and at Dunsink from 1876 to 1878; but ill health interfered much with his scientific labours. On his return from the transit of Venus expedition to Rodriguez, he remained nearly a year at Greenwich, occupied in the measurement of the British photographs of the transit.

The two Belgian expeditions for the observation of the approaching transit have started—one under M. Houzeau for Texas, and the other, under M. Niesten, for Chili.

"Signor Baccelli, Minister of Public Instruction," says our Naples Correspondent, "has complied with an invitation recently made to the Italian Government to take a part in the scientific international expedition to the Marquesas Islands in 1883. The object of the expedition will be to observe the eclipse of the sun in the month of May of that year. Prof. Pietro Tacchini, Director of the Astronomical Observatory of the Collegio Romano in Rome, has been charged with making all the necessary preparations, and for this purpose he is about to visit London, to purchase a photographic equatorial and other instruments required for the observation of the important phenomenon. 'Italy,' says the *Roma*, 'is the first of the powers to offer to take a part in the scientific expedition of 1883.'"

The August meteors appear to have been less numerous this year than usual.

Vice-Admiral Stephen C. Rowan has been appointed Superintendent of the U.S. Naval Observatory at Washington, in succession to Rear-Admiral John Rodgers, who died on the 5th of May.

Prof. H. A. Newton has been appointed Director of the new observatory of Yale College, New Haven, Connecticut, which possesses a heliometer by Repsold and an eight-inch refractor by Grubb.

GEOGRAPHICAL NOTES.

It is not likely that Mr. Leigh Smith will be able to accept the invitation he has received to be present at the Southampton meeting of the British Association. We have given in another column an account of his adventures.

Sir Richard Temple took for the subject of his able address to the Geographical Section of the British Association the Plateau of Mid-Asia, an area which he described as one of the most wonderful on the surface of the earth, containing nearly 3,000,000 of English square miles, and equal to three-fourths of Europe. It has, he urged, eminent claims on the attention of geographers for several reasons:—1. A mountain system which dominates the greater part of Asia, and includes stupendous ranges with the loftiest peaks yet discovered in the world. 2. A series of heights and depressions almost like the steps of a staircase within the mountainous circumvallation of the plateau. 3. The sources and the permanent supply of rivers which, passing from the plateau, flow through densely populated regions, and help to sustain the most numerous families of the human race. 4. A lacustrine system comprising lakes of which some are saline while others have fresh water, and of which many are situated at great altitudes. 5. The home of conquering races, whence warrior hordes poured during several centuries over nearly all Asia and a large part of Europe. 6. Natural products of value, variety, or interest, and pastoral resources susceptible of indefinite development. 7. An enormous field for scientific research, with many regions which, though not wholly undiscovered, yet need much further discovery. 8. An imperial jurisdiction offering many problems for the consideration of social inquirers. Sir Richard discoursed at some length on each of the eight points. In conclusion, he remarked that the annals of the Mongols reveal one of the many examples of the theory of causation, explaining how geographical surroundings affect the human character. There remain the mountains, the sea of undulating uplands, which are still among the few important regions not essentially modified by human action. The pine forests, though hardly intact, have not been extensively cleared. There is the dread desert, where to the ears of superstitious Mongols the roll of the mustering drums and the shouts of battle are audible, and which has engulfed additional tracts once productive. The pastoral resources, the nomadic diet and exercises, the tribal organization, are in kind the same as of yore, though perhaps modified in extent or degree. The short-lived heat may perhaps be gaining strength, but the winters must be nearly as long and hard as ever. Thus the same physical and climatic conditions which once caused the Mongolian nation to become one of the mightiest engines ever directed by man are still surrounding the Mongols of to-day. Once audaciously ambitious, the Mongols are now sluggish and narrow-minded; once passionately fond of independence, they are now submissive to the domination of races formerly despised by them as inferior; once proud of a tribal organization and a voluntary discipline that wrought world-renowned wonders, they are now spilt up into factions like a faggot of sticks that has been unbound. A man who, though the feeblest of pedestrians, grips with his bowed legs the saddle of the most restive horse as with a vice, is all that remains of the historic Mongol. It is for the social inquirer to determine what have been the circumstances counteracting the climatic and local causes which made this nation potential in moulding mediæval history.

A letter, dated June 30th, 1882, has recently been published in India from the Political Resident at Aden to the Bombay Government, detailing the facts that have come to his knowledge regarding the murder of the Austrian traveller Dr. Siegfried Lauger in the interior of Arabia early last June. In April last Dr. Lauger had come to Aden with the intention of travelling into the distant interior. The Resident, having in vain tried to dissuade him from undertaking the journey without proper escort, provided him with letters to the Abdali Haushabi and Upper Yafai tribes, through whose territories he was to pass. By the Haushabi he was escorted to the country of the Alandi, and by the latter to the country of the Amir of Zhali. Dr. Lauger being desirous of visiting the Musjid of Noor, in the Yafai country, the Amir escorted him to the territory of the Ahl Mehlaji. By the latter he was provided with camels and men, who went with him as far as Sumsara. About eight miles from this place, at the junction of the Wady Yahar and the Wady Bana, he was murdered for the sake of plunder by some men of the Ahl Daer tribe, who had previously decoyed him from the direct road to the Musjid of Noor. His books and papers were thrown into the river by the murderers. The Ahl Daer tribe are nomads, and owe allegiance to none. The Resident at Aden has requested the friendly chiefs with whom he has relations to declare the murderers outlaws.

Herr Barth, of Leipzig, announces the preparation of a series of casts of heads from the ethnographical collections made by the brothers Schlagintweit. They have been carefully taken, and may be had in metal or plaster. A portion of them are due to the travels in India of Hermann, Adolph, and Robert von Schlagintweit, others were obtained by Eduard von Schlagintweit in Morocco, and nine in North America by R. von Schlagintweit, among the Indian tribes.

"Maps of the Seat of War" abound. Mr. Stanford sends us an excellent large scale map. Unluckily, it was published without consultation with Sir Garnet Wolseley, and would only illustrate a direct advance from Ramleh or Aboukir. Col. Leake's map of Lower Egypt, sent us by the same eminent map-maker, is the best for the general reader. A useful little sketch plan of Alexandria and a small but clear map of Lower Egypt come also from Mr. Stanford; so does an excellent map of the whole country as far as 24° north latitude.—Mr. Laurie's sketch of the Delta in his shilling map is clear, and his plan of Alexandria Harbour is excellent.—Messrs. Bacon send a large "War Map" of North-West Egypt which is clear, but does not embrace the probable scene of operations. They also send a bird's-eye view of Egypt which will suit the general public.—Mr. Stanford has further sent us an excellent shilling map of Lower Egypt.

The nobility of the Crimea have resolved to erect a monument in Simferopol to the Empress Catherine II., in celebration of the hundredth anniversary of the annexation of the Crimean khanate to the Russian empire on April 3rd, 1783.

Science Gossip.

We have already made mention of the Gilchrist Lectures to be delivered next winter; we can now add the following details. The so-called English Courses will be held at Leicester, Lincoln, Chesterfield, York, Doncaster, Reading, and Banbury, in alternate weeks, commencing on January 8th, 1883, and concluding before Easter. They are as follows:—The Evolution of the Solar System, by Mr. R. A. Proctor, F.R.A.S. An Hour with the Modern Microscope, by Rev. W. H. Dallinger, F.R.S. The Dynamo-Electric Machine and its Uses, by Mr. W. Lant Carpenter, B.Sc. Energies within the Earth: (1) Mountain-making, (2) Volcanoes and their Causes; or, The Great Fossil Mammals and Birds and their Teaching, and Evidence of the Antiquity of Man, by Dr. Martin Duncan, F.R.S. The Voyage of the Challenger: (1) Physical Conditions of the Deep Sea, (2) Animal Life of the Deep Sea, by Dr. William B. Carpenter, C.B., F.R.S.—The Lancashire Courses are to be held at Burnley, Bolton, Bacup, Bury, and Stockport, commencing October 4th, and continued every night save Saturdays and Sundays:—Lectures I and II: Principles of Electric Lighting and of the Electrical Transmission of Power, by W. Lant Carpenter, B.Sc. III. The Sun, by Prof. Balfour Stewart, F.R.S. IV. Beginnings of Animal Life: the Jelly Specks that form Chalk and Limestones, by Prof. W. C. Williamson, F.R.S. V. Beginnings of Vegetable Life, with especial reference to Fermentation and Disease Germs, by Rev. W. H. Dallinger, F.R.S. VI Beginnings of Animal Life: Infusory Animalcules, by Rev. W. H. Dallinger, F.R.S.—The Scotch Courses are to be held at Forfar, Brechin, Arbroath, Dunfermline, and Kirkcaldy, weeks commencing December 4th, 11th, 18th, 1882; January 8th, 15th, 22nd, 1883:—Lectures I., II, III.: Principles of the Recent Industrial Applications of Electricity, by W. Lant Carpenter, B.Sc.; IV., V., VI., same titles as the last three in the Lancashire Courses, by Dr. Andrew Wilson, F.R.S.E.

Dr. Carpenter sailed for the United States about a fortnight ago.

Messrs. Cassell & Co. will shortly publish in serial form a new work entitled 'Familiar Wild Birds,' by W. Swaysland, with coloured plates painted from nature and numerous wood engravings.

Herr August von Froy, manager of the largest Austrian iron-works, has been appointed chairman of the representative committee for making preparations for the meeting of the British Iron and Steel Institute, which is to take place at the end of September.

Mr. Burt, M.P., and the officials of the Miners' National Union have issued a manifesto pronouncing the experiments with the "lime process" of getting coal a complete success. In this process cartridges made of finely powdered lime compressed at a pressure of forty tons are used instead of gunpowder. When these are placed in the holes previously bored a small force-pump injects water to the back of the hole, the lime is slacked, and by the mechanical force due to the expansion thirty yards of coal are at once brought down. "Thus the possibility," say the reporters, "of any further disastrous catastrophes arising from the use of powder" is entirely removed.

Dr. C. W. Siemens has founded, in connexion with the Metallurgical Department of King's College, a gold medal and prize to the annual value of twenty guineas, with the object of stimulating the students to a high standard of proficiency in metallurgical science. The first award will be made in June, 1883, for the best essay 'On the Manufacture of Steel suitable for Ship and Boiler Plates.' The essay must be forwarded to Prof. Huntingdon on or before June 30th.

Prof. Prestwich has published through the Clarendon Press 'An Index Guide to the Geological Collections in the University Museum, Oxford.' The arrangement is excellent; the student is enabled by it to follow the succession of life forms from the earliest palæozoic periods to the most recent geological time.

The *American Engineering Journal* records a curious fact, which throws some light on the growth of coral. A French man-of-war on passing a reef of the Gambier Islands rubbed upon it. After a cruise in the Pacific for nine weeks a fine mass of coral was found growing on the sheathing of the ship, having a diameter of nine inches and a weight of two pounds and a half.

The Government Astronomer of Victoria sends us his *Monthly Record*, taken at the Melbourne Observatory, for March, April, and May. It is interesting to notice that the means of the barometer have averaged for twenty-three years 29·965 inches in March, 30·019 in April, and 29·990 in May, the respective means of temperature being 63·8°, 58·7°, and 53°.

M. Rousseau informs, by a note, the Académie des Sciences of a remarkable manifestation of atmospheric electricity observed by him on the 21st of July. Looking through his telescope about 2 A.M. his vision lost distinctness, luminous sheets, as of diffused lightning, spread over the surface of the sky, and similar diffused flashes were produced about twenty feet from the ground.

Capt. Clarence E. Dutton, of the United States Geological Survey, communicates to the *American Journal of Science* for August an interesting article 'On the Tertiary History of the Grand Cañon District, Colorado,' illustrated by a drawing showing the remarkable rocks of Vishnu's Temple, Colorado.

Mr. A. Wendell Jackson has also in the *American Journal of Science* a most thoughtful paper 'On the General Principles of the Nomenclature of the Massive Crystalline Rocks.'

M. D. Thomasi, at the meeting of the Académie des Sciences on the 7th of August, reported his discovery of the law regulating the determination of heat units. When one metal is substituted for another in a saline solution, the heat units given out are always the same for each metal, whatever may be the nature of the acid.

Symons's 'British Rainfall for 1881' has been received. It contains the usual amount of meteorological information and several introductions, which add materially to the interest of the book and to its usefulness.

M. l'Abbé Moigno has, it seems, addressed a letter to Mr. Charles Latimer, "le chef intrépide de la croisade antimétrique," which was received with "une admiration si profonde" that it was decided to elect the Abbé an honorary member of the International Institute for the Preservation and the Perfecting of Weights and Measures.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of PICTURES by Artists of the British and Foreign Schools is NOW OPEN at THOMAS McLEAN'S Gallery, 7, Haymarket.—Admission, including Catalogue, 1*s.*

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

A Description of the Monument and Effigies in Porlock Church, Somerset. By Maria Halliday. Illustrated. (Torquay, 'The Torquay Directory' Company.)

Mrs. Halliday of Glenthorne has been moved by admiration for a beautiful relic of antiquity to write this elaborate and discursive essay on one of the most interesting sculptured sepulchral monuments in the west of England, a tomb comprising the effigies in Watchet alabaster of a knight in full plate armour. His pauldrons are of very unusual form, and he wears a collar of knighthood which, although it looks like the collar of SS, is not now identifiable as pertaining to any particular order. At his side is the statue of a lady who wears a lofty mitre head-dress, bound by a coronet of fleurs-de-lys and jewelled reticulation of the kind represented by the figures of the wife of Sir W. Vernon at Tong, the wife of Sir H. Stafford at Bromsgrove, and Joan, Lady Bardolf (?), at Dennington. Mrs. Halliday, having identified the crest of the heaume (not helmet as she styles it) on which the boat-shaped salade of the male statue rests as a lion's head erased—a crest undoubtedly proper, if not peculiar, to the family of Harington of Aldingham, co. Lancaster—has had little difficulty in associating the tomb with a once-renowned house, to the possession of one of whose members the manor of Porlock passed by the marriage of Isabella, a daughter of Sir Nigel Loring, with Robert, third Baron Harington. The tomb has been fancifully awarded to Sir N. Loring himself, although he was No. 20 of the Knights of the Garter, a founder knight, and died in 1386 (or 1385), and was buried at Dunstable. Apart from this last fact, the costume of the male effigy at Porlock decided against this fancy, and the crest of the heaume was evidence on behalf of a Harington. Wonderful guesses had been made. Of course somebody was found rash enough to say that a Knight Templar (a celibate order) and his lady (!) were commemorated by figures in the costume of the first half of the fifteenth century, which showed no sign of mail. The three female effigies named above agree exactly with that at Porlock in their costume, and afford a limit as to its date. The question next presented was whether the third Baron Harington and Isabella (born Loring) his wife, or their eldest son John, fourth baron, and Elizabeth (born Courteney) his wife, are represented on this tomb. Baron John died 1418. Other owners of Porlock likely to be interred in this beautiful nook of the Somerset coast are placed out of the question by the costumes of the statues, which can hardly be accepted as later than 1450 or 1460, and may be much earlier.

In rejecting the ascription of the monument to Robert of Harington, who died in 1406, and his wife, Mrs. Halliday has (p. 4) made a point of the total absence of mail from the armour of the knight's effigy. In doing this she has undoubtedly assumed too much. The brass of Sir John Lysle, "Dominus de Wodynton in insula Vecta,"—an ally, by the way, of the Courteneys, whose torteaux and label are impaled with the lions of Lysle on a shield at the side of his effigies at Thruxton, Hants,—is dated 1407, yet there is not a ring of mail, while the rest of his armour is decidedly of an earlier character than that of the Porlock knight. The truth is antiquaries rely with too great strictness on the details of the fashion of armour in effigies and other delineations. The brass of Sir Ivo Fitzwaryn, at Wantage, is dated 1414; that of Robert Hayton, Esq., at Theddlethorp, Lincoln, includes a voluminous camail, and is dated 1424; and those of Sir Symon de Felbrigge, at Felbrigge, Norfolk, 1416, and of Sir John Hadresham, at Lingfield, Surrey, 1417, all display more or less of mail; while the effigy of John Cressy, Esq., at Dodford, Northants, 1413, and that of Sir John de Brewys, at Wiston, Sussex, 1426, are without mail; and, on the other hand, the figure of Sir Thomas de Saint Quintin, at Harpham, Yorkshire, which is not earlier than 1420, shows the escalloped edge of a long hauberk below the lowest lame or splint of the taces, and on the basinet a remarkable orle or wreath, a feature which occurs on the head of the Porlock knight.

As to mail, we find it surviving in the brasses of R. Quartremayns and his son, esquires, in Thame Church, Oxon, *c.* 1460 (!), of which the pauldrons and outrageous coudières are of the type suggested by the former piece of armour in the subject of Mrs. Halliday's studies. Later still are the Playters brass, dated 1479, at Sotherly, Suffolk, with a mail collar, and others of the same type which are not earlier than *c.* 1480. It can hardly be doubted that there was a revival, *c.* 1410–1460, in the display if not in the use of mail. To return to a vital point of Mrs. Halliday's researches, it is important to notice that to the lowest splint of the taces of the Porlock knight are attached tuilettes, or flying pieces, as in the Leventhorpe brass at Sawbridgeworth, 1433, the Elmbrydgge brass at Beddington, Surrey, 1435, and several others of the same category. Under these tuillettes might have been hidden the mail hauberk on which much of our author's argument against Robert Harington depends. Tuilettes are, it must be admitted, generally later than 1406, the date of his death. Of course mail was worn long after any date here in view, but it is doubtful whether it was shown under or, as in the camails, over the ever-increasing plates of steel.

Such differences of dates and dresses go to prove what common sense suggests must have been the case, that our gallant ancestors did not change the fashions of their armour with that facility which characterizes our parting with suits of broadcloth. A suit of armour was an expensive affair and a fit was not always certain, so that although growing corpulency might compel a warrior to have his back and breast plates "let out" from time to time, it did not force him to get a new corselet. The monumental brasses of country gentlemen show clearly that these worthies had to appear in old-fashioned armour long after changes of fashion made them not "fit to be seen." In relying on Mr. Planché's opinion that the mitre head-dress of the Porlock lady "characterizes" the reign of Henry VI., Mrs. Halliday has, in quoting his words about it as "peculiar to the time" of that monarch, made more of the assertion than her authority intended, or any literary authority could induce us to accept. This is shown by the brass of Joice, Lady Tiptoft, 1446, or 25 Henry VI., which comprises a mitre head-dress, reticulated and coroneted, like that of the Porlock lady, while the effigies of Christina Phelip, in Herne Church, Kent, is similarly clad and was executed in the 10th Edward IV., or 1470. Can we suppose that an alderman's lady such as Christina could be so much behind the fashion in her head-gear as comparison of these dates suggests?

Having proved that it does not do to rely too strictly on details of costume, we proceed to notice much more important evidence in respect to the ascription of one of the Porlock effigies to Elizabeth Harington. This lady married secondly Sir William Bonville of Chewton, afterwards Lord Bonville and K.G., who was taken prisoner at St. Albans in 1461 and beheaded. The Harington crest is good evidence that the male figure in question represents one of the lords of Porlock of that name. A tradition in the village points in the same direction. Are we, therefore, to assume that the lady's statue lies by the side of that of her first husband, whom she survived fifty-four years, that is till 1472? Mrs. Halliday has convinced herself that John and Elizabeth of Porlock, and not Robert and Isabella, are represented on this

monument. It is in her favour, although she does not urge the point, that Elizabeth, as daughter of a peer, might well wear a coronet she claimed in her own right, which Isabella could not. She has not convinced us, but, without proving her case, she has certainly narrowed the field of doubt. That a second husband should be ignored on a tomb would be no unprecedented fact, although it would be unusual. The costumes of both figures undoubtedly suit the later pair better than Robert and Isabella their predecessors. The estate of Porlock belonged to the Haringtons and not to the Bonvilles, and after the attainder of Lord Bonville it remained, according to the settlement of her first husband, in the hands of Elizabeth, who was successively Courteney, Harington, and Bonville. It is probable, therefore, that she might choose to be represented at Porlock at the side of Harington rather than Bonville; such a probability tends to weaken claims on behalf of the latter peer, and to counterbalance those in his favour which the late costumes of both figures indicate. It is likewise in favour of John Harington that, with benefactions to the poor of Porlock, he provided a chantry to be established in this church, which, however, was not established until 1474, two years after the death of his widow. Did she erect the tomb in anticipation of the chantry, or did Cecily Bonville, her heiress and Lord Bonville's sole heiress, erect the tomb? With the establishment of the chantry prayers were ordered to be said, not only for the souls of John Harington and his wife, the founders, but for those of his father and mother (Robert and Isabella), Lord Bonville, second husband of the founder's wife (!), and another Lord Bonville.

The omission of the figure of a second wife from a tomb erected by the widower of a first wife is not at all a rare fact. The monument of Richard II. and Anne of Bohemia at Westminster was constructed in pursuance to commands given, at a time when he deplored her death so deeply that he caused the old palace at Sheen, where she died, to be destroyed on account of its sorrowful memories. Before the monument was complete he, being childless, and for reasons of State, married again. But he left no space for the effigies of Isabella of Valois at his side. We can recall no instance of such a space being left, except that memorable one of the great peer and statesman whose sumptuous marble effigies and the figure of his first wife, with a vacant space for the statue of the second—a space she refused to fill—occupy the centre of the chapel of St. Paul at Westminster. When Isabella of Valois died there was no space for her first husband's statue on her tomb. She married secondly the Duke of Orleans, and died in France. Every student of monumental brasses can remember examples in which the widower of two wives has represented both the ladies with himself. The ladies are not so heedful of earlier loves, but usually ignore their first husbands. It is noteworthy that, although she had been married thrice, Margaret of Richmond lies alone, with the emblems of Owen Tudor on her monument, under her statue, which Henry, her son, erected at Westminster.

To summarize the question, there is nothing in the costume of the male figure to prove that Robert and Isabella are not commemorated at Porlock. The head-dress of the female figure, if we suppose Isabella did not survive her husband and adopt a later costume than that of his time, is in favour of this view. Did Elizabeth commemorate her first husband and herself and ignore the claims of her second partner? or did Cecily Bonville pay sculptural honours to the former pair, with one of whom she had but remote concern, and when he had been dead at least sixty years? The style of the canopy, being later than that of the statues, suggests that it is an addition which might well be Cecily's contribution to the work which had been initiated by Elizabeth during her second widowhood, with the period of which the costume of both effigies agrees happily enough; as, indeed, is the case with regard to the similar monuments at Tong (*c.* 1407) and at Bromsgrove (1450) above mentioned.

Although we consider Mrs. Halliday's case "not proven," we thank her for the interesting book she has written, and the considerable light she has cast on the beautiful monument and its adjuncts. The illustrations of the carving and colours of the statues and canopy, and those referring to the fine Easter tomb, if it be such, which adds to the importance of the church at Porlock, are very curious and valuable.

We have received from M. Quantin, of Paris, the second volume of the *Revue des Arts Décoratifs*, with numerous fine illustrations. The examples comprise a capital panel in chiselled iron in the mode of Albert Dürer, by M. E. Vernier, and its beautifully designed frame; a first-rate reproduction of Gobelins tapestry, after J. B. Oudry; gold and silver smiths' works of Dutch, German, and French origins; Venetian glass; bouquets in *plomb repoussé*, by M. Marron, of Rouen; views of splendid rooms in the French palaces; and similar specimens of ancient and modern decorative design. The text comprises an intelligent series of papers by M. Darcel on decorative tapestries; another series on the French national manufactories, by M. Garnier; and essays on, abstracts from, and reviews of current art books and matters artistic, most of which are the works of competent writers such as M. Henry Havard, the Marquis P. de Chennevières, M. Gerspach, and M. Chipiez. These papers are associated with news and memoranda and the very useful "Tablettes de Collectionneur," a congeries of notes by various hands.

LEWES PRIORY.

1, Scroope Terrace, Cambridge, Aug. 21, 1882.

Will you allow me to call the attention of your readers to the important excavations now proceeding at Lewes Priory? The church is of special interest as having belonged to the Cluniac Order, whose great church in Burgundy was not only one of the largest in Europe, but was built on an unusual plan, with eastern as well as central transepts, and a great porch at the west end, beyond the actual front of the church. It will be extremely interesting to discover whether these peculiarities have all been reproduced at Lewes. The same plan of double transepts has evidently been followed, and it remains to be seen whether the western porch also existed.

The investigation has been already commenced, under the direction of Mr. Somers Clarke and my friend Mr. W. H. St. John Hope, who is well known as a good antiquary and successful excavator. Mr. Hope writes to me:—"We have already investigated all that the railway spared of the refectory, and are now hard at work on the substructure of the dormitory. We have uncovered some fine walls 5 ft. thick; also two portions of the great watercourse, with a sluice gate. Our researches are as yet too young to enable me to say more; but a few days will make all the difference."

When the conventual buildings are finished they will attack the church. Meanwhile it is desirable to make an appeal for funds, without which the work cannot proceed. Subscriptions should be sent to Mr. Somers Clarke, 15, Dean's Yard, Westminster. John Willis Clark.

THE INVESTIGATIONS AT ASSOS, 1881.

A profoundly interesting volume has been published by the Archæological Institute of America. It is printed at the cost of the Harvard Art Club and the Harvard Philological Society. It is accompanied by a Report on the Foundation of the American School at Athens, showing that the scholars of America are determined to take up the line long since pointed out by the French, and turn their classics from a mere study of language and of books into a study of old life and of monuments. We hail the appearance of the Americans, with their acuteness, their enterprise, and their practical sense, in this field, and congratulate them that, though entering it late in the day, they seem to be rewarded with results which may well cause some jealousy in those who have long borne the heat and burden of the day.

The report of the executive committee describes important researches in Central America, on which we may soon expect a companion volume to that now issued upon Assos. The latter work was entrusted to Mr. Joseph Thacker Clarke, and his labours are yet unfinished, as he expects to dig another season at the site; but the most important part, the full description and restoration of the famous temple (of Athene?), is now before us. First in importance is the fact that in addition to the sculptured friezes brought to Paris in 1838, many slabs are now recovered, completing the design, and modifying considerably the conclusions formerly drawn from the extant remains.

There is no Greek temple from the good epochs which does not show peculiarities of its own and teach us to enlarge our theories upon the nature and development of Greek art. The instance before us is peculiar in many respects. The rude and archaic character of its decoration led the best German authorities, followed by Mr. S. Colvin, to date the building as far back as the sixth century, about the sixtieth Olympiad. But Mr. Clarke, with great judgment, argues that they have been misled by the provincialism (a moderate form of neo-barbarism) of some of the reliefs, while those he has himself discovered show in some cases far greater advance in style and power. He therefore (p. 100) places the date just after the Persian wars, when the defeat of the barbarians gave a great stimulus to commerce, and hence to wealth and to art. But whatever the date, the design of the temple, which he has reconstructed with great ingenuity, has many extraordinary features, which will make a new chapter in the histories of Greek architecture. The restoration (p. 100) is at first sight surprising. The band of reliefs corresponding to the cella frieze of the Parthenon is placed not round the cella wall, but on the peripteros, immediately above the abaci of the pillars, and under the metopes and triglyphs. Not only is this double band of ornament quite unparalleled, but the centre of the frieze and the two outer metopes are occupied by an heraldic emblem, a pair of sphinxes couchant, which recalls the gate of Mycenæ or some Oriental decoration rather than a Greek temple. As Mr. Clarke points out, the recurrence of the sphinx on coins of Assos shows that this is indeed the significance of the design. These salient peculiarities quite prepare the reader for certain curious facts ascertained by closer measurement.

There is a general absence of that delicate curving of straight lines so remarkable in the Parthenon. The pillars (p. 86) seem actually to have had no entasis; and though those at Corinth appear to agree in this, one cannot but wish that we had more actual drums extant to verify the reasonings of Mr. Clarke. What makes this regret more bitter is the fact that the work of destruction was carried out in the present century—nay, within the last thirty years! Since that time the great theatre, one of the most completely preserved in Greek lands, has become a mere half-emptied quarry. Pursuing our account of the peculiarities of the temple, we find that the stylobate is not curved (as in the Parthenon), but apparently made as level as the architects could make it (p. 87). This was quite natural when they neglected the far more obvious swelling of the pillars. "But it is an inexplicable and unique arrangement of the channelling upon the columns of the Temple of Assos that arrises, not hollows, were in the axis of the plan, and in line with the faces of the abacus." We cannot pursue the details further; but we call the attention of all scholars to the modest, accurate, and painstaking description of Mr. Clarke, and especially to his corrections of the numerous inaccuracies and assumptions in Texier's account—a great pity in so splendid and costly a work, till this day our main authority for many remains in Asia Minor.

The first two appendices contain copies, unfortunately not in fac-simile, of Assos inscriptions, and some notes on sites of towns in the Troad by Mr. W. C. Lawton. These notes are sketchy and superficial, and we wonder at all reference to George Grote's account of the Troad being omitted—an account which is quite final on most of the disputed points in the minds of those who have read the controversy. It did not require Schliemann's discoveries to corroborate his able and thorough refutation of the speculations of Strabo. We cannot but suspect that there is some little truth in the charge often made, that American scholars are apt to accept the newest essay as their authority.

The report concludes with an interesting essay on the geology of Assos by Mr. Diller. The drawings and plates are very neat, and are no doubt faithful as far as a hand drawing can be. In the "monumental volume," however, which we are promised, we hope to see them replaced by some sun-printing process. This is particularly desirable in the case of inscriptions, should there be any of disputed age and of historical importance.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

Plymouth, Aug. 23, 1882.

THE thirty-ninth annual congress of the British Archæological Association was commenced on Monday last at Plymouth, with all the pleasant accompaniments of fine weather and a goodly assemblage of members. The proceedings commenced with a reception held in the Guildhall, where the Mayor of Plymouth, supported by a number of the local gentry and the Town Council, welcomed the members to the town. The regalia, consisting of maces, silver-gilt, of the time of Queen Anne, and other articles, were then inspected and commented upon by Mr. G. Lambert, F.S.A., who described the peculiarities of the workmanship. A silver-gilt cup of artistic design and old date, out of which Drake and many other of Plymouth's worthies must have drunk, was greatly admired. The archives of the Corporation were then described by Mr. R. N. Worth, F.R.G.S., and after an adjournment for luncheon the documents and books were inspected. These have shared the dangers and vicissitudes of many other municipal records, and have suffered accordingly. Many a missing document was referred to, now most probably destroyed or lost for ever. The party found them in a new fire-proof room, a portion of the handsome Guildhall of which Plymouth may be proud. They are carefully arranged and indexed, so as to be capable of ready production, the whole being a pattern of neatness and order which might be followed with great advantage by other corporate bodies. The old cucking-stool, of wrought iron, is still in existence, and was produced for the inspection of the party, when some doubts were expressed as to its destination, since the ornamental designs and lightness of the metal seemed hardly adapted for its rough use. Proceeding to the parish church of St. Andrew, the mother church of Plymouth, the archæologists listened to an address from Mr. Worth on the history of the building, formerly a dependency upon the priory of Plympton. He was followed by Mr. Loftus Brock, F.S.A., who briefly called attention to the peculiarities of the building and to the features it possessed in common with so many other of the granite-built churches.

The dates given for the erection of various portions of the building are well made out, but they do not correspond with the actual work, with the exception of the fine western tower (erected in 1460 at the cost of Mr. Yogge for the labour, the townspeople finding the material). An ancient building at the south-east corner of the churchyard, known popularly as the "Abbey," but which has no written record, was most probably the clergy house. It is said to be attached to the church by a subterranean passage into a fifteenth century crypt beneath the chancel. The old Custom House, dated 1637, was then inspected, a curious example of the lingering of an earlier style in the west of England, the four centred doorways, of granite, being similar to several in the neighbouring buildings fully 200 years older. The church of Charles was also visited, and was described by Mr. Worth and Mr. Brock. It was so called, not like some few other churches, by the partisans of King Charles I. after his death, but during his lifetime, the building being so far completed that divine service was performed in it during the long period when Plymouth held out against the royal forces. The church is a good example of the survival of the Gothic style, being in proportion and form very similar to the usual type of the older buildings, some of the windows, however, being more or less copies of the thirteenth century traceried windows of Exeter Cathedral. There is no chancel arch, nor is there either any appearance or record of any division, by a screen or otherwise, between the nave and chancel. There is a capital bust of the Rev. Dr. Hawker, the writer of many well-known theological books, who was for many years the vicar of the church. The building is sadly shorn of its fairly good proportions inwardly by high pews and heavy galleries.

The party then proceeded through several of the older streets of the town under Mr. Worth's guidance, and visited several Elizabethan houses of considerable interest, and concluded their perambulations at the site of the Dominican Friary, once a building of considerable extent with a large church, but now only the portion of a long galleried apartment remains. This has, on the first or principal floor, a finely proportioned open timber roof of the fifteenth century, and was considered by Mr. Brock to be the refectory. In the evening the party assembled to dinner at the Guildhall, where the inaugural address was delivered by Sir J. A. Picton, in the unavoidable absence, through illness, of his Grace the Duke of Somerset, President of the Association.

A charming programme was arranged for Tuesday's proceedings, the intention having been to visit the most interesting of the prehistoric remains on Dartmoor, including the remarkable bridge at Merivale, near Prince's Town. The party started with brilliant weather, and the first halt was made at Buckland Abbey. The building consists of the ancient conventual church transformed into a comfortable and spacious dwelling-house, now occupied by Mr. Bundock, who with his wife and daughters heartily welcomed the party, the whole of the rooms being thrown open for inspection. Mr. Loftus Brock read a paper descriptive of the building. The abbey was founded for Cistercian monks by Amicia, Countess of Devon, in 1278, the first inmates being brought from Quarr Abbey, in the Isle of Wight. The monks, without the previous licence of their diocesan, the Bishop of Exeter, presumed to celebrate mass, for which trespass the house was speedily placed under an interdict, which was only removed at the intercession of Queen Elinor on the day of the bishop's death. Beyond a few scattered notices of lawsuits of no historical importance, there is no recorded history, excepting that licence was obtained to crenellate the buildings, *temp.* Edw. II. The lecturer sketched the rise and progress of the Cistercian order in England, quoting from Mr. Brooking Rowe's 'Cistercian Houses of Devonshire' his analysis of the extreme severity of the rules of this secluded order. He ventured to think, from many historical evidences, that the abbeys of this order were more empty than most others at the Reformation, an event which he hailed as putting an end to a false mode of life.

The house erected within and around the church in the time of Queen Elizabeth was purchased by the celebrated Sir Francis Drake, who resided here for an extended period, and of whom there are several memorials, one of the principal being the well-known portrait representing him at the age of fifty-three. The property still continues to belong to the Drake family. The hall, a finely panelled apartment, with a pendent ceiling, bears date early in the reign of Elizabeth, and is a good specimen of the architecture of the period. The party examined the house, the interesting family memorials, and the traces of the monastic buildings everywhere apparent.

The next halt was made at the church of Buckland Monachorum, an extremely fine specimen of enriched Perpendicular work, executed in granite, the columns in the interior of the building being worked each out of a single stone. There is a fine tower, with pinnacles of the usual Devonshire type, at the west end; but within many of the ordinary features of the local buildings give place to more ornate work than is generally met with, the window tracery being extremely good. The peculiarities of the building were pointed out by Mr. Brock, and Mr. Bundock called attention to the remarkable granite vaulting in the Drake Chapel, which he believed had been brought from Buckland Abbey. Sir James A. Picton referred to the beauty of the situation of the church, in a pleasant valley surrounded by trees, and to the quaint appearance of the houses of the village, almost all of which are old. He then traced the connexion between the family of the Drakes with the Heathfields, and pointed out the beautiful monument in the chapel in memory of Lord Heathfield, the brave defender of Gibraltar.

The carriages being resumed, a pleasant journey was made across the wild moorland country to Prince's Town, to examine the prehistoric remains which abound in the district. While luncheon was being partaken of, however, a rapid mist arose which developed into a drenching rain. Objects close at hand were quite hidden from view, and it was soon perceived that the quest of circles and the like on the wet moors was altogether out of the question. The party therefore returned to Plymouth by way of Tavistock, having seen much of Dartmoor under very varying aspects.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXVIII.—KNOWSLEY HALL, PRESCOT.

NOBLE houses contain a great variety of objects. Our readers will therefore feel no surprise at our passing from the grim Neapolitan pseudo-devotional picture to its neighbour, an ably painted whole-length portrait of a black racehorse, 'Sir Peter Teazle,' who

won the Derby for the Earl of Derby in 1787, and was ridden on that occasion by S. Arnul, a jockey of distinction. As this picture is dated 1803 it seems to be a copy of an older work. This portrait is signed by J. Boultbie. The original may have been the work of Sawrey Gilpin, who painted a portrait of this horse that was, as Mr. Scharf has discovered, exhibited at the Academy in 1788. We notice the picture here on account of its merit; it is not very inferior to a Stubbs. Another subject is presented by Jan Van Huysum's 'Flowers' (No. 400), signed and dated 1720, and comprising a group of large blossoms, an acanthus leaf with a snail on it hanging down in front, and a large red garden poppy. It is very finely modelled, and there is none of that excess of coolness which mars much of the painter's work. It is very soft and rich in warm clear colouring. Two capital pictures in the manner of Masseus, the Serpent Painter, representing 'Insects,' Nos. 443 and 444, are the works of Maria Sybilla Merian, and hang in the Green Sitting Room at Knowsley. Two poker pictures by or after S. Rosa (314 and 315) represent 'The Good Samaritan' and 'The Temptation of Christ,' and are not without a considerable amount of spirit. Near these is 'Frank Hals' (318), by himself, a life-size, half-length figure in a broad-brimmed black hat and a ruff, with a medallion hanging from the neck. He is laughing while he holds forward with his left hand a glass with a spoon in it. The dress is buff, with a belt. This is a good example of Hals's work. It is somewhat over-rough, and there are parts that are unfinished, but there is plenty of spirit, character, and energy. The picture was etched by Herr Unger with other works of the painter.

Two pictures by Zucchi, Angelica Kauffman's second husband, ought not to be omitted here; they represent scenes connected with the history of the great house of the Stanleys. The first is No. 334, 'Fête at the Oaks' in Surrey on the marriage, June 9th, 1774, of the twelfth Earl of Derby with Lady Elizabeth Hamilton, whose portrait by A. Kauffman, in a group, we have already noticed. On this occasion General Burgoyne, to whom the Oaks belonged (he had converted it from an alehouse, and it gave its name to the famous race), wrote the comedy called 'The Maid of the Oaks.' The scene of Zucchi's design is a lofty hall, with an arched roof and wreathed columns, statues in niches, and pictures on the walls. Some of the numerous figures have been identified, and they are probably all portraits. The ladies wear Turkish costumes, the gentlemen Spanish. All the latter wear hats, and they sit at long tables furnished with viands, and are attended by servants in ordinary liveries. There is, as the Knowsley catalogue states, a long account of these festivities in the *Gentleman's Magazine* for June, 1774, p. 263. The rejoicings were under the charge of that unlucky warrior General Burgoyne, who was greater at feasting than fighting. Zucchi's second picture is the better of the two. It derives much of its charm from the beauty of the architecture of the ball-room, with two fine central columns, which was the scene of the 'Fête at the Oaks' (338). It was erected by Robert Adam, and comprised the circular corridor of the richly decorated saloon. These apartments are separated by a range of lofty Corinthian columns of elegant design. The corridor, a true ambulatory, has a fine arched ceiling, which resembles that of the church of Sta. Costanza at Rome. The figures are numerous; some of them wear yellow dominos, all are portraits, many are dancing in attitudes of studied elegance, all of which are well rendered. The execution of these pictures is rather slight, the pigments being thin; but all parts are carefully drawn, and each figure is properly studied, grouped with its neighbours, and animated in its actions; the incidents are studiously varied, suitable to the subjects, and free from affectation. The colours employed to represent the effect of lamplight were almost wholly brown and a brownish orange, with positive yellow for the high lights. Crimson occurs on the curtains.

Among the finest examples of ancient miniature painting are the lovely portraits (Nos. 218 to 227) which the thirteenth Earl of Derby bought at Strawberry Hill in 1842, now enclosed in a frame. Some of them are a little faded by exposure to too much light. No. 219 is Isaac Oliver's 'Elizabeth, Queen of Bohemia,' which Walpole bought from Lady Isabella Scott, daughter of the Duchess of Monmouth. It seems to be, as were many such works of earlier and later dates, painted on a playing card; the pattern of the back appears on the reverse of the card. It is an oval; the figure is shown to the waist and turned to our left. The dress is crimson, and the long, light golden hair streams over the shoulders and about the face. The finish is exquisitely solid, and renders perfectly the morbidezza of the almost girl-like princess's attractive and ingenuous features. This work was lot 15, fourteenth day of the sale, and bought for thirteen guineas; it was No. 2221 in the Loan Exhibition at South Kensington, 1862, and No. 1812 in the Exhibition of Miniatures, 1865. That Mrs. Beale, the paintress, No. 220, was painted by herself, is hardly to be doubted; it shows yellowish half-tints in the reddish carnations, and other characteristics of her Lely-like manner (S.K.L.E., No. 2222, and E.M., No. 1813). 'Queen Elizabeth' (221), by N. Hilliard, which Walpole bought of Lord Wilmington, retains on the back of the card four pips of the six of clubs. The carnations of this gem of delicate execution are now white and pallid, but it remains one of the most exquisite examples. It retains the real gold used to represent her majesty's goldsmithery, and her jewels are still brilliant. It gives the head and neck only; the face is in three-quarters view to our left, and enclosed by elaborately dressed yellow hair, which, after the queen's fashion, is studded with gems and gold. Her large radiating ruff, rising above the ears and open at the neck, showing chains and jewels, is adorned with gold and rubies. The face exhibits the fine character of the "bright Occidental star." While reviewing the Royal Academy Winter Exhibition of 1879, which comprised a most precious gathering of miniatures, we called attention to N. Hilliard's portraits of this queen in Case F., the property of the Duke of Buccleuch; among them was an example of the class represented by Lord Derby's gem, which he bought at Strawberry Hill, fourteenth day, lot 19, for fourteen guineas. 'Marie d'Autriche,' queen of Louis XIII. (222), is a capital work of Petitot's (S.H., fourteenth day, No. 56, price 21*l.*; S.K.L.E., No. 2224; E.M., No. 1815). John Hoskins's 'Queen Henrietta Maria' (223) has no painter's signature, and proves the fidelity of Van Dyck when dealing with the features of Charles's queen, although the work before us gives a different and less masculine reading of their character. The Duke of Buccleuch sent a fine portrait of this queen to the Academy, Case I., No. 7, by Isaac Oliver. Lord Derby's portrait comprises a large crystal jewel at the breast, with a black bow, a pearl necklace, and pearls on the back of the head. It has a landscape background, by which means we may identify it as that which, then attributed to Dixon, was sold at Strawberry Hill to the Earl of Derby on the eighteenth day as lot 122, for six guineas (L.E., No. 2225; M.E., No. 1816). Few miniatures surpass N. Hilliard's 'Sir Francis Drake' (224) at the age of forty-two, which is dated 1581, and shows the bulldog-like features set in an almost circular outline, delicately painted, exquisitely finished, and perfectly preserved. The figure is to the waist, in a white satin dress, and wearing a massive chain composed of four links placed side by side; the buttons of the jerkin are black and white. The catalogue quotes Stow's description of Drake's appearance, and thus gives another portrait of the man which serves to confirm the *vraisemblance* of Hilliard's:—"He was low of stature, of strong limbs, broad-breasted, round-headed, browne hayre, full-bearded, his eyes round, large, and clear, well-favoured, fayre, and of a cheerful countenance." The back of the card bears the ace of hearts (L.E., No. 2226; M.E., No. 1817).

'Robert Devereux, Earl of Essex' (225), came from "Strawberry" on the fourteenth day, lot 45, price seven guineas (L.E., No. 2227; M.E., No. 1818). It is mentioned in Lord Orford's 'Works,' 1798, ii. p. 474, as having belonged to Lady Frances Worsley, a descendant of the earl's. It is the work of I. Oliver, unfinished, the background and front of the dress being bare parchment. He wears a small frill over a muslin turnover band; the Garter ribbon is unusually narrow, the face is in three-quarters view to our left, the hair is very dark brown. It was engraved by Houbraken. The head, compared with the Elizabethan face of Drake, is almost of a modern English type, and nearly oblong in its outline, with remarkably clear, intelligent eyes. The portrait of 'Ben Jonson' (226) is painted in oil on copper, and resembles the accepted head of the poet, but is less bluff and less fat. It is a bust in three-quarters view to our right; the hair is brown and the eyes chestnut, the dress plain black, the beard square cut, and the moustaches turned up (S.H., eighteenth day, lot 134, price 3*l.* 10*s.*; L.E., No. 2220; M.E., No. 1819). No. 227, an enamel by C. F. Zincke, represents with evident truthfulness Sir R. Walpole in 1744, and is beautifully finished, the face in three-quarters view to our left; the hair is white. Horace Walpole wrote that this admirable portrait was "very like." It was engraved by Vertue in Lord Orford's 'Works,' 1798, ii. p. 225 (L.E., No. 2229; M.E., No. 1820).

Another frame contains five admirable miniatures. No. 229 is Mary Sidney, Countess of Pembroke, an oval on copper (L.E., No. 2238; M.E., No. 1821). 'Charlotte (born De La Trémouille), Countess of Derby' (230), by C. Jonson, has a girlish and round face and a very sweet and bright expression, thus contrasting with that in the large picture with the Commonwealth drummer which we have already described. Her portrait is exquisitely painted and modelled with remarkable precision and delicacy. The Duke of Buccleuch has another portrait of her by S. Cooper (R.A. 1879, Case A., No. 14, dated 1671; L.E., No. 2234; M.E., No. 1822). 'Tintoretto when Young' (*l*) (231) is an oval in oil, on copper, attributed to the artist (L.E., No. 2233; M.E., No. 1823). 'Andrew Marvell' (233), in oil, on zinc (L.E., No. 2236; M.E., No. 1825), shows a young face turned to our right, with long flowing brown hair and brown eyes, which look steadily at the spectator; grey bands and a plain white tassel are below the chin. It is a fine and ingenuous countenance marked by culture. As Marvell was born in 1620, this portrait of a man about twenty-five years old, if it represents him, must have been painted about 1645. Van Dyck, to whom it is attributed, and whose work it resembles, died in 1641. Supposing the sitter to have been younger than twenty-five, it is difficult to see why Marvell, who was at that time a hardly known student – simply a teacher of Lord Fairfax's daughter "in the languages," as Milton described him—should have sat to the greatest portrait painter of his day. The patriot was almost unknown till Van Dyck had been dead nearly twenty years.

A second miniature, said to represent the Countess Charlotte of Derby, bears no number in the Knowsley catalogue, and is described on p. 230 of that work as of an "Unknown Lady." It is in a filigree silver frame and is very charming. It depicts a lady with yellow-brown hair, a fair complexion, and grey eyes. It has nothing to do with the frame, which

is not English, and is of a later date than the days of the Lady of Lathom. Horace Walpole, to whom it belonged, declared in writing, on a paper which still remains on the back of the picture, that it represents the most loyal of countesses. It was bought by Lord Derby, her descendant, at Strawberry Hill, May 6th, 1842, lot 46, for sixteen guineas. See Lord Orford's 'Works,' 1798, ii. p. 423. Another purchase from Strawberry Hill is, like the last, without a number. It is called 'Isaac Oliver,' by himself, and was engraved for Walpole's 'Anecdotes' by J. Miller. Lord Derby gave twenty guineas for it on the fourteenth day, when it appeared as lot 85. Again the "Lord of Strawberry" is the authority for the name of the sitter for this exquisite portrait, which, doubtless, I. Oliver painted with all his might and in a wonderfully fine manner. The execution of this gem is very solid with brownish shadows. The half-length figure is that of a young man, who looks at the spectator and has a smooth face, shown in three-quarters view to our right. He has small moustaches and full dark hair, and wears a large ruff. His black satin dress is slashed with crimson and he has a black cloak. The Queen has another 'Isaac Oliver,' by himself (R.A. 1879, Case I., No. 6).

The Duke of Buccleuch has a fine portrait, attributed to Isaac Oliver, of 'Frances (born Howard), Countess of Essex and Somerset,' the so-called "poisoning countess," whose likeness at Knowsley Hall is one of the greatest treasures of the miniaturist's art, and in the catalogue bears the number 234. It is so fine a work that the Director of the National Portrait Gallery—a critic by no means addicted to enthusiastic expressions—wrote of it:—"There is only one other miniature deserving comparison with it, and that is the exquisite portrait by the same artist, similar in size, style, and attitude, of Lucy Harrington, Countess of Bedford, purchased from Stowe by the Duke of Buccleuch." As to the example before us, we cannot do better than quote the elaborate and exact description of it by the author of the Knowsley catalogue. "It is," he says, "exquisitely painted in water colours on a large circular card, enriched with gold and silver. The outer rim of the card is gilded; the back is plain and highly polished. On the back of the frame is inscribed, in Horace Walpole's own handwriting: 'The Lady Frances Howard, Countess of Essex and Sussex, from the collection of James West, President of the Royal Society. H. W., 1773.' A half-length figure, standing, enveloped in a thin, silver-striped gauze veil, gathered very full round and above the shoulders. Her face is nearly full, but turned somewhat to the left. Her dark brown eyes are fixed on the spectator. The mouth delicate, with a pleasing smile. Her right hand, free from rings, is raised to her bosom; the left arm hangs down and does not show the hand. A transparent wire-gauze headdress descends in a point on the centre of the forehead. Her sleeves are of a downy-white fabric, with silvery lines in a feathery pattern upon it. An outer mantle of white embroidered stuff covers the lower part of her dress. The background is opaque and intense black. The artist's initials are extremely small, merely a cipher of I O in gold, without the usual dots, on the black background in the left-hand side near her elbow. The jewels, now tarnished, were originally of bright silver in a gold setting, and highly raised. Most of the silver has now tarnished; but in its original condition the picture must have been splendid."

The scarf of silver tissue surrounds the countess like a cloud. The grey dress with gold embroideries, the elaborate and splendid jewellery of gold and coloured stones, the serpent-like character which our fancy is apt to attribute to the witchery of the smiling face, the very delicacy of the pallor of the skin as it now appears, and, finally, the unusually large size of this miniature, five inches in diameter, are striking elements which add to its importance and make the visitor remember it. Lord Derby bought it at the Strawberry Hill sale, lot 52 of the thirteenth day, for eighteen guineas. It would probably fetch a thousand guineas now. See Lord Orford's 'Works,' 1798, ii. p. 489 (L.E., No. 2231; M.E., No. 1811). It was engraved in stipple for the *Biographical Mirror*, iii., pl. 2.

A considerable number of paintings in oil and drawings in water colours by Mr. E. Lear are at Knowsley; nearly all of them represent famous and picturesque views in Greece, Ionia, and the Isles, and they were produced for the late Earl of Derby, whose liking for Homer attested his taste for such scenes. The artist himself has been celebrated by the Laureate as the "E. L." wielder of

> Such a pencil, such a pen,

as described the woodlands and the echoing falls of water, the passes, and the coast fortresses which, perched on giant cliffs, dominate the sea. Besides these drawings are many more, the work of artists and capable amateurs.

The library at Knowsley is large and richly furnished with books on special subjects of many kinds, including ample provision for the study of the histories of the fine arts and of antiquities. Among them are some from historic libraries, such as that of Horace Walpole. There is a note-book which belonged to Vertue, and contains portraits by him of some of his contemporaries and others, and various sketches of curiosities; likewise a small octavo volume of drawings and notes made by J. Martin, of Thetford, the Norfolk antiquary, of antiquities, coins, arms, medals, and genealogical notes relating to Norfolk (Strawberry Hill sale, sixth day, lot 48). More important than this is a quarto volume which belonged to Mariette till 1775, containing heads from life and of the Janet category, drawn in black and red, with inscriptions (which were attributed by Mariette to Brantome) giving the names of the sitters, who, according to a note by Walpole pasted on the cover, include Francis I., the Queen Mother, Margaret of Navarre, Lautrec, and others. Among these likenesses is that of Louise de Savoie. 'Madame de Navarre' is the image of her brother. 'Le dolfin François' is a chubby boy, very like his father; near him are 'Monsier dorleans qui mourviot a dishuit ans (a 18 ans)' and 'Le roy henry deuxisme.' This book was lot 15 of the sixth day's sale at Strawberry Hill, and was sold to Mr. Boone for sixty guineas. We have already noticed a very numerous collection of similar drawings at Castle Howard; another was till lately in the Sutherland Gallery. Many more exist in the Louvre and British Museum.

The next paper of this series will describe the pictures belonging to private collections near Liverpool.

Fine-Art Gossip.

The new room between the Elgin and Egyptian galleries, the entrance to the Print Room, and the Central Saloon in the British Museum is nearly finished, the decorations only being required. It is considerably below the level of the two galleries and accessible from them by flights of steps. Each flight of steps has a balustrade of small Doric columns, similar to those of the larger staircases in the Museum. The new room is fully lighted from the roof, and in every respect but its unfortunately unavoidable low level is a desirable addition to the public part of the Museum. Its construction has, however, caused a general dislocation of the arrangements of the Print Room, and immense inconvenience in that department, which will not be remedied until the new Print Room is built in the Secretary's garden, and the gallery appropriated to engravings and drawings, which is one of those vacated by the Natural History Collection, has been made ready for public use. The new room is to be filled with Hellenic sculptures and architectonic fragments, including those taken from the Mausoleum, and will afford a much desired opportunity for improving the arrangement of the antiquities in chronological order, defect of which is extremely injurious to the educational service of the Department of Greek and Roman Antiquities. The new room is about 150 feet long, 40 feet wide, and 30 feet high. When the present Print Room is destroyed, its site will be, we believe, appropriated to an extension of the Elgin Room.

A society has been formed to publish a quarterly work devoted to the costumes of all nations and peoples. Among the members who have already joined are Mr. Alma Tadema, Mr. G. Boughton, Mr. R. R. Holmes, Mr. Louis Fagan, Mr. E. W. Godwin, Mr. J. E. Linton, Baron de Casson, and Mr. Wills. The curators of the museums and libraries of St. Petersburg, Florence, Paris, Vienna, Berlin, Brussels, Naples, and other cities, have undertaken to help the "Costume Society" in all possible ways. Each print or chromo-lithograph will be accompanied by explanatory letter-press.

An exhibition of sketch designs submitted in the preliminary stage of the competition for the new municipal buildings at Glasgow is to be opened on Saturday next, under the management of the Glasgow Institute of Architects. The press view takes place on Friday. The drawings are to be delivered on Tuesday next.

A marble bust of the late Mr. Frank Buckland, the work of Mr. J. W. Wood, has been placed near the entrance to the Fish Museum at South Kensington.

The death of Mr. Marshall Wood, a sculptor who prepared several statues of Her Majesty for the colonies, and executed other commissions of a public nature and similar character, is announced as having occurred at Brighton.

Thorwaldsen's famous lion at Lucerne, which has till now been the property of the Swiss family of Pfyffer, is about to pass into the possession of the town of Lucerne. The citizens hope to preserve it more effectually than has hitherto been the case from those vicissitudes of the weather to which the monument is necessarily much exposed.

The interesting mosques of Adrianople, which had so long been in a ruinous condition, are being repaired by the Governor-General, H.H. Kadri Pasha, sometimes called the English Pasha.

Owing to the frequency of suicides from the summit of the Vendôme Column, Paris, the authorities have thought fit to exclude the public from that building. In thirty-two years not fewer than eighty-two visitors have thrown themselves from the gallery.

MUSIC

The Great Musicians. Edited by Francis Hueffer.—*Purcell.* By W. H. Cummings.—*English Church Composers.* By W. A. Barrett.—*Sebastian Bach.* By R. L. Poole. (Sampson Low & Co.)

These are the most recently published of this series of musical biographies, four volumes of which have been already noticed in the *Athenæum*. The editor may be commended for giving Henry Purcell a place among the "great musicians," and also for his choice of a biographer, Mr. Cummings having laboured zealously, though it is to be feared not altogether successfully as yet, to secure wider appreciation for the genius of our most gifted composer. He may be said to have worked upon virgin soil in the present instance, as no biography of Purcell of any value existed, the notices in the histories of Burney and Hawkins

being chiefly remarkable for a number of errors, due, it would seem, to indifference. Thus it has been continually asserted, on the testimony of these writers, that Purcell was made organist at Westminster Abbey in his eighteenth year, the fact being that Blow resigned in his favour in 1680, when the younger musician was twenty-two. Here the error is undoubted, and it is one that ought never to have occurred. But Mr. Cummings is on more difficult ground in seeking to prove that Purcell wrote the 'Macbeth' music generally attributed to Matthew Locke, the balance of probability, if not of actual evidence, being the other way. Though the question is interesting, it is now of less importance than formerly, as the incongruity of the association of Middleton and Shakspeare is beginning to be recognized, and the music is therefore likely to fall into disuse. The record of dates and facts connected with Purcell's life has become a matter of extreme difficulty, thanks to past neglect, and the narrative that Mr. Cummings has placed before us is necessarily somewhat broken and disconnected, notwithstanding the large amount of documentary evidence which his industry and research have enabled him to accumulate, and which he wisely quotes in place of giving the details of his subject in his own words. The additional light, however, that he has thrown on the life and work of the composer makes it the more clear that if his contemporaries appreciated Purcell at his full value the disastrous predilection for foreign music which afterwards set in proved as inimical to his reputation as it did to native musical art generally. We may add that Mr. Cummings's book is enriched by a capital index, a chronological table, and a list of the organists of Westminster Abbey from the Reformation to the present time.

In her stores of cathedral music England may be said to possess a school of art truly national if rather limited in scope, and Mr. Barrett has compiled an admirable and exceedingly useful treatise on the lives and productions of the leading musicians who have laboured in this field. Tersely written and arranged chronologically, the book forms practically a history of that branch of music in England the practice of which has been continuous and, on the whole, consistent for fully three centuries. In this domain, at any rate, England recovered from the blow inflicted at the Revolution, the most brilliant period being that of the lives of Wise, Humfrey, Blow, Purcell, Clark, Croft, and Weldon. The blighting influence of alien art, which then became more and more apparent, had doubtless much to do with the decline which set in, the worst years of which were responsible for such atrocities as Clarke Whitfield's "In Jewry is God known" and Jackson in F. But this was a time of apathy and degradation in church work generally, and the revival of taste in ecclesiastical art was coeval with the dawn of a better spirit in matters relating to cathedral music. Mr. Barrett seems to apprehend some danger from the increasing influence of modern and extravagant styles of composition as exhibited in the productions of many of the leading church musicians of the present time. There is, it is true, but little evidence of original thought, and too much disposition to be carried away by passing fashions and mannerisms; but a comparison with the close of the eighteenth century is all to the advantage of our own epoch, and affords some ground for hope in the future. Mr. Barrett's volume may be warmly commended to the notice of all who are interested in this subject.

The third of the present volumes deals with a vast subject, quite beyond adequate treatment within the limits here prescribed. The author seems to have felt this, and modestly declares that his aim will be accomplished if his sketch serves as an introduction to the English translation of Dr. Spitta's comprehensive work which is shortly to appear. At the same time he claims originality in the matter of arrangement, and, of course, in the opinions advanced. It is not clear that in the former respect he has hit upon the most desirable method of treatment. The strictly biographical portion of the book is necessarily intermixed with disquisitions on the compositions, for Bach's life might be told in half a dozen sentences, so uneventful was it in proportion to its duration. But for purposes of reference it is somewhat confusing to find the organ works summarized in one part of the book, the other instrumental works in another, and the cantatas, masses, &c., in yet a third place. A brief synopsis of the whole would have been preferable. Mr. Poole gives us, however, a list of the church cantatas in the presumed order of production as suggested by Spitta. It may be noted that in speaking of the concertos he mentions the two for two harpsichords and the two for three, but not the one for four instruments. On the other hand, he mentions Bach's third surviving son, Johann Gottfried Bernhard, by his first wife, who became organist at Mühlhausen, and to whom the otherwise admirable article in Grove's 'Dictionary' contains no reference. In a letter to Erdman, Bach says:—"I must now acquaint you with somewhat of my domestic estate. For the second time I am married, my first lamented wife having died at Cöthen. By her I have living three sons and a daughter." Mr. Poole occasionally indulges in some rather odd expressions. He says that Buxtehude "innovated" the custom of having concerts (p. 20); and speaks of multiplying with the parts (p. 54), and of the choruses in the cantatas as being generally formed on a "figured subject" (p. 83). On the whole, however, the author has done his work well, and his book deserves recognition as the first original biography of Bach in the English language—excluding dictionary articles—as well as on account of its own merits.

THE BIRMINGHAM FESTIVAL.

Of all the periodical musical gatherings in the provinces, the triennial festival at Birmingham holds the foremost place in public estimation, by reason of the signal services it has rendered to art from time to time. The management has a right to point with pride to the extensive list of new works produced at these gatherings, some of which have taken their place among the masterpieces of music. At the last festival, in 1879, there was a falling off in the spirit of enterprise usually displayed, and the result was quickly manifest in diminished receipts and unqualified condemnation by the press. The error is not to be repeated, for, as we have already remarked, the festival of next week promises to be one of exceptional interest, the proportion of unfamiliar material and actual novelty in the programme being unprecedentedly large. The executive force is of the customary dimensions. The principal vocalists engaged are Madame Albani, Miss Anna Williams, Miss Eleanor Farnol, and Madame Marie Roze, *soprani*; Madame Patey and Madame Trebelli, *contralti*; Messrs. Lloyd, Cummings, and Maas, *tenori*; and Messrs. Santley, F. King, and Foli, *bassi*. The orchestra, as on former occasions, is of imposing size, the total force numbering 142 players, including 108 strings. The chorus consists of 252 voices. Mr. Stockley retains his post of chorus master and Mr. Stimpson that of organist. At one time it was generally supposed that Sir Michael Costa would be unable to occupy his time-honoured position as conductor, and statements as to his successor were confidently though, as it proves, rashly made. But the veteran *chef d'orchestre* has quite recovered from his severe indisposition, and will conduct the entire festival, save those new works which will be directed by their respective composers. According to long established precedent, the opening performance on Tuesday morning will consist of Mendelssohn's 'Elijah.' In the evening the first of the novelties, Sir Julius Benedict's cantata 'Graziella,' intended for last year's Norwich Festival, but not completed in time, will form the main feature of the programme. Wednesday morning will be devoted to M. Gounod's long-promised oratorio, 'The Redemption.' The production of this work under the personal direction of the distinguished French composer has aroused a very large amount of interest, the demand for tickets greatly exceeding the supply. The evening concert will include a new sacred cantata, 'The Holy City,' by Mr. A. R. Gaul, and an orchestral serenade, in five movements, by Mr. Villiers Stanford. 'The Messiah' will occupy Thursday morning, and in the evening two more new works will be brought forward, Herr Niels Gade's cantata 'Psyche,' and Mr. Hubert Parry's Symphony in G, which was promised but not performed at the last series of the Richter Concerts. The concert of Friday morning has an excellent programme, consisting of Mozart's G minor Symphony, Brahms's 'Triumphlied,' Cherubini's Fourth Mass, and Beethoven's 'Mount of Olives'; and in the evening the festival will be brought to a close by a repetition of 'The Redemption.' It will be generally admitted, whatever verdict may be passed upon the new compositions, that the Birmingham Festival Committee has this time spared no effort to maintain the prestige of a valuable musical institution. The rehearsals for orchestra and principals were held in St. George's Hall on Monday, Tuesday, and Wednesday last, and were attended by a large number of musicians, especially on Wednesday, when 'The Redemption' was taken in hand; and, without anticipating the opinions that will properly be given next week, it may be said that some portions of the new oratorio bid fair to be exceedingly effective in performance.

Musical Gossip.

We have received the prospectus of the "Sacred Harmonic Society," an institution incorporated as a limited liability company, not for profit. As the time-honoured association bearing this title has ceased to exist, the appropriation of its name by a new body is only questionable as a matter of policy. At present the executive of the proposed company seems content to base its appeal for funds on the grounds that it will continue the work of the old society on similar lines. The prospectus quotes the remarks of some of the leading journals as to the desirability of prolonging the existence of the Sacred Harmonic Society—unavailing expressions of hope that its demise might be averted. It is not stated how a similar fate is to be avoided in the future, save in the

vague sentence that "it is hoped an increased concert revenue will result from a careful study of the requirements of the times." It is further stated that "Sir Michael Costa has been communicated with, and it is confidently hoped that circumstances will admit of his accepting the invitation of the council to become conductor." At present it would be premature to offer any opinion as to the method of procedure adopted by those who are endeavouring to float the new undertaking. That its aims, in the abstract, are good, no one would venture to deny, and with this general expression of approval we shall be content until more definite proposals are forthcoming.

The prospectus of Mr. Willing's Choir issued this week contains but little information in addition to that already published in the *Athenæum*. The dates of the concerts at St. James's Hall are as follows:—December 12th, Gade's 'Psyche' and Handel's 'Acis and Galatea'; January 30th, 'Elijah'; March 20th, 'The Messiah'; May 1st, miscellaneous, including some new work.

We mentioned last week that Herr Joachim had resigned his appointment as Director of the High School of Music at Berlin. *Le Ménestrel* now states that the eminent violinist intends to take up his residence in London. For more than one reason the truth or falsity of this report may be said to be a matter of considerable interest to English musicians.

M. Saint-Saëns has just completed a new opera on the subject of Henry VIII. The score has been delivered to M. Vaucorbeil with a view to its production at the Paris Opéra.

One cycle of 'Der Ring des Nibelungen' is to be given under Herr Neumann's direction at Breslau early in September. The *Musikalisches Wochenblatt* states that the whole of the tickets were disposed of on the first day of sale, and that the Emperor of Germany will be present at the performances.

A report having been circulated that M. Léo Delibes is composing an opera on the subject of 'Rigoletto,' the French papers explain that he is merely writing music for one scene in the drama of 'La Roi s'Amuse,' which is to be revived at the Théâtre Français.

At the musical festival held in Brussels on the 20th and 21st inst., the principal works performed were Handel's 'Alexander's Feast'; Brahms's 'Requiem,' for the first time in Belgium; 'L'Hymne à la Beauté,' an unpublished oratorio of Pierre Benoît; and 'Le Retour,' an oratorio by M. Samuel, Director of the Conservatoire at Ghent. The executants numbered 520, and the conductors were MM. Dupont and Warnots.

MISCELLANEA

The Hunterian MSS. of Hippocrates.—I have received from Vienna an inquiry regarding a MS. of Hippocrates. During my illness the letter went astray, and I would ask the aid of the *Athenæum* in replying to my correspondent, to whom I owe an apology for my unintentional neglect. The following are the titles included in a folio on vellum: 1, Ypocratis Aphorismorum libri cum com'ento Galïeni: ex Arabico in Latinum translati a Constantino Africano; 2, Ypocratis Regimen actuarium cum com'ento Galieni (Latiné); 3, Ypocratis Prognosticorum liber cum commentariis Galieni (Latiné); and, 4, an anonymous piece, commencing "Medicina dividitur in duas partes in theoricam et practicam." No other Hippocratic MS. is in the Hunterian Library.

John Young, M.D.,
Keeper of the Hunterian Museum.

To Correspondents.—W. D.—E. R.—received.
No notice can be taken of anonymous communications.

Erratum.—P. 231, col. 2, line 36 from top, for "a hundred years" read *ten years*.

HURST & BLACKETT'S
NEW NOVELS,
AT ALL LIBRARIES.

NEW BABYLON. By Paul Meritt and W. HOWELL POOLE. 3 vols.

SAINT and SIBYL. By C. L. Pirkis, Author of 'A Very Opal,' 'Wanted, an Heir,' &c. 3 vols.

The MERCHANT PRINCE. By JOHN BERWICK HARWOOD, Author of 'Lady Flavia,' 'The Tenth Earl,' &c. 3 vols.
"This story is pleasantly told."—*Athenæum.*
"A clever, stirring novel."—*Daily Telegraph.*
"An interesting story of English commercial life, told quietly and easily in Mr. Harwood's well-known manner."—*Daily News.*

DAISY BERESFORD. By Catharine CHILDAR, Author of 'The Future Marquis.' 3 vols.
"Miss Childar has written a pretty, pleasant story, full of varied character and entertaining talk. 'Daisy Beresford' is a charming creation; she is full of spirit and enthusiasm."—*Daily News.*
"Several of the characters in 'Daisy Beresford' are clearly drawn. Two old maiden aunts are very well done, and the heroine is also good."—*Athenæum.*

FORTUNE'S MARRIAGE. By GEORGIANA M. CRAIK, Author of 'Dorcas,' &c. 3 vols.
"'Fortune's Marriage' is naturally and pleasantly written, like all Miss Craik's stories. Both Fortune and Ronald are thoroughly well drawn."—*St. James's Gazette.*
"'Fortune's Marriage' is gentle, tender, and unexaggerated. It is carefully written and has been carefully thought out."—*Daily News.*

REDEEMED. By Shirley Smith, Author of 'His Last Stake,' 'All for Herself,' &c. 3 vols.
"'Redeemed' is above the average of modern novels. The characters are drawn with care and distinctiveness."—*Daily News.*
"This clever novel is a fresh piece of manly writing, vigorous in expression of thought that is always healthy and not seldom deep. The characters are all excellently drawn."—*Daily Telegraph.*

A FAITHFUL LOVER. By Mrs. MACQUOID, Author of 'Patty,' 'Diane,' &c. 3 vols.
"Mrs. Macquoid's new novel may be pronounced a well-deserved success. The story is fresh and original. The heroine is a frank, pure, and natural girl."—*Spectator.*

HURST & BLACKETT, 13, Great Marlborough-street.

Now ready, Vol. XII.—EGYPTIAN TEXTS.
RECORDS of the PAST; being English Translations of the Assyrian and Egyptian Monuments. Published under the sanction of the Society of Biblical Archæology. Edited by S. BIRCH, LL.D. With an Index to the Contents of the Series. Cloth, 8s. 6d.

Second Edition, royal 8vo. price 1s.; post free, 1s. 3d., paper covers; cloth gilt, red edges, price 2s. 6d.
AUTHORSHIP and PUBLICATION.—A concise Guide for Authors in Matters relating to Printing and Publishing, including the Law of Copyright and a Bibliographical Appendix.
"A work which every author, whether experienced or not, should undoubtedly possess."—*Knowledge.*
London: Wyman & Sons, 74–5, Great Queen-street, W.C.

Now ready, fcap. 4to. cloth, price 7s. 6d.
THE STUDENT'S CONCORDANCE to the NEW TESTAMENT, REVISED VERSION.
Compiled upon an Original Plan, showing the Changes in all Words referred to.
With Appendices of the chief Authorized Words and Passages Omitted in the Revision, and of New and Disused Words; a Table of the Genealogy of the English New Testament, &c.
. Published under License of the Universities.
London: Bemrose & Sons, 23, Old Bailey.

SYMEONIS DUNHELMENSIS OPERA OMNIA.
Now ready, Vol. I. royal 8vo. pp. 439, price 10s. half bound.
SYMEONIS MONACHI HISTORIA ECCLESIAE DUNHELMENSIS: Eadem Historia deducta, incerto Auctore, usque ad A.D. 1144: sequuntur varii Tractatus, in quibus de Sancto Cuthberto et Duneimo agitur; Epistola Symeonis de Archiepiscopis Eboraci: Carmen Aedelwulfi; Vita S. Bartholomaei; Vita S. Oswaldi Regis et Martyris. Edited by T. ARNOLD, M.A., Univ. Coll. Oxon. Published by the Authority of the Lords Commissioners of H.M. Treasury, under the Direction of the Master of the Rolls.
. The Second and concluding Volume will contain SYMEON'S HISTORIA REGUM, &c.
London: Longmans & Co. and Trübner & Co. Oxford: Parker & Co. Cambridge: Macmillan & Co. Edinburgh: A. & C. Black, and Douglas & Foulis. Dublin: A. Thom & Co.

UNIFORM WITH 'KERAMIC ART OF JAPAN.'
Imperial 8vo. 400 pages, with Illustrations in colours and gold, bound in cloth, with ornamented back, gilt, price 2l. 2s. nett,
Dedicated by direct permission to His Imperial Majesty the Mikado,
JAPANESE MARKS and SEALS.

Part I. POTTERY.
Part II. ILLUMINATED MSS. and PRINTED BOOKS.
Part III. LACQUER, ENAMELS, METAL, WOOD, IVORY, &c.
By JAMES L. BOWES,
Joint Author of 'Keramic Art of Japan.'
Comprising 1,300 Marks and Seals copied in fac-simile, with examples in colours and gold, executed by Messrs Firmin Didot et Cie., of Paris. The Work also contains a Grammar of the Marks; brief Historical Notices of the various Arts of Japan; the Jikkwan and Jiuni Shi Characters, with those of the Zodiacal Cycle; also the Year Periods since the Fourteenth Century; and a Map showing the various Seats of Manufacture.
London: H. Sotheran & Co. 36, Piccadilly; 136, Strand; and Queen-street, City.

SATURDAY, SEPTEMBER 2, 1882.

LITERATURE

America Revisited. By George Augustus Sala. Illustrated. 2 vols. (Vizetelly & Co.)

A NEW book of travel by Mr. Sala is sure to be welcome. He possesses the happy knack of adorning whatever he touches and of finding something worth telling when traversing beaten ground. His first book about the United States was composed during a visit to that country nineteen years ago, and it was entitled 'America in the Midst of War.' His present one, which depicts the same country in the midst of profound peace and in the enjoyment of marvellous prosperity, contains striking contrasts between the sad past and the happy present.

When Mr. Sala visited the United States in 1863 he did not travel through the South or to the extreme limit of the Far West. On the occasion of his last trip he did both. During his journeyings, which occupied four months and a half, he contributed a series of letters to the *Daily Telegraph*, and these letters are now reprinted, after having been revised and amplified; whilst two, describing Salt Lake City and Chicago, are printed for the first time. Both volumes are profusely illustrated; but unluckily the illustrations do not always add to the interest of the text. Mr. Sala is so pictorial in his manner of writing as to be independent of the illustrator's aid. If he had illustrated this work with his own pencil, as he could do most effectively, its value would be certainly increased. But pictures which have been prepared for another's writing, and which will be familiar to many, do not enhance the reader's pleasure. Many of them have no connexion with the letter-press. Two ought to be suppressed in any future edition. They are at the end of the second volume, and represent "Slaughtering and Skinning Cattle" and "Spearing Cattle at Chicago." What makes them the more out of place is the fact that, when taken through the stockyards of Chicago, Mr. Sala "resolutely refused to see the killing of the pigs." He gives a reason for this which is creditable to him. He says, moreover, that the remembrance of what he did witness made him, "in an intermittent manner, uncomfortable for full eighteen months." We hope, then, that he will persuade his publishers, who are responsible for the illustrations, to cancel those which must be very distasteful to him. As regards the letter-press itself, the chief criticism we would offer is that the five pages devoted to a description of the arrangements of a Pullman car could be spared. Many pages before inditing this account in his usual vivacious style, Mr. Sala writes:—

"This handsome and comfortable caravan needs no description on my part. You have seen it in full working order, both as a sleeping car, a drawing-room, and recently as a restaurant on the Midland, and as a drawing-room car on the London and Brighton Railway."

If he desired to give some novelty to a subject now hackneyed, he might have done so by comparing the ways and manners of Pullman car conductors in the United States and England. Such a comparison would redound to the credit of the English.

An example of the skill with which Mr. Sala imparts life to a topic that has little life in it may be found in his impressions of New York. So many persons have described that city that its general aspect is familiar to the readers of books of travel on the North American continent. Yet here is a true and vivid picture of what actually exists—a view of New York which may have struck other visitors, but one which has not been limned with the like fidelity and force:

"The most forcible impression on my mind was to the effect that that most frugal and ingenious people, the Dutch, had been forced by the machinations of Prince Bismarck to evacuate Holland, and had suddenly colonized the purlieus of Paradise Street, Liverpool, which by some preternatural means or other had been transported across the Atlantic. The little red-brick houses, the high 'stoops' or flights of wooden steps in front, the green 'jalousie' shutters, the handicrafts and shop business carried on in cellars, the amount of mopping and scrubbing and scouring going on, the endless procession of open drays full of corpulent little kegs presumably full of Schiedam, all at first bespoke the neighbourhood of Amsterdam, Rotterdam, or the Hague. But no; I was not in Holland. Locomotives and passenger cars are not accustomed, so far as my remembrance serves me, to whiz through the ambient air on a level with the second-floor windows in the towns of the Low Countries; and it was only when crossing one of the avenues that I began to realize the fact that I had reached the only country which as yet possesses that not very artistic-looking but still distinctly beneficial institution, an 'Elevated Railway'—America..... I had scarcely, however, made up my mind that I was in the United States when a change came over the spirit of my dream, and I found myself murmuring that surely I must be in Germany. Those unmistakably Teutonic names over the shop fronts, those bakeries, barbers, billiard rooms, shops for the sale of 'underwear,' eating and drinking houses, lager-beer saloons, bowling alleys, and corner groceries—the whole redolent with a mild perfume of sauerkraut, sausages, and Bremen tobacco, belonged obviously to the Fatherland—not, perhaps, so much to austere Berlin, or vivacious Vienna, or æsthetic Munich, or decorous Dresden, as to one of the Hanse towns. .....Yes, I was in Germany; and I awaited in fear and trembling to hear the strains of the 'Wacht am Rheim,' to see the warriors of Germania with their invincible 'pickelhaube' helmets and their irresistible needle-guns march by 'in squadrons and platoons, with their music playin chunes,' and to feel that I was a 'Philister.' Not a bit of it. We jolted round a corner. We passed by a Monte Testaccio of potatoes, of evidently Irish extraction. I saw Mike from Connemara smoking his dhudeen. Biddy M'Flinn was brushing up some blooming Newtown pippins with the corner of her woollen shawl, to make the fruit look spruce and tidy for market; and Father O'Quigly the priest passed by sleek and smiling, with a broad-brimmed hat and a black broad-cloth coat reaching down to his heels."

An illustration gives a far less correct notion of a phase of New York than this word-picture does of the aspect of the city. It is entitled "A New York Drinking Bar"; the bar-keeper is represented therein "mixing a drink" in a purely imaginative fashion. Some time ago the trick of pouring the liquor from one tumbler to another in a fantastic style was cultivated by the "mixers of drinks"; but any picture representing this gives a false impression of what would be seen nowadays in a New York drinking bar.

Far the most picturesque chapters in Mr. Sala's work are those in which New Orleans is described. Here Mr. Sala is on ground quite new to him, which furnishes him with opportunities whereof he takes full advantage. He thought it the most interesting city on the continent. Life there is unlike the life in any other city of the United States, such places as St. Augustine and Santa Fé being, of course, excepted. The approach to the city is as remarkable as the city itself:—

"For miles and miles your progress is by the side of stagnant-looking creeks and great pools of purple-brown water fringed by fantastic jungle which might be pollard and alder grown into strange shapes, but which may be vegetation peculiar to the district. The frogs, I should say, must have a 'high old time' of it in these very moist morasses. Anon the train is engulfed by the forests of the swamp. The clumps of pine cypress cluster round you, threatening baleful embraces. Most uncanny are they to look upon. It is one of the caprices of landscape gardening in the South to cut trees and shrubs into quaint and grotesque shapes, just as we in England during the Georgian era used to snip and shave and pare the yews and box trees in our gardens into whimsical forms outrageous of all the canons of good taste. Between London and Epsom, passing through Sutton, you will notice many amusing though irritating examples of this perversion in arboriculture. But they are the forces of nature, and not the disciples of Le Nôtre and 'Capability' Brown, that have bestowed the strangest of embellishments on the trees in the swamps about New Orleans. I was told by an American gentleman at Atlanta to 'look out for the morse'—so he pronounced it—as I neared the Crescent City. I was not quite certain as to what the 'morse' might be—a bird or a beast, a variety of the mosquito, a political shibboleth, or something to drink; but at daybreak I discovered that the so-pronounced 'morse' was, in reality, the moss. Some kind of lichen clothes the swamp-forests in mantles of unwholesome richness. It hangs in festoons and pendants; it droops or forms itself into jagged projections; it enlaces the tree-branches and hangs to them, and winds round the trunk, and at last, so they tell me, kills the tree."

The many sights of a novel kind which Mr. Sala saw in New Orleans furnish the substance of seven chapters. Chief among them was the Carnival, which flourishes there with a vigour unknown in Paris, whence it was transplanted to New Orleans, and which cannot be paralleled by any city of modern France except Nice. Even in Italy, the home of the Carnival, and Rome, where its traditions are best preserved, nothing so imposing is to be witnessed as the spectacle of which Mr. Sala was a

spectator in New Orleans. The characteristics of three other Southern cities, Richmond, Georgia, and Atlanta, are described in a masterly way. This is true also of Chicago, the marvel of the West, and of San Francisco, the pride of the Pacific slope.

Throughout Mr. Sala's volumes are scattered many digressions which often instruct instead of wearying the reader. In the chapter on Salt Lake City there is one of special value. Having carefully noted during his journeys the cooking from which he suffered or which afforded him gratification, Mr. Sala sets forth his experiences in the following paragraph :—

"The Far Western *cuisine* (at the hotels, I mean) is sometimes rather rough, but, as a rule, it is fully equal and very often superior to the cooking in the Northern and Middle States, while it is infinitely preferable to the detestable culinary outrages of which the traveller is the victim everywhere in the South, save in two or three restaurants in New Orleans. The general goodness of Western cookery is perhaps to be attributed to the preponderance of Germans among the cooks. In the Eastern States nine-tenths of the cooks are raw young Irishwomen, who can boil a potato, make tolerable oyster soup, and perhaps concoct a tolerable clam chowder; but who roast badly and fry abominably. A model of a beefsteak fried (she rarely attempts broiling) by Biddy, with its black fat embellished with cinders by way of gravy, ought to be a permanent exhibit in a museum of wretched cookery. I suppose the poor dear soul is too much absorbed in her duties of going to Mass and confession, subscribing to the Ladies' Land League, and bedizening herself in cheap finery, to bestow much time on the study of the culinary art."

Generally speaking, however, the remarks about Salt Lake City are not of much value; indeed, Mr. Sala has not done justice to the subject or himself in this part of his work.

In this, as in all his books, there is contained a large amount of curious miscellaneous information. Those who seek for interesting details about the United States will find what they covet, whilst they may discover many other things which they did not expect.

The History and Antiquities of Colchester Castle. (Colchester, Benham & Co.)

Colchester Castle has seen strange vicissitudes. The old Norman keep had its share of siege and storm in its early days. Protestant martyrs and Catholic sufferers for their faith have been imprisoned there; Quakers have been done to death within its walls by the long slow agony of uncared-for imprisonment; Lucas and Lisle were "shot to death" beneath its walls for holding Colchester for the king contrary, as it was said, to the laws of war; and to come to more modern times, its owner in 1726, Sir Isaac Rebow, being provoked by the conduct of his eldest son, instead of cutting him off with a shilling, left him the ruins of Colchester Castle, but nothing else whatsoever. But the most wonderful thing of all is the fate that has befallen it in these recent days. A few men have arisen (perhaps we can hardly call them a school, but their number is not absolutely inconsiderable) who have persuaded themselves and laboured hard to convince others that Colchester Castle is by no means what it seems to be—the fragment of a very grand Norman keep—but a veritable relic of old Rome, a temple built in honour of the deified emperor Claudius Cæsar. To any one who has acquired information as to what Norman keeps are like—to any one, indeed, with common observation who has seen the Tower of London or the keep of Newcastle-on-Tyne—it must be obvious that Colchester Castle is a building of the same character and of somewhere about the same date. To reason with the advocates of the Roman theory is out of the question; to endeavour to refute them step by step, as the author of the very useful little book before us has done, is, we fear, waste of time. He may rest assured that no one who understands the subject is in the least likely to go astray, and it is surely not worth while to write a learned book in refutation of every grotesque delusion that one comes across. We do not think it was at all necessary to answer this preposterous Roman theory, but it has been so utterly demolished in the pages before us that for the future no one interested in Colchester or in mediæval castles need give the least heed to it.

It is only a small part of the book that is devoted to a polemic against this Roman heresy. A good part of the rest is devoted to tracing step by step the fortunes of the great fortress from the days of William II. until it became a museum of local antiquities. Such a book might have been extended to any length. The writer has evidently been anxious to be as brief as possible, and has given us some things very shortly that we should like to have heard of more at length. He several times quotes the "Town Rolls," on one occasion as telling how in 1406 a Colchester maiden, for no reason at all as far as we can see, was carried off into the castle and tortured with thumbscrews till the blood oozed forth. He does not inform us whether these town rolls have been printed or whether he is quoting from manuscript authority. If the latter, we would suggest that the sooner they are committed to the printing press, either as a whole or in abstract, the better it will be for those who are interested in the social history of the Middle Ages. When the writer reaches the time of the wars between Charles I. and his Parliament, he shows himself to be strongly on the side of the latter. He describes the siege of Colchester in the present tense, and certainly at times overshoots the mark by introducing patches of word-painting which mar the effect of a carefully prepared narrative. A passage like the following is not only inharmonious, but singularly incorrect:

"We are looking right into Fort Rainsborough. We smile as we think of the fanatical seaman who commands it—they have transformed him into a colonel now."

The proper way of spelling this person's name is Rainborowe. What evidence the writer may have come upon as to his "fanaticism" we know not; nothing that we have ever seen renders him liable to such a charge. If by "now" it is meant to imply that Admiral Rainborowe had been made a colonel in the army because his ships had revolted some little time before, or because his services were urgently needed against Colchester, the conclusion is incorrect. He had long borne a military commission, and had served with distinction as a soldier at Crowland, Bristol, in the battle of Naseby, and other places too numerous to mention.

The Sacred Books of the East.—Vol. XVI. *The Sacred Books of China: the Texts of Confucianism.* Translated by James Legge.—Part II. *The Yî King.* (Oxford, Clarendon Press.)

Persons who visit the Tower of London will not fail to notice the scraps of carved work which may be seen on some of the chamber walls. How many weary hours were lightened in the execution of these sad trifles! A similar desire to lighten the hours of his confinement (we are told by Dr. Legge) led the lord of *K*âu, or, as he is now known to us, King Wăn, to occupy himself in prison in Yû-li with the lineal figures which compose the mysterious classic before us, the 'Yî King.' He lived in the twelfth century B.C., and ruled over the principality of *K*âu, which formed a part of what is now the province of Shen-hsî. "Equally distinguished in peace and war, a model of all that was good and attractive, he conducted himself with remarkable wisdom and self-restraint." His fate was to be thrown into prison B.C. 1143, and whilst awaiting the order for his death, which might arrive at any moment, he occupied himself in arranging the lines and writing the sentences appended to them, which have survived more than three thousand years, and are now brought before us by the author of the volume under review.

The 'Yî King,' or 'Book of Changes,' consists of sixty-four hexagrams, the component parts of which are whole or divided lines, placed one over the other in a certain fanciful order, and called by a name which in its turn suggests an explanation found in the text. In the present case, as we have said, the arrangement of the lines was the work of King Wăn, the lord of *K*âu, and the names with the explanation contained in the first sentence were his also. Appended to the enigmatical sentence forming this text are explanations of the separate lines composed by the duke of *K*âu, the son of King Wăn. Besides this there are the appendixes, reckoned to be ten, and called the "ten wings," though in reality not so many. These appendixes are not exactly commentaries on the text, though partly so; but in some cases, as, for instance, in that of the fifth and sixth "wings," they are independent treatises "on the origin of the trigrams, the rise of many arts in the progress of civilization," and other subjects. Dr. Legge has altered the arrangement of the appendixes in his work, and treated them as seven instead of ten, according to the method explained on p. 27 of his introduction.

The appendixes are generally, though not unanimously, attributed to Confucius. If he was the author of them, six or seven centuries must have elapsed after the text of the classic appeared before the appendixes were written. If this were the fact, Dr. Legge says, "the entire work cannot be regarded in its two parts as a homogeneous whole, or constituting one book in the ordinary acceptance of the term"; and therefore he doubts whether Confucius was the author of the appendixes. He gives a very good additional reason for this theory on p. 29 of the introduction. It is simply this: if Confucius had written the appendixes, the introduction of the

phrase "the Master said," which constantly occurs, would have no sense. In the third appendix this formula occurs at least twenty-three times; but how, if Confucius were the author of the whole of the matter, could he thus "distinguish himself from himself"? The conclusion of Dr. Legge is that as in the case of three of the "wings" there is no reason for supposing Confucius to be their author, possibly there is no sound reason for holding the Confucian origin of the other seven.

To revert to the composition of the hexagrams. These are composed each of a double trigram, which trigrams were originally eight in number; it is by multiplying the eight by itself that we arrive at the mystical number of sixty-four. The trigrams consist of three lines one above the other; these lines are broken or unbroken, and so arranged as to denote originally the eight points and half points of the compass. When formed into hexagrams, a name being given to each, according to the meaning of the name King Wăn explained the force of the entire figure, and each line was dealt with by his son Tan. Tan, we are told, "was a patriot, a hero, a legislator, and a philosopher." Perhaps he took the lineal figures in hand as a tribute of filial duty. What had been done for the whole hexagram he would do for each line, and make it clear that all the six lines "bent one way their precious influence," and blended their rays in the "globe of light which his father had made each figure give forth." All this, we confess, makes the subject-matter of the text more confused; for if Wăn's "globe of light" be, as it is, extremely dark, the additional rays of Tan's commentary seem to make the darkness greater.

We cannot catch the inspiration that gave to Dr. Legge "the clue to the interpretation" of this obscure book. "The written characters of the Chinese," he says,

"are not representations of words, but symbols of ideas, and the combination of them in composition is not a representation of what the writer would say, but of what he thinks."

This sentence rather adds to the obscurity of the subject. Luther used to say "that words are living things, and have hands and feet"; they are so because they are the exponents or symbols of living thoughts; in what sense then does Dr. Legge use the expression "*not* representations of words, but symbols of ideas"? It is quite possible, indeed, to catch the meaning of a picture more quickly by inspection than by description; and so Dr. Legge, by his intimate acquaintance with the picture symbols of Chinese, is able to penetrate at once the meaning of their combination or collocation; but it is plain he only does so by a rapid process in his own mind, by which each part as a separate word takes its place in the group and brings out the meaning of the whole. This, combined with a spirit perhaps somewhat philosophic, may make the thoughts of the deviser of the 'Yî' plain to the translator; we have not caught the inspiration, and confess that we do not understand either its drift or its interpretation.

But at least we learn this, that the 'Yî King' is a text in explanation of certain lineal figures and of appendixes to it; the former belonging to the twelfth century B.C., the latter to perhaps the sixth century B.C. The text itself consists of sixty-four short essays, enigmatically and symbolically expressed, on important themes, mostly of a moral, social, or political character; and the appendixes are generally expansions of the essays, couched in equally enigmatical language.

The art of divining by figures was ancient among the Chinese. It had prevailed in China for more than a thousand years before the lord of Kâu took it up, and although neither he nor his son used divination, their words became, as they were designed to be, oracles to subsequent ages, when "men divined by the hexagrams, and sought by means of what was said under them to ascertain how it would be with them in the future, and learn whether they should persevere in or withdraw from the courses they were intending to pursue."

In the appendixes it is stated that the origin of the lines and their combinations must be sought in the times of Fu-hsi (3000 B.C.). It was he who framed the trigrams, but who first multiplied these to form the hexagrams of the 'Yî' is a moot question; Dr. Legge, however, thinks that the names of the figures as we have them now date from the time of King Wăn.

The general account is that Fu-hsi arranged eight sets of trigrams after a certain method called the "former heaven" (sien thien), the due south point being denoted by *khien*, the due north by khwăn, the former consisting of three unbroken lines placed one over the other, the latter of three equally divided or bisected lines also so placed; the intermediate points, proceeding from S. to S.E. and so round the compass, were represented by lines partly whole and partly broken, and named successively tui, lî, *kăn* (khwăn), kăn, khân, sun. The order of this arrangement was altered by King Wăn, who placed the trigram lî in the due south place and khân in the north. For what reason the change was made is not known; it is called the "posterior heaven" arrangement. The scheme of Fu-hsi was suggested by a dragon-horse which came from the river Mang. This dragon-horse is said to represent the essence of heaven and earth. The marks on its body are those of the dragon, its shape is that of the horse. These marks are enigmatically represented by hollow or black circles. The hollow circles denote heaven, the black ones earth. In the north heaven produces water (a hollow circle), earth perfects this by six black circles. Then earth produces fire in the south point (two black circles), heaven perfects it by seven white ones; heaven again produces wood (three white circles), earth perfects it by eight; and so on. Dr. Legge gives this scheme on p. 15 of his introduction, and explains that these white and dark circles were afterwards changed into broken and entire lines:—

"The first, the third, and the fifth lines in a hexagram, if they are 'correct,' as it is called, should all be whole, and the second, fourth, and sixth lines should all be divided. The Yang lines, that is, the whole ones, are strong; the Yin lines are weak. The former indicate vigour and authority, the latter feebleness and submission. It is the part of the former to command; of the latter to obey."

This, however, is not the whole secret. The virtue of the hexagram consists in the correlation of the lines; the first and fourth, the second and fifth, the third and sixth, are all correlates, and to make the correlation perfect the two members of it should be lines of different qualities, one whole and the other divided. Moreover, the middle lines of each trigram, in the double figure, have a peculiar value and force—the second from the bottom, that is, and the fifth; if we have a whole line in the fifth place and a divided line in the second, the correlation is complete. Let the name or meaning of the hexagram denote for the fifth line a sovereign or a commander-in-chief, then the subject of the second will be an able minister or skilful officer, and the result of their mutual action will be beneficial and successful.

There was yet another source from which these mystic numbers or arrangement of symbols were derived. It was from the river Lo, in the time of the Great Yu, that a tortoise emerging "produced the writing." The figures on his back suggested strange theories about physics, astrology, divination, morals, and so forth, which were embodied by the hero sage (Yu) in the "great plan" of the 'Shû King.' This tortoise enigma is nothing but the arithmetical puzzle, as the Chinese themselves remark, of placing the nine digits in such order (arranged as a square) that the sum of each line may be equal to fifteen; but in the hands of the diviners the figures became indicative of changes of life proceeding from the nine mansions, and bore their share in the construction of the weighty maxims of the 'Yî.'

In the translation of the sententious clauses that accompany the hexagrams Dr. Legge has shown his usual skill. We do not pretend to follow him in his work; it seems, as far as such a subject admits of rational interpretation, to have been carefully handled and put before the reader; indeed, Dr. Legge's own statement that it took him thirty years to find out the secret of the book is a sufficient guarantee of his version being a faithful and trustworthy exposition of the original. An in telling us that "there is hardly another work in the ancient literature of China that presents the same difficulties to the translator," he is stating what every Chinese student must readily allow.

In 1876 the Rev. Canon M'Clatchie published a version of this work. His theory is that the Yang and Yin principles in the Confucian or earlier books of China denote the male and female principles in nature, and that the Chinese philosophy is a fabrication of fables or analogies derived from the intermingling of these principles. Dr. Legge happily says, "Such things never entered into the minds of Chinese scholars"; and we quite believe him. However mystical or magical this philosophy may be, it is certainly free from the folly of the nature cult in its worst sense; it puzzles us and amuses; but the Chinese do not shock us in their wise meanderings.

M. Terrien de Lacouperie has struck out a new path for himself. He thinks that he can explain some of the mystical sentences of the 'Yî King' by reference to the Accadian. Whatever his method may be, one thing at least is certain, that divination by geometrical figures was in use

by the primitive magicians of Chaldæa, derived from Accadian civilization; and the tablets of Fu-hsi may not, after all, have differed in their origin from the rudely drawn plans or geometrical figures of the tablets of Larsa. But although this may be so, it will require much ingenuity and corroborative evidence to connect the wise saws of the duke of *Kâu* with the divination of the primitive settlers on the plains of Shinar.

The History of Rome. By Wilhelm Ihne. English Edition. Vols. IV. and V. (Longmans & Co.)

In these two volumes Dr. Ihne concludes his history of the Roman Republic. The fourth and fifth volumes have the same merits and are liable to the same criticism as the previous parts of the work. Dr. Ihne always shows a competent knowledge of the subject. He has studied the sources with care and skill, he has made himself acquainted with modern books dealing with the history and government of Rome, he displays marked independence of judgment, he is animated by a love of justice and goodness, and he narrates and discusses in a style calculated to arrest the attention of the reader. At the same time the reader is impressed by the writer's tendency to see one side in too strong a light. He takes a liking for certain characters and certain notions, and his judgments are influenced by this special interest. But as he is genuinely anxious to be impartial, these favourable judgments are qualified in a subsequent page, and statements thus occur which approach being contradictory of each other.

Thus in these volumes Dr. Ihne brings out prominently the idea that Rome owed its greatness to the senate. "This organ," he says,

"was supplied by the senate, which in course of time attained to a degree of excellence unequalled in any other nation of antiquity, and which contributed more than any other part of the Roman constitution to raise the state to its high and powerful position. The senate was in truth the soul of the Roman body politic; and at all times the fortunes of the community depended upon the healthy condition and the civic virtues and wisdom possessed by this assembly."

Again, he says:—

"The Roman senate was a political organism of the highest perfection, such as no other state in antiquity ever created or was qualified to create."

But this body practically represented the nobility, as Dr. Ihne allows. What is the character which our historian gives to the nobility? In one passage we are told, "In the whole history of the world the Roman aristocracy never has had its equal"; in another, "No government, except that of the Turks, has ever equalled the system of unscrupulous plundering carried on by the ruling classes at Rome"; and in another of similar import Dr. Ihne says:—

"The neglect of the state in the administration of public lands produced a systematic dishonesty in the ruling families with regard to public property, and nourished that spirit of cupidity, rapacity, and violence which has always been a peculiar feature of the Roman nobility. Their selfishness, cruelty, and overbearing increased with the extension of the Roman dominion, and became, in the end, fatal to the conquered nations and then to the conquerors themselves."

It would be unfair to Dr. Ihne to affirm that he never sees that such statements need reconciliation, but he certainly leaves his readers in wonderment how a body of men so selfish and unscrupulous could become a perfect instrument of government.

This affection for the senate seems to bias his judgment of the principal characters that appear in his book. He praises the Gracchi:—

"They had an object in view, which they tried to realize without the least motive of selfishness or personal interest, animated exclusively by an ardent sympathy with their suffering fellow citizens and an intense patriotism."

But he stigmatizes both of them as demagogues, he calls Tiberius a fanatical reformer, and he accuses them of undermining the very foundations of the republic. And why? Because they transferred the judicial power from the senators to the knights, and because "they had broken the power of the senate and restored the sovereign rights of the people."

Still more markedly does Dr. Ihne show his antipathy to Marius and his affection for Sulla. For Marius he has no apology to make. His frenzied atrocities have "exposed the democratic party and himself to the detestation of the world." Sulla also committed great crimes, and in one or two passages Dr. Ihne, striving after impartiality, has denounced them in the fiercest language. But for most of his actions Dr. Ihne can always find some excuse. He acquits Sulla of vulgar selfishness, and therefore refuses to place him

"on a level with those scourges of mankind who in ancient or modern times have sacrificed the happiness of nations to their criminal selfishness."

And he sees in Sulla's proscription lists "a means whereby indiscriminate slaughter was averted" and "private passions controlled." When he praises him his language is unmeasured. Nothing "that any Roman general had ever accomplished before," in Dr. Ihne's opinion, can be compared with the operations of Sulla in the East. The same unconscious partiality is obvious in all that Dr. Ihne says of Marcus Porcius Cato, to whom he has evidently a bitter antipathy because he urged the destruction of Carthage.

Another feature of this history is the writer's readiness to judge an historian's statements by what he deems their internal probability. We take one instance. Livy narrates that Hostilia was accused of having poisoned her husband the consul, and adduces especially the circumstance that when her son Flaccus, by another husband, failed in obtaining the consulship, it was said that she reproached him with his failure, and added that he should prepare himself for again being a candidate, and that she would find a way to getting him elected consul within two months. "Among many other testimonies," says Livy, "bearing on this case, this utterance, too surely confirmed by the event, had special influence in causing the condemnation of Hostilia." Plainly there was a regular trial, witnesses were examined, and particular stress was laid on Hostilia's conduct towards her husband and son. Dr. Ihne rejects the whole story, and thus comments upon it:—

"The charge is in itself so absurd that we should be inclined to think it was never seriously preferred, if it were not to a certain extent characteristic of the credulity and malignant scandalmongering in which the Roman people at all times delighted."

The favourite epithet which Dr. Ihne employs to throw discredit on a story is "silly." "The story of the slave is too silly to deserve attention." "The owner of Manius must have been the silliest man in Rome." "Is it possible to imagine anything more silly?"

It is especially in dealing with Sallust that Dr. Ihne applies this criterion of internal probability. The narrative of the Jugurthine war comes within the period of which Dr. Ihne treats, and he proceeds in his use of the statements of Sallust on the principle that the historian is always to be suspected. As he cannot array opposing authorities, he has recourse to his own idea of what the facts should have been, and without hesitation discards Sallust's most positive assertions. Sallust affirms that men of Italian origin were put to death at Cirta. This statement Dr. Ihne characterizes as more than doubtful, and says, "We are convinced that the whole story of the wholesale murder of these men was invented." Sallust asserts that Metellus defeated Jugurtha. Dr. Ihne thinks that he can see without difficulty that the merit of Metellus consisted in barely escaping a great disaster, and in a note on this passage he gives an historical apothegm which will excite surprise: "The transformation of a report essentially correct into a deliberate lie is generally gradual."

Frequently Dr. Ihne distorts Sallust's statements by putting a meaning into them which does not belong to them, and then drawing inferences from this meaning. Thus Sallust states that Jugurtha caused Hiempsal to be murdered. Dr. Ihne remarks that this was "probably a crime committed in self-defence." He bases this remark on the character of Hiempsal, whom he describes as "violent and savage." The only authority for this is found in the words of Sallust, "natura ferox"; but these words mean nothing more than that he was naturally high-spirited, and there is nothing in them to indicate savagery or vice. Again, Sallust asserts that Memmius "persuaded the people to decree that Q. Cassius should be sent to Jugurtha, and, giving him a pledge of his safety from the people, should bring him to Rome, in order that the more easily through the information of the king the delinquencies of Scaurus and the others who were accused of bribery might be brought to light." Dr. Ihne interprets this passage to mean that Jugurtha was invited to come to Rome to give information against those whom he had bribed. And then he adds the remark, "We cannot omit expressing our grave doubts of its accuracy. Sallust is so often notoriously guilty of gross negligence," &c. Now the words of Sallust imply only that it was the intention of Memmius to use Jugurtha as an informer. Sallust does not say that Memmius revealed his intention to Jugurtha, much less that Jugurtha was induced to come for that express purpose. Jugurtha had surrendered himself. The Roman people determined that he should be brought to Rome that they might have an opportunity of getting at the bottom of the infamous transactions of which they heard so much, and Jugurtha

came because he could not help himself, and probably he did not object to come because he had full confidence in his power of bribing the dominant party.

Dr. Ihne is not less severe with other historians, ancient and modern, of Rome, and speaks in strongly derogatory terms of Mommsen as well as of Tacitus and Appian. In fact, he has intense antipathies and does not care to be moderate in his language, as when he styles Louis Blanc an incurable monomaniac. But these peculiarities rather add interest to his narrative. Dr. Ihne writes with the feelings of one who is following the course of modern politics with keen zest, and he has thrown side lights on many of the problems of ancient history by his knowledge of the current of modern events. Indeed, the faults to which we have alluded prevent his book from taking the highest rank among histories, but they add a relish to the ordinary matter of history and stimulate, if they do not instruct, the reader.

Jews as They Are. By C. K. Salaman. (Simpkin, Marshall & Co.)

Of late years many circumstances have combined to attract attention to the modern Jew. Lord Beaconsfield and 'Daniel Deronda,' Emanuel Deutsch and Sarah Bernhardt, Judge Hilton and the *Judenhetze*, Prof. Goldwin Smith and the excesses in Southern Russia—these names and events will recall many an interesting episode connected with what may be plausibly termed the most anomalous personage of modern times. The name of Jew is associated at once with religion and commerce, with music and philology, with dreams of the past and future and very practical dealings with the present. A more curious compound of an historic "survival" and a nineteenth century institution can scarcely be pointed out than the modern Jew as he lives and moves among the unselect.

By his collection of essays Mr. Salaman has scarcely satisfied the natural curiosity about such an anomalous being. His aim has apparently been to prove that Jews as they are are not very different from other people. If he had been successful, he would have removed the mystery which still lingers round the modern Jew, notwithstanding that he has doffed the gaberdine and donned broadcloth. He is content to answer Prof. Goldwin Smith's query, "Can Jews be patriots?" by triumphantly pointing to the Master of the Rolls and other Jewish gentlemen who have risen amongst Englishmen to posts of much honour and emolument; but he has scarcely faced the crucial question whether an English Jew feels more at one with a German or French Jew than with his fellow citizens. In an essay on the Jewish clergy he has shown by specimens that their sermons reach respectable rank in that class of literature; but he has failed to touch upon several topics which to most minds would be suggested by such a subject. How far have the Jews been touched by modern rationalism? M. Renan has said in his own way that the Jew, who has given God to the world, believes least in Him. Is this in any way true of English Jews, about whom Mr. Salaman writes? He is silent on this point. Again, the reader is not told how far Jews as they are still practise the quaint Talmudic customs which have done much to preserve their separateness. In what light modern Jews regard Christ, whether they still hope for the return, how far intermarriage has progressed among them, why they are eminent in music and acting and so mediocre in the other arts—all these and a thousand other questions which occur to one concerning the modern Jew are left unraised, unanswered, and unexplained by Mr. Salaman. He has instead given us an essay—interesting in its way, though scarcely novel—on the sources of Shylock, omitting, however, all reference to the trial of Lopez, Queen Elizabeth's physician, with which the play has been of late years connected. The remainder of the book gives an abstract and brief chronicle of the interesting events relating to the Jews of England that have occurred during the past half century; an account of the Russian persecutions of the last year; usury in the Middle Ages, as practised by Popes and Cahorsins as well as Jews; and a thoroughly justified protest against attempts at conversion. This *olla podrida* cannot but have some points of interest to any reader, but it fails to satisfy legitimate curiosity on any of the points we have referred to above. It is especially to be regretted that the composer of such charming songs has not touched upon the interesting topic of Jewish music. Wagner's assault upon it *à la mode de Schopenhauer* is not yet forgotten or, probably, forgiven, and it would be worth while hearing the other side from one who knows so much both about music and the Jews as Mr. Salaman. We would express the hope that in any future production Mr. Salaman may devote himself rather to some such task as this than to the disillusionizing work of rendering Jews everyday persons. In this prosaic age we cannot afford to be robbed of the slightest prospect of the romantic or the incongruous.

Rosmini's Philosophical System. By Thomas Davidson. (Kegan Paul, Trench & Co.)

This book has great merits and great defects. It has the merit of introducing us to a thinker whose very name will be new to the majority of educated Englishmen; the translation, of which it in great part consists, is excellently done; it contains an interesting sketch of Rosmini's life, and a bibliography of all his works and of books on his philosophy; it is very well got up—altogether the student of Rosmini will find it indispensable to him. But at the same time it has the defect of being too long; the notes overlay the text; they are full of so much learning that the critic is afraid to skip them, but he finds them harder than that which they are intended to explain. We are afraid our advice to a reader of Mr. Davidson's work must be that he should read the introduction and the text very carefully, and resolutely skip the notes, reserving them till he has mastered the text irrespectively of them.

Rosmini was born at Rovereto, in the Italian Tyrol, on the 25th of March, 1797. He came of old and noble families both on his father's and his mother's side. In 1820, on the death of his father, he inherited considerable property, and in 1821 was ordained priest. About the year 1828 he founded the order which bears his name, and in 1830 published his famous 'Nuovo Saggio sull' Origine delle Idee' ('New Essay on the Origin of Ideas'). Of this work Mr. Davidson tells us that it "established his reputation as the ablest Catholic philosopher of his time, and was almost immediately introduced as a text-book into many schools and seminaries, even, it should seem, into those under control of the Jesuits." From 1830 to 1837, continues Mr. Davidson,

"he worked into clearness the plan of his great system of truth and partly executed it, at the same time labouring to find a footing for his order; from 1837 to 1848 he enjoyed as much happiness as usually falls to the lot of mortals, all his plans seeming to promise realization; from that time to 1855 [the year of his death], though he pursued his schemes with unabating vigour, he was doomed to drink to the dregs the bitter cup of misrepresentation and slander."

During the troubled times of 1848 the Piedmontese Government, being in need of the countenance and aid of the Pope for the prosecution of the war with Austria, sent Rosmini to Rome, as special envoy to the Holy See. There seems to have been some confusion or misunderstanding as to the object of the mission. "What the Piedmontese Government contemplated," says Mr. Davidson, "was an armed alliance of princes capable of offering immediate opposition to the Austrians; what Rosmini meant to labour for was a permanent confederation of states, with the Pope as *ex officio* president. The Government, however, was induced by Gioberti to adopt for a moment Rosmini's plan." Then it thought better of it, and left him without instructions, till after seven weeks he resigned.

A few weeks afterwards, on the assassination of the Pope's minister Rossi, the Romans endeavoured to compel the Pope to appoint a Liberal ministry, and suggested Rosmini as one of its members. The Pope, "reluctantly yielding to force, nominated the ministry desired, conferring the presidency of it on Rosmini, with the portfolio of public instruction." Rosmini, for some reason or other, declined to act, and from that moment his influence with the Pope ceased. His enemies, and they were many and bitter, procured the condemnation of his recently published works, 'The Constitution according to Social Justice' and 'The Five Wounds of the Holy Church.' Rosmini submitted without a protest and offered to withdraw them from circulation. This, and the growing favour with which his system was regarded, roused still further the malice of his enemies, and they began a systematic course of calumniation, which might have succeeded if the Pope had had less personal knowledge of Rosmini himself. As it was, his traducers overshot their mark, and the matter ended with the Pope's enjoining perpetual silence on Rosmini's enemies, and declaring, after careful examination of his published works, that no obloquy should attach either to him or to the institution which he had founded. Rosmini unfortunately did not live long to enjoy the satisfaction which this victory afforded him. He died at Stresa, on the Lago Maggiore, on the 1st of July, 1855, not without suspicion of having been poisoned.

Such is the outline of the life of this re-

XUM

markable man. Of his philosophy it is more difficult to give even an idea within the brief limits at our command. He begins by defining philosophy as the science of the ultimate "why"; as that which attempts to set at rest the last questions which it is in the power of the human mind to ask. This general philosophical science he divides into sciences of Intuition, Perception, and Reasoning, the first two forming the formal and material conditions of the last. Intuition embraces the two fundamental sciences of Ideology and Logic. Perception comprises Psychology, Cosmology, and the physical sciences generally, while Reasoning produces Theosophy or Ontology and Deontology. A glance at Mr. Davidson's table of contents will suffice to show the vastness and multiplicity of the subjects contained in Rosmini's system. Here we can only say a word about Ideology, which as treated by him strikes us as bold and original. Ideology, as the name implies, means the science of the problem of ideas, and is regarded by Rosmini as the foundation of the whole edifice of thought. He believed that on the true solution of the problems of ideas depended the truth of the whole philosophical system as a system. It was to demonstrate that his solution was the true one that he wrote his masterpiece, the 'New Essay on the Origin of Ideas,' already mentioned above, a translation of which we are glad to learn is about to appear in English shortly.

The 'Sistema,' of which Mr. Davidson has given a translation, was a compendium of his philosophy, written by Rosmini himself for the 'Universal History' of Cesare Cantù. Its main purpose is not so much to explain Rosmini's system as to induce its readers to study the larger works in which that system is explained more fully. Mr. Davidson has attempted to supplement the brevity of Rosmini's compendium by copious extracts from some of these other works; but on the whole we think, as we have said above, that this has been overdone. Nor can we bring ourselves to accept some conclusions as stated by Mr. Davidson, though whether in these he represents, as he seems to think, the true mind of Rosmini, it is difficult to decide. Our aim is simply to direct the attention of our readers to a work and a system of thought both of which appear to be deserving of serious attention.

Ottoman Poems. Translated into English Verse in the Original Forms, with Introduction, Biographical Notices, and Notes, by E. J. W. Gibb, M.R.A.S. (Trübner & Co.)

Mr. Gibb remarks that, notwithstanding the interest which is exhibited in Turkey and the Turks, nothing is known of their poetry, although it constitutes a large and recognized school in the annals of Oriental literature. Indeed, except Mr. Redhouse's short essay, there was nothing to be found in English about the subject before this volume appeared. This is not surprising. We do not account for it as Mr. Gibb does by the difficulty of the Turkish language, for the difficulty is not so great and our scholars are familiar with languages which are harder to master than Turkish can be. Neither do we attribute it to the other assigned cause, that Turkish poetry is only secondary, being founded on the imitation of Persian; for, as Mr. Gibb says, Latin poetry is studied, although it is modelled on the Greek. A good and sufficient reason is that English people have great and pressing demands upon them which tax their attention. We have our home and colonial policy, our intercourse with America to engage us, and a large participation in the enterprise of the world, which embraces scientific invention and investigation, and which is brought home to us in the converse of daily life. We see daily before our eyes the materials of which history is made and books are built up, and it is therefore by no means easy to take an interest in everything. If Englishmen read and write fewer books than some other peoples do, it is by no means from want of intelligence, but it is because England takes a more active share than Germany in the progress of the world.

Mr. Gibb, however, has met a want, and this is shown by the way in which his book has been produced. He has had the co-operation of a considerable body of subscribers, and no doubt in time he will likewise obtain the support of the more general public. If Von Hammer-Purgstall has been able to devote a great work to the 2,500 recorded poets, or, it may be, poetasters, it must be remembered that Turkey has for over three centuries held a prominent position on the Danube, and that Hungary and Austria have had ample reason to know her.

For us Mr. Gibb has given a sufficient survey. He explains the nature of Turkish classic poetry, and gives specimens in his own verse of poets and poetesses down to our own day. Much of this matter is technical and concerns only the specialist, nor, perhaps, will many be attracted by Mr. Gibb's translations; but the book may be perused with great interest by the more general student, and it will not frighten any reader. It reveals a picture of literary endeavour unfamiliar to us because it is so remote from our own ideas. It shows, too, in what varied shapes the intellectual life of a people presents itself. It is true that the peculiar form of these compositions is greatly due to the pervading influence of Islam and to the imitation of Persian poetry already referred to, but there is something in the genius of the Turks themselves which allows them to assimilate these mystical conceptions and to adopt a like treatment of language. If Mr. Gibb begins five centuries ago, and gives specimen after specimen age after age, it must be borne in mind that at this very day the same literary system and workmanship are in full vigour. In the stray notices in the *Athenæum* will be found the only popular record of Turkish literary life, and it is but lately that we mentioned the almost daily appearance in the *Vakit* (the *Times*) of a *gazel* by one of the busiest of Turkish statesmen, Munif Pasha. Mr. Gibb might have added more about modern poets, of whom he only names the late Ziya Bey.

In this sense Mr. Gibb's volume is a curious study of Turkish life. He supplies a chronological table of sultans, scrupulously marking all those who are recorded as poets, and those so marked outnumber those unmarked. The biographical notices show that the poets are taken largely from the political class or were engaged in public life. The casual details supplied regarding poetesses will be interesting to the reader and make him wish that the author had given more in illustration of the position of women in Turkey, so much misapprehended abroad. The biographical notices and the notes are so written that they form an attractive portion of the book, but it is to be regretted the notes are thrown together at the end.

Of the way in which Mr. Gibb has performed his task a critic must speak with some reserve, unless he possesses the intimate knowledge of the subject of which Mr. Redhouse and the author can boast. Besides, the poems are given in translation, but not in Turkish. So far as we can judge by the first line, given in Turkish for reference, Mr. Gibb has conscientiously carried out his promise of faithfully reproducing the original, as far as the transference to verse in another language admits of it. We can, however, with more confidence refer to the fact that Mr. Gibb has had the countenance of that distinguished scholar Mr. Redhouse, who has permitted the book to be dedicated to him.

We have called the work illustrative of Turkish classical poetry, and we have done so expressly. Mr. Gibb hazards the conjecture that the popular ballads may possibly exhibit a distinct national spirit (p. xxxii). We go further, and, believing that they are worthy of study for such a purpose, we regret that, as he says, there is no recorded information with regard to them. They are heard throughout the length and breadth of the land, and they find their way into every house. The tales of the story-teller, although better known, have perhaps exercised less influence in the past, and we may be able to show that, as in some other countries, the popular poetry has affected the classic. Thus as to the imitation of Persian forms, it is to be explained still better by assimilation, because assuredly the Turkish language, modelled on the cardinal law of euphony, did not require to learn the resources of alliteration from the Persian, but rather eagerly seized on and applied them.

The future of Turkish poetry will be affected by the popular forms. The classic style will be abandoned. Following the impulse to the simplification of the language given by high authority, the infant theatre has been from its beginning popular in its language.

This is a subject for the speculation of the student; but there is another, which is wider than Turkey and the Turkish, and that is, that in the whirligig of time and in the repetition of history the Turanian languages are again occupying the world. We do not speak of the Basque tongue, far older than its Indo-European neighbours, but more particularly of the East Turanian languages, commonly treated as new-comers and intruders, to be expelled from the European borders, but which can likewise boast of a most remote antiquity. It is, however, to be remarked that Turkish, Magyar, and Finnish are now in definite literary positions, and are remodelling themselves and freeing themselves from the bonds of Persian or Arabic, of German, and of Swedish. It

may happen, even as Netherlandish and Flemish are now combining, and seeking a union with Low German, there may come about an association, but less intimate, of the Eastern Turanians or Ugrians. Indeed, that approximation of the Magyars and the Finns is already commencing.

It is strange that in this day, when not only Semitic studies but Indo-European are at their height, we may look for the displacement from their scholastic realm of the Greek and Latin, leaving space for the development of others. This, to some extent, is filled by the expansion of English, with its hundred millions of speakers, of German, of Spanish, and of Russian; but we can see a greater prominence given to the non-Indo-European vernaculars of the Indian peninsula, to Chinese, to Tibetan, and to the newly known Japanese. What, however, at present strikes our attention is that the dead Turanian languages are coming under notice. The hieroglyphics have revived the defunct Coptic, but the progress of Babylonian discovery, if it has given to the Semitic domain Assyrian, has bestowed a more promising endowment upon the Turanian in the Accad or Sumerian, and with this tongue of ancient civilization Turkish and its Ugrian congeners come most in connexion. It is not, indeed, beyond expectation that as Turanian studies gain in importance and in recognition, Turkish itself may meet with greater favour, and its philological importance commend it to the attention of scholars.

Chap-Books of the Eighteenth Century. With Fac-similes, Notes, and Introduction by J. Ashton. (Chatto & Windus.)

THE chap-book was not originally a product of the eighteenth century, nor were its marvellous woodcuts primarily due to the artists of that age. In fact, those publications were beginning to go out of vogue before the middle of this period. The amusingly characteristic blocks which Mr. Ashton has reproduced were often of very considerable antiquity, and must have yielded impressions so numerous as to be worthy of the envy of printsellers of our day. We have traced through more than a century of publication the use of blocks that were issued with ballads and tracts of all sorts, often with courageous indifference to the letter-press they adorned. Their successive increase betrays the number of times that they were taken to the press, and the multiplication of worm-holes in the wood the length of the time that the blocks themselves rested on shelves unused. These blocks being mostly of pear wood—box was not then in vogue—were liable to worms' attacks.

A long succession of ballads, broadsheets, and chap-books like those for which we are indebted to Mr. Ashton, show the changes, mostly condensations, which texts originally bulky were made to suffer. The Wandering Jew, Nicodemus, Dr. Faustus, Mother Shipton, and Reynard the Fox attest the love of our ancestors for the marvels of magic and the supernatural. The legends of Sir Bevis, St. George, and Guy of Warwick are gems of this kind, which were reduced by gradual cutting and recutting, yet are still of considerable length. But the 'Travels of Sir John Mandeville' have been "boiled down" with modern ruthlessness; 'Robinson Crusoe' has suffered a sea-change so great that not even Xury, the Moorish boy who, after having delivered his friend from captivity, was sold to the slave dealers, would know him again. The 'Story of Miss Davis,' of whom there is a delicious cut in the costume of 1730–40, is not, of course, Defoe's, although it bears a similar name, and the use of the cut proves how long it had been in vogue, exactly as the costumes of the Commonwealth which occur in the illustrations to 'Captain James Hind' show that fashion demanded the copying of old cuts when they could no longer be made to print legibly. A very large proportion of the cuts display costumes of the seventeenth century; some of these illustrate the sixteenth century, a period during which the dresses of the fifteenth century were still in vogue, exactly as the hats of the Welsh women of our own time are survivals of the old Puritan array.

In many instances Mr. Ashton has wisely reprinted only the heads of his texts, with fac-similes of the titles; nevertheless we fail to see the use of a considerable number of these repetitions in this curtailed condition. To the 'Trial of Sir John Barleycorn' we should, had the compiler's limits allowed, have liked to find added all the noble old versions of that renowned ballad, which are immeasurably superior to the modern versions, although Mr. Ashton includes a fine one from the British Museum, 'Roxburghe,' i. 347, which had been repeatedly printed before. The custom of mocking the Welsh is one of those curious vagaries of the popular mind which this and similar collections reveal. The King's Tracts in the British Museum abound in chap-books and flying sheets which seem to show that this vein of mockery attained its greatest development before and during the Civil War, when Welsh troops were defeated at Edgehill, and their local magnates espoused the Royalist side in considerable numbers. Thomas Lambert's issue, called 'The Welch-man's Life, Teath, and Periall,' and 'The Welch Man's Inventory,' both published in 1641, showed which way the vanes of popular opinion pointed. The provincial manners and poverty of the sons of St. David were the staple subject of all these satires; and it is noteworthy that the typical native of the Principality of 1641 wears a long gown trimmed with fur, like those used in England in the fifteenth and sixteenth centuries. The custom of attacking him is older than that of abusing the Scotch. The Welsh are always made to speak a "mountainous language" and display astounding ignorance. For instance, 'The Life and Death of Sheffery Morgan' relates with grotesque humour how that worthy, going into a shop in Lombard Street, not to spend but to change a shilling, saw "an old jackanapes" chained upon the counter, and took the beast for the shopkeeper's father. Although Mr. Ashton prints this and its fellow tract among chap-books of the last century, it is at least one hundred years older than 1700, and only its popularity and survival excuse its appearance in this volume. In the same way 'The History of the Blind Begger of Bednall Green,' although dated 1715, may be traced, even in the form here presented, to a much more remote time. It includes a cut representing "Young Monford riding to the Wars," and attired like Charles I. Mr. Ashton correctly says that this cut "is more likely to represent Prince Rupert and his 'dogge Pudle'" (poodle). This dog of "Prince Robin"—or "Prince Robber," as the harried country folks of the Midland Counties named the man who introduced the plundering habits and cruelties of his German relations into England — is often delineated in tracts. The beast was "a white dog called Boy," and is mentioned in many a tract, *e.g.*, 'The Bloody Prince,' 'Rupert's Sumpter,' 'A Dog's Elegy,' 'The Welch Embassadour,' and others, all of which are in the British Museum. He was the dog Cleveland made immortal in 'Rupertismus,' which describes with savage glee the alleged terrors of the Puritans with regard to the "bloody prince" and his dog:—

They fear the Giblets (gibbets?) of his train, they fear
Even his dog, that fowr-legged Cavaleer:
He that devowres the scraps that Lunsford makes,
Whose picture feeds upon a child in steaks.

This "picture" of Col. Lunsford is another satirical print of this kind. For Lunsford and the dog see Eliot Warburton's 'Prince Rupert and the Cavaliers,' 1859. The people hated "Boy" so bitterly for his abhorred master's sake, that when the beast was slain at Marston Moor, July 2nd, 1644, the chap-book called 'A Dog's Elegy' was published with a cut on the title-page representing a Commonwealth soldier shooting a dog; and the text in a vigorous picture described the prince's grief and wrath:—

How sad that Son of *Blood* did look to hear
One tell the death of this shagg'd *Cavalier*,
Hee rav'd, he tore his Perriwigg, and swore,
Against the Round-heads that hee'd ne'er fight more.
Close couch'd as in a field of *Beanes* he lay
Cursing and banning all that live-long Day;
Thousands of Devills Ramme into Hell!

This is the close-shaved poodle which appears at the side of young Monford while his master trots across the "tented field." "Boy" lies dead in the 'Elegy,' British Museum Library, E. 3/17, and in the 'Sumpter,' E. 2/24. The former is inspired by an astounding hatred of the plundering but picturesque prince, the queen, her mother, and many of the Royalist leaders.

As we have already said, a large proportion of the cuts and chap-books described in this volume belong to an earlier period than the eighteenth century. The seventeenth century, to which they owe their origin, offers to diligent searchers a far richer field than that which Mr. Ashton has zealously cultivated. By way of showing its value as illustrating the times, let us say that no one of our own day can have a just idea of the bitterness of the hatred Laud had earned for himself and his master unless he has studied the tracts and chap-books which were in everybody's hands during the contest; they show the direction and force of public opinion. The British Museum contains a prodigious pile (officially estimated at thirty thousand in number) of them—a pile which Thomas Carlyle absurdly called "rubbish heaps," an ungrateful epithet to be applied by one who owed not a little to the treasures he had but half examined. They retain vital heat to this day; and the man must be dull indeed and deeply pre-

XUM

judiced who can take up one of them and not perceive the glow of life which is in it yet. Macaulay made much juster as well as more faithful use of these chap-books than Carlyle did. Enough remains for half a dozen Carlyles to sift. We think Mr. Ashton or an antiquary of deeper knowledge would do well to make a book out of the materials of the "rubbish heap." A book of the kind now before us would serve as an introduction to a mass which was thoroughly examined for a particular purpose when the 'Catalogue of Satirical Prints in the British Museum,' vol. i., was prepared. This catalogue is a key to one large group of these books, but it is confined to that one. Hollar's large etching, 'The World is Rvled & Governed by Opinion' (Parthey, No. 490; Satirical Print No 272), comprises a Tree of Public Opinion, the leaves of which are formed of these chap-books.

Among the chap-books in this collection which are older than the eighteenth century is 'The History of the Two Children in the Wood,' which is adorned by a cut representing, in the manner of many Egyptian and early Italian and Dutch paintings, not only the catastrophe of the ruffians, but the death of the innocents, the hanging of the murderer, and even the destruction of his cattle by murrain. Bewick probably looked with zest and deep fellow-feeling on the designs of the woodblocks which came from that wonderful repertory, the publisher's house in the yard of the church of St. Mary, Aldermary, London, whence during many decades issued countless works of this class. Two of the three cuts from one of them copied here are highly meritorious in their way, the third is puerile. A large number of the texts and cuts before us are wretched things, actually not worth copying. The stupidity of the version of Æsop's Fables here described is very great; and so is that of 'The World Turned Upside Down.'

The most illustrious of all the chapmen, if such he can be called, who, although gifted like his fellows with an amazing flow of words, was not a peripatetic, was Sir James Hodges, Town Clerk of London, from whose shop, "The Looking-Glass," on London Bridge, issued a great mass of chap-books, such as 'Jack the Giant Killer,' 'Long Tom,' 'Mother Shipton,' 'Mother Bunch,' and 'The Old Woman of Ratcliff Highway.' His flow of talk was commended by Dr. William King in 'Anecdotes of his Own Times,' and he is frequently mentioned in civil and political history of the middle of the last century. His enemies described his talk as a hodge-podge, a term which the reports in the morning papers of April, 1757, amply justify when they quote specimens of it (see 'The New Foundling Hospital for Wit,' 1769, vol. ii. p. 71). Sir James himself figured in that strange procession of civic dignitaries who, to the immeasurable disgust of the populace, waited on Lord Bute with an address, May 12th, 1763, which is referred to in Churchill's poem 'The Ghost,' iv. 354. Hodges's horse bears a hornbook between his ears, and the knight himself carries aloft on a pole two open chap-books and a scroll of ballads, in the Satirical Print No. 4056, which professes to be "An Exact Representation" of the cavalcade, and of some of the disastrous incidents which attended its progress. Mr. Ashton does not mention Hodges, but he pays due attention to Dicey, who flourished in Aldermary Churchyard and Bow Churchyard.

NOVELS OF THE WEEK.

Jobson's Enemies. By Edward Jenkins. 3 vols. (Strahan.)
Proper Pride. 3 vols. (Tinsley Brothers.)

So long a time has elapsed since the publication in serial parts of 'Jobson's Enemies' came to a premature close, that it seemed destined to a place beside 'Denis Duval,' 'Wives and Daughters,' and other works of fiction left by their authors to tantalize posterity. We hope that its appearance in a complete form may be taken as evidence that the ill health which, as it was understood, compelled its suspension, has passed away. At the same time, to perpetrate a bull, if they had known how very tragic the end of poor Jobson was to be, Mr. Jenkins's readers would almost have preferred to be left in ignorance of it. No doubt the opening words of the story give a hint of disasters to come, but hardly of their extent; certainly not that the worst of Jobson's enemies were to be they of his own household. Those familiar with Mr. Jenkins's former books will notice, perhaps with some satisfaction, that in his present one he has, to a great extent, abandoned the line on which he has hitherto worked, appearing more as a story-teller pure and simple, and less as a reformer of social or other abuses. He has, no doubt, a slap at the publishers, and both branches of the legal profession, the solicitors especially, come in for some severe treatment, one long episode being introduced, as it would appear, solely in order to illustrate their malpractices; but as a whole the story has no moral beyond what every decently constructed tale of human life is bound to have. The general lesson which the author desires to teach seems to be that a great career may be ruined from despicable causes, and that a man who wishes to get on should not be too uncompromising. But, after all, neither the hostility of his enemies nor his own perfervid denunciation of abuses would have ruined Jobson without the help of an unwise speculation into which he let himself be drawn. The fault of the book is a certain want of compactness. The story is full of characters who disappear from it, and incidents which have not much effect upon it. The early history of the hero is told at disproportionate length, but affords an opportunity for some amusing description of the humours of a small Canadian town fifty years ago or so. A good deal of the fun after the hero is brought to England is dreary enough. There is a dreadful lawyer's clerk, whose appearance on the scene is always the signal for some third-rate Dickens—perhaps the most depressing of all styles. The use of "to architect" as a verb seems Transatlantic, and there are other words in Mr. Jenkins's volumes that are by no means above suspicion. Jobson's verses are pretty, but not always strictly original.

Proper pride is often an unamiable quality; and it is exhibited in its worst form by the leading actors in the story of that name. They gratify themselves in its indulgence by neglecting every means of coming to an understanding which would render it unnecessary. As becomes the hero of a cavalry novel, Sir Reginald Fairfax is a dark gentleman, somewhat of the Guy Livingstone type, a first-rate officer and *beau sabreur*, given to introducing the devil a little too often into ordinary life. He is always congratulating himself on his unbending will, when a little reason would be more to the purpose. The lady of his affections and ruler of his hearth is of course beautiful as the day, and, to promote harmony, brings the element of Irish blood and a somewhat Irish temper to the domestic complications which are liberally provided. For a young person of such independent character, Alice Fairfax is far too susceptible to the insinuations of the suspicious old lady who has acted as her duenna and becomes her chief adviser in the early days of her marriage. The result is a very pretty misunderstanding, which the proper pride of husband and wife forbids them to remedy by reconciliation, even when the fabrication on which it is based has been thoroughly exposed and demolished. The result of the quarrel, for the purposes of the story, is the expatriation of Sir Reginald to India, where he joins the Afghan expedition, to which several chapters are devoted. We confess to a preference for the military part of the novel over the more ambitious attempt at characterizing the actors. The Indian part of the book seems to be written with knowledge, whereas neither Reginald nor his wife is much better than a spoilt child in home life. The style of the book is vernacular, and the chapters are short; on the whole, it is a fair specimen of the ordinary novel—shallow and lively, truer to the externals than the deeper side even of conventional humanity.

DIOCESAN HISTORIES.

Diocesan Histories. — Durham. By J. L. Low. (Society for Promoting Christian Knowledge.)—The Society for Promoting Christian Knowledge has lately shown that it has renewed its youth, and has done excellent work in this series of "Diocesan Histories." English history as a whole has been popularized enough of late years, and public curiosity has been stimulated about its details. If a social history of England is ever to be written, it can only be by a study of the details of mediæval life in separate localities. Politically England might be united under Egbert, but its social history is eminently provincial, and the tendency of imperial politics is even yet strongly affected by provincial influences. If constitutionally the English bishops rank as barons, the history of a see is the history of a great barony as much as a record of ecclesiastical events, and this series of "Diocesan Histories" will do much to bridge over the gulf which at present separates archæology from history. Mr. Low has undertaken the most interesting of the English dioceses. He has recorded the heroic times of Northumbrian Christianity, the days of saintly missionaries, and the prime of monastic civilization, which reached its zenith in the great Abbey of Durham, whose position close to the Borders gave its bishop an important place in the political organization of William the Conqueror. Mr. Low has to chronicle the architectural splendours of the noblest minster which adorns England. He has to tell of some of the most aspiring politicians of mediæval history, and has to record a social condition which was exceptional through

the palatinate jurisdiction as well as through the peculiar circumstances of Border history. Side by side with this he has the more ordinary features of ecclesiastical life, the strife between the bishop and his chapter, and the alternate victories of antagonistic powers. Mr. Low has done this with spirit and with humour; he has caught the salient points, and is animated with strong local patriotism which lends colour to his sketches. His account of Flambard, for instance, is excellent; but we are sorry that he passes over the struggle of Pudsey and Longchamp, which was so important in English politics during the absence of Richard I. on his crusade. The Reformation period and the struggles of the Puritan canon Peter Smart, in his hatred of "superstitious vanities," are graphically told and would aid any reader to understand better the great points at issue in those days. Occasionally Mr. Low makes a slip in historical accuracy, as when he speaks of the Empress Maud, "to whom the crown of England belonged by right of succession"—a right which certainly would have excluded her father. But this is an exception to Mr. Low's general carefulness. His book, though unequal in parts, is always interesting, and will to the general reader throw much light, not only on the ecclesiastical but on the social history of the north of England.

Diocesan Histories.—Chichester. By the Rev. W. R. W. Stephens. (Society for Promoting Christian Knowledge.)—This is a somewhat colourless little book. Perhaps the fault lies to some extent with the subject. Sussex has played no very memorable part in history, and Chichester, its ecclesiastical centre, lies away from the high roads of mediæval or modern life. With the conversion of its woods into iron-smelters' charcoal the manufacturing existence of Sussex practically died out, and the present use of the county as a sanitarium for Londoners is a comparatively recent discovery. Always a sleepy county, the good grass land and neighbouring woods tempted to its sunny climate such clergy as valued rather an undisturbed possession of flocks of men and sheep than a more stirring pastorate. Mr. Stephens rightly makes the monasteries a special feature of his book; but he should remember that the names of mediæval institutions convey no vivid notions to the kind of person to whom the Christian Knowledge Society addresses itself, though a picturesque treatment of the monastic system renders his book readable enough to those who know no better already. The author shows himself more capable in his remarks on the architecture of Sussex churches. Here, too, the unusual number of those of very early types testifies to an absence of energy in the old clergy, as may also the tameness of the Cicestrian episcopate—a good man was at once transplanted from so quiet a field. The whole work savours much of the books on the shelves of the Reading Room of the British Museum—especially those within easy reach—and not at all of the MS. Department or of Fetter Lane. There is no freshness and little accuracy in facts thus obtained at third and fourth hand, and though it would, of course, be unreasonable to expect great research in a short manual like the present, better things might have been expected from an author who constantly quotes his previous work on the see. When, however, the Reformation is reached, and with it that peaceful haven of printed authorities so dear to most topographical writers, Mr. Stephens is not only more accurate, but more interesting. Treating of the comatose Church of the seventeenth and eighteenth centuries and using with effect certain local diaries, the author becomes almost vivacious. Throughout the book there are errors and misprints, the latter without number. Richard of Wych is sent on a fool's errand to Boulogne in search of a university at which he might study the civil law; Bologna is, of course, meant. Reginald Pecok is credited with a new work, the 'Repression of Over-Much Learning,' an imaginary volume into which one might be tempted to believe the author had been dipping when he forgot the title of so well-known a book as the 'Repressor of Over-Much Blaming of the Clergy.' The author may be right at p. 61 in following (verbatim, but without acknowledgment) Foss in stating that Chancery Lane took its name from the house built in "New Street" by Ralph de Neville the Chancellor, who died in 1244, instead of accepting the more generally received idea that the lane took its later name from the grant of the "Domus Conversorum" by Edward III. for the storage of the records of the Chancery; but he is certainly wrong in translating Foss's "hospitium" (or guest-house) as hospital.

Diocesan Histories.—Peterborough. By George Ayliffe Poole, M.A. (Society for Promoting Christian Knowledge.)—The Peterborough volume certainly does not fall short of any of its fellows. The English dioceses, roughly speaking, marked the outlines of the old Saxon kingdoms. We say roughly speaking, for the boundaries of those states were not constant, and it is probable that there never was a time when the political divisions of England exactly tallied with the ecclesiastical divisions as they existed before Henry VIII. disturbed the old arrangement. The great see of Lincoln represented Mercia, and out of it Henry carved the diocese of Peterborough. This was part of a magnificent scheme which was to have given us twenty-one new bishoprics. Very little, however, was accomplished; but Peterborough remains to this day as an example of what the king intended. It is well for art that he was not in this, as in so many other cases, diverted from his purpose, for the bishop's throne has saved the abbey. Had that vast fabric been permitted to dwindle into a parish church, it is almost certain that nearly all of it, except just what was necessary to house the congregation, would long since have been swept away. Good building stone is not plentiful just in that neighbourhood, and we may feel quite sure that it would have been used as a quarry, even as Crowland, Revesby, Nostell, and Bridlington have been. Mr. Poole does not supply an architectural description of the abbey, but he dwells lovingly on the lives of its builders and those who furnished its princely endowments. He has evidently much more sympathy with the great ecclesiastics of the early time and the Middle Ages than with the smaller men who followed them. The later part of the volume, indeed, does not seem to be nearly so satisfactory as the earlier portion. This may in some measure be accounted for by the fact that the monastery was a much more important factor in English life than the bishopric has ever been. The abbey has a history which stretches back into the golden cloud-land of Anglo-Saxon hagiology, and some of the most poetic figures in the drama of the past flit across the pages. Hereward the Wake is there, the murdered Waltheof, and the great William himself. Catherine of Aragon sleeps in the abbey still, and Mary of Scotland's body rested there until her son transferred it to Westminster. The burial of Elizabeth's victim is perhaps the last fact chronicled here which will touch the imagination. Some notices are given of the bishops, and there is a catalogue of them at the end of the volume; but they have little more interest to any but the local antiquary than the lists of churchwardens which we sometimes find in town histories. The author is somewhat too severe on the Puritans; his picture is too highly coloured, and there are hardly any lights therein at all. We must excuse him, however, for, much as they have been slandered as to evil doings in other places, it is hardly possible to find words too strong to express our detestation of the destruction caused by them at Peterborough. The stained glass with which the church was adorned, and of which an account survives, must have been some of the most interesting and beautiful in England. Justice, or something nearly like it, is done to the Roman Catholic sufferers under Elizabeth; the passages criticizing Garnet's conduct with regard to the confessional are, whether Mr. Poole be right or wrong in his conclusions, singularly out of place. There is an appendix to the volume containing ecclesiological notes relating to the diocese. This is a most useful feature. The author tells us that it is very imperfect. As far as we have been able to test it we have found it singularly accurate.

SCHOOL-BOOKS.

Class-Book of Elementary Mechanics, adapted to the Requirements of the Revised New Code. —Part II. *Force.* By William Hewitt, B.Sc. (Philip & Son.)—Each New Code is presently followed by a flood of books "adapted to its requirements,"—usually bad books. The work before us, however, is as far in advance of the average of such publications as the last New Code is in advance of its predecessors. In the hands of an intelligent teacher it will be of the greatest use, for, besides care and thoroughness, it shows an intelligent appreciation of the difficulties felt by the readers for whom it is intended. It was, perhaps, too much to expect that the doctrine that action and reaction are equal and opposite should be made quite clear in the case of a horse drawing a cart, but it is certain that it is here made more nearly clear than ever before. A large number of simple but well-selected examples adds great value to the book.

Geometrical Exercises for Beginners. By Samuel Constable. (Macmillan & Co.)—Work from Dublin is usually welcome, for it is usually good. This little book, by an ex-sizar of Trinity College, Dublin, is of the high quality to which we are accustomed, and must not be judged by its modest title. Any one of ordinary capacity who has worked through it carefully will have acquired an insight into the power of geometrical methods and a real strengthening of the logical faculty. Still more important, he will have found out that the study of geometry can be interesting. The whole work is well done, and the chapter on "Loci" in especial is an example of the best kind of geometrical teaching.

A Treatise on Elementary Trigonometry. By the Rev. J. B. Lock. (Macmillan & Co.)—This book is carefully and intelligently compiled. It has no pretence to originality, but it follows for the most part the methods and contains the teaching which have been universally followed and conveyed on the blackboard by all schoolmasters who have understood their work—that is, who have possessed the two requisites, knowledge of their subject and an appreciation of difficulties. Seeing, however, that the book is intended for school use, it is a grave mistake to include the answers to the examples.

Chambers's Reprints of English Classics: The Armada, Ivry, and Evening, by Lord Macaulay, with Notes.—*Scott's Lady of the Lake, Canto II.*, with Notes.—*Coleridge's Ancient Mariner*, with Life and Notes. (Chambers.)—*Clarendon Press Series: Scott's Lay of the Last Minstrel, Canto I.* Edited by W. Minto. (Clarendon Press.)—We doubt the wisdom of the present fancy for annotated texts of modern English classics. The teacher of to-day would seem to be considered a nonentity who knows nothing, for there is little in these notes which he ought not to be able to tell his pupils, and they would be more benefited by getting the information from him than reading it in print. The notes in Messrs. Chambers's editions are good enough in their way, but the policy of setting schoolboys to read Macaulay's very Della Cruscan 'Evening' may be doubted. A map of the Trossachs should be appended to the edition of 'The Lady of the Lake.' The chief feature of Prof. Minto's edition of 'The Lay of the Last Minstrel' is the excellent intro-

XUM

duction, which rises above the ordinary level of school-book literature.

Molière: L'Avare. Edited by L. M. Moriarty. (Macmillan & Co.)—This is a handy edition, with sensible notes and capital indexes. The introduction might with advantage have been made more interesting. The book is very cheap.

Alexandre Dumas: La Tulipe Noire. Edited by P. Blouët. (Hachette.)—M. Blouët's notes only fill a few pages, and some of the information given is a little superfluous. There seems small use in such notes as: "Molière, celebrated French poet, was born at Paris, Jan. 15th, 1622, died in Paris, Feb. 17th, 1673. Shakespeare, the greatest poet England produced, born at Stratford-on-Avon, April, 1564; died in the same town on the 23rd of April, 1616." Surely a boy who can read 'La Tulipe Noire' with profit might dispense with these notes and several others of the same kind.

The Oration of Demosthenes against Meidias. Literally translated by C. A. M. Fennell, M.A. (Cambridge, Hall & Sons.)—Mr. Fennell has produced a translation much above the level of the ordinary "crib." His accurate scholarship shows itself in every page, although he has not ventured to make his version readable. A valuable feature of his little book is the index, which supplies a key to the chief grammatical difficulties of the speech.

THEOLOGICAL BOOKS.

THE Rev. W. H. Lowe, M.A., Hebrew lecturer at Christ's College, Cambridge, has just brought out a commentary on Zechariah, intended for candidates for honours in the Theological Tripos. There is no need to bestow praise upon the commentator's Hebrew knowledge, for he is already well known by his commentary on the Psalms, and we may add that he is one of the few Christian scholars who are familiar with the Rabbinical idiom and its literature. In the present work he makes ample use of it—perhaps too much for a student's commentary. In his preface he tries to maintain the integrity of the prophecy, and refers for more ample information to Mr. Wright's Bampton Lectures on Zechariah. This work having been reviewed in the *Athenæum*, we may refer to our review for the arguments against the integrity of the book. Mr. Lowe's commentary is very complete, and even advanced students may learn from it. He makes use of various readings as well as of the various translations, which may be an inducement to some students to apply themselves to deeper investigations of the Biblical texts. On some points we should have liked less positive statements. That the Biblical MS. at Cambridge (Mm. 5, 27) was written in 856 A.D. is not generally admitted, and it is, therefore, a mistake to say that "the *Codex Petropolitanus*, A.D. 916, is inferior in age to the Cambridge MS." Besides, the right reading in Zech. i. 4 is certainly *umimmaallekhem*, according to the spirit of the Hebrew language, whilst the *mem* of *mital* (Hag. i. 10) seems to us a dittography of the preceding word *shamaim*. *Shimmurim* (Ex. xii. 42) does not mean "special observance," but "waking" (cf. Ps. lvii. 5). There is too much subtlety in the note on *Kefi isch* (ii. 4). The right reading is probably *Kefi asher*, "so that he [Judah]"; and the same expression in Malachi ii. 9 has the meaning "just as" (A.V. "according as"), and not "because" or "since." Most unsatisfactory is Mr. Lowe's explanation of the passage (ix. 7), "And he shall be as a governor in Judah, and Ekron as a Jebusite." The right translation might be, "And he will be like Eleph" (Josh. xviii. 28) "in Judah, and Ekron in Jebus." At least the parallelism requires two cities, and the word אלף (here written defectively) in the sense of governor is always written *alluf*. Not more satisfactory is the commentary on xiv. 4, 5. In the first instance, Mr. Lowe ought to have mentioned that the Oriental codex omits the words "in that day" in the fourth verse, and that *Ge-haray*, "the valley of the mountains," refers to a place of that name, which is given by Josephus ('Antiq.' ix. 10, 4) as *Eroge* (if even we agree with Mr. Lowe that the account given by Josephus of the earthquake in the days of Uzziah is apocryphal, the tradition must have existed in his time about a place Eroge). Ge-haray means, probably, "the valley of the two mountains," and the following words ought to be read *Ki yagia Ge-haray mol Otsal*, for Ge-haray touches towards Otsal (cf. the lection מאל, Neh. xii. 38). Otsal is probably identical with the Hotsal mentioned in the Talmud as a fortified place in the possession of the tribe of Benjamin (see Neubauer's 'Géographie du Talmud,' p. 152). And no doubt *nistam* (the reading of the LXX.), "shall be closed up," is the better reading in all the passages. As to the reading *immo*, "with him," instead of *imkha*, "with thee," there can be no doubt about it, since it is given so in the *K'ri*. The four excursuses which are given at the end of the commentary have very little to do with Zechariah, and could be omitted without detriment to the student.

SIGNOR PIETRO PERREAU, Librarian of the Royal Library of Parma, employs the very inconvenient form of autography for the publication of important Hebrew books. In this form he has nearly finished the commentary on the Psalms by Emmanuel ben Solomon, a friend of Dante, from a MS. at Parma; and we have just received an autographed copy of his monograph on abbreviations used in Rabbinical writings, entitled "1,700 *Abbreviature Ebraiche, Chaldaiche, Rabbiniche, Talmudiche colle loro varie Soluzione*, Parma, 1882, autografia, edizione di 60 esemplari." We regret that such a useful monograph should not be made accessible to general readers by publication in the ordinary way. The author, by having chosen in his publication the current Italico-Hebrew characters instead of the square letters, has limited the use of his sixty copies to those who are familiar with these unpleasant characters. Had the librarian of Parma known that Dr. Schiller-Szinessy, of Cambridge, has nearly finished his great work on Hebrew abbreviations, the preparation of which was mentioned a long time ago in the *Athenæum*, he would, perhaps, not have wasted his time with his solutions of 1,700 abbreviations only.

WE have received the first volume of a *Jerusalem Annuary*, partly in Hebrew, partly in German, edited by Rabbi A. M. Luncz. It contains all kinds of information concerning Palestine, and especially Jerusalem, as well as some literary articles. Amongst the latter we may mention the diary in Hebrew of Meshullam of Volterra, who travelled from Florence to Palestine in the year 1481 A.D., according to the MS. in the Laurentian Library at Florence. Another article in Hebrew gives an account of the tombs of eminent men who are buried in Palestine, with some unknown inscriptions.

AN edition of some of the works of Ephraem Syrus is being published at Malines under the superintendence of Canon Lamy, a professor at Louvain. The first volume alone has yet appeared, and the work will be in three volumes quarto.

OUR LIBRARY TABLE.

MR. W. CAREW HAZLITT has sent us a *Second Series of Bibliographical Collections and Notes on Early English Literature*, 1474–1700 (Quaritch). This thick volume, containing some seven hundred pages, compactly printed in two-column form, testifies to considerable activity on Mr. Hazlitt's part. In 1867 he published his 'Handbook,' a very useful and fairly accurate compilation. This was followed, after an interval of nine years, by the 'First Series of Bibliographical Collections and Notes'; and the present volume is the result of Mr. Hazlitt's bibliographical lucubrations since 1876. In the prefatory dedication it is stated that no entries in the First and Second Series have been gathered at second hand; every book catalogued has passed under the editor's personal inspection. The three volumes together certainly cover a wide area. We desire to express our appreciation of Mr. Hazlitt's untiring industry, but we are bound to say that we do not approve of the arrangement, or rather want of arrangement, in his large undertaking. If we turn, for instance, to the entries on Decker or Samuel Daniel, we find a few notices set down at random, without any attempt to make a complete list. There is abundance of new matter in the present volume, but there is much that is mere repetition. The notes, often interesting, are sometimes misleading. Under the heading "Heliodorus" Mr. Hazlitt observes: "It does not appear to have been noticed by critics that this is the parent book from which later writers derived those tales of sensational adventure and hair's-breadth escapes, on which much of the plot of such dramas as 'Pericles of Tyre' turns and depends. No doubt the author of the 'Pattern of Painful Adventures,' the acknowledged foundation-story of Pericles, went to Heliodorus." Lawrence Twine, the author of the 'Pattern of Painful Adventures,' went not to Heliodorus, but to the 'Historia Apollonii Tyrii.' Among the Harleian MSS. in the British Museum there is an old play (No. 7313) of little merit, 'The White Ethiopian,' founded on the romance of Heliodorus; and another old play, the 'Strange Discovery,' by J. G[ough], published in 1640, is drawn from the same source. Charles Lamb's friend Le Grice, in the notes to his dainty translation of Longus (Penzance, 1809), promised to give an English dress to the 'Æthiopica,' but the reception accorded to Longus gave him no encouragement to proceed.

THE Index Society may be congratulated on being able to distribute to its subscribers so valuable a work as *An Index of Norfolk Topography*, by Mr. Rye. The compiler's reputation as a student of the records is so well established, and his industry and sagacity as an antiquarian explorer are so widely known, that any publication which bears his name is sure to receive respectful attention and certain to contain some valuable accession to our knowledge of the past. But in this volume he has far outdone any of his previous achievements. The preface contains an elaborate, and it may even be said an exhaustive, account of all that has been attempted up to this time by Norfolk antiquaries for the "history of the county," with brief occasional notices indicating where their collections are still to be found. There is a short account of the chief MSS. in the Record Office relating to the county, and "a tolerably faithful guide to the most prominent and useful" sources of information, both printed and unprinted, in public and private libraries and archives in various parts of the country. The index itself extends to over 400 pages. The parishes are arranged in alphabetical order, and references given to the page and volume of any work in which mention is made of the place and to the press mark by which a MS. may be asked for. In a work of such enormous labour that Mr. Rye tells us the mere sorting of the slips in which the several entries were made "took over a year," it was inevitable that mistakes should be discoverable, and we are told to expect them. Mr. Rye wisely and modestly says that "he who begins to work at MS. sources has an unknown and infinite field to work on, and it would be useless for him to break his heart in a vain pursuit of the *ignis fatuus* of a perfect index." We are not disposed to be too censorious, and we recommend the possessors of this book to make what corrections and additions they can in the margins of their several copies. Doubtless the author will be glad to be set right where he has gone wrong

through inadvertence, and no one knows so well the difficulty of avoiding errors as they who are most anxious to be accurate. To the inexperienced it may seem inexplicable that a veteran like Mr. Rye should have spelt Bishop Jegon's name with a *G*, that he should have asserted that John of Oxford was Bishop of Chichester, and that he shou'd have given a wrong date for Le Neve's death — according to his own account he was certainly alive in 1737. To the initiated such blunders are not so strange as that any single page of this index should be free from faults.

MR. DOUGLAS, of Edinburgh, has sent a pretty little reprint of Mr. Howells's pleasant story *A Chance Acquaintance*. As the author derives a profit from this edition of his novels it is to be hoped it may meet with the wide sale it certainly deserves.

MR. LEA, of Philadelphia, has sent us a volume of *Translations and other Rhymes*, which he has printed for private circulation. Mr. Lea is evidently accomplished, but a man who essays to translate 'The Erl-King,' 'The Castle by the Sea,' the 'Dies Iræ,' and a number of other poems of the first rank shows more courage than discretion, unless, indeed, his mastery of verse be something very extraordinary.

WE have on our table *Dante Gabriel Rossetti*, by W. Tirebuck (Stock),—*The Life of Charles Darwin*, by G. W. Bacon (Bacon),—*Arctic Sunbeams*, by S. C. Cox (New York, Putnam),—*High Education in India*, by R. Lethbridge (Allen & Co.),—*A Latin Grammar*, by J. R. Leonard (Murby),—*An Etymology of Latin and Greek*, by C. S. Halsey (Boston, U.S., Ginn & Heath),—*Libyan Vocabulary*, by F. W. Newman (Trübner),—*An Anglo-Saxon Primer*, by H. Sweet (Clarendon Press, Frowde),—*The Catiline and Jugurtha of Sallust*, by A. W. Pollard (Macmillan),—*Homeri Iliados*, Liber XVIII., by S. R. James (Macmillan),—*Scepticism – Credulity = 0: the Religion of Algebraic Curves*, by Col. J. Browne (Rivingtons),—*Arabic Names of the Stars, with their Meanings*, by W. H. Higgins (Hamilton),—*Household Chemistry*, by A. J. Shilton (White),—*An Elementary Treatise on Conic Sections*, by C. Smith (Macmillan),—*The Dismal Science*, by W. Dillon (Dublin, Gill),—*The Young Wife's Own Book*, by Dr. L. Weatherly (Griffith & Farran),—*On In-Knee Deviation*, by Dr. W. J. PARSONS AND PLAYWRIGHTS BEFORE THE COMMONWEALTH.

British Museum, Aug. 26, 1882.

MR. HALLIWELL-PHILLIPPS has kindly drawn my attention to an unpublished old play (Add. MS. 26,348) on the subject of the divorce of the notorious Frances, Countess of Essex, and her marriage with Robert Carr, Earl of Somerset. The piece seems to have been written late in life by one who had moved among the scenes that he describes. The author has prefixed to the play characters, written in a shrewd and trenchant style, of the principal personages about the court of James I. There is not sufficient literary interest in the piece to warrant me in including it among the MS. plays to be printed in the second and third volumes of my collection; but to the historical student both the play and the characters ought to be of considerable value. In the address "To the Reader" occurs the following curious passage:—

"Captain John Bingham that translated Aelian out of Greeke, & the p'decessor to Skippon in the City Artilery, a man no les fitt for practice, perished for want in Ireland. Sir Thomas Glouer, Consul at Constantinople, & made famous by so many gretfull acknowligments for courtesies done to his nation, did little beter then starve. Owen the Epigrammatist & another reare decipherer of Letters (whom I have oftne obserued to walke & dine together with Duke Humphery in Pauls) with a number more (whoe had wisdom & partes rich enough to endow this nation with greter peace & plenty then it is euer likly to inioy) yet ware sofared to be deuoured with the rust of want & contempt or forced with lerned George Chapman to wright for the Stage that lies now under a heuier censure then any wise nation euer loaded her with, being to my knowlig the beast tutor our ignorant gentury & nobility had: so as if our deuins coold haue plaid thair parts in the pulpet with as much reson & Eloqencie as some of our poets cried up moralitie in the Theater, religion & allegiance had not so easily abiured the kingdom" (leaf 18).

A. H. BULLEN.

THE PRESTON GUILD MERCHANT.

ON Monday next, the 4th inst., the borough of Preston, in Lancashire, will commence the holding of its Guild Merchant, an ancient festival held every twenty years. The greatest possible interest is being taken in the coming festivities, which will last the whole week.

The Guild Merchant was originally an assembly of the mayor, aldermen, and burgesses of Preston, held for the purpose of enrolling as freemen the sons of the old burgesses, of bestowing the freedom of the town on others who were allowed to settle there on payment of certain fines, and in general of upholding and regulating the special privileges which had been granted to the town by various royal charters. Those who were entitled to settle in and trade in the town were called the "in-burgesses," whilst others, usually persons of rank and position living in the neighbourhood, upon whom the freedom of the town was conferred, were called "out-burgesses" or "foreign burgesses." As time went on these gatherings became the scenes of great festivities, which attracted persons from all parts of Lancashire and the neighbouring counties, and which lasted frequently for a fortnight, and on one occasion even longer.

By a charter of the time of Henry II., and, as shown by the names of the witnesses, of about the year 1170, that king granted to "his burgesses of Preston" that they should have "the same liberties and free customs" as his burgesses of Newcastle-under-Lyne. This charter was confirmed by King John in 1199, by Henry III. in 1227 and again in 1252, by Edward III. in 1328, and since that date by many of the later kings and queens. The privileges which the burgesses of Newcastle-under-Lyne possessed were that they should "have a Guild Merchant in the said borough, with all liberties and free customs to such Guild Merchant in any wise belonging; and that they may pass through all our dominions with their merchandise, buying, selling, and trafficking, well and in peace, freely, quietly, and honourably; and that they be quit from toll, passage, pontage, stallage, lastage, ulnage, and all other customs."

The earliest date when a Guild is known to have been held is 2 Edward III., 1328; but in the records of that Guild, now preserved in Dr. Kuerden's MSS. in the Heralds' College, there is distinct reference to a previous one, the date of which is unknown. No Guild is known to have been held between 1328 and 20 Richard II., 1397, of which the roll of inburgesses and foreign burgesses still exists among the corporation records. This Guild was held in June of that year, William de Ergham then being mayor of the borough. The next Guild was in May, 1415, and the one after that in May, 1459, the one referred to by Dr. Kuerden as having been held in 1429 having been shown to be a clerical error on the part of that antiquary. Of both these Guilds the list of burgesses who were then enrolled and the various ordinances and statutes which were enacted exist among the corporation records, whereas those of the next Guild, held in August, 1500, appear to be now lost. There exists, however, an interesting document showing the form of procedure observed at the holding of this Guild, from which it appears that "all burgesses dwellyng wythin the towne of Preston" were to be ready to go in procession throughout the town on the first day of the Guild. After the procession there was to be "a masse with solempnytie of the Holy Goyste, solempnley to be held with the Mayor and Aldermen." The Guild was then to be held. "That the poynts and the rights of the Gyld Marchaunt moght be knowen to all burgesses, therefore was made three Proclamacions in ye open Market three days, that all manner of men clayming franchises of fredome within our burgh of Preston, whether they it claym by descent or purchase, that they shall apper at ye tyme that Gyld Marchaunt is holden before the Mayor and the Burgesses of the same Gyld, for to here and know the franchise, freedoms and libertics and all other poynts appertaynyng to ye said Gyld Marchaunt, the whyche we have by letters patent, by ye said lege lord the Kyng and of his most noble progenitors to us graunted before this tyme."

The next Guild, held on May 24th, 1542, is of interest from the importance of the names of

those who became foreign burgesses. The roll of these, still in the possession of the corporation, is headed by the names of "Edwardus comes Derbie, Henricus Dominus le Strange ejus filius et heres appar', Thomas Stanley frater ejus et Edwardus Stanley frater ejus," since which date, for the past three hundred and twenty years, 1542 to 1862, the Stanleys have been present at every Guild celebration. On August 30th, 1562, another Guild was held, at which it was definitely enacted that they should be held every twenty years, "on the Monday following the feast of the Decollation of St. John the Baptist (August 29th)." Accordingly the next took place in 1582, exactly three hundred years ago, since which date they have been held every twenty years without intermission.

The earliest printed account of any of the Preston Guilds is that drawn up by a well-known Lancashire antiquary, Dr. Kuerden, in 1682, which was printed in 1818, from the original manuscript discovered about that time. In 1702 the Yorkshire antiquary Ralph Thoresby was present at the Guild, and has left a short account of it in his diary, published in 1830. He says: "We were too late to see the formalities (the several [trade] companies in their order attending the mayor, &c., to church, and thence after sermon to the Guild-house to the feast, &c.) at the opening of the Guild, but were in time enough for the appendices, the pageant, &c." On the day he went away he records that he slept but little, "the music and Lancashire bag-pipes having continued the whole night at it." The Guild of 1762 was described in no less than four separate printed accounts, one of which gives representations of the various parts of the trades processions, &c. Since then many accounts of the Guild have been published, and especially of the last one, held in 1862; but by far the most valuable, being based as it is on original and unpublished records in the possession of the corporation, is the one which has been appearing during the last six months in the columns of the *Preston Guardian*, and which is now being reprinted in book form. This has been written by Mr. W. A. Abram (author of 'The History of Blackburn,' &c.), a well-known Lancashire antiquary, who is also engaged in editing the early Guild Rolls for the Record Society. The importance of these rolls cannot be over-estimated, as they contain a mass of genealogical information relating to Preston and North Lancashire generally of which there is no other record. They are being printed exactly as they are, and, if we may trust the recently published report of the Society, may be expected early next year.

THE COMING PUBLISHING SEASON.

Messrs. Sampson Low & Co.'s preliminary list of announcements for the coming season is now ready. The most prominent article is an *édition de luxe* of 'Lorna Doone,' Mr. Blackmore's celebrated romance. The illustrations, engraved by Mr. J. D. Cooper from drawings by Mr. Percival Skelton, illustrate the scenery of the chief incidents of the story. These designs are derived from water-colour paintings by Mr. F. Armstrong, of Bristol. There will also be full-page illustrations, prepared by Mr. W. Small, which are studies of chief events, characters, and scenes in 'Lorna Doone.' This *édition de luxe* will likewise be furnished with initial letters by Mr. W. H. J. Boot. Each of these letters will be the vehicle of a view in Devonshire or Somerset. The same firm also announces an English edition, translated by C. B. Pitman, of the 'Florence' of M. Charles Yriarte. Next come 'The History of Fashion in France,' translated by Mrs. Cashel Hoey and Mr. J. Lillie from the French of Challamel; and Mr. Audsley's 'Ornamental Arts of Japan,' with ninety plates, of which seventy-four will be in colours and gold. The other books of the preliminary list must be shortly enumerated:—'Sir Roger de Coverley,' re-imprinted from the *Spectator*, with designs by Mr. C. O. Murray; Lady Brassey's 'Tahiti,' furnished with thirty-one illustrations in autotype, from photographs taken by Col. Stuart-Wortley; 'From Benguella to the Territory of Yacca,' by Capello and Ivens, translated by Mr. A. Elwes; Mr. Joseph Hatton's 'Journalistic London,' with original portraits of distinguished editors and writers for the press; Leonardo da Vinci's literary works, with 200 original drawings by the process Dujardin and about 450 fac-simile illustrations; 'Conversations and Journals in Egypt and Malta,' by Mr. Nassau Senior; 'The War between Peru and Chili, 1879-81,' by Mr. Clements R. Markham; Mr. Winks's 'Lives of Illustrious Shoemakers'; the 'English Catalogue' of 1872-80; and lastly, new novels by Mr. Thomas Hardy, Mr. George Mac Donald, Mr. Clark Russell, Rev. E. Gilliat, Lady Clay, and the Hon. E. Talbot.

Messrs. Cassell, Petter & Galpin announce, among other new works, 'The Early Days of Christianity,' by Canon Farrar, forming a supplement to the author's 'Life of Christ' and 'The Life and Work of St. Paul.' It supplies an account of the lives and writings of the three pillar apostles, St. Peter, St. James, and St. John, with an explanation of their Epistles and of the Apocalypse. The first two volumes of 'An Old Testament Commentary for English Readers,' by various writers, edited by the Bishop of Gloucester and Bristol, will be published during the year. Vol. I. contains the Pentateuch, by the following authors: Genesis, by the Dean of Canterbury; Exodus, by Canon Rawlinson; Leviticus, by Dr. Ginsburg; Numbers, by the late Canon Elliott; and Deuteronomy, by the Rev. C. H. Waller, M.A. The same firm promises a new volume (Cable—Conarium) of the 'Encyclopædic Dictionary'; the second volume of 'Modern Europe,' by Mr. C. A. Fyffe, M.A., embracing the period 1814-1848; the English translation, in two volumes, of Prof. Ebers's work, 'Egypt, Descriptive, Historical, and Picturesque,' with notes and introduction by Dr. Samuel Birch; 'Manuals of Technology,' edited by Prof. Ayrton and Dr. R. Wormell (the following are already in preparation: 'Electric Lighting and Transmission of Power,' by Prof. Ayrton; 'Practical Mechanics,' by Prof. Perry; 'Cutting Tools worked by Hand and Machine,' by Prof. Smith; 'Iron and Steel,' by Mr. W. H. Greenwood; 'Fluid Motors,' by Prof. Perry; 'Chemistry,' by Dr. Armstrong; 'Flax Spinning,' by Dr. David Thomson; and 'Watch and Clock Making,' by Mr. D. Glasgow); 'The History of the Year,' a complete narrative of the events of the immediate past; 'Wealth-Creation,' by Mr. Augustus Mongredien, author of 'Free Trade and English Commerce'; 'Choice Dishes at Small Cost,' by A. G. Payne, author of 'Common-sense Cookery,' &c.; 'The Story of English Literature,' by Anna Buckland; 'Constitutional History and Political Development of the United States,' by Simon Sterne, of the New York Bar; 'A Winter in India,' by the Right Hon. W. E. Baxter, M.P.; 'A Commentary on the Revised Version of the New Testament for English Readers,' by the Rev. W. G. Humphry, B.D., Prebendary of St. Paul's; 'Oliver Cromwell,' an historical biography, by Mr. J. Allanson Picton, author of 'The Mystery of Matter,' &c.; 'The World in Pictures,' six volumes, suitable for gift-books and Sunday-school prizes, presenting pictures of missionary enterprise throughout the world; 'The Changing Year,' being poems and pictures of life and nature, with numerous illustrations by W. Small, M. L. Gow, C. Gregory, M. E. Edwards, A. Barraud, Percy Macquoid, and other artists; 'Wild Animals and Birds, their Haunts and Habits,' by Dr. Andrew Wilson; 'Bo-Peep,' a book for children, illustrated with original pictures; 'An Intermediate Text-Book of Physical Science,' by Dr. F. H. Bowman, intended to occupy an intermediate position between the elementary text-books for use in schools and those which are suited for colleges and universities; 'Hand-railing and Staircasing,' a complete set of lines for handrails by "square-cut system," and full practical instructions for making and fixing geometrical staircases, by Mr. Frank O. Creswell; 'On the Equator,' by H. de W., with four autotype photos; 'Modern Explorers,' by Mr. Thomas Frost, author of 'Half-hours with Early Explorers'; 'Peter Parley's Annual for 1883,' the forty-second issue of this popular Christmas book; a collected edition of Mr. G. Manville Fenn's works; 'A Parcel of Children,' by Olive Patch; 'Elfie under the Sea, and other Stories,' by E. L. P.; and 'The Little People's Album,' with illustrations by Lizzie Lawson, M. E. Edwards, and other artists.

Messrs. Griffith & Farran will publish this autumn three books illustrated with coloured pictures: 'Wee Babies,' by Amy Blanchard and Ida Waugh, a book in which child-life from the cradle upwards is portrayed both in the verses and the drawings; 'Fly-away Fairies and Baby Blossoms,' a fanciful picture book, by Miss Clarkson; and 'My Own Dolly,' by Amy Blanchard, a child's story, illustrated by Ida Waugh. They also announce 'The Babies' Museum of Rhymes, Jingles, and Ditties,' a new collection of the old favourite nursery rhymes, illustrated and arranged by "Uncle Charlie."

THE SUNDERLAND LIBRARY.

Apropos of the Sunderland sale a Correspondent writes as follows:—"The sale of the Sunderland Library reminds me of a little fact which shows how widely Lord Sunderland's name was known in his own day, and that it had become a sort of proverbial designation for a munificent friend of learning. In the correspondence of Emmanuel Marti (or, as he called himself in Latin, Martinus), one of the most distinguished archæologists that Spain has produced, is a letter addressed to a young Englishman, a certain John Conduith (Epist. vii. 11). Conduith was travelling in Spain in 1716, in order to study the Roman remains in the country, and he sought Marti's assistance and advice as to how to set about the undertaking. Marti tells the enthusiastic Englishman the story of his own hopes and disappointments—how he had discovered by sad experience that no one in Spain cared for ancient monuments, and that an investigation of Spanish antiquities such as he had contemplated would require a patronage and support which there was no chance of finding in the Spain of that day; so that he had come to see that the only thing to do was to do nothing. 'Vides nodum, in quo solvendo plus sit negotii quam in Gordiano. Ergo dormiamus in utramque et altum stertamus; quando ad id unum aliena ope non indigemus, nec nascuntur apud nos *Sunderlandi*.' I wonder how many 'Sunderlandi' we have among us at the present moment, and whether we are much better off in this respect than Spain was in Marti's day. As Marti's 'Epistolæ' are so little known, I may add that the book is dedicated to the English minister Keene, and that it was thought worth reprinting in Holland within three years of the publication of the original Madrid edition (1735). If there are any data for a general statement on the subject, one would like to learn the prices paid by Lord Sunderland for his books, so as to compare the sums now realized with the prices of George I.'s time. I have before me a priced copy of the 'Bibliothecæ Petaviana et Mansartiana,' the auction catalogue of the libraries of Alex. Petau and Fr. Mansart, sold at the Hague in 1722, at which Lord Sunderland seems to have made some purchases; this, at any rate, is the opinion of the former owner of my copy of the catalogue, Richard Heber. If Heber is right in identifying the volumes, the Horace of 1470 (lot 6352), which in July last fell to Mr. Quaritch for 29*l.*, cost Lord Sunderland in 1722 the sum of 121 florins—a large price in those

times, but nothing by comparison with the 499 florins given by him at the same sale for the Terence of 1469. I shall be curious to see how much this Terence fetches when it is again put up for sale at Leicester Square with the other Terences of the Sunderland Library."

Literary Gossip.

Some weeks ago we stated our intention of printing a considerable mass of correspondence throwing light on the life of Lord Byron. Since this announcement was made we have received an intimation that the publication of these letters would be distasteful to several members of the Leigh and Byron families. This is somewhat surprising, for, as we mentioned, the effect of publishing the correspondence—and a further examination confirms the opinion we expressed—would be to prove the groundlessness of the horrible suggestions made public in 1869, and we should have supposed that the representatives of the Leigh family would have desired to see Mrs. Leigh's memory cleared of the aspersions of Mrs. Beecher Stowe. There is nothing in the documents that does not redound to the credit of Lord Byron and his sister. Still, as we wish as far as may be to defer to the wishes of their relatives, we shall not for the present take further steps in the matter.

Mr. George Meredith, we are glad to say, has nearly finished a new novel.

Among the MSS. left by the late Mr. James Thomson is a long symbolical poem entitled 'The Doom of a City,' written so far back as 1857. Mr. Thomson destroyed whatever he had written before that date. Another early unpublished poem is 'The Happy Poet,' a companion piece to 'The Lord of the Castle of Indolence.' No definite arrangements have yet been made for the publication of Mr. Thomson's remains, but it is probable that the criticisms (which include articles on William Blake, Heine, Leopardi, and Shelley), will be issued before the poems.

Mr. Douglas, of Edinburgh, is to publish in October Mr. W. D. Howells's new book, 'A Modern Instance.' It contains a "study of the typical character of American life, the young man sprung from nothing who by natural gifts means to make his way in the world." Mr. Howells has been lately in London for a short visit.

Messrs. Hurst & Blackett will publish during September a new work by the Rev. A. G. L'Estrange, entitled 'The Friendships of Mary Russell Mitford as recorded in Letters from her Literary Correspondents,' in two volumes. An announcement of the above work appeared in our "Gossip" of April 22nd, but its publication has been delayed till the present month.

Messrs. Longman & Co. will issue next November the first number of the new magazine we mentioned some time ago. The title is *Longman's Magazine*. Each number will consist of from 100 to 128 pages, and the price will be sixpence. The prospectus says that the editor

"is aware that in offering so large an amount of literature of a high standard at so low a price he is taking a bold step. He is confident, however, that an immense class exists amongst us which is anxious to procure literature of this kind, provided that it is offered at a reasonable price. This class has been largely reinforced in England since the passing of the Elementary Education Act in 1870; and its extent had, perhaps, never been tested previous to the publication of those sixpenny reprints, which commenced with the cheap issue of Lady Brassey's 'Voyage in the Sunbeam' by Messrs. Longmans in the autumn of 1881. The large body of readers of good literature thus revealed encourages the editor to hope that there may be room for *Longman's Magazine*."

Among the contributors will be Mr. Grant Allen, Mr. Anstey, the author of 'Vice Versâ,' Mr. W. Black, Lady Brassey, Prof. Bryce, Mr. Freeman, Mr. Froude, Mr. Thomas Hardy, Mr. W. D. Howells, Prof. Huxley, Miss Ingelow, Mrs. Oliphant, Dr. Smiles, Mr. L. Stevenson, Mr. Julian Sturgis, and Prof. Tyndall.

The new Scottish quarterly which we also announced some time ago will make its appearance towards the end of November next. Promises of co-operation have been received from well-known hands in all departments, and we hope Mr. Gardner's enterprise may meet with the success it deserves.

Dr. Abel, the learned philologist and accomplished journalist of Berlin, will be in Oxford in October next to deliver the Ilchester Lectures.

Messrs. Griffith & Farran, the successors of the Newberys, have recently discovered that they possess nearly the whole of the woodblocks drawn and engraved for 'The Looking Glass for the Mind' by Bewick. They hope to be able shortly to complete the set, and they propose to issue a reprint of the edition of 1792, printing the illustrations from the woodblocks. The following is the full title of this almost forgotten volume: 'The Looking Glass for the Mind: an intellectual mirror; being an elegant collection of the most delightful Stories and interesting Tales, chiefly translated from that much admired work "L'Ami des Enfans."' The reprint will be prefaced by a brief introduction by Mr. Charles Welsh.

Messrs. Henry Sotheran & Co. have in the press an "artist's edition" of Mr. J. R. Wise's 'History, &c., of the New Forest.' This edition will contain an entirely new preface and corrections by the author. It will be well printed by the Ballantyne Press, on paper made expressly for the book; and, in addition to India proof impressions of the charming wood engravings by Mr. Walter Crane, it will be enriched with twelve original etchings by Heywood Sumner (who is well known as the artist of the Itchen Valley, the Avon, &c.), taken during the winter, spring, and summer seasons, thus giving a picture of forest scenery under different aspects. The edition is to be limited to 400 copies.

A collected edition, edited by his son, of the poems of the late Mr. D. F. Mac Carthy, is about to be published by Messrs. Gill & Co., of Dublin.

'Eli's Children: the Chronicles of an Unhappy Family' is the title of Mr. Manville Fenn's new story now passing through the press.

Mr. Cecil Bendall, Fellow of Caius College, is likely to be appointed Assistant in the Oriental Department of Printed Books at the British Museum in succession to the late Dr. Haas.

Sir Thomas Jamieson Boyd (head of the well-known publishing firm of Oliver & Boyd), who has during five years held the Lord Provostship of Edinburgh, intends to retire from the office in November next.

The late Mr. Charles J. Kickham, who was prominently connected with the Fenian conspiracy, was also at one time known as a writer, being the author of 'The Homes of Tipperary,' 'Knocknagow,' 'The Untenanted Graves,' and other poems and stories.

The library of Trinity College, Dublin, will be closed to the public from the 4th to the 18th inst.

The issue of the official guide to the forthcoming Church Congress at Derby has, we understand, been entrusted to Mr. Charles Mackeson. The book will be illustrated with portraits of the Bishop of Lichfield (the President of the Congress), the Archbishop of York and Bishop of Truro (preachers at the opening services), the Archdeacon of Ely (permanent secretary), &c. It will give a history of the past twenty-one congresses, and biographies of all the readers and selected speakers at the Derby gathering.

Prof. Jebb writes to us complaining that the brief notice we had space to give of the new number of the *Journal* of the Hellenic Society may lead people to suppose that his remarks on Ilium are contained in his paper on Pindar. Our language seems to us sufficiently distinct; but lest any one should be misled, we take the opportunity of saying that the subjects are treated of in two distinct articles.

The *Revue Critique* publishes a short analysis of the report on the work during the year of the École d'Athènes and the École de Rome. M. Reinach has continued his excavations in the necropolis of Myrina, and also explored the cemetery of Cyme. Memoirs on various subjects, such as the sources of ancient Greek law, the Athenian Archons, &c., have been written. At the École de Rome a great variety of monographs has been produced, the subjects embracing the Domestici and Protectores, troops of the Imperial Guard from the third century to the seventh, Francesco da Barberino as a source of Provençal literature, the genealogy of the Antonines, &c.

The enlargement of the Bibliothèque Carnavalet, which has been long in hand, is now nearly complete. It comprises a structure annexed to the Hôtel des Drapiers, and containing, on the ground floor, inscriptions referring to the history of Paris; on the first floor, views and plans of the ancient city. The Musée has been enriched with many new documents. An immense plan of Paris has been placed on the staircase, begun in 1734 and finished in 1739, by MM. L. Bretez, C. Lucas, and Aubin.

We referred a few weeks ago to some severe strictures passed on the Punjab Educational Department by some important witnesses examined by the Education Commission at Simla. The defence of the Director of Public Instruction, when recalled for examination, was that though there has been a great decrease in the actual number of primary schools, there has been no decrease in educational facilities; that

the primary school system had been too hurriedly pushed forward, at first causing the supply of schools to outrun that of teachers, so that many of the former had to be abandoned; and that though the schools are now fewer, the expenditure on them is double what it had been when they were more numerous.

SCIENCE

Travels and Researches in Western China. By E. Colborne Baber. Printed for the Royal Geographical Society. (Murray.)

THIS interesting volume forms one of the *Supplementary Papers* which are now issued by the Royal Geographical Society in the place of the old *Journal*, discontinued in 1881. Some of Mr. Baber's notes had previously been laid before the public, but now that it is possible to peruse them in a connected form their interest is greatly enhanced. His route may be roughly described as traversing much of the same region as Capt. Gill, *i.e.*, the border land of Western China and Tibet; but to this it must be added that they had but few points actually in common, and that Mr. Baber had the rare fortune of exploring several new localities, notably the Chien-ch'ang Valley, a country absolutely unknown to Europeans, save for a few sentences in Marco Polo, who calls it Caindu. One of the most interesting descriptions relates to a particularly old monument near Wan-nien-sou, a bronze colossal figure of an elephant, surmounted by an image of Buddha, the whole group rising to a height of thirty-three feet above the floor, and enclosed in a shrine, shaped like a hollow cube, covered with a hemisphere, and surmounted by a pyramid. Considering how China is not unfrequently reproached for its lack of ancient monuments, Mr. Baber may well be congratulated on the discovery of what he believes to be, next to the Great Wall, the oldest Chinese building of fairly authentic antiquity, containing the most ancient bronze casting of any great size in existence. It is not every day, as he truly remarks, that a tourist stumbles upon a handsome monument fifteen centuries old. At no great distance to the west of this temple rises Mount O, a mountain held in special veneration by the Chinese, chiefly on account of a mysterious atmospheric phenomenon, consisting of a radiant circle of many colours, broken on the outside by quick flashes, surrounding a central disc of peculiar brightness. The Chinese naturally invest it with a supernatural character, and call it "Fo-kuang," or "Glory of Buddha"; but there appears little doubt that it is a phenomenon somewhat similar to that of the "Giant of the Brocken," and not unfrequent on other isolated peaks. Mount O enjoys also the reputation of forming on one side the highest precipice in the world, the mountain being, as it were, cut sheer down for a distance of about six thousand feet. It is thus a conspicuous outpost of the limestone formation, which on this line of latitude extends westward as far as the T'ung river, where the sienite and granite of the Tibetan plateau first appear.

Glancing through Mr. Baber's volume, we find some difficulty in selecting passages as typical of the work. The descriptions of scenery are so fascinating and piquant, the incidents of travel so characteristic and often amusing, and the information which his thorough knowledge of the vernacular enabled him to acquire on points of history, ethnology, and geography is so considerable, that readers will do well to peruse the book for themselves. We may, however, fairly invite attention to the chapter on the Chien-ch'ang Valley, perhaps the least known part of the eighteen provinces, chiefly for the opportunity which it afforded to the author of making researches on the subject of the Independent Lolos, an interesting people which no other traveller has described. This tribe, or rather nationality, inhabits an extensive country, about 11,000 square miles in area, to the east of the Chien-ch'ang Valley; and the wide difference between them and the Chinese is at once apparent. They are far taller than the latter, and probably taller than any European people, remarkably straight built, with slim but muscular limbs, deep-chested, as becomes mountaineers, rather prominent cheek-bones, and arched but rather broad noses. Buddhism does not count a single convert among the Lolos, whose precise cult it is difficult to ascertain; but, whatever it may be, it is fostered by a class of medicine men, who are held in great reverence and monopolize the art of writing. Mr. Baber adds:—

"There is much in the free-hearted manner of these Lolos to attract the traveller, and more in the interest which attaches to so original a people. Possessed as they seemed to be with half an idea that I was akin to their race, they were everywhere curious to see their far-away tribesman. A European could doubtless stroll over the length and breadth of their meads and mountains in complete security, but he must be furnished with references, and an introduction *en règle* is indispensable. They appear to keep a wary watch along their border, and the character of a visitor is soon appreciated at its true value. Should he belong to the category of honest folk he will find no difficulty in crossing the frontier, unless it be from Chinese officials."

An amusing instance of Chinese cowardice is furnished by Mr. Baber. A Customs officer was explaining to him that a band of twenty to thirty Lolos, armed with sticks and stones, had swooped down on the village and carried off about 200*l.*, besides stripping all the officers of their clothes; whereupon Mr. Baber remarked it was a shameful thing that a village containing one hundred and fifty able-bodied men could not protect itself against thirty Lolos armed only with sticks and stones; to which his visitor rejoined, with true Chinese *naïveté*:—

"Certainly it is very shameful, but how can you expect mere savage Lolos to have any sense of shame? What is still more disgraceful, the robbers were subject Lolos and not the autonomous Blackbones. The latter would have plundered us and carried us into slavery as well!"

One of the most useful contributions to the geographical knowledge of the regions described by Mr. Baber is contained in his note on the Sifan tribes, twelve in number, which inhabit the valleys of the Kinsha, Yalung, and T'ung rivers, between the twenty-seventh and thirty-third parallels. This includes a detailed description of the country of Dege, a portion of Tibet which has not hitherto attracted attention, probably owing to its inaccessible, or rather its remote, position about the upper course of the Kinsha, but which is commonly reported to be populous and rich, chiefly because it lies at a distance from the great highways, and thus enjoys exemption from the burdensome imposts levied under the guise of contributions towards the travelling expenses of officials. The varied and extensive information so successfully collected by Mr. Baber regarding Dege and other little-known tracts ought to act as a powerful incentive to the ambition of future explorers. True that the road to Tibet may prove to be in effect a *cul-de-sac*, as it has to Cooper, Gill, Prejevalsky, and others; but there is, undoubtedly, much new work to be done round about and between Cheng-tu and Kokonor, and Mr. Baber's data would materially help such researches, besides being a very striking example of the ease with which a traveller thoroughly conversant with the vernacular may traverse unfrequented parts of China and yet meet with uniform consideration from all classes of society.

Continuous Railway Brakes: a Practical Treatise on the several Systems in Use in the United Kingdom; their Construction and Performance. By Michael Reynolds. (Crosby Lockwood & Co.)—The utility of a good brake in the prevention of collisions and in the diminution of the mischievous results of getting off the rails, although it may be exaggerated, is in principle undeniable. Mr. Reynolds speaks on the subject with all the weight of personal experience. He has endeavoured to explain what a continuous brake should be capable of doing, and where it is found most useful. He has brought together accounts of the leading systems of continuous brakes which have been tested by practical working in this country; and, having first laid down the requisites of the case, has brought one after another to the test of comparison as to the degree in which each requisite is attained or approached. The first condition required in a good system of brakes, we are disposed to agree with Mr. Reynolds, is that its application should be at the instant control of the engine driver. It is, however, no less indispensable that its application should also be in the power of the guard. Automatic action, again, is needed, so that in the case of a separation occurring between the carriages of a running train, the brake should come into play without the need of any action on the part of either driver or guard. This, of course, involves the addition of a brake to every carriage, and further complicates the apparatus, as it is necessary to be able not only to take off, but to keep off, the brake while separate carriages are being moved in the stations and sidings. Instant promptitude of action, adequate retardatory power, simplicity of working, and construction which is difficult to throw out of order, are further conditions of excellence; and it will be at once seen that it is hard to reconcile these various demands on the ingenuity of the mechanic, especially when it is remembered that economy is an element of no little moment in the case. Indeed, every extra shilling in the cost of a brake that should be applied to all the engines and vehicles running on the railways of the United Kingdom amounts to an aggregate of 25,000*l.* Mr. Reynolds describes, with the assistance of nearly a hundred plates, cuts, and diagrams, the series of inventions which he traces from the original lever bar. We can go a step further back in our recollection of the early days of the railway system—to the use of "the sprag," a short, stout cudgel which was adroitly thrust between the spokes of a running wheel when it was desired to bring the waggon to a stop. Screw brakes, chain brakes, Smith's vacuum brake, Hardy's vacuum brake, Steel and McInnes's

compressed-air continuous brake, Eames's vacuum continuous brake, Aspinall's automatic vacuum brake, Barker's hydraulic continuous brake, and Sanders's vacuum continuous brake, are successively described; and then Mr. Reynolds comes to what he, in common with most authorities on the subject, regards as the best of these appliances hitherto produced—the Westinghouse automatic brake, of which a full description is given. There is also a chapter on the trials of brakes made by the Railway Commissioners at Newark in 1875. A full, fair, and lucid account of the subject named in the title is thus presented to the reader. Two points strike us, which we in no way blame Mr. Reynolds for not having taken up, but the discussion of which is necessary to a full appreciation of the whole brake question. One of these regards the most constant, most successful, and, we may add, most wonderful application of the brake to arrest trains running at forty-five miles an hour in about their own length. This is done at every station on the Metropolitan Railway. Whatever may be the separate dues of Mr. Fowler, the engineer who designed the stock and arranged the mode of working of the line, of Mr. Tomlinson, the able resident engineer, or of any one else, the full explanation of this most successful system is a desideratum. At the same time it is desirable to work out the great cost, both to rails and to running stock, of its application. It has been just stated by Mr. Fowler, at the meeting of the British Association, that these brakes absorb 60 per cent. of the whole locomotive power developed on that line. If we contrast with a sudden, powerful, and destructive arrest of speed the quiet three mile slackening which Mr. Brunel introduced for his unprecedented velocity of trains on the Great Western, we shall probably come to the conclusion that there are immense drawbacks to that reliance on powerful brakes which, so long as trains are allowed to run at very different rates of speed on the same line, is unfortunately becoming more and more common. The second consideration regards the brake of the future. As to this, without saying that the great ingenuity devoted to the design and perfecting of continuous brakes worked by vacuum, by compressed air, or by hydraulic power has been wasted, we do not suppose that any of the brakes above described would have been likely to come into existence if the present state of our knowledge as to magneto-electric and dynamo-electric and dynamo-magnetic power had been of longer standing. Under the constantly changing relations of railway trains, the ready communication of electric contact must, we feel assured, ultimately displace any pneumatic or hydraulic junctions. How the brakes are to be put on electrically there is no need now to attempt to point out; but that such will ultimately be the method adopted is as sure as can be the forecast of any of the unborn, but distinctly adumbrated, mechanical improvements of the future.

THE BRITISH ASSOCIATION.

Southampton is a pleasant place to spend a week in. The picturesque aspect of the town itself, especially of its long and handsome High Street, the beauty of its surroundings, standing as it does within the fork formed by the bright broad waters of the Itchen and the Test, with richly wooded banks on the other side of either, its numerous breathing spaces in the shape of large and well-kept greens, besides a public garden, and the so-called common, which is really a well-planted park, give sweetness to the air and rest to the weary mind. The attendance at the meeting has been fair, the accommodation sufficient, and the arrangements excellent. The weakest point, perhaps, was the skating rink, the place assigned for the President's address and the evening lectures. It is too low in the roof to afford the grand *coup d'œil* to which people are accustomed at the opening meeting; and considering that it only seats about 1,200 persons, the platform included, it requires an undue exertion of the voice to fill it.

Dr. Siemens's address, a criticism of which was given in the last number of the *Athenæum*, was, like his own career, a happy combination of science and practice. No man can speak with more weight on numerous questions which are now fluttering the public mind; and the expressions of opinion which he has given with respect to electric lighting, gas lighting, gas engines, the fuel of the future, and the electric transmission of power, must be accepted as sober and well-balanced statements of the hopes which the public may reasonably entertain on these important points. The array of expectations thus presented is sufficiently startling. Gas engines to take the place of steam engines, and gas-making apparatus to replace boilers in our steamboats—smokeless fuel for the fires in our houses and factories in the shape of gas with or without coke or anthracite—the incandescent electric lamp for the houses of the rich, but gas still to remain the poor man's friend—small steam engines to be superseded by a few central large ones, distributing their power by means of electric transmission—are changes which Dr. Siemens thinks to be not far distant. As regards electric railways, he is not sanguine, except for short lines in the neighbourhood of water power, and the particulars which he has given as to the plan which will be followed in the new line which is about to be opened near the Giant's Causeway will be read with interest. The current will be sent to the train by means of a separate conductor suspended on one side of the line, and will return by the rails, which for this purpose need not be insulated. Storage batteries will be used as auxiliaries, accumulating energy while the train is running downhill, and giving it out in ascents, as well as at level crossings where the side conductor will be interrupted.

The addresses of the presidents of the sections have been well up to the mark. Lord Rayleigh accomplished the very difficult task of giving a philosophical disquisition on physical investigation generally without indulging in platitudes. He enforced principles important to be remembered, and apt to be overlooked by those engaged in scientific work, illustrating his remarks by numerous well-chosen examples. Prof. Liveing began with a discussion of some of the elementary ideas of chemistry, insisting on the absurdity of the views of chemical attraction which are taught—directly or implicitly—in the current text-books, and the necessity of looking to ordinary dynamics for the explanation of chemical phenomena. He referred to the modern hypothesis of vortex atoms as one which, whether true or false, at least showed the feasibility of an ordinary dynamical explanation. The latter part of his discourse was occupied with a review of the light thrown upon the constitution of atoms by spectroscopic results. Mr. Fowler, in the Mechanical Section, had no difficulty in interesting his audience with remarks about channel and river tunnels, the achievements of modern railway engineering, and the gigantic Forth Bridge which is about to be constructed on his own plans. In the Geographical Section, Sir R. Temple, as was mentioned in last week's *Athenæum*, discoursed eloquently on the mountains, rivers, and inhabitants of the great plateau of Central Asia, the meeting-place of the three great mountain chains of that continent, and the mother land of the hordes which, under Chinghiz Khan, achieved the greatest conquests known to history. Prof. Boyd Dawkins, in the Anthropological Department, discoursed on the present phase of our knowledge of the antiquity of man, drawing graphic sketches of the earth as it was in the days of the river-drift man and the far later days of the cave man who was in a higher stage of the hunter civilization. Mr. Etheridge, in the Geological Section, was less sensational, contenting himself with a disquisition on the geology and history of Hampshire; while Mr. Sclater Booth, in the Economic Section, brought us still nearer to the prose of life as it is by an address on Local Government Boards.

The first of the evening lectures was that given by Sir William Thomson on the tides. It was delivered with but few notes and without much regard to exact logical consecution of topics; but the intense energy of the lecturer and the startling points he made sustained the attention of the audience. The subject is one which, as chairman of the Tidal Committee of the Association, he has worked at for many years, and one result of his labours has been the publication of very complete tide tables for the principal Indian ports. Another result, of great importance to the geologist, is a determination of the amount by which the solid earth yields to the same distorting forces which produce tides in the sea. If it were of indiarubber, or, what amounts to much the same thing, if it had a crust only twenty or thirty miles thick, with fluid within, its yielding would be so great as practically to prevent any tidal currents from being formed in the water, for the formation of these depends upon the water yielding more than the land. Sir William's calculations show that the actual amount of yielding on the part of the land is less than it would be in a solid globe of glass of the same size. The latest forms of his tide gauge and tide-predicting machine were exhibited, and his harmonic analyzer was explained by the aid of a diagram.

The Saturday evening lecture to the operatives was delivered by Mr. John Evans, its title being 'Unwritten History, and how to Read It.' It was devoted to the early history of man as inferred from the remains of his handiwork, especial attention being given to remains found in the neighbourhood of Southampton. It was illustrated by beautiful diagrams of the various implements in question, showing the successive stages of their improvement; and though read, it was so clear and forcible that the audience appeared thoroughly to appreciate the intellectual treat provided for them.

The Mechanical Section had a lively discussion on the Channel tunnel, both in its engineering and political aspects, and Mr. Crampton exhibited on a small scale an excavating instrument which he would drive by direct hydraulic pressure instead of the pneumatic pressure hitherto employed. His scheme also includes the reduction of the excavated fragments to pulp, which would be run off in a drain to the end of the tunnel, and there pumped up to the surface. A beautiful model of the Forth Bridge as about to be constructed stood permanently on the table in this Section, and the plan of it was very fully expounded by Mr. Baker. Its longest span is about three times as long as that of any existing bridge. The trains are not to run along the top of it, but at the middle of its height, the girders above and below this level being in general appearance symmetrical.

The capabilities of compressed air as a motive power for tramways were ably set forth by Sir F. Bramwell, who espouses this mode of propulsion in preference to steam; and a very lucid statement was given by Mr. Preece of the results which have been attained in the use of the telephone. It is possible, he says, to swear to a friend's voice in the telephone though he be at 100 miles distance. The greatest distances at which conversations have been carried on have been from 400 to 500 miles. This was at night and through wires suspended in the air. Through submarine cables conversations have been carried on between Dover and Calais and between Holyhead and Dublin; but there is no case where the distance with a submarine cable has exceeded 100 miles. The trouble from the influence of telegraphic currents in neighbouring wires has been cured by twisting together the direct and the return wire of the telephone; and in this way Mr. Preece has conversed with a

friend without difficulty seventy-six miles off through wires erected on posts which also carried telegraphic wires busily occupied.

The Geographical Section have had a paper from Mr. J. Thomson, who is to lead an expedition which will be sent out under the auspices of the Royal Geographical Society to explore Kilimanjaro and the mountain chain to which it belongs. It contained, however, no thrilling narrative of adventure, but was devoted to the exposition of a geological theory respecting lake Tanganyika. Commander Cameron, who was present, challenged this theory, and a smart discussion ensued between the two explorers.

A prominent place was given to a paper by a foreign traveller, Mr. Tchihatchef, on the deserts of Africa and Asia. His paper, which is reported at great length in the *Times* of the 29th ult., asserts that the sand deposits of the Sahara are comparatively local phenomena, and that in the greatest part of the desert the subjacent strata are perfectly conspicuous, either by cropping up through the superficial deposits, or by rising as mountains and hills, generally of cretaceous formation. He accepts the view that the climates of Egypt and Syria have very much deteriorated since the times of Egyptian greatness. Another traveller, Mr. O'Donovan, gave an account of his recent explorations at Merv.

The eminent physiologist, Prof. Du Bois-Reymond, of Berlin, has read some papers of a technical character in the Biological Section; and Prof. Clausius, of Bonn, one of the founders of the modern science of thermo-dynamics, has been regular in his attendance at the Physical Section, though not taking much part in the discussions.

One of the most important contributions in the Physical Section was from Prof. Langley, of America. He exhibited two remarkable instruments, namely, his "bolometer," or radiation measurer—an instrument some twenty times more sensitive than the thermopile; and a very large diffraction grating, ruled on concave speculum metal by Prof. Rowland. By means of these powerful appliances, aided by the position of his observatory at the top of a mountain, he has made startling discoveries as regards the ultra-red portion of the solar spectrum. He has not only traced it much further than it was ever traced before, but has found in it absorption lines very much stronger than any that occur in the visible spectrum.

Capt. Abney, who has worked at the same subject, and has accomplished the difficult feat of photographing the ultra-red spectrum, took part in the discussion, as did also Prof. Schuster, and some interesting facts were brought out; one being the existence of vapour of alcohol either in the loftiest regions of the air or in interplanetary space, as shown by the absorption bands of alcohol in the spectrum of the sun; the other the existence of strong evidence that the group of lines in the solar spectrum known as the B group is due neither to the sun's atmosphere nor to the earth's, but to absorption in interplanetary space.

Prof. G. Forbes gave a very clear account of a series of experiments which he carried out with Mr. Young, of Kelly, and the method of which appeared to be unexceptionable, proving (unless they can be impugned) that red light travels faster in air than blue light. If this be so, the difference in vacuo will be still greater, whereas the received theory is that in vacuo all colours travel with equal velocities.

The Committee on Meteoric Dust reported, through Prof. Schuster, that large quantities of iron had been found in dust collected in the Sahara desert and in other places far from towns, and that much of this iron is alloyed with cobalt and nickel. These facts seem to indicate derivation from extra-mundane regions.

The Undergronnd Temperature Committee have furnished a general summary and discussion of all their results, extending over the past fifteen years, drawn up by Prof. Everett. The rates of increase at the several stations differ widely among themselves, and the general average deduced is a degree in 64 feet. Considerable prominence is given to the fact that increase downwards exists not only at depths at which the temperature remains constant throughout the year, but also in the upper strata as far as the surface itself, when we compare the mean annual temperatures at each depth.

Dr. Siemens brought forward in this Section the proposals contained in his presidential address for some additions to the list of "practical units" employed by electricians. Two of his units were unanimously approved—namely, (1) the *watt*, which is the rate of doing work when a current of one ampere passes through a resistance of one ohm; and (2) the *joule*, which is the amount of work done, or its equivalent the amount of heat generated, when these conditions are maintained for one second. These two units will probably be brought into immediate use, as they are greatly wanted in electrical engineering. One horse power is equal to 746 watts.

Mr. G. H. Darwin, son of the late eminent naturalist, made some important communications, one of them being in reference to his observations originally undertaken to detect the disturbance of gravity produced by the moon's different attraction in different positions, but lately continued for the sake of the information which they give respecting minute tremors of the earth. They show a chronic state of earthquake in what we have been accustomed to regard as *terra firma*.

Sir W. Thompson, as usual, was the leading spirit in the Section, throwing important light upon nearly every question that was discussed, besides contributing several papers of his own.

The Economic Section, which on some previous occasions has been accused of admitting papers of too light and popular a cast, has now recovered its character, and the titles of its communications at this meeting breathe the spirit of as severe science as the most rigorous political economist could desire. Prof. Leone Levi's statistics of crime in the three divisions of the United Kingdom were especially important.

The event of the meeting has been the decision arrived at by the General Committee to hold the next meeting but one in Canada. This is a new departure, but, as the General Secretary pointed out, it is quite within the scope of the Association's work as defined in the printed constitution. Strong opinions were expressed against the proposal, as virtually excluding from the meeting a large proportion of the most devoted members and hardest workers of the Association; but its supporters were enthusiastic, and though defeated by a small majority in the voting for next year's meeting, which is to be at Southport, they finally carried their point as regards the 1884 meeting by fifty-three votes against thirty-nine. Great inducements were offered in the shape of facilities for travelling; and the rare chance thus afforded of seeing America was doubtless a powerful attraction, especially to the younger portion of the members. At the worst, no very great harm can come of it. The regular work of the Association is not so vitally essential that a year's interruption for the sake of a holiday tour will produce any very grave inconvenience.

ASTRONOMICAL NOTES.

An attempt was made to observe the total eclipse of the sun on May 17th last in Central Asia, where the duration of totality was greatest, by M. Pomerantzeff, director of the Observatory at Tachkent, in Russian Turkestan. He selected as station a place called Pindjekent, a few miles to the east of Samarkand, and on the principal road from it in that direction. But, unfortunately, the cloudy state of the sky during the whole time of the eclipse prevented any observation being made; and the only result of the expedition was the determination of the geographical position of the station—the longitude by means of eight chronometers which had been transported to Pindjekent, the latitude with a transit instrument set up in the prime vertical. M. Schwarz, however, who had remained at Tachkent, was able to observe the time of the beginning of the eclipse there. It is interesting to remember how near M. Pomerantzeff's intended place of observation was to that where the observations were made for one of the very earliest catalogues of stars in existence, that of Ulugh Beigh (as Timour's scientific grandson is usually called, though his real name was Mirza Mohammed Taraghy), the epoch of which is 1437, formed from observations made at Samarkand.

Profs. Tacchini and Millosevich succeeded in following Wells's comet (*a*, 1882) at Rome until July 21st, when the increasing moonlight added to the difficulty of seeing the comet, which had then become very faint. Its place on July 21st was R.A. $11^h\ 19^m$, N.P.D. 82° 53′.

We have received the number of the *Memoirs* of the Italian Spectroscopical Society for July. The principal contents are Prof. Tacchini's detailed account of his observations at Rome of the solar spots, faculæ, and protuberances during the first six months of the present year. He has communicated a note on the metallic eruptions observed by him during the same time, and their distribution in heliographical latitude, to the *Comptes Rendus* of the French Academy for August 21st.

A second series of micrometrical measures of double stars, made by Dr. J. Jedrzejewicz at Plonsk, in Poland, is published in *Astronomische Nachrichten*, Nos. 2449–50 (the first series was completed in No. 2407). It consists principally of double stars endowed with a relative movement which has been either proved or at least suspected, the only exceptions being those of a very few couples which had not been measured for a long period. The method of observing is the same as in the first series, also micrometric apparatus, excepting that the number of micrometric eye-glasses has been increased, four years' experience having taught Dr. Jedrzejewicz that a convenient choice at hand of the magnifying power used, according to the brightness and mutual distance of the components, aids greatly in the accuracy of the measures.

ANTHROPOLOGICAL NOTES.

In the *Journal* of the Anthropological Institute, Mr. E. H. Man's excellent paper on the aboriginal inhabitants of the Andaman Islands gives evidence of the usefulness of the small volume of 'Notes and Queries on Anthropology' published by the British Association. Mr. Man works almost entirely upon the lines laid down in that volume, and by that means is enabled to give an exhaustive account, in the nature of a monograph, of the physical characteristics and culture of the Andamanese. Dr. A. Macfarlane submits an analysis in a graphic form of the relationships of consanguinity and affinity, and adopts a good suggestion of Mr. F. Galton to use for representing such relationships a notation capable of being vocalized. Mr. Howitt and the Rev. Lorimer Fison in an able paper trace the transition in Australian tribes from mother right, the original form of descent, to father right, sometimes by the orderly process of development, as when a tribe settles down to agriculture, sometimes by the violent action of impulses within the community itself. Mr. E. C. Hore contributes a paper 'On the Twelve Tribes of Tanganyika,' and Mr. A. Simson one 'On the Napo Indians of Ecuador.' The *Journal* also contains shorter communications by Mr. J. E. Price 'On Aggri Beads,' illustrating the collection of these objects in the museum at Colchester, and by Mr. Bloxam on a Patagonian skull.

Both the Anthropometric and the Photographic Committees of the British Association present this year interim reports with the view to the more complete discussion next year of the

facts they have collected. The Anthropometric Committee has obtained during the year a considerable number of statistics relating to women and children, and has commenced the distribution according to locality of the information gathered during the six or seven years it has been at work. The Photographic Committee, of which Mr. Park Harrison is the energetic secretary, is in possession of a fine series of local types of features.

A Society of Anthropology has been established at Brussels under the presidency of M. Vanderkindere. Its object is defined to be the study of questions of anthropology in general, and in particular of those which belong to Belgium. As it is to the bone caves of the valley of the Lesse, at Furfooz, the Trou de la Naulette, &c., that we owe some of the most valuable documents for the study of prehistoric man, preserved and illustrated in the museum of Brussels upon so admirable a plan that they tell their own story, the new society has reason for existence, and it ought to become both busy and prosperous. In many respects Belgium is a country capable of throwing much light upon anthropological questions. It possesses several useful and active local archæological societies. The Société Archéologique de Namur, for instance, in the third *livraison* of the fifteenth volume of its *Annales*, just published, gives an interesting account of explorations in a cemetery of the second or early in the third century at Franchimont, in the neighbourhood of other later interments, and of other sound archæological work, the results of which the anthropologists of Belgium will know how to use.

SOCIETIES.

Entomological.—*Aug.* 2.—Mr. F. D. Godman, V.P., in the chair.—One new Member was elected.—The following were exhibited: *Macropis labiata*, by Mr. F. Enock,—*Paragus tibialis* and *Discomyza incurva*, by Mr. T. R. Billups,—Cicindela, sp. from Babylon, by Miss E. A. Ormerod,—and *Xyleborus Saxesenii* (destructive to ale-casks sent out to Rangoon), by Mr. W. L. Distant.—The following papers were read: 'Notes on the Life-history of *Sitones lineatus*,' by Mr. T. H. Hart,—'On a Visit to Ceylon, and the Relation of Ceylonese Beetles to the Vegetation there,' by Mr. G. Lewis, who had captured about 1,200 species of beetles in Ceylon in five months,—and 'On certain Temperature Forms of Japanese Butterflies,' by Mr. H. Pryer.

MEETINGS FOR THE ENSUING WEEK.

Wed. Entomological, 7.

Science Gossip.

The Jubilee Exhibition of the Royal Cornwall Polytechnic Society, which opens on the 5th inst., is advancing so rapidly towards completion that it is now possible to say that it promises to be a complete success. Meteorology will be fully represented, especially as related to the county of Cornwall. Instruments of the most varied character will be exhibited, and a lecture by a member of the Kew Observatory will be delivered. Excursions to the mines are arranged, and the Natural History Committee has organized dredging parties in the harbour of Falmouth.

The Marquess of Ripon has accepted the presidency of the Yorkshire College of Science.

Sir Woodbine Parish, F.R.S., who died the week before last at St. Leonards-on-Sea, although connected with the diplomatic service, was well known in the scientific world by his work on the natural history of Buenos Ayres and the Rio de la Plata, and by having contributed to our palæontological collections the remains of the megatherium and the glyptodon from South America.

The 'Mineral Statistics of Victoria for the Year 1881' are, with their usual regularity, to hand. From the preliminary statement by Mr. Thomas Couchman, the secretary for mines, we learn that 313,828 ounces of alluvial gold were produced during the past year, and 519,550 by quartz mining. In 1868, 1,087,502 of alluvial gold were obtained, and since that date the annual produce has steadily declined.

The Twenty-eighth Annual Report of the Trustees of the Australian Museum, New South Wales, for 1881, has been forwarded to us. The collections have been considerably increased and many specimens new to science have been added. The progress made has been in every way most satisfactory. Fourteen appendixes are added to the report, which gives in detail statements of every matter of interest.

Dr. Werner Siemens has been examining the production of electricity under very peculiar conditions. In a Berlin brewery electricity was developed to such an extent as to alarm the workmen and impress them with an idea of demoniacal agency, a continuous stream of sparks being produced from malt when passing through the shoot from the malting floor. Dr. W. Siemens discovered that this was due to the insulation produced by an asphalte floor, which rendered the malting room a large Leyden jar.

M. J. van der Berghe communicates to the *Journal de Pharmacie* for July a curious investigation which he has made. Being struck with the constant appearance of a minute quantity of copper in bread, he was led to make a very cautious examination of wheat. He found in a million parts of wheat 9·24 parts of metallic copper, and of oats 10·8 parts.

The meteorological observations recorded at six stations in India in the year 1880 have just reached us. These stations are Calcutta, Lucknow, Lahore, Nagpur, Bombay, and Madras. We have also the monthly records for July, August, and September, 1881.

The Report of the mining surveyors of Victoria for the quarter ending March 31st, 1882, shows a production of 83,497 ounces of alluvial gold, and of 106,329 ounces by quartz mining.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Albert Dürer et ses Dessins. Par C. Ephrussi. Illustrated. (Paris, Quantin.)

Between 1877 and 1880 M. Ephrussi contributed to the *Gazette des Beaux-Arts* a series of papers on the drawings of Dürer which were illustrated with photographs of great value. In this volume his essays are reprinted, with the addition of much new matter and sundry corrections. In fact, the essays have been entirely remodelled, more transcripts from drawings by the great master have been added, and his draughtsmanship is now very fairly, conveniently, and powerfully exhibited. A wonderful body of work it is. No other artist, except Raphael or Holbein, has bequeathed so numerous a collection of drawings. The drawings of Da Vinci embrace subjects of high scientific and historical value, but the number of those which are purely artistic is less, while from a personal and biographical point of view Dürer's excel even Da Vinci's in interest. The former are nearly all artistic *per se*, or topographical, and comprise delineations of costume, cities, buildings, and other structures, most of which were made for pictorial purposes. The drawings of Holbein are mostly portraits. The studies of Raphael, the Cartoons apart, are figures, or portions of figures, draperies, and architecture. Dürer's are nearly all finished to the highest pitch, in which respect he equalled Holbein and Mantegna—and Da Vinci, who, like Mulready, drew everything with all his might, and, as Walpole's correspondent said of Pitt's speaking, "like ten thousand angels."

One of the features of M. Ephrussi's book is the degree of critical independence it displays. He has had the courage to differ not only from older opinions, but from the dicta of Dr. Thausing. In some, if not all, of these points our author gets considerably the best of the argument. While he does not go out of his way to wrangle with the learned German professor, he maintains his own ideas ably and strongly, and frequently displays chivalric feeling and temper while admitting the importance of other opinions. As to the biography of Dürer, M. Ephrussi has thrown new light on one or two minor facts—light, generally speaking, derived from the drawings. Dürer's work, if properly read, does much to aid his biographers. Its varying and developing style accords completely with what we know of his life and travels, apart from the famous and most precious diary, or rather journey book.

Not a few of the drawings bear, besides the dates, memoranda of interest in regard not to their subjects only, but to the painter. In his note-books or on loose sheets of paper he delineated scores of men and things which time and the draughtsman's skill and genius have made even more precious to us than they were to him. A draughtsman so minute, laborious, and scrupulous could not fail to gather what may be called the honey of the Low Country and Rhineland, which he traversed to and fro. In these examples more especially Dürer worked without the least affectation, or any other infirmity of will and skill. This cannot be said for all his works. It is this, even more than their technical merits, which makes the subjects of M. Ephrussi's researches and comments worthy not only of the care he and others have expended on them, but of the attention of all who love art as the servant of history and the exponent of design in the highest sense of the term.

The more important facts of Dürer's career are assumed by our author to be known to his readers. His suggestions and additions are, as has been said, with the exceptions which we notice below, of minor importance, yet still valuable, although not capable of discussion within the limits of this review, because they are connected with out-of-the-way details, which it would be hard to explain in a few words. The sum of M. Ephrussi's remarks on the technical part of his subject effectually proves that Dürer, with characteristic literalness, obeyed that command to all earnest painters which is conveyed in "Nulla dies sine lineâ." He drew everywhere, and as if his life depended on the practice; therefore his draughtsmanship was, from a scientific point of view, simply perfect, uncompromisingly faithful and searching. That delicate silver-point of his followed the subtlest curves of a damsel's cheeks, lips, and eyelids. He astonished the Bellinesques themselves by drawing hair as even Venice had never before seen

it drawn. The convolutions of a mountain country and the foreshortening of a river's banks were rendered by his deft fingers in an amazingly fortunate manner. Of this unflinching skill this volume contains several signal instances. With the brush, his favourite and most efficient implement, charged with white, bistre, or Indian ink, he represented the contour of draperies, such as those of the apostles fac-similed here, with skill equal to that of Da Vinci, if with less felicity. Da Vinci drew draperies in the same spirit that Phidias employed in sculpturing them. That peculiar defect of a full sense of the transcendent importance of repose in design, which was Dürer's characteristic shortcoming, caused his draperies, as well as other matters, to be inferior to those of the Greek and the great Milanese.

Largely assisted by the dates borne by the authenticated drawings themselves, and rejecting without scruple some of the audacious counterfeits which occur in nearly every collection except that at Berlin, M. Ephrussi has adopted a chronological arrangement for his examples, without regard, as he says, to the fact that their subjects are thus made to form a sort of *olla podrida* of portraits, trees, buildings, portions of pictures, limbs, heads, extremities, and landscapes. In appendixes he has grouped (1) the drawings in classes according to their materials and subjects, and (2) according to the collections, public and private, in which the examples are now to be found. The latter mode of grouping will be of untold value by-and-by, when the works must needs be traced from cabinet to cabinet. As to the amount of importance to be attached to the fact that certain examples are named in these lists—of which M. Ephrussi, who has seen the specimens thus catalogued, assumes the responsibility—we may as well say at once that while we admit his decisions without reserve in ninety-nine out of a hundred cases, there are examples named here which not only we but every artist we know decline to accept as Dürer's. M. Ephrussi indicates by means of his chronological arrangement the changes of Dürer's technique. Among other results, this classification shows that the artist travelled in 1515 through Swabia and Alsace, making sketches and studies of buildings and landscapes. H. B. Grün seems to have shared this journey. Our author describes the influence on the painter of Wohlgemuth and of Schongauer; while in the 'Death of Orpheus,' in the Print Room, M. Ephrussi finds the evidence of Dürer's first contact with Italian art by means of engravings—contact that is distinct and at its best in the 'Apollo and Diana' in the British Museum, where the Italian of De' Barbari has been translated into the fine German of Dürer. Another but different manifestation of this influence appears in the 'Adam.' Our author shows clearly the effect produced on Dürer by Jacopo de' Barbari, whose influence on the German proved far superior to that of the other Venetians with whom, at a later date, he came in contact. The impressions of religion and prosperity on Dürer's mind are not ignored.

The second of the two points of unusual interest to which we have already referred as of cardinal importance in M. Ephrussi's studies demands notice. A number of views of landscapes made by Dürer, and dated with that scrupulous exactness which was part of his character, and is a curious proof of his high opinion of himself, prove almost to demonstration that our painter did not go to Venice in the early months of 1494 (twelve years sooner than a better certified visit was made), as it has been commonly believed he did — a visit to which many effects have been fondly attributed. These conclusions have been previously entertained; but M. Ephrussi has, we think, settled the point effectually and ingeniously. To account for the existence of certain drawings made in the Venetian hill territory, and hitherto supposed to have been produced *en route* for Venice in 1494—the date of the assumed first visit of the master to the Queen of the Adriatic—our author conjectures (and his conjecture is favoured by collateral evidence too complex for consideration here) that Dürer made a tour to these hills in 1506, and then produced the studies. That Dürer was at Strasbourg during the spring of 1494 is a fact of great value in combating the assumption that he journeyed to Venice in the same period.

M. Ephrussi urges more than one good argument in support of the idea that during an excursion from Venice late in 1506 Dürer met at Bologna Leonardo da Vinci, who is known to have journeyed to that city in the summer of the same year, and remained absent from Florence till October, if not later. In the library at Dresden are certain sketches of horses by Dürer after Leonardo's drawings. To say the least, it is extremely probable that the two masters met on this occasion, and that these studies may indicate a *rapprochement* which it would be pleasant to contemplate. The evidence yet obtained on this point is not, of course, conclusive. Possibly the manuscripts of the Milanese artist will establish the idea of our author or relegate it to the limbo of ingenious imaginings. That Dürer was honourably entertained and heartily admired in Venice is decisively proved by his own reproachful letter, written to the magistrate of his native town nearly twenty years afterwards, in which he declares that the Signory offered him two hundred ducats a year and part payment of the price of all the works he might be induced to execute for the city. "But I refused," said he, "all these offers because of the love I bore your lordships and the fine city in which I was born." The appeal conveyed in these words was not met in a way to satisfy the whole of his expectations.

The numerous illustrations deserve more than passing notice. Had M. Ephrussi's sole object been to show the technical powers of his hero by selecting the finest specimens, he might have added to the popularity as well as to the intrinsic value of this volume. Some of the specimens in the Albertina, the Louvre, and at Berlin would have yielded nobler results than many which find place here; and some of them might have enabled us to trace the technical and mental development of the artist even more closely. The "Green Passion" at Vienna, 1504, is not only a far finer series than the pretty and spirited marginal designs to the Emperor Maximilian breviary at Munich, but it is more truly characteristic of Dürer. Nevertheless, we have nothing of the former and three whole pages from the latter. The famous portrait of Dürer by himself at Munich, which shows his noble face not ennobled by that torrent of small ringlets, on oiling and dressing which he must have spent no end of time, although reproduced by M. Dujardin as well as can be done by heliogravure, is not completely satisfactory, yet it is much better than an engraving could be expected to be. The noble altar-piece of the Paumgärtner at Munich is somewhat opaque and heavy, but otherwise it does not lack spirit and fidelity, and its size is adequately represented. Among the most satisfactory transcripts is the portrait of Paumgärtner himself, 1503, a marvel of drawing and character-delineation. The worn, over-sensitive, and somewhat querulous features of Agnes Frey, Dürer's wife—"My Agnes," as the artist wrote on her likeness—have a biography in their expression which may serve as a comment to the letter of Pirkheimer in the lady's disfavour, on which many legends of her husband's domestic misery have been founded. Nothing could be better than the reproduction of the head of Dürer's father in the fur cap now in the British Museum, an artistic treasury of Dürer's works, which is not half studied as it ought to be. In saying this we do so with that reserve which is necessary whenever general use of such incomparable and irreplaceable gems of art is advocated. Such works are far too precious to be in frequent use. Photography reproduces them with absolute fidelity, and photographs only ought to be generally available, not the originals.

To conclude, M. Ephrussi's laborious and yet animated monograph is, as a whole, worthy of its subject and the pains expended on it; it contains a mass of studies, opinions, and information not accessible elsewhere, and is of high value in enabling students to grasp the art of Dürer at its sources, to see the man at work at home and abroad. A worthy supplement to this book would be a complete set of photographs from Dürer's drawings.

Tome II., Huitième Année, of *L'Art* (Librairie de 'L'Art') is quite equal to foregoing volumes of the same periodical. It contains among numerous large etchings from pictures a series of reproductions from works in the lately sold gallery of M. Febvre, including some of the works of Nattier, of which the most attractive is the portrait of the Marquise du Chastelet. Other considerable elements of the volume are portions of a collection of papers on the treasures of Hamilton Palace, copiously illustrated with engravings of choice examples of *bric-à-brac*. The letterpress by M. N. Gehuzac is lively and comprehensive rather than severely critical. The papers by M. Chesneu on Delacroix deal ably with a subject which we should have considered past writing about. Some fac-similes of sketches and studies made for pictures add to the interest of these essays. Articles on the late *Salon* reproduce in capital etchings a few noteworthy pictures. Among these transcripts the best are 'Les Deux Amis,' a cat and bird ensconced on a chair, by M. P. Rousseau; and a very excellent and characteristic bust portrait of Corot. The sterling character of the countenance is a strong contrast to another portrait of the self-satisfied, self-asserting, self-centred G. Courbet, of which it may be said that

XUM

facial characterization could hardly more truly reflect the man. Among the essays of interest is 'Deux Documents Inédits des Artistes du XVII[e] Siècle,' dealing with the wills of Poussin and Claude. Papers on the French architect Jacques Androuet du Cerceau and his works appear in the earlier portion of the volume, and are accompanied by engravings showing the beauty of some of the houses attributed to him in French provincial cities. The style of these buildings is of a very pure Renaissance order, semi-classical without formality, elegant, severe, and free, and, unlike French and English adaptations of the cognate art of Palladio, they are adapted to the climate of Orleans and the neighbourhood of that city, where some beautiful types remain.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

Plymouth, Aug. 29, 1882.

THE evening of the 22nd was devoted to the reading of papers, the Athenæum having been placed at the disposal of the Association for the purpose by the Plymouth Institution. After the welcome accorded by the president of the latter society, Mr. R. N. Worth, a paper was read by Sir J. A. Picton on the municipal records of England, illustrated by those of Liverpool. The new school of inquiry into the documents in question has already shown the great amount of information that may be derived from their study, and the lecturer indicated the subjects that are referred to by those of Liverpool. The growth of the borough, incidents of domestic life of all kinds, value of money, specimens of orthography, costumes, arms, punishments—these, and a vast number of other subjects, are all capable of being examined in a way not to be accomplished by the aid of any other documents. Another paper, on various incidents of Sir Francis Drake's voyage round the world, was read by the Rev. W. S. Lach-Szyrma. The small size of Drake's ships was particularly emphasized, the largest being about the average size of a modern collier. This was followed by a third paper, by Dr. Drake, on the antiquity of the armorial bearings of the family, and various differences were passed in review. The meeting separated at a late hour.

Wednesday was devoted to visits to Dartmouth and Totnes. On arrival at the latter place a special steamer conveyed the bulk of the party to Dartmouth, the beautiful scenery of the river Dart being seen to great advantage. The church of St. Saviour was examined and described by Mr. Loftus Brock, in the unavoidable absence of the Rev. E. C. Brittan. It is a cruciform church, with aisles to both nave and chancel and a plain western tower, the main portion of the fabric having been erected in the fourteenth century and consecrated October 13th, 1372. Much of the interior was, however, rebuilt in more ornate style only about thirty or forty years later, at which time, or a little later still, the magnificent oak rood screen, for which the church is so celebrated, was erected. The well-known pulpit is also of the same date, the anomaly of the badges of the time of Charles I. in the panels being accounted for by the indications that they were later insertions, the small original statuettes having been chiselled away to receive them. The same process is sufficient to account for the late date which now appears on the fourteenth century iron-work on the south door. Col. Bramble explained the costume of the very fine Hawley brass in the chancel (1408). The ancient houses in the Butter Walk were then inspected, while some of the party paid a visit to Dartmouth Castle and the ancient church of St. Petrock. On the return journey, after luncheon, a lengthy visit was paid to Totnes Church, a building of considerable size and much artistic beauty. Here Mr. Windeatt supplied many interesting items of information from local documents, &c., among which were references to the building of the tower about 1432. The magnificent stone rood screen was erected by the corporation in the thirty-eighth year of Henry VI. Mr. Loftus Brock was sorry that, for the sake apparently of architectural uniformity, a fine seventeenth century monument had been taken down from the chancel during the recent restoration and rebuilt in a corner of the tower. Passing into the old Guildhall of the town, the party was received by the mayor, Mr. Harris, and hospitably entertained. The building is a quaint structure, dating from the time of Edward VI. Within it a great number of deeds and documents were laid out and described by Mr. Windeatt at length, many notices of important historical events being rendered. Mr. C. H. Compton described the ancient charters, which were passed in review with the originals, and Mr. G. Lambart, F.S.A., discoursed upon the two silver-gilt maces and the loving cup of the corporation. Several granite columns, removed from an ancient building on the south side of the church at the entrance, were seen near the Guildhall, lying about awaiting their much needed re-erection. The quaint old houses in the principal street, with their rows of columns and built over the footway, the two gates of the town, and many curious fragments of carving, were all noted, and the visit was brought to a close by the inspection of the ruins of the castle. This is a circular shell keep on a conical mound, artificially shaped, the masonry being pronounced by Mr. Brock to be no earlier than the thirteenth century, although the earthworks may be of very great antiquity. The ruins belong to the Duke of Somerset, and have been planted with trees and laid out as a recreation ground. The return to Plymouth was at an hour too late for the reading of papers, and no meeting, accordingly, had been arranged for.

On Thursday the archæologists proceeded by a special train and carriages direct to Lidford by way of Tavistock, much of the wild scenery of Dartmoor being passed. The church of Lidford is a small building, but possessing points of much interest. After a welcome had been given to the party by the clergyman in charge of the parish, Mr. Brock passed the architecture of the building in review, and pointed out that it had grown from a simple nave, enlarged first by the addition of the chancel and then by the southern aisle and the picturesque western tower. Part of the north side of the nave is of remote antiquity, and the plain cylindrical font dates probably from Saxon times. The building is dedicated to St. Petrock. The stairs to the rood loft alone remain, and there is the peculiarity of a hagioscope cut through the lower steps. Mr. R. N. Worth rendered an interesting description of the now decayed town of Lidford, which was of extent and importance in Saxon times, having a mint, and apparently a large population. The castle adjoins the churchyard, and there the party inspected a square keep of no great elevation, erected on a bold circular conical mound of earth. The arches are round headed and segmental pointed. Mr. Worth referred to the meagre history of the building, the earliest mention of it known to him being in the reign of King John. Lidford is the largest parish, perhaps, in England, containing as it does almost the whole of Dartmoor, and is many thousands of acres in extent. Mr. Brock pointed out that the architectural evidences forbade the belief that any of the masonry was of older date than the time of John at the earliest. The earlier age of the mound was apparent, for no one would purposely have designed a circular base to receive a square superstructure. The mound was the older of the two. Mr. Worth narrated his interesting discovery of a series of important and extensive earthworks which entirely surround the town. The party proceeded to examine these works, which are still very apparent on many points around the houses now forming the village, enclosing a much larger space than is at present occupied. They consist of a massive rampart and an outer ditch, and their appearance fully justifies the belief that they are the remains of a British fortified town. The earthworks of the castle are included within the area thus surrounded.

Almost the whole of the party then descended the romantic gorge of the Lyd, the grounds being kindly thrown open by the proprietor. The little river has here worn for itself a narrow channel in the hard rock of remarkable depth, through which the stream roars and leaps, surrounded by a luxuriant undergrowth of bushes and ferns, the whole forming a scene of great beauty. Passing close to Brent Tor and its ancient church dedicated to St. Michael, perched like an eagle on the summit of the lofty hill, conspicuous for many miles, the party proceeded to Tavistock. Here the church of St. Eustacius was inspected. Mr. Loftus Brock referred to the fact that the building was mentioned as being dedicated to this saint so early as 1184, and that it was until then separate from the great abbey of Tavistock close to it. After referring to the fact that several other churches named after early saints are mentioned at the same time, the lecturer proceeded to show that many churches in the county still retain their dedications to saints of the third, fourth, and somewhat later centuries, indicating that here, as in Cornwall, Romano-British Christianity existed to an extended degree. The vicar described the two monuments, which are of much interest, and Mr. Lambert explained the pewter communion flagons of the church. A perambulation was then made of the site of the celebrated abbey, aided by notes and a plan prepared by Mr. Rundle, of Tavistock. The church, which was of great size, stood almost in the centre of the present Bedford road; the office is on the site of the chapter house, and the sites of the other conventual buildings were fairly well made out. This most gratifying visit was brought to a close by the inspection of the well-known Romano-British inscribed stones in the vicarage gardens, which were found to be in fairly good state although standing in the open air.

In the evening the following papers were read: 1. 'On the Finding of an Early Statue at Abbotskerswell Church,' by Mr. J. Phillips. It has been found embedded in the wall of the building during restoration. 2. 'The Early History of Plymouth,' by Mr. R. N. Worth, in which attention was drawn to recent discoveries, showing that an early British race must have occupied the site. 3. 'Robert Blake, Colonel and General at Sea, 1657,' by Mr. E. G. Bennett, in which many of the exploits of the gallant sailor were passed in review. 4. 'The Exeter Book,' by Mr. D. Slater, in which the claims of a new translation of this important Saxon work were advocated.

On Friday a large party of the archæologists proceeded to Totnes, where carriages were in readiness to take them to Dartington Hall. Here they were received by the Rev. R. Champernowne on behalf of his nephew, the owner, who was absent. After the history of the building had been related by Mr. Champernowne, a survey was made and its architectural features pointed out by Mr. Brock. The style of the work tallies with the recorded history, the mansion having been erected in the reign of Richard II., whose badge appears on the vaulted roof of the entrance porch. It has consisted of an outer quadrangle, a fine central hall, dividing it from an outer court, the principal apartments having been in the latter, but only a few traces of walling remain here and there. The hall is unroofed and mantled with ivy, but its fair proportions can be traced, and the position of the daïs, minstrels' gallery, passage way to kitchen, &c., made out. A wide open fireplace exists at the end of the hall, while in the rear, on the opposite side, is the kitchen. The outer quadrangle still retains many of its buildings, including the retainers' hall, near to the site of the original entrance, and it is still covered by its open timber roof. The old parish church, close to the hall, has been unfortunately

XUM

demolished, but the destroyers have had the good taste to retain the tower, which still exists intact. The visit to this fine and but little-known hall was somewhat hasty, in consequence of the extent of the programme.

The next halt was made at Berry Pomeroy Church, a fine and characteristic specimen of a Devonshire church, with a capital porch with a vaulted roof and a room over it, a good western tower built "battering," and an unusually good oak screen, coloured and gilt, extending from wall to wall across the chancel. Mr. E. Windeatt detailed the history of the building, and paid a just eulogium to the Rev. John Prince, author of the 'Worthies of Devon,' who was for many years vicar of the parish, and who died there September 9th, 1723. Mr. Brock referred to the peculiarities of the architecture, and, after the fine monuments had been inspected and thanks accorded to the Rev. A. J. Everett, who had received the party at the church, a visit was paid to the mansion adjoining. Here many articles of furniture of great artistic beauty were inspected, among them being an elaborately moulded and carved bedstead of seventeenth century work, said to have been brought from the adjacent castle. Proceeding onwards through some of the most beautiful scenery of Devon, Berry Pomeroy Castle was reached. This charming ruin was seen to great advantage, every point of view being a remarkable study for an artist. It consists of a mass of late Tudor buildings, grouped around an inner court, and surrounded by an escarped bank of great height, there being but one approach. This is a gateway with spaces for two portcullises and two flanking towers. Mr. C. Lynam related the history of the building within the inner court, and the party then perambulated the remains, which are very extensive and imposing. The next halt was made at Compton Castle, a building partly in ruins, of early fifteenth century date, of a very different plan, more resembling Dartington Hall, since it had a quadrangular court enclosed by walls in front of the principal block of buildings which divide it from a second court in the rear. The buildings consist of the remains of the chapel, some of the best rooms, and nearly the whole of those for domestic purposes. Mr. C. H. Compton read a paper on the families connected with the castle and described it. The party then proceeded to Torquay to luncheon, and a return was made by way of Paignton to Totnes, passing Tor Abbey on the road, which, had time admitted, would have been inspected. Owing to the lateness of the hour of return, a single paper only was read at the Athenæum. This was 'Notes on the Cornish Language and its Survival in the Cornish Dialect,' by the Rev. W. S. Lach-Szyrma.

Saturday proved to be a day of alternated sunshine and shower, but the latter did not prevent a large party from starting in carriages from Plymouth for an extended drive. The first place visited was Slade Hall, the seat of Mr. J. D. Spode, who described the building. The hall has an open timber roof of the early part of the seventeenth century, very similar in design, however, to one seen at Plymouth Priory of the fifteenth century, affording evidence of the continuance of old designs in the locality. Passing on to Cornwood Church, the building was examined and commented upon by Mr. Brock. It is a double-aisled building, the aisles, north and south, having transepts. The tower at the west end is a portion of an older church, doubtless of smaller size, the growth of the building to its present proportions being pointed out stage by stage. The next halt was made at Fardell, an ancient manor house, mainly of fifteenth century date, now used as a farmhouse. The party being assembled on the broad staircase, of later date, Mr. G. R. Wright, F.S.A. — the hon. Congress secretary, whose cheery horn had been heard all through the week guiding and directing the routes to be taken—read a paper 'On Fardell, the Family Seat of the Raleighs.' He traced the connexion of the family with the house from its commencement to its close. There is a chapel to the right of the house, where Mr. Brock pointed out some thirteenth century stonework, although the licence from Bishop Lacey only dates from August, 1433. Passing the position where the Fardell Stone had laid for many years, the next stopping point was Ivy Bridge, where the picturesque river bed and its roaring stream, the ivy-mantled arch spanning it, and all the other charming features of the spot were inspected. After luncheon the visitors drove back rapidly to Plympton. Here Mr. Brooking Rowe, F.S.A., pointed out the ruins of the ancient castle of Plympton Maurice, raised on a circular conical hill. The masonry work is of Norman date, but the hill may be ancient British or Saxon, while the base court, which approaches to an elongated square in plan, surrounded by lofty earthern banks, may be the site of a Roman camp. The sea once came up to the base of the castle hill. The adjacent church of St. Maurice was then examined, and notes read on its history by Mr. Rowe. It has a good bold tower. Proceeding to the celebrated school of Plympton, where Sir Joshua Reynolds was educated, the party had another example of the lingering Gothic style in the design, the building having been erected in the middle of the seventeenth century. The Town Hall was next visited, and Mr. G. Lambert discoursed upon the copper-gilt maces, while Mr. Brooking Rowe and others described some good thirteenth century tiles found on the site of Plympton Priory. The fine church of Plympton St. Mary was then inspected. It is of granite. It is more elaborate in its design than usual, the eastern portion having two parallel aisles on each side of the nave. There are some fine monuments and many other points of interest. After describing the church, Mr. Rowe led the party to the site of the priory of Augustinian canons, close to the church. So completely has this large building been demolished, that there are few features visible. Mr. Rowe was able, however, to point out the site of the church, the position of its transepts, and, as the result of excavations, the jambs of a fine western entrance portal. On the return to Plymouth the closing meeting was held at the Guildhall, where a conversazione was given by the Mayor of Plymouth, who presided. Papers were read: by Mr. W. H. Cope, 'On Old Plymouth China'; another, 'On a Ruined Holy Well dedicated to St. Julian at Rome,' by Mr. J. Hine; and a third, by Mr. C. H. Compton, 'On the Gilberts and Comptons of Compton Castle.' The proceedings were brought to a close by the usual complimentary votes of thanks.

The extra day's proceedings, Monday, the 28th, were among the most interesting of the whole. Under the guidance of Mr. F. Brent, F.S.A., a visit was paid to the old citadel of Plymouth, the last of the seventeenth century fortifications still intact in England, on the site of ramparts of the thirteenth century, and that of the old Chapel of St. Catharine. Besides these, the site was probably that of a prehistoric settlement. The remains of the Ancient Castle Gateway in Cambhay Street were then inspected, probably not too soon for the preservation of record of their existence, since they will soon be swept away for the purposes of public improvement. Mr. C. W. Dymond, F.S.A., at the request of the party, promised to prepare a memoir of the remains. Proceeding by boat, Mount Batten was reached, with its martello tower dating from the time of Charles II., while the locality records the name of Admiral Batten. Close to the tower some faint traces may yet be perceived of the earthworks thrown up during the memorable siege of Plymouth by the Royalists. Mr. Brent called attention to the fact that the spot was in all probability the seat of an early Celtic race, since large numbers of flint flakes have been found from time to time, while the continuance of the settlement to a later period appears to be proved by the numbers of British coins, in silver, gold, and copper, which have been found. Close to Mount Batten is the site of the ancient cemetery, which was explored by Mr. Spence Bate, the results of which are preserved at the Plymouth Institution.

Later in the day a visit was paid by carriages to St. Germans and Port Eliot. On arriving at the church, the former seat of the ancient bishops of Cornwall, the party was met by Mr. W. Daubeney, a relative of the vicar's, and by the Rev. H. Evans, who welcomed them in the name of the vicar, the Rev. A. Furneaux. The church, which stands about midway on the steep slope of a hill side—a remarkable position for such a building — consists of the nave and aisles only of a larger building. The eastern part, which was the portion occupied by the Augustinian Canons prior to the Dissolution, fell down in 1592 and was never rebuilt. Two western towers, of different design, make an imposing west front, the effect of which is increased by the fine projecting Norman porch, undoubtedly the finest in the West of England. The south aisle was rebuilt early in the fifteenth century, and the north aisle was removed at the close of the last century. Mr. Loftus Brock, F.S.A., described the building, and took occasion to refer to the evidence afforded of the existence of Christianity in Britain in early times, apart from all Saxon influence, doubtless the growth of the British Church of Roman times. The name St. Germans refers to the well-known bishop of the fifth century, who visited England to combat Pelagianism, and it is found associated with the Church from the earliest times of history. The names of many of the churches in the immediate locality are also those of early saints known in Wales and Brittany as well as in the West of England. Port Eliot, the seat of the earl of St. Germans, is close to the church on the north side, and was thrown open to the party. After their reception their noble host escorted them through the building and pointed out all the objects of especial interest. There are many fine historical and other portraits, several of which are by Sir Joshua Reynolds. Here, too, is an early landscape by Sir Joshua, a view of Plymouth, and also his 'Snake in the Grass,' a charming work in admirable preservation. Many pieces of old Plymouth china were especially noted, and in the library the Eliot correspondence and papers, now carefully bound. The daylight being almost gone, a visit to Trewaton Castle had to be given up, and it was at a late hour that the carriages passed over the ferry at Saltash on the way back to Plymouth, the effect of the charming scenery being heightened by brilliant moonlight.

The proceedings finally closed on Tuesday by a visit to the Duke of Bedford at his charming cottage and gardens at Endsleigh, near Tavistock. The Congress has been a very pleasant one, well attended, and well calculated to promote the Society's aims and objects by stimulating and promoting interest in and knowledge of our ancient monuments.

Fine-Art Gossip.

Some further particulars of the long labour of cataloguing which Mr. Algernon Graves has nearly completed will be welcome to students of English art-history. The MS. series, from 1760 to 1880, consists of twenty-nine folio volumes, containing 25,600 pages, divided as follows: Royal Academy, ten volumes; Society of British Artists and British Institution, ten volumes; the Society of Artists and Free Society, three volumes; the Old Masters' Exhibition, four volumes; Old Masters' Drawings, one volume; Modern Drawings, Loan Exhibitions, one volume. Every professional or amateur artist who exhibited a work or works since 1760 is registered

in alphabetical order, with a complete list of his contributions and every change in his address inserted after his name. By careful double checking of each entry Mr. Graves has been able to correct the very faulty indexes of the catalogues and trace each work to its owner. Few persons are aware of the reckless manner in which the indexes used to be prepared. In many cases painters and all their contributions were omitted, although as many as half a dozen examples were described in the bodies of the catalogues. This occurred frequently in respect to unknown painters; but the most conspicuous example connected with a painter of renown concerned Turner, two pictures by whom were found by Mr. Graves not indexed, and, consequently, not included in Rodd's list. They were, of course, omitted in the faulty reprint of Rodd in Mr. Thornbury's 'Life of Turner,' and in other works on the painter, the authors of which relied on the indexes of the catalogues of the exhibitions. Great want of care has been shown by everybody in the apportionment of initials to the names of painters, especially with regard to members of families bearing the same surnames. With regard to the Landseers, of whom not fewer than six were exhibiting at the same period, our own experience has revealed to us the blunders of the indexes and enables us to appreciate highly the value of Mr. Graves's emendations. Of the indexing of portraits we have already spoken. Mr. Graves is completing a condensed dictionary of the names of all the artists exhibiting, probably more than 20,000, comprising the most useful information concerning them in one line, and showing not fewer than 15,000 names not in any other dictionary. At the 122 exhibitions of works by living artists at the British Institution and Society of British Artists, 1806–80, there were 78,352 works; of these 247 were by unknown or anonymous persons. The remainder were produced by 7,003 artists, among whom were 890 unmarried and 253 married ladies. Of the total number, 28,828 appeared during the sixty-two years of the Institution, and 49,524 at the sixty gatherings in Suffolk Street. The latter does not include the recent winter exhibitions. With great liberality Mr. Graves intends to leave the results of his prodigious labours to the Print Room, and he never hesitates to make them available by inquirers of the present time.

The quarterly meeting of the National Society for Preserving the Memorials of the Dead was held on Tuesday, the 22nd ult., when the most satisfactory progress in the enrolment of members was reported and the prospects of the society considered excellent. Among other matters decided upon was the holding of a meeting at Derby during the sitting of the Church Congress. The influence of the society has already been exercised for good, and several applications for aid were received. The secretary, Mr. W. Vincent, Belle Vue Rise, Norwich, will be happy to afford further information.

Mr. C. B. Curtis, of New York, has nearly finished printing his 'Catalogue Raisonné of the Works of Velasquez and Murillo.' He adds a list of engravings after the great Spaniards, and historical and critical notes. Messrs. Sampson Low & Co. are the London publishers.

Z. writes:—"It may add to the interest taken in your 'Fine-Art Gossip' on the picture recently purchased for and now exhibited in the National Portrait Gallery to have it generally known that this work is referred to in 'Lodge's Portraits' under that of Charles Blount, Earl of Devonshire. It is perfectly plain that the inscription, which is descriptively inaccurate in several particulars, was added long after the picture was painted, not by a Spaniard, but by some one who had only a slight knowledge of Spanish and the Spanish caligraphy of the period."

The autumn exhibition of works in black and white and of the Scottish Water-Colour Society, at the galleries of the Glasgow Institute of the Fine Arts, will open to the public on the 5th of September and close early in November. The press view takes place to-day (Saturday). One of the main features of the forthcoming exhibition is the Méryon collection, lent by Mr. B. B. Macgeorge.

It is proposed to erect a statue of M. Ledru-Rollin on the Boulevard Voltaire, Paris. Subscriptions for this work have not flowed rapidly.

The death of M. Edmond Morin, well known in this country as a book-illustrator, is announced as having occurred in a *maison de santé* at Sceaux.

MUSIC

THE WEEK.

BIRMINGHAM MUSICAL FESTIVAL.

In our preliminary notice of the Birmingham Festival last week we gave an outline of the programme, which may certainly rank as one of the finest ever offered to the public at any provincial festival. It is very gratifying to be able to say that the enterprise shown by the committee of management has been rewarded by a large increase in the number of tickets sold as compared with the festival of 1879, when the only two important novelties were by one German and one French composer. This year, while due weight has been given to the claims of musicians of such European reputation as Gounod, Brahms, and Gade, the compositions of English artists have received their fair share of attention. Though it is, of course, only right that this should be so, praise is none the less due to the committee of the Birmingham Festival for having set a good example, which it is to be hoped the managers of other festivals will not be slow to follow. In musical matters we have been too much inclined to act as those "ill birds that foul their own nests"; and while a continental musical festival in which the chief part of the programme is of foreign origin is never to be met with, the tendency in this country has been to disparage native talent altogether, and as far as possible to exclude it from all our important musical celebrations. It is true that we have not yet produced a Bach, a Mozart, or a Beethoven among our native composers; but we certainly have among us musicians who can fairly hold their own against the large majority of the present generation of composers either in Germany or France. We are not arguing against the introduction at our festivals of the recognized masterpieces of art; a programme consisting entirely of novelties by Englishmen would be no less an artistic than a commercial mistake. All that we plead for is a due appreciation of the works of our own countrymen; and it is with the greatest pleasure that we recognize the fact that on the present occasion this appreciation has been accorded to them by the Birmingham committee.

The festival itself, which did not commence until Tuesday last, was preceded by two days (Saturday and Monday) of long and careful rehearsal, during which all the most important items of the festival received attention. The general custom at provincial musical gatherings has been to crowd the whole work of final preparation into a single day, with the result that not only is everything necessarily hurried over, but singers and players are alike fatigued before the festival itself begins. It was at Leeds, if we remember rightly, that the example of two days' rehearsal was first set. Birmingham has now not only copied the example but improved upon it; for the separation by the Sunday of the two days of preliminary work gave sufficient repose to all concerned. The good result of this was clearly observable in the performance of 'Elijah,' which opened the festival on Tuesday morning. The vigour and spirit both of the choral singing and orchestral playing showed conclusively that the performers had come fresh to their work. It may safely be affirmed that seldom, if ever, has a finer rendering of Mendelssohn's great work been given. Detailed notice is unnecessary with regard to music so familiar; it will suffice to say that the soprano solo music was divided between Miss Anna Williams and Madame Albani, while Mesdames Trebelli and Patey shared the contralto music, Mr. Edward Lloyd taking the tenor part, while Mr. Santley, though not in very good voice, gave a superb reading of the part of the prophet. Sir Michael Costa showed, happily, no traces of the effects of his late illness; and it is no more than justice to the veteran conductor to say that we have never heard the oratorio rendered with more delicacy and refinement under his direction than on this occasion. A word of praise is also due to Miss Eleanor Farnol, and Messrs. Woodhall, Horrex, and Campion, for their able assistance in the smaller solo parts.

On Tuesday evening the first of the novelties of the festival was brought forward. This was Sir Julius Benedict's cantata 'Graziella,' which was originally intended to have been produced at the Norwich Festival of last year, but which was not finished in time. The libretto of 'Graziella,' which is from the pen of Mr. Henry Hersee, can hardly be unreservedly commended. Though entitled "a dramatic cantata," the poem has but little of interest; it may be described as conventional both in subject and treatment. Graziella, a fisher-maiden of Procida, is beloved by a young fisherman Renzo. His affection is not returned, but Graziella betroths herself to him as a reward for his having saved her father's life. Renzo, however, hearing a conversation between Graziella and a certain Alonzo, who turns out to be a count in disguise, and learning that they love one another, resigns his claim on Graziella's hand, and goes off to the wars, where he is killed. Alonzo departs to obtain his mother's consent to his marriage. This is refused, and Alonzo writes to Graziella breaking off the engagement, whereupon she takes the veil. The music which Sir Julius Benedict has written for this poem, though not as a whole equal to some of his other compositions, is remarkable as the work of a man of nearly eighty years of age. That the hand of the experienced musician should show itself in every number was only to be expected; but the vigour and spirit which characterize much of the music were, perhaps, less to have been anticipated. While there is but little in 'Graziella' which can be called absolutely new, there is much which will please and attract. Among the most effective numbers we may name the

melodious opening chorus, "See, with slow majestic motion"; the sailors' chorus, "Up with the anchor"; and the trio, "Think of me sometimes," this last-named piece being the best, from a musical point of view, in the cantata. Two or three songs, written evidently with an eye to the shop, will probably be popular in the drawing-room; while the concerted portions of the music are effectively laid out for the voices. The orchestration contains many happy touches of colouring; but we regret that in places Sir Julius should have pandered to a vulgar taste by the too frequent introduction of big drum and cymbals, and by such expedients as the doubling of the vocal melody by a blatant and obtrusive cornet-à-piston. The composer certainly never learned that style of instrumentation from his great master, Weber. The performance, though marred by several slips in the orchestra, was on the whole good. The solo parts received full justice from Madame Marie Roze (Graziella), Madame Patey (the Abbess), and Messrs. E. Lloyd (Renzo), F. King (Alonzo), and Campion (Gennaro). The composer, who conducted his own work, was most warmly received, both on taking his seat and at the close. The cantata was much applauded, two numbers (it is hardly needful to add, not the best) being encored. A miscellaneous second part followed, the most important item of which was Mr. F. H. Cowen's orchestral suite, 'The Language of the Flowers.' This work is no novelty in London; it will therefore suffice to say that it was excellently played under the direction of the composer, and was very warmly received.

The great attraction of the festival centred in the production on Wednesday morning of Gounod's oratorio 'The Redemption.' That much curiosity would naturally be felt with respect to any new work of importance from the pen of the composer of 'Faust' is, of course, obvious; but interest was further heightened by the fact that M. Gounod had received 4,000*l.* for his work. It was, moreover, known that he considered the oratorio his masterpiece, and that he had written on his score "Opus vitæ meæ." When, in addition to these facts, it is remembered that the work was to be conducted by its illustrious composer, it will not surprise our readers to learn that every seat in the Birmingham Town Hall was filled, and that, though two performances are to be given during the festival, many applications for tickets have necessarily been refused.

From the composer's prefatory note to the published score we learn that the idea of the oratorio first occurred to him in 1867, and that he wrote the words and two numbers of the music at Rome in the winter of 1867-8, completing the work twelve years later with a view to its performance at the present festival. Like Wagner, Gounod has been on this occasion his own librettist. He has entitled his work a "sacred trilogy," and it consists of three parts and a prologue. The prologue commences with an orchestral symphony intended to depict the Creation; to this succeed the narrative of the Fall, given as a recitative, and the promise of redemption sung by a "Celestial Choir." Of the three divisions of the work itself, the first is entitled "Calvary," the second, "From the Resurrection to the Ascension," and the third, "The Pentecost." The form of the poem is somewhat peculiar. It is mostly a free paraphrase of the Scriptural narrative as found in the Gospels and in the Acts of the Apostles, interspersed with reflective passages taken from various sources. The narrative portions are, curiously enough, given to two narrators (tenor and bass), mostly alternately, but occasionally, for no very obvious reason, in combination. The parts of Jesus, the Jews, the holy women, and others, are treated dramatically, as in Bach's 'Passions' according to Matthew and John. From a musical point of view this has the disadvantage of breaking up the work too much into small fragments, especially in the first part, which deals with the Crucifixion. The only movements of the oratorio which are amply developed are the concluding chorus of the second part and the opening and close of the third.

Writing immediately after the performance, and on the eve of going to press, it is impossible to do more than indicate briefly the salient features of M. Gounod's work. His own opinion of it we have given above; whether the public will endorse the composer's estimate remains to be seen. We are inclined to think that for posterity the great work of Gounod's life will be 'Faust' rather than 'The Redemption.' But no one can hear the new oratorio without being impressed by the earnestness which pervades every page. It may be said that the composer has written it with his heart's blood; he has striven to the utmost to rise to the height of his great argument; and if he has not been invariably successful, we can at least point to many passages in which he has shown himself by no means unworthy of his theme. Such are, for example, the mocking choruses of the Jews, the "Reproaches," the quartet and chorus "Beside the cross remaining," and the following exquisite solo, "While my watch I am keeping," in the first part; the scene of the Ascension in the second; and the opening of the third, all of which may compare with anything that Gounod has written. Many other passages might be referred to which are but little inferior to those named. In general it is the lyrical portions of the work which possess the most value, judging from a purely musical point of view.

In his treatment of the narrative portions of the oratorio the composer has attempted an innovation the success of which is doubtful. Nearly the whole of the recitative, with which the work abounds, is set either on a monotone or on ascending or descending chromatic scales. In harmonizing this part of his oratorio, moreover, Gounod has used chromatic chords to such an extent as to become at times absolutely wearisome. Sequences of chromatic harmony are also employed with a persistence which in the end grows monotonous. This is particularly the case in the first part of the work, where narrative predominates, and for this reason we believe that the second and third parts will always be found the most effective in performance.

Of the truly gorgeous orchestration with which the work abounds it is needless to speak at any length, for Gounod's mastery of this branch of his art is known to all. It may, however, be said that those who only know the oratorio through the pianoforte score can form no idea whatever of the richness and beauty of the effects. Many passages which on paper appear insignificant acquire an altogether different meaning from their exquisitely tasteful colouring; and while it may be conceded that the richest instrumentation will not make a bad work into a good one, it cannot be denied that appropriate employment of the resources of the orchestra adds immeasurably to the effect of musical ideas which in themselves are worthy of such adornment.

It may be doubted whether a finer performance of any new work has ever been heard than that of 'The Redemption' on Wednesday. The credit of this is due in the first place to the composer himself, who conducted his work with a firmness and decision which never left his forces for an instant in doubt as to his intentions. The Birmingham chorus, who, thanks to the training of their energetic chorus-master, Mr. W. C. Stockley, were perfectly familiar with the music, sang magnificently throughout; while the orchestra, than which a finer could not be collected in this country, were no less deserving of praise. The solo parts were in the safe hands of Mesdames Albani, Marie Roze, and Patey; Messrs. E. Lloyd, W. H. Cummings, Santley, and F. King; and Signor Foli. The reception of the oratorio was most enthusiastic, the audience rising and cheering repeatedly at the close of each part of the work.

Of the remaining concerts of the festival we must defer our notice till next week.

Musical Gossip.

Mr. Stephen S. Stratton has issued the prospectus of his fourth series of chamber concerts in the Masonic Hall, Birmingham. The full programmes are not announced, but it is stated that they will be compiled mainly from the works of the great masters. Novelties will also be included, one of the works promised being Johan S. Svendsen's Octet for strings. Mr. Stratton has always made the production of works by native composers one of the features of his excellent concerts; the coming season will show no falling off in this respect. The English works to be given are a MS. composition by the late F. E. Bache, a Quintet by Onslow, a Pianoforte Trio by the late J. H. Griesbach, a work by the late Charles Lucas, and Quartets by Ebenezer Prout and C. Villiers Stanford. Mr. Stratton's enterprise deserves, and we hope will receive, the warm support of the Birmingham musical public.

Under the title 'Richard Wagner et son Œuvre Poétique, depuis Rienzi jusqu'à Parsifal,' Mdlle. Judith Gautier (a daughter, we believe, of Théophile Gautier) has just published (Paris, Charavay Frères) an interesting little volume, the first part of which is devoted to personal reminiscences, and the second to a more or less full analysis of all his dramatic poems. The sketches of Wagner's private life and the account of the author's personal intercourse with him will be read with much interest. The analyses of his works are somewhat brief as regards the earlier dramas, which have been already translated into French—even 'Tristan' and 'Die Meistersinger' are not very adequately dealt with; but the description of the poem of 'Der Ring des Nibelungen,' and even more that of 'Parsifal,' are very complete, and will do much to give the French public a fair conception of Wagner's latest poems.

To Correspondents.—T. A.—H. A. W.—C. T.—D. D.—received.

No notice can be taken of anonymous communications.

LITERATURE

A Short History of the Kingdom of Ireland from the Earliest Times to the Union. By C. G. Walpole, M.A. Five Maps and Appendices. (Kegan Paul, Trench & Co.)

NATIONS are what their physical surroundings and past history have made them; and if some knowledge of its people is essential to one who undertakes the government of a country, we should not predict success of the intelligent foreigner who assumed to legislate for England without having ever heard of the Magna Charta and Bill of Rights. It might be interesting to inquire how many of those who discuss the Irish Land Question know anything about the details of the plantations in the sixteenth and seventeenth centuries, or the Acts of Settlement and Explanation, or the commercial legislation of the eighteenth century. Independently of the advantage of knowing something of the events which have made the inhabitants of Ireland (for better or worse) such as they are, the history of that country should be worthy of the attention of students of the now popular science of sociology; for that unfortunate island has for seven centuries been the *corpus vile* for experiments of every form. In the twelfth and thirteenth centuries the feudal system was supposed to be universally applicable; in the fifteenth century all attempts to govern the country ceased, and the inhabitants were left to their own devices; in the sixteenth century it was attempted to convert the people against their will to a religion opposed to all their prejudices. Henry VIII. combined a strong government with measures of conciliation, and might have succeeded but for the religious difficulty. Mary avoided the question of religion, but introduced the system of plantations. Elizabeth, at all times anxious to avoid doing anything in Ireland, was forced to let loose on the country the English adventurers who proposed to civilize the island. James I., with the assistance of Lord Bacon, planted Ulster, and imagined that he had unified the population and established the rule of English law. He was succeeded by Strafford with the *thorough* policy which ended in the rising of 1641. Then the Catholics of Ireland (not the Irish Catholics) attempted to govern the country and establish a *modus vivendi* with England, which essay at self-government brought over Cromwell, whose policy was the maintenance of order by a Protestant settlement, the destruction of the Catholic aristocracy by confiscation, a strong standing army, and effective penal laws. Charles II., although inheriting great difficulties from the preceding Government, adopted the policy of interfering as little as possible. James II. supported the Catholic and national parties, with results but too well known; then followed the attempt during the eighteenth century to govern the country through the Protestant party, penal laws, and universal corruption. In 1782 the ruling class in Ireland declined any longer to act as the mere tool of the English ministry, and the independent (?) Parliament established at that date continued until the Union. For eighty-two years Ireland has been ruled by the Imperial Legislature, and various experiments have been tried, the ultimate results of which, as exhibited in the present condition of the island, cannot be considered satisfactory.

The difficulty of acquiring trustworthy information about Irish history arises from the unsatisfactory nature of the works in which attempts have been made to tell the history of Ireland as a connected narrative. Some respectable books, such as those of Cox and Leland, regard the subject from the English point of view, and treat the history of the native population as an Englishman in New Zealand might do that of the Maoris. With these writers the English Government is always just and beneficent, the English pious and civilizing, and the native Irish unreasonable rebels, urged to constant revolt by their innate barbarism, hatred of improvement, and dislike to true religion. The absurdity of such narratives has been long since understood; Celtic literature and civilization now attract a share of the interest of the learned, and any educated person can without difficulty perceive that these English writers were ignorant of the existence of one-half of the historical literature of the country, and very imperfectly acquainted with the remainder. There is another class of so-called Irish histories, written from the nationalist point of view, not more profitable, and perhaps more misleading. The avowed object of these writers is to vilify everything English, to represent the English Government of the last 700 years as one prolonged and unmitigated tyranny, to paint all Englishmen as robbers and murderers; but on the other hand to extol all that was Celtic, to exaggerate the legendary ancient civilization, to describe every Irish chief as a heroic patriot or martyr (as the case may be), and to represent Ireland as an everlasting Job sitting upon ashes and covered with sores. These two classes of Irish histories are both useless except as mutual correctives; if one is read, its evil results should be met by reading the other, and the careful student may thus compass the negative advantage of believing neither. It is not, however, from a deficiency of available sources of information that no satisfactory history of Ireland has been written. During the past fifty years numerous scarce works have been republished and MSS. printed which previously were inaccessible; the Celtic tribe system is now understood, and the once mysterious Brehon Laws are accessible to all. Year by year the publication of the English records discloses what were once impenetrable State secrets.

There is one difficulty in writing a readable history of Ireland which no amount of new information can remove, and which almost forbids us to hope that such a work can be made popular with the general public. History is attractive in so far as it can be made dramatic—so far as each crisis in the nation's fate is summed up in some one decisive struggle, or can be told in the form of a biography of the chief actor. The popularity of Greek history rests upon the mode in which it can be thrown into acts, each terminating with some brilliant stage effects, after which the curtain falls, to rise and disclose a new plot and a fresh cast of characters. If we carefully examine the popular conception of English history from the fall of Harold to the arrival of William III., we perceive that it may without difficulty be divided into a series of dramas, each with a marked and effective termination. A history can be written biographically when the force which manifestly produces marked results is the surpassing genius and energy of a conspicuous individual; the struggle, for instance, of Scotland against England in the thirteenth and fourteenth centuries lives only in the deeds of Wallace and Bruce, and is popularly believed to have terminated with the battle of Bannockburn.

The history of Ireland cannot be written dramatically or biographically. The changes which took place were all produced by unobserved forces acting over long periods. The transformation of the Norman feudal lords into quasi-Celtic chiefs resulted from many and not obvious causes and took two centuries to effect. The only complete drama in Irish history is the reign of James II. The history of Ireland is also almost—if we may use the term—heroless. Of the Celtic population the only man who has left an enduring name in history is the king Brian; of all the Normans who fought and died during three centuries there remains only an indefinite memory of the Geraldines as a family. Cromwell is remembered not because he personally achieved very much in Ireland, but because he manifestly did something; and from Cromwell to Grattan and O'Connell not one man has left a memory. It is strange but true that, although there was incessant war in Ireland for five centuries, no one out of Ireland who has not specially studied Irish history could name any battle except that of the Boyne, or siege except that of Londonderry; and the reason of this is that during the entire period the fighting never resulted in any decisive success which determined once for all the course of subsequent events. For those, however, who are desirous to get to the bottom of the matter, and who read history not for amusement, but to discover what were the causes acting upon large bodies of men which produced particular events, or the results of the conflict of races in different stages of culture and with different systems of polity, the history of Ireland should present an especially interesting study. Why did the Normans absolutely fail in Ireland? Why did no race in Ireland succeed in conquering and absorbing the others? Why did every

system of English policy either fail absolutely or produce results worse than the evils it was intended to remedy? These are questions of the utmost interest, and to be explained by the action of the same general laws which operate in other regions of the world. This, however, is a form of history which as yet is distasteful to the general public.

Mr. Walpole's object is much more humble, namely, to produce a short and popular narrative which may at least enable the ordinary Englishman to obtain a reasonable knowledge of the subject, or rather to escape from the condition of absolute ignorance in which he lies at present. Upon opening the book we are at once favourably impressed by patent facts.

The author has had the sense to dismiss from the stage the crowd of mythical events and unsubstantial heroes — events which never happened and men who never existed— which occupies the earlier half of most Irish histories. It is most satisfactory to hear nothing of the Firbolgs, or the Tuatha de Danaans, or of the Milesians who, moved by a mysterious destiny, passed across Southern Europe to seek the land promised to their ancestor Gadelius, carrying a sacred banner on which were represented a dead serpent and the rod of Moses (this is the information given to the ingenuous youth of Ireland by a late well-known member of Parliament). There is nothing about King Dathi, who conquered Gaul, then under the rule of the patrician Ætius, and was, it seems, slain by lightning on his way to Rome; even Cormac McArt, who probably had an existence, absolutely disappears. This is most satisfactory, and we accept it as an omen that the Irish is now being treated like other histories, and that these vain tales and names are at last dismissed, to disappear or to be treated as solar myths. We may congratulate the author upon the excellent maps annexed to his letter-press; without maps no history can be of much use, and we hail this as a proof that Mr. Freeman has at last convinced the public of the usefulness of political geography. Our author has also clearly seen that details of the perpetual scrambling, fighting, cattle-lifting, and murdering, which form the staple of the history of all tribal communities, and fill pages of the 'Annals of the Four Masters,' have lost all interest in the nineteenth century.

By entitling his work 'The Kingdom of Ireland' our author manifestly intimates that his main object is to detail the history of the island from the date at which the English Government took in hand seriously the affairs of Ireland, and we may therefore conclude that the first two portions of the work, entitled "Independent Ireland" and "The Anglo-Norman Settlement," are to be taken as merely introductory. It is for this reason, we presume, that the details of the early Irish Church, and to a great extent the tribal organization, are dealt with in a very perfunctory manner, and that the Norman settlement certainly does not receive the attention which it deserves. In the narrative of the latter event this work falls very much into the lines of the ordinary Irish nationalist histories: details which are not peculiar to the Norman invasion of Ireland are treated as exceptional. A Papal bull may be a bad title, but was it not a common title in the Middle Ages, and were there not bulls granted authorizing the conquest of England, Majorca, and Sardinia? Again, we are told that the introduction of the feudal system into a country the land of which was held by tribal tenure was an injustice to the native inhabitants. Invasion and conquest are most inconvenient to the conquered people, and the introduction of feudalism may have been injurious, but this is not peculiar to Ireland. Was not feudalism introduced upon a system of village communities in England, Scotland, Denmark, and notably in Germany? And did not a similar process occur in the case of Naples and Syria? These and similar statements in the earlier chapters of the work give a key to the mode in which the later portion of the history is dealt with, and lead us to anticipate the manner in which subsequent events are discussed. The writer has honestly endeavoured to master the history of Ireland, and has read many works on the subject (as set forth in his list of authorities), some good, some indifferent, and some very bad; but when he comes to judge of what was done he allows himself to be influenced by the opinions of others derived from the ideas of the eighteenth or nineteenth century, and formed in ignorance of the acts and habits of those contemporary with the events related. This is now a common error of Englishmen in writing of Irish history. For many generations the respectable Briton had flattered himself upon the contrast between himself and the mere Irish Papist: all the stories told by these wicked Papists of their sufferings were calumnies, or, if there was any truth in them, their sufferings were richly deserved. The publication of the English records dissipated this delusion; the English found that their ancestors did undoubtedly rob, murder, confiscate, and torture in Ireland without scruple or remorse, and that the Irish legends understated the fact. Astonished at this information and perplexed with the condition of Ireland, the English Liberal fails to realize that the killing, plundering, and persecuting practised in Ireland were only portion of a general system carried on throughout Christian (?) Europe and elsewhere. Mr. Walpole, for instance, writes as if the treatment of the Irish had been something unique. So far he obviously errs, but at any rate there is no concealment or palliation of the errors or misdoings of English governments or individuals, and his readers do not need to supplement his statements by further atrocities from Irish national writers. We desire to draw special attention to the narrative of the war of 1641; the Ulster massacre is fully and fairly discussed, and the subsequent complications of Irish politics are clearly explained.

It is invidious to refer to many small errors in details, but we cannot conclude without protesting against the mode in which the character of Flood is treated; the opinion of Mr. Lecky, in the last volume of the 'History of the Eighteenth Century,' and the documents which he refers to, are preferable to the views of the second-class writers whom our author has thought it right to follow.

As a fair and readable popular history of Ireland this work is a most useful and timely contribution; it is not—what, indeed, it does not attempt nor pretend to be—an explanation of how and why the facts it relates came about, nor a picturesque description of bygone men and manners.

Encyclopædia Britannica. Vol. XIV. Kao—Lon. (Edinburgh, Black.)

The successive volumes of the 'Encyclopædia Britannica' now appear with such regularity that it may be looked upon as a half-yearly publication. Each volume may therefore be regarded as a huge number of a very high-class periodical, containing essays by experts in all branches of knowledge arranged in alphabetical order. From this point of view the present volume cannot be considered of equal interest to its predecessors, merely by reason of its alphabetical position. We have none of the great articles summing up what is known of important countries and peoples, like France, Germany, and Greece. The greatest of men have chosen other parts of the alphabet for their names, with the exception of Leibnitz and Leonardo (should we add Locke?). None of the great sciences haunts K or L. There is not even any Biblical book of very great interest on which we could receive instruction from Mr. W. R. Smith, who now ranks as co-editor with Prof. Baynes. In short, from no side can the present volume compare with the eighth, perhaps the most interesting of all.

At the same time not a few of the articles contained in the fourteenth volume are of great interest. Foremost among these are two critical studies by Mr. Swinburne on Keats and Landor, written with his usual fire and force, but somewhat too lyrical—if we may use the expression—for biographical notices. Too much censure of the poet, too much praise of the prose writer, are discernible. It is surely exaggerated to say of Keats that "the merit of his work at twenty-five was hardly by comparison more wonderful than its demerit at twenty-two." And again with Landor, praise of his dramatic power is surely misplaced, and to assert that as a poet he stands as much above Byron as below Shelley is little less than bizarre. The article on Keats, however, contains a remarkable bit of "placing" of the order of merit of the poet's productions, while that on Landor does full justice to the nature of the man.

As we have commenced on biographies, we may notice the remaining noteworthy contributions in this line of work, in which the great advance in excellence over the eighth edition is most marked. Prof. Sidney Colvin's life of Leonardo da Vinci comes next, "longo sed intervallo," to Mr. Swinburne's two essays. There is something disappointing in two lives of recent celebrities written by friends — that of Kingsley by Mr. Kegan Paul, of G. H. Lewes by Mr. James Sully; the former hardly doing justice to what may be termed the buccaneer element in Kingsley's nature, the latter saying absolutely nothing about the man Lewes, really far more interesting than Lewes the author. Mr. Saintsbury does himself justice in two admirable essays on La Fontaine and Le Sage, the latter being specially excellent. It is perhaps worthy of remark that the lives of Lagrange and Laplace have been entrusted to a lady,

Miss A. M. Clerke, who seems desirous to emulate the acquirements of Mrs. Somerville. Leopardi is described with customary skill by Mr. R. Garnett, while Mr. Sime adapts his life of Lessing to a smaller scale. It is somewhat curious to observe the provincial tone adopted by American writers on their own worthies; La Fayette and Abraham Lincoln are quite out of scale, owing to the want of perspective shown by the writers of their lives. Locke's life and thoughts are the subject of careful study by Prof. Fraser. The editorial care is shown by the fact that the poet Longfellow is included among the biographical notices. On the other hand, the space allotted to Liguori should have been much curtailed. Mr. Littledale is here more just to the "Father of Lies" than in his 'Plain Reasons,' but he has been even more generous than just in devoting so many columns to a comparatively unimportant personage.

In scholarship Mr. Robertson Smith has given two of his best pieces of work in the articles on Kings and Lamentations, in both of which he is more original than has been his wont in previous contributions to these volumes. Prof. A. S. Wilkins on the Latin language is perhaps the most complete philological study as yet offered to the readers of the ninth edition. This elaborate essay supplies a decided want, though something more detailed might have been given on modern Latinity. Both "Logos" and "Liturgy" are unsatisfactory; the former is "prescientific," the latter too catalogic.

Turning to science, the principal article in this domain is that of Prof. Tait on light, an admirable treatise, only marred by being disassociated from that on optics. We are glad to observe that Mr. Glaisher gives the history as well as the mathematics of logarithms. If we may include logic under this rubric, the article on this subject by Prof. Adamson must be noticed as one of the most valuable contributions to the method of logic which have been made in England. The importance of symbolic logic is made clear, while the ordinary Aristotelian logic is put aside as merely of pedagogic utility; this admirable article likewise contains a tolerably full history of logical doctrine.

In legal matters Scotland still holds the sway, though we are glad to see that Prof. E. Robertson has only the lion's share of the articles, "Law" itself and the important topic of "Landlord and Tenant" falling to him. The unfortunate dispute as to the article "Land," by Mr. Kinnear (though not signed with any initials), might draw attention to what is a straightforward *résumé* of the recent views of the Maine school.

Of the remaining topics dealt with in this instalment, decidedly the most interesting is "Libraries," one of the best articles in the volume. Messrs. Tedder and Thomas are to be congratulated on the enormous amount of information, practical and otherwise, they have packed within the limits at their disposal. Prof. Palmer is less amusing than is usual with him when dealing with the subject of legerdemain. Sir E. Beckett tells us how to pick a lock, Capt. Moriarty how to cast the log.

Regarding the comparatively slow progress of the ninth edition, we have again to urge the danger of the earlier volumes becoming obsolete before the letter Z is reached. Already we hear of an American supplement, and it would be a good idea for Messrs. Black to make preparations for the need of one by the time the great work they have undertaken is finished. The standard of excellence attained in the present issue is very high, and raises one's opinion of the present state of English intellectual power. The 'Encyclopædia Britannica' contrasts favourably with any other encyclopædia anywhere.

Reminiscences of an Old Bohemian. 2 vols. (Tinsley Brothers.)

"Senex loquax" is the device affixed to these amusing volumes. It is in every way appropriate. Their author has lived long and worked hard, and had innumerable experiences; and he gossips of all with the garrulity of age—benevolent, discursive, a trifle emphatic. He writes as one who loves to remember and to prattle; and his work, if it is innocent of coherence, is full of kindly sentiment, and contains a number of pleasant stories pleasantly told, together with an assortment of memories and facts that begin almost with the century and end but with the current year.

In reading one is irresistibly reminded of the Bohemianisms of Thackeray. The 'Reminiscences' have a queer polyglot flavour—as of Costigan, and Florac, and the Chevalier Strong. They treat of a cosmopolitan Bohemia: of a Latin land whose denizens are equally at home in Vienna and in London, and are equally great at mixing punch, and talking science, and telling stories, and singing songs, and writing leaders and slashing articles. Everybody is a good fellow; brotherhood prevails. Such jests, such liquor, such good fellowship are things of a golden past, and will never more be included in the fortune of man. The wind carries them all away, and the new generation knows them not, and would not greatly care for them if it did. Later on the Bohemian's talk is of the Savage Club, and of such men as Frank Talfourd and "poor Jeff Prowse," and the brothers Brough, and Dr. Frank, and "Bill" Romer. But the Savage itself is a kind of survival of the Thackerayan civilization, and its founders are in some sort the legitimate successors of the Thackerayan generation, so that the story keeps its old-world aspect and suggestiveness until the end. It is amusing and a little pitiful too. The fashions of Bohemia have changed from what they were; the types of Bohemia are quite different from what they used to be. Bludyer and his pints of brandy are as remote as Trimalchio; not Grub Street itself is more utterly of the past than Shandon and his slashing articles. Nowadays Bohemia makes money and cultivates a reputation, and is skilled in the metrical forms of France, and takes a quiet cup of tea at its club. In the presence of a Bohemia of this sort—staid, prim, ambitious, a trifle pedantic—the Bohemianism of these 'Reminiscences' assumes an aspect at once antiquated and pathetic, as of a dodo in some modern farmyard, as of a megatherium in the Zoological Gardens.

The "Old Bohemian" withholds his name, but his identity is easily established, for his physiognomy is peculiar, and his experiences are such as have fallen to the lot of but few. He was born at Trois-Rivières in Canada, and has been a British subject from the first, though the stock he comes of is a blending of "Italian, French, German, and Sarmatian." At five years old his parents brought him to Europe; and after four years of "apparently ceaseless journeyings through France, the British Isles, and all over the Continent, including the dreary regions of Poland and Russia," he was set down at Linden, in Hanover. Here he learned to speak German and acquired the first principles of the science of cookery. Soon orphaned, he went to school at Magdeburg, in the Klosterschule, and studied after that at Halle and Leipzig, and at Berlin, where he read medicine and attempted in a desultory way to qualify himself as a doctor. From Berlin he proceeded to Paris, where he knew Godefroi Cavaignac and Armand Carrel, walked the hospitals with Broussais, and took part in the Revolution of July. From Paris he started for Montpellier, but he travelled by way of Lyons, and in Lyons he remained, until he left it for a tour through Britain in company with a rich Marseillais. In the March of '33 he was once more in Paris, with an opportunity of working under Dupuytren, Orfila, Dumas, Raspail, Villemain, and Victor Cousin; but he was a determined Brudenschafter, and he was speedily summoned to Germany by the society, where he took part in the little attempt at revolution that was made in the April of '33. Returning to Paris, he volunteered for Algiers, and served there on the medical staff of the Foreign Legion, in which capacity he leeched and let blood—Antonini was his chief, and Antonini was a determined follower of Broussais—in a way that, half-hearted as it was, is terrible to read. Presently, however, he caught a fever, and fell himself under Antonini's hands. The consequence was that he was invalided and sent back to France. When he was cured he went on to Paris, and stayed there for some time—translating, writing articles, lecturing, walking the hospitals. But he was known as a Republican and as an acquaintance of Barbès and Blanqui and Raspail, and one night the police came down upon his lodgings, took him to the Rue de Jérusalem, and expelled him there and then from France. On his way to England, however, he alighted at Rouen; and at Rouen he remained for eight months, doing duty the while as Professor of History and the English Language at the Parc des Chartreux, until one day he was caught in the street by a Parisian *mouchard*, and obliged to continue his journey and take refuge in England. He did not return until thirty months afterwards. And when he did so he was forgotten, or at least permitted to live in peace.

The rest of his career he must be left to tell for himself. It is as varied and as full of ups and downs as can well be imagined, and its story is one that may be read with real pleasure. The "Old Bohemian," indeed, has seen many men and done many things. He has translated books, delivered lectures, served as a war correspondent, officiated at an international exhibition, defended criminals, acted as assistant to a famous homœopathic doctor, fought at

XUM

barricades, helped to found a popular club, edited journals, and mixed drinks for everybody. In this last capacity he is—on his own showing—a great artist. His limitations are obvious, for he lived in Paris in 1830, and he has not a word to say of 'Hernani'; he has carried pineapple rum for Ludwig Devrient, and his account of the great artist is merely sympathetic; he has seen Frédérick Lemaitre, and is inclined to rate Charles Mathews for as good an actor. But in the composition of artistic beverages he appears to be unrivalled. His teachers have been so many and so famous that to tell them over is to give a fair idea of his life. The brewing and bottling of beer and the mixing of common grogs he learned from a German cook; Godefroi Cavaignac taught him to produce burnt-brandy punch; Alfred de Musset instructed him in the art of combining absinthe with Chartreuse; a highly respectable German metaphysician imparted to him the secrets of egg-and-milk punch, and a highly respectable German historian those of *Maitrank;* for his dexterity in preparing pineapple cup he is indebted to "Johannes Ronge, of Holy Coat of Treves fame"; he acquired the gift of making toddy from the father of the late Angus Reach, and that of mixing Athole brose from a Scottish mariner; and his supremacy in the projection of cardinal, bishop, and wine punches generally is due to no less a man than Raspail himself—"one of the most accomplished chemists of the age."

The Names of Herbes. By William Turner, A.D. 1548. Edited by James Britten. (Trübner & Co.)

William Turner was the first Englishman who wrote about plants in a scientific manner. His science was, of course, a widely different thing from ours, but it will soon be noticed by any one who reads a page or two of the reprint before us, or, indeed, of any of Turner's non-theological writings, that he was a close observer of nature, and little given to rely upon authority when it was not supported by trustworthy observation. Turner was a Morpeth man. His father is said to have been a tanner. The year of his birth is unknown. It must have been some time during the first decade of the sixteenth century. Morpeth, though a place of political importance, must have been a small town when Turner was a boy. It may be inferred from several passages in the book before us that he spent his youthful days wandering about among the woods and heaths that surrounded his home. We find frequent notices of Northumbrian plants, and now and then we are told that this or that grows near Morpeth. In one instance he is still more particular, for we are informed that aconitum "is much in Northumberland in a wodde besyde Morpeth called Cottingwood." This place is, we fear, a wood no longer. It was, we believe, a fragment of the old forest, and in Turner's time must have been a wild park-like spot. Turner flourished in a time of religious change, and much of his life was given to religious controversy. He was an ardent Protestant, and on two occasions—once under Henry VIII. and again during the reign of Mary—it became necessary for him to retire to the Continent. He may have been a sufferer, but we have certainly been gainers from his banishment. Had he remained in England his botanical knowledge would have been of a far less valuable kind than it has proved to be. There is probably not a page of the reprint before us in which he does not mention some botanical fact that he has himself observed in the Rhinelands, Italy, or France. In the reign of Edward VI. he was rewarded with the deanery of Wells, which, of course, became forfeited on the restoration of the Roman Catholic worship under Mary. It was given back to him in or before 1560. We think it not unlikely that he was for a time chaplain to the English at Boulogne. Stowe's memoranda, published by the Camden Society, mention a minister "cawlyd Turnar of Bullyn," who, preaching at Paul's Cross in 1563, maintained the startling opinion that "the deade of ye cittie shuld be buryed owt of the citie in ye fylde." If this was not William Turner the botanist, there must have been two contemporary Turners who were men of scientific attainments. As far as we have been able to make out, this is the earliest English protest against intramural burial.

Turner's 'Names of Herbes' must not be confounded with his larger works on botany. It has naturally less scientific value than they, but for the student of language it is perhaps more important, as it has certainly the advantage of being much shorter. Turner knew English well, and could use it with effect in several directions. He has done us good service by enriching our tongue with several plant names that have now become familiar. This was done, not by inventing Latin or Greek compounds, but either by translating into English or borrowing from sister dialects. It is almost certain that the name of one of our best-known trees was introduced by him. Of the "Larix" he says that it "groweth on the highest toppes of the Alpes, higher then the firres do, the duch men call Laricem *ein larchen baume*, the french men cal it *Dularge*. It may be called in englishe a *Larche* tree." It is not improbable that the *Euonymus europæus* had its name of the spindle tree from him. He tells us that he had observed them growing in the hedges "betwene Barkway and Ware." Turner was, we may be sure, an observant man in many directions. It was, perhaps, natural that he should record that two of the greatest beech trees he had ever seen grew at Morpeth "on ij hylles right ouer the Castle." These had no doubt strongly appealed to his childish imagination, and there may have been a whole world of legend and romance connected with them that had impressed their forms on his memory. We should hardly have expected that one who seems to have known little of Yorkshire, except what he must have seen in travelling along the Great North Road, would have observed that the yew tree was particularly prevalent in that county. He may well have been the first to point out the fact.

There are several passages in the text which show that Turner took interest in his native tongue. English-speaking people have never been ashamed of their language, as some continental peoples have been, but it comes upon us like a discovery when we find a man of the Reformation period treating it as something in itself worthy of respect. The name by which he knew the *Isatis tinctoria* was "wad," "not *Ode* as some corrupters of the englishe tongue do nikename it." We do not remember that "ode" occurs in any of our modern glossaries, but the people who pronounce wood as 'ood, wool as 'ull, and woman as 'oman, would certainly omit the first letter in "wad," and probably change the vowel so as to make an ordinary hearer think they said "ode." Now and then we come on a derivation which, if not true, is worth attention. Speargrass, a plant which the editor does not think it safe to identify, grows in watery places in Northumberland, and is so called because "it cutteth mennes handes that touche it." In one passage Turner gives those persons who persist in thinking that Saxon was a separate language from our own a useful lesson. The *Armoracia rusticana* grew around his native place, and was there called "Redico." This he felt sure was all wrong: "It should be called after the olde Saxon englishe Retticol, that is Radishe colle." We have not space to quote further from this very interesting reprint. There is hardly a page that does not throw light on some of those things which now engage the attention of thoughtful people. The shadowy outline of Turner's own tastes which we derive from his little book leads us to think that the bent of his mind was towards physical science, not theology. In the sixteenth century it was, however, almost impossible for any intellect even a little above the average to keep out of the vortex of religious controversy. Mr. Britten has edited the book with great care. We have detected no misprints, and in such a book notes would have been out of place. There is, however, an index giving Turner's English names, the modern scientific names, and also the Latin names that Turner knew them by. Some of the last appear in forms which it would not be easy to find in any modern book of reference.

The Sacred Books of the East.—VIII. *The Bhagavadgītā, with the Sanatsugātīya and the Anugītā.* Translated by Kāshināth Trimbak Telang, M.A.—XII. *The Satapatha Brāhmana according to the Text of the Mādhyandina School.* Translated by Julius Eggeling. Part I. (Oxford, Clarendon Press.)

By sacred books we can only understand books which in some way show the thoughts of a people, which serve them as moral and religious guides, and which above all are the text-books of a certain sect or a larger part of the community with a definite name. All those books must therefore be excluded which, showing deep religious feeling, are of an eclectic character only. If this line is not drawn, we should soon see included in such a series, speaking of Indian literature, the poems of Cāṇakya or Bhartṛihari, in both of which there is certainly no lack of religious feeling.

These remarks have been called forth by the contents of the eighth volume of the "Sacred Books." It contains the 'Bhagavadgītā,' the 'Sanatsugātīya,' and the 'Anu-

gītā' (three extracts from the 'Mahābhārata,' although this is not stated on the title-page), translated by Kāshināth Trimbak Telang. None of these extracts has any claim to be considered as sacred writing above the 'Mahābhārata' or Vālmīki's 'Rāmāyana.' We know very well that the 'Bhagavadgītā' has been considered a sacred book; but it is not the text-book of any sect, and has been considered a sacred writing by virtue of its philosophical contents. In its present form it is a philosophical dialogue between Arjuna, the hero of the 'Mahābhārata,' and Krishna before the beginning of the great battle. It does not want much acumen to see that the dialogue is a compilation of different ages. The universal soul is repeatedly said to be the same as Vishnu, and Vishnu the same as Krishna. The translation of the 'Bhagavadgītā' is certainly no advance on that given by Mr. J. C. Thomson in 1855. The other two extracts from the 'Mahābhārata' require in this connexion no notice. They are philosophical treatises, but are considered as of no authority in India. They appear here for the first time in a modern European language, and we ought therefore to be thankful for them; but the English translation is nearly as difficult to understand as the Sanskrit original. The translation is eclectic, *i.e.*, Mr. Telang follows in his translations two Indian commentaries, sometimes adopting the explanation of the one, sometimes that of the other, without feeling that he is called upon to give the reason for his choice. The introduction to all three extracts contains many valuable materials, but they are not properly worked out. Two very copious indices are added at the end of the book, but they are almost too diffuse, a rare fault in an index.

The translator of books belonging to Indian religions labours under a great disadvantage. The different collections of hymns summarily called the Vedas underlie all Brahmanical speculations; but an English translation of these books has not yet been taken in hand in the present series. This disadvantage will be felt by the general reader more in the present translation than in any other. It is well known that to the different collections of hymns commentaries were added at a very early time which showed the way in which the hymns ought to be used at the sacrifice. These were the so-called Brāhmanas. Their object, as Prof. Weber puts it in his 'History of Indian Literature,'

"is to connect the sacrificial songs and formulas with the sacrificial rite by pointing out on the one hand their direct mutual relation, and on the other their symbolical connexion with each other. In setting forth the former they give the particular ritual in its details; in illustrating the latter they are either directly explanatory and analytic, dividing each formula into its constituent parts, or else they establish that connexion dogmatically by the aid of tradition or speculation. We thus find in them the oldest ritual we have, the oldest linguistic explanations, the oldest traditional narratives, and the oldest philosophical speculations."

Among the different Brāhmanas none, perhaps, is of greater value than that to the 'White Yajurveda,' the so-called 'Satapatha Brāhmana.' The 'Yajurveda' itself gives the most perfect picture of Indian sacrificial ceremonies. Different schools belong to this Veda, and first it is divided into the schools of the Black and White Yajurveda. It is not our province here to discuss these curious names; it must suffice to say that the chief difference between the two schools consists in the fact that in the 'White Yajurveda' the sacrificial formulas are separated from their ritual basis and dogmatical explanation, and that we have here a systematic and orderly distribution which cannot be found in the 'Black Yajurveda.' The 'White Yajurveda,' again, has been handed down in its entirety in two different recensions, the Kānva and Mādhyandina. Both of these have been published by Prof. Weber, whilst of the Brāhmana belonging to it only the Mādhyandina version has been published by this scholar. The 'Satapatha Brāhmana,' as is called the Brāhmana to the 'White Yajurveda,' consists, as the name infers, of one hundred sections. These hundred sections are distributed into fourteen *kāndas*, of which in the translation before us the first two are given. Every one of the *kāndas* has a different name according to the general matter of which it treats. In the introduction Prof. Eggeling discusses the time of this Brāhmana, mostly following Prof. Weber. He makes it highly probable that of the *kāndas* only nine belong to the original work, and that the remaining five belong to a later time. As to the age of the whole book, much depends on the time in which we place the great grammarian Pānini, and on the construction which we put on one of his aphorisms. This much, however, is certain, that in the time of the Buddha the different Brāhmanas, if not brought into their present shape, were known, and the legends which we find in them quoted to corroborate a statement or to show the superior value of Buddhist philosophy.

Of the two *kāndas* before us the first treats of the new and full moon sacrifices. The Brahmanical householder must for a period of thirty years—according to some authorities, for the rest of his natural life—after first setting up the fire in his own house perform this sacrifice twice every month. To perform this sacrifice takes two consecutive days. The personal restrictions involved in the householder entering on the *vrata* (vow of abstinence) include chiefly the abstention from certain kinds of food, especially meat, and from other carnal pleasures, the cutting of the beard and hair except the crest lock, the sleeping on the ground in one of the chief fire-houses, and the observance of silence during the ceremonies. The ceremonies begin with the preparation of the sacrificial fire; after this a rite called the *agnyuddharana*, or taking out of the fire, is performed; then the *agnyanvādhana*, or putting fuel on the fire. In the evening immediately after sunset and on the following morning just before sunrise the householder has, as usual, to perform the *agnihotra*, a burnt offering of fresh milk, which is described at greater length in the second *kānda*. The second *kānda* treats first of the kindling of the sacrificial fire on the part of the young newly married householder. This sacrifice is as a rule performed on the first day of the new moon. Then follows the *agnihotra*—the morning and evening libation and the homage to the fire. A very interesting Brāhmana is the 'Pindapitriyajña,' or the oblation of funeral cakes to the *pitris* (fathers), showing as it does a very ancient kind of worship about which much has lately been written. The *āgrayaneshti*, the offering of first-fruits, is next described. It is performed in spring and autumn, and is given to Indra and Agni in the shape of a sacrificial cake, and to the Viçvedevāh in the shape of boiled grains (corn). The second *kānda* concludes with an account of the *cāturmāsyāni*. They take place, as their name implies, every four months, at the commencement of the three seasons.

All these ceremonies are carried out with the greatest minuteness, as it is believed—or better, perhaps, as the Brahmans make believe—the slightest mistake would render the sacrifice unacceptable to the gods or the god. The story has often been repeated of the wrong accentuation of *Indraçatru*, "having Indra as a conqueror," as *Indraçatru*, "conquering Indra"; and we know that even now when the pupil learns the Veda a mistake which he makes in pronouncing a word is invariably punished with a box on the ears.

It is strange to notice to what use the old legends are put in the mouths of the Brahmans. Thus we find a quarrel between Mind and Speech related in the fourth *adhyāya*, in which it is explained why the sacrifice is performed for Prajāpati, "the master of the creatures," in a low voice:—

"Now a dispute once took place between Mind and Speech as to which was the better of the two. Both Mind and Speech said, 'I am excellent.' Mind said, 'Surely I am better than thou, for thou dost not speak anything that is not understood by me; and since thou art only an imitator of what is done by me and a follower in my wake, I am surely better than thou.' Speech said, 'Surely I am better than thou, for what thou knowest I make known, I communicate.' They went to appeal to Pragāpati for his decision. He (Pragāpati) decided in favour of Mind, saying to Speech, 'Mind is, indeed, better than thou, for thou art an imitator of its deeds and a follower in its wake; and inferior surely is he who imitates his better's deed and follows in his wake.' Then Speech, being thus gainsaid, was dismayed and miscarried. She (Speech) then said to Pragāpati, 'May I never be thy oblation-bearer, I whom thou gainsaid!' Hence whatever at the sacrifice is performed for Pragāpati, that is performed in a low voice; for Speech would not act as oblation-bearer for Pragāpati."

We find here also the often repeated legend of the deluge and the creation of man through Manu and his daughter. The Brāhmana thus sums up the moral:—

"Now this daughter of Manu is essentially the same as the Idā, and whoever knowing this performs with the Idā ["idayā carati," with the double meaning "lives with Idā" and "practises rites with the Idā ceremony"], he propagates the race which Manu generated; and whatever blessing he invokes through it (or her), all that is granted to him."

We are sorry that we cannot enter more fully into the matter, and that we must leave it now to the reader to separate the wheat from the chaff, of which latter there is only too much.

The translation before us is, on the whole, very good. We have compared some of the more difficult passages and think that Prof. Eggeling generally has found the right meaning. Idiomatic English was not to be

XUM

expected, for the reason that the notions expressed in the book are entirely foreign to European speculations. The translation will give the reader a very good idea of the contents of the book and the development of Brahmanical speculation, and the Sanskrit scholar will find in it a valuable help to one of the most difficult writings in that language.

Cinquante Ans de Vie Littéraire. Par Mary-Lafon. (Paris, Calmann Lévy.)

REMINISCENCES of interest are somewhat common just now both in England and in France; nor is the abundance the result of a mere coincidence, for in both countries the survivors of certain very interesting transactions in politics, religion, and literature are at a time of life when they feel that they must speak if they ever are to speak, and when they also enjoy the παρρησία given by the departure of most of the people they have to speak about. It is not at all improbable that the name of M. Mary-Lafon is not very significant to English readers. Indeed, he would hardly be classed among French men of letters of the first or even the second class by anybody. A slight smile is permissible at the way in which he recounts the attempts which Talleyrand, Béranger, and other people made to dissuade him from the thorny path of literature, and the heroic replies which he usually made, to the effect that "glory or Calvary" awaits the literary aspirant. It is about fifty years since that time, and we are not aware that either of these striking fates has befallen M. Lafon. An industrious *littérateur*, insured against the caprices of fortune from the outset by the possession of a modest independence, he has worked when he pleased, rested when he pleased; has produced some plays and novels that were fairly successful; has exercised the combined delights of being a journalist and affording himself a conscience; and has had the luck to have several grievances. Of these the chief and principal appears to be that in M. Fortoul's grand and, alas! only partially realized scheme of editing all old French poetry under Government patronage, he, M. Lafon, was unhandsomely edged out of the editing of some Provençal texts. Of the rights of this matter we cannot, of course, pretend to form any but a very rough judgment. But M. Lafon admits that a committee composed of MM. Guessard, Paulin Paris, and Victor Leclerc decided against him; and we doubt whether twenty years ago a more competent tribunal, or one from which appeal could more safely be refused, was to be found in France.

However, M. Lafon is a Gascon, and to Gascons large latitude is permitted, though he need not have been so severe as he is on his compatriot Jasmin. The real interest of the book is not in M. Lafon, or in the repartees and remarks (invariably expressive of noble sentiment, brisk wit, or valiant tenacity of opinions) which he represents himself as making. The interest is in the people whom he met, and respecting whom his anecdotes (which must be taken with some reserves) make a good part of his volume. They are not always fully quotable in English. We can only refer readers to the book for the manner in which Talleyrand's niece exercised the privileges usually reserved in England to very old gentlemen on their own hearthrugs, and for an egregious story of espionage, which forms a less decent pendant to Coleridge's anecdote about "Spy Nosy." Here is M. Lafon's portrait of George Sand in 1831:—"Une figure mentonnée, le nez des brebis de Berry et trop fort, une bouche trop grande, des yeux trop hardis, assez de cheveux mais d'une longueur ordinaire — voilà qui frappait en elle." There are some accounts of the St. Simonians, "with their blue jackets fastened in by black leather belts, their red breeches, their beards, worn before only by sappers, and their Scotch bonnets." M. Lafon repeats, though without giving any clear authority for it, the ugly story of M. Victor Hugo setting Granier de Cassagnac to cut up Alexandre Dumas. Among the most curious things in the book, but almost always too long to quote, are M. Lafon's accounts of his canvassing visits to academicians to request their votes in the Academy prize contests—a somewhat degrading incident of the academic system, to which English men of letters possessed of the noble spirit which M. Lafon represents as his own would find it hard to submit. A story of the same class, however, told at the expense of Alexandre Dumas, may be given. Parseval-Grandmaison, one of the poetical school of the Empire, was dead, and the author of 'Antony' aspired to a seat among the immortals. On the very day of the funeral of the poet he burst into the chamber of Michaud, with whom M. Lafon was sitting, and formulated his demand in the bluntest possible manner. Whereunto replied the historian of the Crusades, in his eighteenth century manner, "Déjà! vous êtes donc venu par le corbillard?" Dumas, for once discomfited, turned tail, says M. Lafon, and fled without a word. There is a story told here of Guizot (which the whole character of the man contradicts, and which is, therefore, not worth telling at length), to the effect that he took three thousand francs as a loan or present from a journalist in his more necessitous days, and neither returned the money nor recognized the obligation afterwards. There is a good description of Gustave Planche, with whom, says M. Lafon, "j'etais lié autant qu'on peut l'être avec un homme qui n'a qu'un cerveau et un estomac." M. de Custine, it seems (though one might have thought that he would have known better), in a personal interview with Planche, enclosed a thousand-franc note in a book which he wanted the French Mr. Bludyer to review. Planche must have been in a good humour, or his friendship for M. Lafon, who was Custine's introducer, must have been sincere, for he merely returned the offending paper with a sarcastic remark. Another story told here about Planche, that of his discovering "dix-sept fautes de français" in the funeral discourse on his father, we think we have seen before. Meyerbeer appears, like Lord Farintosh, keeping a special tooth which ached when he had inconvenient visitors and invitations; and there are some traits, not of much importance, of Mazzini, whom M. Lafon met at Lausanne while he was delivering some lectures there.

Such is a brief indication, by way of sample, of some of the interesting personages who figure here. The book is injured by the fault above noticed, the constant tendency to obtrude the personality and merits of the author; nor are the stories as a rule very well told, which is the reason why we have quoted none of them in the original. But as a book to turn over it has considerable attraction.

A Library of the Fathers.—S. Cyril, Archbishop of Alexandria: Five Tomes against Nestorius; Scholia on the Incarnation; Christ is One; Fragments against Diodore of Tarsus, Theodore of Mopsuestia, the Synousiasts. (Parker & Co.)

Notes on the Canons of the First Four General Councils. By William Bright, D.D. (Oxford, Clarendon Press.)

The Synod of Elvira and Christian Life in the Fourth Century: a Historical Essay. By Alfred William Winterslow Dale, M.A. (Macmillan & Co.)

Studies of Arianism, chiefly referring to the Character and Chronology of the Reaction which followed the Council of Nicæa. By Henry Melvill Gwatkin, M.A. (Cambridge, Deighton, Bell & Co.)

THE simultaneous appearance of these four volumes is not without significance. It shows that the ecclesiastical mind is studying with considerable earnestness the history of the Church in the fourth and fifth centuries, probably under the conviction that it may help towards a solution of problems that belong to the present. Certainly the first on our list is intended to modify contemporary theology. There is something touching about its publication. It is edited by Dr. Pusey, who says:—

"St. Cyril was my own early teacher on the connection of the doctrine of the Incarnation and the Holy Eucharist, which Hooker all but reached. It was at my wish that, in his uniform filial love, my son took, as the central work of his life, to make the text of his works as exact as it could be made."

The present translation is the last work done by the son, and part of the preface had been printed when death put an end to a career marked by many successful labours and full of promise of still greater achievements. It is needless to say that the translation is executed with conscientious accuracy and competent knowledge. As the preface was left in a fragmentary state, the father has added an account of Cyril's defence of the faith against Nestorius and a notice of the works translated. Both portions of the preface are animated by the belief that orthodoxy is essential to salvation, and that the opinions of the writers are alone orthodox. A theological belief different from theirs is a misbelief or a blasphemy. All who adopt their opinions are saints, all who differ are wicked. The early portion of Cyril's archiepiscopate in Alexandria was characterized by riot and bloodshed, of which he was himself the cause. Mr. Pusey passes over this part of the history in these words:—

"St. Cyril's accession to the Archiepiscopal Throne of Alexandria brought him at once into a position of great power in Alexandria; and brought too, in the early part of it, trials in regard of the disunion between him and Orestes the Governor resulting from the Jewish insurrection against the Christians";

and Dr. Pusey speaks of the "self-forgetful, God-devoted character of my early benefactor, St. Cyril." Most readers will recall in contrast the brilliant but not flattering

pictures of St. Cyril drawn by Gibbon and Kingsley.

Mr. Gwatkin seems to hold the same opinion of the virtue of orthodoxy as Dr. Pusey, but he attaches himself to the orthodoxy of Athanasius. "Ecclesiastical history," he says, in speaking of the age of Cyril,

"records no clearer period of decline than this. There is a plain descent from Athanasius to Basil, a rapid one from Basil to Theophilus and Cyril."

Prof. Bright, we imagine, is also an Athanasian, and therefore he has no scruple in giving a fair, unvarnished account of the conduct of Cyril at the Council of Ephesus; and he makes known to us that bishops of Cyril's own day had exactly the same opinion of him as Gibbon and Kingsley. "This company of forty-three prelates," he says,

"after listening to Candidian, deposed Cyril and his friend Memnon of Ephesus on charges of violence, heterodoxy, and precipitancy, and broke off communion with the other bishops."

The volume of Prof. Bright is another instance of the eccentricity of the Delegates of the Clarendon Press. Formerly we complained that Prof. Bright had edited the Athanasian treatises without notes, and he explained that that was no fault of his. Now he has issued a series of notes without a text, and again he has done injustice to himself. It is true that the Clarendon Press has published the text of the canons; but it is a text without various readings and the ancient translations, and Prof. Bright's notes presuppose an acquaintance with both various readings and translations. The notes themselves are remarkably good. Prof. Bright deserves special praise for his elucidations of the meaning of the peculiar Greek words that occur in the canons. Nothing is omitted or neglected. His notes also treat of the history and usages of the Church, and here again their value is great. Prof. Bright's rare knowledge of the history of the Church in the British Isles as well as on the Continent enables him to draw interesting illustrations from sources not well known. It is, however, difficult to determine what limits are to be put on such annotations, and in several cases we cannot find out why he has inserted or omitted. For instance, he has a note on the connexion of the Church with slavery, in which he refers to an essay by Mr. Talbot and to Wordsworth's Bampton Lecture; but he does not refer to the famous essay of Möhler or the great work of Wallon.

The other two books on our list are evidently first productions. They deserve the greatest praise. There is real and thorough work in both, and both are full of promise. Their merits, however, are quite different. Mr. Dale has chosen a subject of a limited nature; he has examined all the documents that could aid him in understanding it, and he has sought by all the means within his reach to fathom its meaning and its tendency. The matter is exceedingly well laid out, the arguments and facts are arranged most methodically, and the style is clear and elegant. Mr. Dale has also thought much about his subject, and his account of the advance of sacerdotalism and sacramentarianism, and his exposition of the real meaning of that advance, are admirable. Where Mr. Dale fails is when he has to go beyond the limited range of books connected with Elvira and treat of the morals of the age. In this case he has had recourse to books of a somewhat popular and loose texture, such as those of Renan and Lecky, and he has not made allowance for the possibility of differences in the customs of the various countries of the world at the same time. He has committed several mistakes in this way, but there is one which is quite extraordinary, and we cannot but wonder that the judges of the essay (it gained the Hulsean prize in 1881) did not warn the writer. He says:—

"The office of duumvir was, as we have seen, almost the counterpart of the consulship at Rome, and has for its modern equivalent in Spain the post of 'Alcaldes.' The Decurio, though the title does occur in Spain, was a less familiar official, and is mentioned in surviving inscriptions only five times as against 227 references to the duumviri. In one inscription, quoted by Gams, the titles are almost equivalent; but, as a general rule, the duties of the decurionate were legal and those of the duumvirate municipal in character. Besides their responsibility for maintaining order in their districts, the duumviri were answerable for the due collection of the local taxes; and in all probability were bound to make good any deficiencies that could be distinctly attributed to their indifference or want of rigour. They constituted the municipal senate, and from their number, and by them, the local magistrates were elected."

If Mr. Dale had been at all conversant with inscriptions he would have known that the very form *duumviri* is doubtful, that *duumvir* is correct and reasonable, and that *duoviri* is the correct form, and means two men, and only two men. It would, therefore, be ridiculous to suppose a senate composed of two men. If he had turned to ordinary manuals of Roman antiquities, such as Ramsay's, or, better still, if he had studied Marquardt's 'Römische Staatsverwaltung,' he would have learnt that the *duoviri jure dicundo* were the two chief magistrates of the *coloniæ* in imperial times, and were, as he himself says, similar to the consuls at Rome. The *decuriones*, on the other hand, constituted the senate of the place, and were a numerous body. The words *ordo decurionum* occur very frequently in inscriptions.

Notwithstanding a few such blemishes, Mr. Dale's book is a work of great merit. It presents a very vivid picture of the state of the Church and of society in the beginning of the fourth century, and expounds the canons of the Synod of Elvira with great perspicuity and force of argument.

Mr. Gwatkin's aims are quite different. He disclaims the attempt to make his book a complete portrayal of the nature and history of Arianism. The title exactly expresses what he wishes it to be considered, 'Studies of Arianism.' The reader will not find any clear or connected account of the rise and decline of Arianism. Allusion is continually made to men and sects in regard to whom Mr. Gwatkin supplies no information. In fact, the reader must study the subject before he takes up Mr. Gwatkin's book. Even in regard to doctrines Mr. Gwatkin enters into no satisfactory explanation. He has to treat of Arians, Semi-arians, Nicenes, Anomœans, Homœans, Sabellians, and others, but he never offers an adequate exposition of their doctrines. He frequently furnishes a criticism of them.

In the main aim of his book we do not think he has succeeded. His principal object was to account for the Arian reaction which followed the Council of Nicæa; but instead of doing this he leaves on us the impression that Arianism itself is altogether an insoluble problem unless we make the devil its author. He is himself an Athanasian; he has a strong belief that the minute distinctions in regard to the Trinity are of vital moment to the Church and the world. He speaks of the plague of Arianism and the mire of Sabellianism. He calls Arianism philosophic heathenism—"the Arian Christ is nothing but a heathen demigod"; and he suggests that the Arians were more pagan than Christian, and far from high in their morality.

"On one side their doctrine was a mass of presumptuous theorizing, supported by alternate scraps of traditionalism and uncritical text-mongering, on the other it was a lifeless system of unspiritual pride and hard unlovingness."

These are harsh words to apply to a great mass of the Christians of the fourth century, and one holding such sentiments is not likely to understand Arians or their movements. But though the work is a failure in its main effort, it shows great powers of historical investigation. Mr. Gwatkin has studied most carefully almost all that has been written on the subject in ancient and modern times, he has exercised his judgment in an independent manner, he has unravelled some difficult chronological questions, and his book is eminently suggestive. It is a pity, indeed, that he did not make his volume more completely a series of particular studies, and treat only those topics on which he thinks he can throw new light. He discusses the value of the history of Rufinus satisfactorily; he exhibits fully the results of recent investigations into the early history of Egyptian monachism; he has examined several dates in connexion with Athanasius in a genuinely critical manner; and he has framed tables of the præfecti urbis Romæ, &c., calculated to be of great value. Part of this work is not so completely done as it might have been, evidently because Mr. Gwatkin was pressed for space. Thus in discussing the date of the return of Athanasius from his first exile he has taken no notice of the important statement of Theodoret that the exile lasted for two years and four months. Similar omissions might be noted. But on the whole the book deserves the highest commendation as a specimen of accurate historical research.

NOVELS OF THE WEEK.

Daisies and Buttercups. By Mrs. J. H. Riddell. 3 vols. (Bentley & Son.)
Allerton Towers. By Annie Thomas (Mrs. Pender Cudlip). 3 vols. (Tinsley Brothers.)
For Old Sake's Sake. By the Hon. Mrs. Fetherstonhaugh. (Bentley & Son.)

IT is a pity that Mrs. Riddell cannot forget for a time that she once wrote an excellent novel called 'George Geith.' She would do well to remember what Mr. James Payn gratefully acknowledged in his 'Private Views,' that the readers of fiction are a faithful public. They would not desert her if she tried something new, though, on the

other hand, they are likely to continue to be grateful for whatever she writes. But if she had any desire to increase her reputation, she might forsake the middle-aged hero, toiling, friendless and unsociable, a mystery, somewhere in the City. It is true that in 'Daisies and Buttercups' the real hero lives in New Inn, which is certainly a few hundred yards west of the site of Temple Bar; and it is also true that he is possibly not the hero. By way of compensation, however, the orthodox hero, who tells the story and marries happily at the end, had been a City clerk, and the third prominent character had an office near Cheapside. If 'George Geith' had never been written, 'Daisies and Buttercups' would have been a more striking book, but it must count as one of the author's many successes. It is, unfortunately, dull at the beginning. Striving, perhaps, for an effective contrast, Mrs. Riddell has run the risk of wearing out her readers' patience. The first volume is almost too placid. The scene is principally laid on the Surrey side of the Thames, somewhere near Chertsey, and the country is prettily described. But the narrator is very wearisome about himself and his friends and his office and the legacy which enabled him to give it up. It is only at the end of the volume that the action begins. When it does begin it is lively enough, and there is plenty of mystery and surprise. The book contains no considerable study of female character; it is, indeed, a novel without a heroine. That a woman should succeed in writing such a story is sufficient proof, if, indeed, any fresh proof were wanted, of Mrs. Riddell's accomplished skill as a novelist.

Mrs. Pender Cudlip in her new novel, as in many of her others, writes a good deal about grand folks. When she is going to introduce a bishop's chaplain she takes occasion to speak rather severely of those writers who are accustomed to represent curates as weak and not very manly people, and she is not disposed to be less severe because she knows that writers do this through ignorance of "good society." She, at all events, it must be inferred, is in no such darkness. It is obvious that she has gained some experience since she wrote 'Eyre of Blendon.' Then she displayed a most diverting ignorance of good society, or perhaps her imagination was freer then than it is now, or it may be that, after all, she had not then made up her mind as to what is good society. But now she has spoken upon the question. If she does announce that the Marquis of Monkstown's eldest son was called Lord E. Kenmare, that proves nothing; for one may no doubt be well acquainted with the best society and yet find some little difficulty occasionally in the intricacies of the peerage. But the company of great people has sometimes a chilling effect. 'Allerton Towers' is certainly a dull book in comparison with Mrs. Pender Cudlip's other works. There is a dead level of vulgarity about the characters, unrelieved by those extravagances which have so often afforded amusement to her readers, and it is to be feared that even the assurance that they are moving in the best society will hardly support them to the end. The machinery of the story is very simple. The deaths, if sudden, are commonplace, and are due to causes so ordinary as heart disease and gout in the stomach. The marriages are brought about in what is, indeed, said to be the orthodox fashion in modern society, by proposals coming very directly from the ladies. One lady who married a bishop went on the stage after his death and became "a recognized Queen of Comedy." That happens, however, only in the last chapter; and just as the reader begins to hope that the author is returning to her own best style the story comes abruptly to an end.

Mrs. Fetherstonhaugh's prettily got-up novelette is avowedly a prose expansion of Mr. Gilbert's ballad 'Sweethearts,' and the theme has not suffered in the hands of the novelist. The story is slight enough, but those who do not despise a mere love tale will not be disappointed in the troubled course run by the loves of Cornet Dundas and Lady Margaret. She is proud, though honest enough; he hot-tempered; and the two manage to be strangers to their better selves for some five-and-twenty years, when the cornet, now a general, makes his peace with the woman he left in pique as a girl. Not an unparalleled situation; but it is drawn with a light hand, and yet not without pathos. The gravity of Dundas's embarrassment, when his pledge has to be exchanged with one kept faithfully for years, and the question arises, "Where the devil did I put that rose?" makes a good foil to his almost too easy recovery of his place in Margaret's affections. Another point is the death of the good horse Royalist in the battle of Balaclava, where so chivalrous a steed might have fitly found his grave.

HISTORICAL AND ANTIQUARIAN PUBLICATIONS.

A Guide to Modern English History. By William Cory. Part II. 1830–1835. (Kegan Paul, Trench & Co.)—Mr. Cory's second volume is more than twice as large as the first, though it discusses the history of barely five, instead of fifteen, years. As the years now dealt with included the passing of the Reform Bill and much other important work consequent on Earl Grey's accession to office, it was only proper that Mr. Cory should pay more attention to them than to the period of something like political stagnation which followed the peace of 1815; but the space devoted to them in this volume is either too little or too much. Mr. Cory has varied the scheme of his work, but not altogether for the better. His first volume was made up of compact criticisms of the principal events and movements of the half-generation to which it referred, no more narrative being attempted than was necessary to remind the reader of the facts which Mr. Cory elucidated with a good deal of epigrammatic force. He now follows much more in the lines of the ordinary chronicler, though without making such a complete statement of details as is requisite for a full presentment of his subject. Far more, for instance, can be easily read in other books as to the origin and progress of the Reform Bill struggle, in Parliament, throughout the country, and at Court, than Mr. Cory's 170 pages record, while fifty or sixty pages would have sufficed for all the critical observations—pithy and well pointed as they generally are—that he has to offer. Hence the volume is heavier reading than it need be. But Mr. Cory is both a laborious and an intelligent student of modern English history, and his book is a storehouse of shrewd judgments on men and sound enforcement of principles. All readers may not agree with him that the Grey ministry was "as nearly faultless as any ministry in any country ever has been"; but few can object to the discriminating praise that he accords to most of the many measures of national importance which it started and helped forward, partly through the political prescience of its leading members, partly through their wisdom in adapting themselves to the reforming humour of the nation itself. Mr. Cory's chapters on the new Poor Law and on other memorable reforms undertaken by Earl Grey's cabinet are shorter and more instructive than those on the Reform Bill. He brings out very clearly also the nature of the change in English foreign policy which began at this time, or, at any rate, first took active form in Lord Palmerston's development of the views of Canning. Here are four sentences on this subject which are a favourable specimen of Mr. Cory's style of writing: "Lord Palmerston would have laughed if any one had praised him, when he was in the keen enjoyment of power, for being a propagator of opinions, a reformer of a people's character, an ally of foreign 'idéologues.' He was an English country gentleman, who trained horses for races. Just as he set himself to bring a colt to the starting-post, just as he desired to win the stakes or the gold cup, so did he, when Lord Grey and the English counties gave him the opportunity, exert himself to make England the winner in competition with Russia. Incidentally he made the pattern monarchy of Belgium, and he rescued Portugal from rapine, Spain from superstition, both from the exclusive patronage of France." Altogether there is so much good work in Mr. Cory's volume that the diffuseness which will deter many readers from it is to be regretted. This volume, however, even more than its predecessor, appears to have been written rather for Mr. Cory's own amusement, as a record of a very extensive study of contemporary history and honest reflection thereon, than for the edification of the public.

The Visitation of Wiltshire, 1623. Edited by George W. Marshall, LL.D. (Bell & Sons.)—This work will undoubtedly be welcomed by most persons on both sides of the Atlantic who are interested in genealogy. It is not, as printed heralds' visitations too often are, an over-edited compilation, in which the added matter tends to obscure the original text; and Dr. Marshall tells us that his sole aim has been to print the original document with as little variation as possible, so that his readers may consult his pages feeling confident that they faithfully represent it. In the years 1620 and 1623 the counties of Cornwall, Devon, Somerset, Dorset, and Wilts were visited professionally by the heralds Henry St. George and Samson Lennard, as deputies to Camden; but the original records of these visitations (of which one is now printed for the first time in the work before us) would appear never to have been laid up, as they should have been, in the College of Arms. It seems that they passed through various hands until they were purchased by the Earl of Oxford, and finally came with the rest of the Harleian MSS. to enrich the treasures of the British Museum Library, in which they now form a very valuable portion of the heraldic collections. They appear to be in the handwritings of St. George and Lennard, with some few additions by Henry Parker, an arms-painter, into whose possession they came on the death of Lennard. From Parker they passed by purchase to Mr. Robert Fisher, who sold them to the Earl of Oxford. The visitations of Cornwall, Devon, and Somerset have been edited for the Harleian Society; and now that Dr. Marshall has published 'The Visitation of Wiltshire,' we may express a hope that the remaining MS. of this important series—viz., 'The Visitation of Dorset in 1623,' Harl. MS. 1166—will shortly find an editor.

We have received a fragment—it is but 144 pages, and goes down only to *Baudouin*—of an index to the first series of the Camden Society's publications. It is not easy to imagine an

index constructed in a better manner, or having its minutest details more thoroughly worked out. We have but one fault to find: arms defensive are classed under one head, but there ought surely to be a cross-reference for each article. "Almaine rivets" does not occur in the general alphabet, but under the above heading only. It is highly probable that a searcher might never think of looking under "Arms." It is conceivable, indeed, that he might not know what "Almaine rivets" were, and consult the index for the sake of gaining information. We have heard it rumoured that this most valuable index will not be continued, but is destined to remain a fragment. We trust this is not so. The Camden Society has conferred a boon on almost every department of English history. It will be a great loss to students, British and foreign alike, if the large collection of books which it has issued is to remain without a key by which to unlock its treasures. We trust if any such determination has been come to that the matter may be reconsidered.

A Provisional Glossary of Dialectal Place-Nomenclature; to which is Appended a List of Family Surnames pronounced differently to what the Spelling Suggests. By Robert Charles Hope. (Scarborough, Theakston.)—Mr. Hope has compiled a small pamphlet on an interesting subject which has been almost entirely neglected by students of dialect. We have no fault to find with it except that it is so small. Somewhat fewer than three hundred place-names are included in his catalogue, while it is certain that more than ten times that number ought to be in if anything like a complete list is to be given. Such well-known forms as Yerk for York and Barkly for the town of Berkeley do not appear. The former is important, as it preserves the memory of what was almost certainly the earlier form of the word, and suggests, if it does not prove, a connexion with the river Ure. Many modern names are mere corruptions of spelling to support wrong derivations. Raventhorpe, for instance, has nothing to do with ravens, but, as Domesday shows, with one Ragnald. If the popular pronunciation, Ranthrup, had been retained the mistake could not have been made. We do not know whether the same use applies to all the shires of England, but in certain parts of the Eastern Counties Thorpe, when it follows two syllables, is pronounced as it is spelt; when, however, there is but one, it becomes Thrup. Althorpe, in the Isle of Axholme, turns into Authrup, but its hamlet of Derrythorpe is pronounced as it is spelt.

We have received *Captain Nicholas Tettersell and the Escape of Charles II.*, a paper contributed to the *Sussex Archæological Collections* by Mr. F. E. Sawyer (*Athen.*, No. 2861). It contains, perhaps, as complete a biography as can now be recovered of the commander of the vessel which carried Charles II. across the Channel after the defeat of Worcester. Nicholas Tettersell was engaged in the coal trade and the owner of a small coasting vessel. He was, no doubt, well paid for the risk he ran, but we may not unreasonably conclude that affection for the royal cause moved him at least as much as the promised reward. His wife, we are told, "suspecting the truth, encouraged him in the undertaking, not caring, as she said, if she and her little ones begged their bread, so that the king were in safety." Tettersell was after the Restoration appointed to a command in the navy.

The Early History of the Mediterranean Populations, &c., in their Migrations and Settlements illustrated from Autonomous Coins, Gems, Inscriptions, &c. By Hyde Clarke. (Trübner & Co.)—Dr. Hyde Clarke's idea of comparing the devices found on ancient coins and gems is good. It has not been attempted before, and if carried out with accuracy and caution ought to lead to some interesting results. Whether it will support the weight of the conclusions Dr. Hyde Clarke imposes upon it is another question. The emblems belong for the most part to too late a period for them to throw any light upon the prehistoric migrations of the populations who employed them. Many of them, too, are derived from common and obvious objects which two nations might easily have hit upon independently. Dr. Clarke's general theories, moreover, lead him to couple together races and tribes between whom other scholars admit no connexion, and his emblems are accordingly collected without much sifting from all parts of the ancient world. It is difficult for any one who is not a Mezzofanti to follow him into those obscure regions of philology in which he delights to tread; but his list of ancient emblems cannot fail to be found useful by many students.

OUR LIBRARY TABLE.

Messrs. Kegan Paul, Trench & Co. have sent us an acceptable addition to the "Parchment Library" in the shape of a Horace. It has been carefully edited by Mr. F. W. Cornish, who has set himself the comparatively easy task of selecting the best readings from previous editions. It would perhaps have been well, in a volume clearly intended as much for *dilettanti* as for serious students, to consult the predilections of old-fashioned scholars by writing *-es* in the nominative and accusative plural, which is now found to be often as correct as *-is*, often more correct. The type is clear and the size of the volume handy, so that the publication ought to make Horace more than ever the cheery companion of men of culture in leisure hours and holiday time.

We welcome the sixth annual number of Charles Friederici's *Bibliotheca Orientalis*. This excellent publication gives a complete list of the books, papers, serials, and essays relating to Eastern literature which were published in England and the colonies, Germany, and France during the past year 1881. Such an annual record is invaluable, and by its help each solitary student, as he works on in his own special line of research, may learn at once what his fellow labourers are doing, and where he can probably find the information which he may be seeking. It is a bibliographical *Bradshaw* for the Orientalist. Herr Schulze is the publisher.

We have received from Messrs. Pickering & Co. a neatly printed little volume entitled *The Banquet of Wit*, edited by James Gray and J. J. Maidment. The publishers have done all that they could be expected to do for this book. It is unfortunately impossible to say as much for the editors. Messrs. Gray and Maidment complain of the "matter-of-factness" and the "plentiful lack of wit" of their contemporaries. These, it seems, are faults due partly to over-education and partly to "the too prevalent mammon-worship," two interesting attributions of cause which we should like to see worked out. The editors look back with a sigh to "the palmy days of their ancestors," when "genuine humour was not the *rara avis* it has since become." This collection is intended to give their readers an opportunity of communing with departed wits. With such discerning and fastidious hosts, one's mouth naturally waters at a promised banquet of wit. Alas, alas! Messrs. Maidment and Gray's anthology consists partly of such venerable Joes as the "Lapsus linguæ" story, partly of anecdotes (such, for instance, as that of D'Assas and "A moi, Auvergne") in which, whatever their interest, wit or humour appears to be totally absent. It is perhaps in consequence of over-education (for we think we may truthfully disclaim having been, in Messrs. Maidment and Gray's elegant language, "placed by mammon-worship on a pinnacle to which we could never have dared to aspire") that we are unable to see anything witty in the well-known story of George III. refusing to take advantage of the young Chevalier's presence in London. The excellence of the editing may be judged from the fact that the story of Erigena and Charles the Bald ("inter Scotum et Sotum") is given as of "a pragmatical young fellow sitting over against John Scot," &c., and from such forms as "Affas" for Assas, "Broughton," in Northamptonshire, for Boughton, "Hatchet" for Daichet, and so forth. In short the book is as bad a one of its kind as we remember to have seen. It is in reality a sort of one-volume 'Percy Anecdotes,' selected without judgment and edited without care.

Mr. Stanley Lane-Poole's pretty little volume *The Speeches and Table Talk of the Prophet Mohammad*, which Messrs. Macmillan have published in their "Golden Treasury" series, deserves a warm welcome. Of course it goes over much the same ground as Lane's 'Selections from the Kurān,' but it is far better adapted for the general public. The compiler has succeeded in his aim of presenting "all that is most enduring and memorable in the public orations and private sayings of the prophet Mohammad in such a form that the general reader may be tempted to learn a little of what a great man was and of what made him great." He has rightly excluded the mass of the Jewish legends which Mohammed repeats so often. "Their only real interest," as he remarks, "is Mohammad's use of them as evidence of the continuity of revelation."

Messrs. Bickers & Sons have been well advised in reprinting that delightful repertory of eighteenth century scandal *George Selwyn and his Contemporaries*, by J. H. Jesse. The reader who wishes to understand the society of the time, to know all about those goddesses the Gunnings—the elder of whom told George II. that the only sight she longed to see was a coronation—and the various other personages whose doings fill the letters of Gilly Williams, Tommy Townshend, and the various other correspondents of "Dear George," cannot dispense with this book. Those whom Mr. Trevelyan's brilliant biography of Fox has interested in Lord Carlisle or Lord Holland will find much information in these volumes; and they also will be of use to those who study the exhaustive 'Catalogue of Satirical Prints' compiled by Mr. F. G. Stephens.

We have on our table *A Catechism of Modern Elementary Chemistry*, by E. W. v. Volckxsom (Kegan Paul),—*Science in a Nut-Shell*, by A. Watt (Johnston),—*Experimental Physiology*, by Dr. R. Owen (Longmans),—*Transactions of the National Association for the Promotion of Social Science, Dublin*, 1881 (Longmans),—*Capital and Population*, by F. B. Hawley (New York, Appleton),—*A System of School-Training for Horses*, by E. L. Anderson (Allen & Co.),—*The Hardy-Fruit Book*, Vol. II., by D. T. Fish (Gill),—*Vegetable Culture for Amateurs*, by W. J. May (Gill),—*How to Live on Nothing*, by Madame Bouchard (Chapman & Hall),—*A Guide to the Upper Thames* (Gill),—*An Hour at the Academy*, 1882 (Pickering),—*Whist for Beginners*, by C. T. Buckland (Allen & Co.),—*Common Sense about Women*, by T. W. Higginson (Sonnenschein),—*A Descriptive Catalogue of Historical Novels and Tales*, compiled by H. C. Bowen (Stanford),—*Childhood at Inverkeithing*, by J. Simson (Baillière),—*A Saint among Saints*, by S. M. S. (Dublin, Gill),—*France in the East*, by F. I. Scudamore (Allen & Co.),—*The Giant Raft*, Part II., by Jules Verne (Low),—*The Monster Municipality*, by "Grip" (Low),—*The Bloody Chasm*, by J. W. De Forest (New York, Appleton),—*Alfreda Holme*, by E. B. Bayly (Jarrold),—*Old Faces in Odd Places*, by U. Rus (Wyman),—*At ye Grene Griffin*, by Emily S. Holt (Shaw),—*Margaret, and other Poems*, by M. Eldryth (Kegan Paul),—*The King of Kent*, by K. Cook (Pickering),—*The Redemption of Work*, by F. Paget (Parker),—*The Trinity* (Cambridge, Johnson),—*The Secret of Power*, by A. Maclaren (Macmillan),—*Parochial and Cathedral Sermons*, by the Rev. E. B. Pusey, D.D. (Parker),—

Die Altchinesische Reichsreligion vom Standpunkte der Vergleichenden Religionsgeschichte, by J. Happel (Leipzig, Schulze),—*Ueber den Geist der Indischen Lyrik*, by Dr. H. Brunnhofer (Leipzig, Schulze),—*Bi-Metallic England*, by O. Haupt (Wilson),—*Briefwechsel zwischen Schiller und Goethe*, Vol. I., by R. Borberger (Trübner),—*Feldrain und Waldweg*, by L. Anzengruber (Trübner),—*Zwei Bücher zur Socialen Geschichte Englands*, by A. Held (Leipzig, Duncker),—and *Ad Odysseam eiusque Scholiastas Curæ Secundæ*, Vol. II., by H. J. Polak (Leyden, Brill). Among New Editions we have *Baedeker's Rhine* (Dulau),—*Marshall's Through America* (Low),—*Hughes's Class-Book of Modern Geography* (Philip),—*Hughes's Class-Book of Physical Geography* (Philip),—*The Money, Weights, and Measures of the Chief Commercial Nations of the World*, by W. A. Browne (Stanford),—*Becker's First German Book* (Hachette),—*Legenda Monastica, and other Poems* (Mowbray),—*Irish Fairy Legends*, by T. C. Croker (Sonnenschein),—*The Great Tontine*, by H. Smart (Ward & Lock),—and *The Odyssey of Homer*, by Avia (Kegan Paul). Also the following Pamphlets: *Affluence, Poverty, and Pauperism*, by J. Polson (Stock),—*The Irish Question* (Ridgway),—*My Country and her Cause*, by an Irish Mechanic (Marcus Ward),—*Import and Export Statistics: a Reply to Mr. Giffen's Theories* (National Fair-Trade League),—*Views on Spelling Reform*, by G. L. Larkins (Stanesby),—*A Letter to Sir James Davidson Gordon, K.C.S.I., from Major Evans Bell* (Chatto & Windus),—*Holidays in Holland*, by P. Lindley (J. Heywood),—*The Argentine Republic*, by Henry St. John Wileman (Odell & Ives),—*Homes and Farms in America*, by G. H. Everett (Dickie),—*The Foundations of Mechanics*, by Walter R. Browne, M.A. (Griffin),—and *Shorthand Shortened*, by D. A. Peachey (Murby).

LIST OF NEW BOOKS.

THE FIFTH ANNUAL MEETING OF THE LIBRARY ASSOCIATION.

Cambridge, Sept. 6, 1882.

OUR reception at Cambridge is really beyond praise. Nothing could be more cordially hospitable. We mustered about one hundred and twenty on Tuesday, the first day, and though the brilliant sunshine of the early morning was too soon clouded over and followed by a persistent rain, the ardour of the librarians in tramping through the town to visit the various college libraries was not to be repressed. For many of them it was a first visit to Cambridge, and the view of stately seats of learning set in beautiful gardens and green lawns filled them with manifest delight and admiration.

Mr. Bradshaw, the President of the Association, took the chair at the first meeting in the hall of King's College punctually at eleven o'clock, and after the transaction of some preliminary business delivered an address of singular interest. Beginning with answers to the three questions, What is a library? what is a librarian? and what is the Library Association? he communicated to his hearers a mass of valuable knowledge on the subject generally and on the particular aspect of the subject presented by the University and by the town of Cambridge. He dwelt upon the fact that all our great libraries have acquired many more books by donations and bequests than they have acquired by purchase. Referring to the loss of books incurred in past ages by clearance of the *libri vetusti et inutiles*, he pleasantly alluded to a paper delivered at the last annual meeting by the Treasurer of the Association 'On the Elimination from Libraries of Obsolete Works.' The reformation of religion was accompanied by an extensive so-called reformation of libraries, and the destruction of books in England in the reign of Edward VI. was enormous, and was the direct cause of the scarcity of many books sought for by collectors. In the knowledge of rare books and specimens of early printing Mr. Bradshaw is *facile princeps*, and his appreciation of them may possibly colour the view he takes of the development of a library being upward from its elementary condition as a modern free library to the condition of a large college or university library abounding in archæological treasures of print. An historical sketch of the twenty-nine libraries—two belonging to the town and twenty-seven to the University—was highly appreciated by the visitors, preparing them as it did for the afternoon visit to the various college libraries. In conclusion the President invited his hearers to examine for themselves the working of the Cambridge University Library in its details, and to take note of the process through which books pass from the time of their arrival in the library till they are made ready for use and their titles are entered in the catalogue.

The discussion on the Annual Report and balance-sheet was adjourned to Friday. The first paper read was an amusing account by Prof. J. E. B. Mayor of a visit to Cambridge made in 1710 by a German named Uffenbach, which has never yet been published. Unfortunately it was difficult to hear all the words of the professor in that resounding hall. Of Mr. Garnett's paper on the printing of the British Museum Catalogue more next week. H.

THE 'YH KING.'

85, Kennington Road, S.E., Sept. 5, 1882.

I WAS not inclined to answer the rather sharp attack made in the preface to his paraphrase of the 'Yh King' by Dr. Legge, in reply to my letter published in your columns (Jan. 21st), as I thought to do so better in printing the scientific proofs of my discovery. Now the review of his book in your last issue obliges me to beg your insertion of the following remarks. I knew beforehand that Dr. Legge's attempt at translating the 'Yh King' was, as far as the text goes, a hopeless task, and any reader of my letter would have surmised that it could not be other than a total failure. The friendly reviewer of his book last week in these columns has been obliged to say, "We cannot catch the inspiration that gave to Dr. Legge 'the clue to the interpretation' of this obscure book," and further, "We have.....to confess that we do not understand either its drift or its interpretation."

However, we may be sure that the author of this version has done for its understanding all that it was possible to do. He has written a paraphrase, for his translation is far from being literal and is about three times longer than literalness would have required. But he says himself that a literal version is utterly unintelligible, and as to his systematic translation, that he has carried out the scheme more concisely than the interpreters he has followed have done. When you compare the Chinese text with his version and find seventeen Chinese words rendered by three score of English words, it is clear, *primâ facie*, that he says more than the text does. If we consider that the author of this unsuccessful version had at his disposal not only his profound knowledge of Chinese lore, but also all that the host of Chinese scholars who have worked on this book have been able to suggest about its meanings, we cannot help thinking that the task is an impossible one and that the text cannot be translated. More than two thousand Chinese scholars have worked upon it, and in the last century no less than 1,450 different works dealing with it had been selected to figure in the great library of the Emperor Kien-lung.

The hope I expressed in my letter quoted above, that Dr. Legge would illustrate his version by foot-notes extracted from the commentaries and giving a great amount of information, has not been fulfilled. I also remark that it is very difficult, as Dr. Legge has not published the original text, to point out any discrepancies, which could be verified at once by his readers without their taking the trouble of looking for a Chinese edition or for Canon M'Clatchie's edition. The number of meanings made up for the occasion and forced upon the characters is very great, and when we find, for instance, the word *tien*, "heaven," translated by "shaving," without the slightest note or explanation, it cannot be admitted that an interpretation with such licences is a *bonâ fide* version.

The text—*i. e.*, the rows of characters which Dr. Legge affirms, without any valid proof whatever, to have been written by Wen Wang and his son the duke of Chöu—is nothing else than a series of disconnected and broken phrases, the attempt to make sentences out of which is as hopeless as to read a dictionary as a continuous text. As I have previously said, the 'Yh' is a collection of vocabularies, some with incidental remarks and sentences on the populations, customs, traditions, geography, &c., of early China. The chapters which contain the various meanings of the ideographical character which forms their heading are entirely like the syllabaries in cuneiform writing of Western Asia. As we know that the early rulers of the Chinese Bak families, previously to their migration to the far East, borrowed somewhere in the West, probably near Bactria, the pre-cuneiform writing and elements of culture spread from Chaldea through Susiana, it is very likely that they knew the syllabaries, which were drawn for teaching the writing, and probably carried some with them. If the extraordinary similarity which exists between some parts of these syllabaries and several chapters of the 'Yh King' is not a proof that we have in the latter actual copies of some syllabaries, it proves in any case that they have been made of materials drawn from the same source. The early chiefs of the Chinese Bak families had

been taught the process, and they continued it when they arrived in their new country.

It is in this sense that the 'Yh King' is the most valuable of the Chinese classics, the one in which, according to the uninterrupted but unexplained feeling of the Chinese themselves, were embodied the wisdom and knowledge of the sages of yore.

It seems that Dr. Legge has been led astray about the authorship of the 'Yh King' by the facility with which P. Regis and his colleagues in their Latin version of the mysterious classic have accepted the uncritical repetitions of several Chinese authors, and tried to find passages in the text to support their views. The statement that the text of the 'Yh King' was written by Wen Wang and Chöu Kung has not a single authority in its favour amongst the oldest writers who have treated of the 'Yh King.' And the Chinese text of the two quotations given, very likely inadvertently, by Dr. Legge to support it do not bear at all that sense. It is inconceivable that the learned professor previously to his hard work did not investigate the matter in order to avoid the unwarranted assertions which are found in his preface and introduction.

To be able to admit that King Wen actually invented and wrote all these words, more or less disconnected, broken sentences, &c., as moral, social, and political essays, we must be prepared to say that his confinement at Yu-li had seriously affected his mental faculties, for they have all the appearance of being written in a lunatic asylum. The only possibility of avoiding a conclusion so prejudicial to the fame of the high-minded sage of Chinese history is to admit that, as is shown by many proofs I have found, he could not help himself, as he had to use sets of characters and meanings ready made for each chapter, framed a long time before him and which in parts had become unintelligible.

The only work of King Wen has been the addition of many divining words and a rearrangement under each heading of the various meanings and sentences, so as to match as often as possible with the comparative suggestions attributed by him to the individual lines of the hexagram. Besides that he wrote the first wing and his son the second.

Tradition has been kept of the modifications he introduced into the headings of the chapters, and we have in the 'Tso Chuen' quotations of the text of the 'Yh King' as it existed previously to his editorial work. The reader will find many unmistakable proofs of the existence of the old text of the 'Yh King,' before the time of King Wen, in my paper on 'The Oldest Book of the Chinese,' as it is not possible to give them here without the text.

It is not unlikely that the eight *kwas* are connected with the eight divining arrows of old Chaldean culture, turned afterwards into an arithmetical puzzle; and we have reasons to believe that the traditions concerning the map of the Ho and the script of the Lo (of which reproductions have been converted also into arithmetical puzzles) are based upon the finding in China on banks of rivers by the early immigrants of rocks carved with cup-marks, like those found in India by Mr. Rivett-Carnac.

The tradition of the authorship of the 'Yh King' by King Wen, based upon an inexact appreciation of what has really been his share of the work, has been turned into an attribution of authorship to the model king and his son by the feeling, natural to the Chinese, which has attributed so many things to them, and the easy and satisfactory saying that the mysterious classic was the work of the greatest sages, Fuh-hi, Wen Wang, Chöu Kung, and Confucius.

Dr. Legge, followed in this by his reviewer, has dismissed the theory of the Yn and Yang principles applied by Canon M'Clatchie in his version of the 'Yh King.' He says, "Such things never entered into the minds of Chinese scholars." I am sorry to see this assertion contradicted by the statement in the 'Annals of the Former Han,' where we read that during several years of the first century B.C. the Yn and Yang principles of interpretation were applied to the 'Yh' by several scholars. I may say that several coarse pictorial nature characters, still recognizable in the writing borrowed by the Chinese Bak families, were used by them, knowing what they were, during several centuries. The coarseness of the characters in the natural line has been gradually rejected through the transformations of the writing, by the same tendency which has transformed the energy and precision of the old literature into a smooth stream of righteous principles and moral conduct. Had Dr. Legge ever studied Chinese palæography and the evolution of the writing elsewhere than through the ideographical transcriptions of the scholars of the Han dynasty and the commentators, he would have changed his mind about the curious things he has written on the subject. He would have found, as I did, that the Ku-wen writing was an exact phonetic transcription of speech, and that it was only afterwards for political reasons that the writing was made more ideographical. He would have seen that the abyss which exists now between the speech and the book language has not always existed. I hope that I have made all this clear in my forthcoming papers on 'The Oldest Book of the Chinese' and 'The Evolution of Chinese Writing and Speech.' And when my version, without any systematic views or addition of any kind excepting what grammar requires, made with the valuable collaboration of Prof. R. K. Douglas, appears, I am more confident than ever that it will show that if the text of the 'Yh King' has been interpreted by 2,000 scholars without any success, it is because it is a kind of vocabulary containing the meanings of three score of words, with a quantity of information on the writing, language, customs, peoples, &c., of old China. It is the oldest and, for many points of historical research, the most valuable book of the Chinese.

TERRIEN DE LACOUPERIE.

MR. HENRY KENDALL.

THE death is announced by telegram of Mr. Henry Kendall, the well-known poet of New South Wales. The *Athenæum* was the first journal in this country to draw attention to the merits of his works. Mr. Kendall was born at Ulladulla, New South Wales, in the year 1842, so that he had barely attained his fortieth year. When only eighteen years of age he began contributing to the columns of the *Empire*, and he continued to contribute to that journal and the *Herald* until 1869. In 1862 he published 'Poems and Songs,' but three years later suppressed the work. He also wrote prose and verse in the *Sydney Punch* and other periodicals. After first holding a situation in the Lands Department, he went to the Colonial Secretary's office, where he was engaged until the year 1869. Then he resigned and went to Melbourne, where he wrote for the *Argus*, the *Daily Telegraph*, the *Melbourne Punch*, the *Australasian*, &c. He obtained a prize offered for the best poem upon any Australian subject; and in conjunction with Charles E. Horsley he composed the cantata for the opening of the Melbourne Town Hall. For some years back he had been residing near Brisbane Water. Mr. Kendall had a serious illness in 1873, and his constitution never quite recovered the shock which it then received.

THE COMING PUBLISHING SEASON.

MESSRS. F. WARNE & Co.'s announcements of new publications in preparation for the coming season comprise:—'Cinderella,' retold in rhyme by Lieut.-Col. Seccombe, with original illustrations by the author,—'See-Saw: a Book of Songs, Rhymes, and Ballads,' with illustrations, accompanied by original music by Mr. W. M. Hutchison,—an entirely new edition of Hans Andersen, with numerous illustrations and page plates, printed in colours from original designs,—Carleton's 'Our New Way round the World,' with numerous illustrations and maps,—"Aunt Louisa's Gift-Book," 'The Field, the Fox Hunt, and the Farm,' with original designs by Mr. Frederick Grey and descriptive text,—'Father Christmas and his Christmas Cards,' by the author of 'Lennie's Bible,' with illustrations,—"The Oakleaf Library," six volumes, with original illustrations drawn and described on every page by R. André, and printed in tints and colours,—"The Silverland Library," twelve volumes, each with coloured and tinted pictures,—"Aunt Louisa's Toy Books," five new volumes: 'The Little Sportsman's A B C,' 'The Farmyard Hunt,' 'A Country Holiday,' 'Play Hours,' and 'Play Time,'—"The Chandos Classics," six new volumes, containing Hume's 'History of England,'—'School Days of Eminent Men,' by F. E. Foster,—the Rev. Silas K. Hocking's new books, 'Storm-Drift: a Tale of the Sea,' and 'Little Mike: a Story of a Waif,'—"Aunt Louisa's 3*s.* 6*d.* Favourite Gift-Books," with coloured page plates: 'Our Favourites,' 'Old Nursery Friends,' 'Welcome Guest,' 'Picture Favourite,' 'Children's Gift,' and 'Bible Picture Book,'—'The Law of County Courts,' by Mr. Smalman Smith, LL.B.,—"Hans Andersen's Fairy Tales Series," fifteen distinct books, with coloured illustrations,—and a new edition of Armatage's 'Cattle Doctor,' entirely rewritten to the present time.

Miss Kate Greenaway's 'Almanac for 1883,' printed in colours by Edmund Evans,—Mr. Walter Crane's new book, 'Pan Pipes,' with accompaniments by Mr. Theo. Marzials,—and Mr. Randolph Caldecott's new toy books, 'The Milkmaid' and 'Hey-diddle-diddle the Cat and the Fiddle,' will be published in October by Messrs. George Routledge & Sons.

Literary Gossip.

As a sequel to the story of 'The Little Pilgrim' appears in this month's number of *Macmillan's Magazine* under the title of 'The Little Pilgrim goes up Higher,' it may interest some people to know that the writer is Mrs. Oliphant.

THE Bishop of Natal, having completed one volume of his analysis of documents connected with the Zulu war, has made considerable progress with a second volume, which contains much information concerning the recent troubles in Zululand. The bishop's work is being set up at his private printing press at Bishopstowe.

THE editing of the correspondence of Carlyle and Emerson has been entrusted to Prof. Norton, of Harvard University, U.S. The interchange of letters began in 1834, and some specimens of Emerson's letters, our readers may remember, appeared a little time ago in these columns. Carlyle before his death gave his sanction to the appearance of his portion of the correspondence.

MESSRS. SAMPSON LOW & Co. have in the press a new work by Mr. Phil Robinson, author of 'Noah's Ark,' 'In my Indian Garden,' &c., the title of which will be 'Sinners and Saints: a Tour across the States and round Them, with Three Months among the Mormons.'

Apropos of the difficulties existing in Madagascar between the French authorities and the Malagasy Government, we may mention that Mr. A. Kingdon, a former resident in the island, has written a narrative of facts from the native point of view. It will be published in the form of a letter to M. Grévy.

XUM

A BIOGRAPHY of the late Prof. Cairnes, the distinguished political economist, is in preparation.

WE understand that Mr. W. Gunion Rutherford, author of 'The New Phrynichus,' and now a candidate for the Chair of Greek Literature at Edinburgh, has in the press an edition of the Greek fabulist Babrius. It forms the first of two volumes to be entitled 'Scriptores Fabularum Græci,' and is an attempt to clear away, without any sacrifice of learning, the pedantic erudition which has hitherto obscured the merits of this simple and charming writer of choliambics. The text is based upon a new collation of the Athoan manuscript, and upon the recent discovery by Pius Knoell of the long missing Vatican codex, which contains some of the fables wanting in the mutilated MS. from Mount Athos. It will be furnished with critical foot-notes in Latin and philological annotations in English, and will be preceded by introductory dissertations on Babrius, on the history of Greek fable, on the diction of Babrius, and on textual questions. The book will also contain a complete "Index Græcitatis Babrianæ." Messrs. Macmillan & Co. are the publishers.

PROF. BLACKIE'S successor will be selected in October. Among the candidates, besides Mr. Rutherford, are Mr. Butcher, Dr. Donaldson (lately appointed to Prof. Blackie's old chair in Aberdeen), Mr. A. Goodwin, and Mr. J. E. Sandys. It is curious to observe how many more candidates for Scotch chairs are now furnished by the English universities than in former days. When Prof. Blackie was elected to the Edinburgh chair, if we remember right, not a single competitor from Oxford or Cambridge obtained a vote. In fact, no member of either university made a serious effort to obtain the professorship.

A 'HISTORY OF SOUTHAMPTON,' by the Rev. J. Silvester Davies, F.S.A., is about to be published by subscription by Messrs. Gilbert of that town. It will be based upon a MS. of Dr. Speed, now in the possession of the Corporation, and will contain much new and interesting information.

MR. G. W. RUSDEN, for many years Clerk of the Parliament in Victoria, has in the press a 'History of New Zealand,' which deals with the manners and laws of the Maoris, the discovery and occupation of the islands under the treaty of Waitangi, and the history of affairs in the colony during the wars and up to the present time. The work will be published by Messrs. Chapman & Hall.

WE regret to hear of the death of Mr. G. Walker, who for about half a century had been in the house of Messrs. Simpkin, Marshall & Co., Stationers' Hall Court. Mr. Walker was admitted as a partner in the firm about twenty years ago, from which position he retired several months since.

THE death is announced of Mr. Mountague Bernard, the well-known authority on international law. Always a delicate man, he exhausted his strength by incessant toil. At Oxford he performed a great deal of work up to 1874, as a professor, an examiner, assessor of the Chancellor's Court, and member of the Hebdomadal Council. He sat on many commissions, including the Oxford University Commission, and was a member of the Judicial Committee of the Privy Council. His chief publications were: 'Four Lectures on Subjects connected with Diplomacy,' and 'The Neutrality of Great Britain during the American Civil War.'

IT may be remembered that Mr. Bernard was secretary to the Public Schools Commission; and we may add, in view of recent controversies, that only lately he expressed strong dissatisfaction at the neglect of the governing body of Westminster School to adopt one of the two courses pointed out by that Commission as alone possible.

A FREE library, the erection involving a cost of about 20,000*l.*, has just been opened at Newcastle-on-Tyne.

MESSRS. NELSON & SONS inform us, in reply to Mr. Golovin's letter which appeared in the *Athenæum* of August 12th, that Mr. Golovin's MS. was purchased by them for 80*l.*, and was translated at their expense from French into English. The English version was lost by a literary adviser to whom it was submitted; but it had been already decided, on his advice and that of another gentleman who had previously read it, that it was not advisable to print it. The original MS. is supposed to have perished in the fire at Messrs. Nelson's establishment in 1878.

AT a meeting of the Council of the Yorkshire College, held on Saturday, the 2nd inst., Mr. N. Bodington, Fellow of Lincoln College, Oxford, and Professor of Greek and Latin in the Mason Science College, Birmingham, was elected to the Professorship of Classics vacant by the resignation of Prof. Marshall, and to the Principalship of the College.

A TYPE foundry of the Burmese character is about to be established at Rangoon, to meet the demand arising from the increased amount of printing in the vernacular.

THE New York *Nation* has some sensible remarks on the printing of the Museum Catalogue, which are worth the attention of readers on this side of the Atlantic:—

"For 3*l.* a year one can get all that shall be printed during that time of one of the largest and most carefully catalogued libraries in the world. As about 2,800 pages were published last year, the price is certainly not high. It may, to be sure, be forty years before one will have the whole, and it will not then represent the library at any one stage of its existence. But the fact still remains that it will be the catalogue of an enormous collection of valuable books, a mine in which the bibliographer can delve for a lifetime. There is a man who has read the catalogue of the Bodleian Library, in four folio volumes, through twice. No doubt somebody has already begun the work of reading through the Museum Catalogue, an occupation of truly endless delight. Cataloguers, too, in numberless libraries will get great comfort from it, and abridge their own labours by using the investigations of the London labourers. No doubt when all the volumes are in type some means will be devised by which the additions shall be printed also in alphabetical order, and not as now (in the second series publishing by the Museum) in the helter-skelter order of annual accession."

THE same paper remarks on the failure of the negotiations for international copyright:—

"Nothing but unlimited piracy will ever convince the great publishers that their attempts to establish international copyright on the basis of protection to the American book manufacturers will not work. The 'Harper' treaty has broken down because the publishers have attempted, under pretence of making literary property sacred, to compel the foreign author to publish his book in America. Sooner or later the publishers will find out that they must all come into the market on equal terms, or else that they will be permanently driven out of the market by the pirates. The authors' best friend at present is the pirate, for it is the pirate alone who can bring the publishers to their senses. He has already half converted most of the publishers, and in time he will make his work of regeneration complete."

THE German printers will celebrate their annual meeting at Stuttgart from the 23rd to the 25th of this month. The gathering promises to be large.

ACCORDING to the information furnished by recent numbers of the *Ferhan*, the journal of Ispahan, civilization is making considerable progress in Persia. A large college, which was completed last year with Government aid, has now commenced its work in earnest amongst the upper classes of Persian youths, who will have the advantage of tuition at the hands of professors who, if not Europeans, have at least graduated at the principal seats of learning in Europe. Further signs of progress are to be found in the increased employment of Europeans in connexion with railways, telegraphs, &c., and in the recent decree for the assimilation of weights and measures throughout Persia.

SCIENCE

The Coues Check List of North American Birds. Revised to Date, and entirely Rewritten, under Direction of the Author, with a Dictionary of the Etymology, Orthography, and Orthoepy of the Scientific Names, the Concordance of Previous Lists, and a Catalogue of his Ornithological Publications. (Boston, U.S., Estes & Lauriat; London, Trübner & Co.)

FEW American ornithologists can rival Dr. Elliot Coues in his experiences of nature, and probably none can equal him in fertility of the pen. Indefatigable in production, it seems but the other day that he presented us with weighty third and fourth instalments of ornithological bibliography, and now he comes forward with a work whose lengthy title gives but a faint idea of its comprehensive aim. The original 'Check List,' published in 1873, was, with the exception of some comments in foot-notes and an appendix, only a catalogue of scientific and vernacular names, compiled with commendable accuracy. During the last nine years, owing to an increased knowledge of North American birds, especially along the Southern or Mexican frontier, where many species have overstepped the political and non-natural boundary, no less than 120 species have been added to the list, whilst ten have been eliminated, all of which are duly enumerated in this revised edition. In addition, however, to these ordinary features of a catalogue, the lower half of every page of the present list is devoted to the explanation of the meaning, derivation, spelling, and pronunciation of the words employed in the scientific nomenclature, a philological

investigation in which Dr. Coues amply recognizes the assistance he has received from Mrs. S. Olivia Weston-Aiken. Nothing of the kind has hitherto been published, and although on many points there is room for discussion and dissent, yet there can be no doubt that this volume contains a vast amount of miscellaneous information which is always interesting and usually instructive. To quote the principal author's own words:—

"No one who adds a degree of classical proficiency to his scientific attainments, be the latter never so extensive, can fail to handle the tools of thought with an ease and precision so greatly enhanced that the merit of ornithological exactitude may be adorned with the charm of scholarly elegance."

We pass over the authors' rules for pronunciation; but we must call attention to the remarks on accentuation, in which it is laid down that modern proper names of three syllables with the accent on the first keep it there after the addition of the *i* of the genitive case, as *Aud'uboni*, *Rich'ardsoni*. Again, in such words of four syllables as *Troglodytes*, *Lophophanes*, *Phylloscopus*, the authors say, "it is glib to accent the antepenult, but it is done at the sacrifice of the strength and dignity of the stem, which stands penult, and which we should prefer to accent even if short." We do not agree with them, but as they add that they are aware that their views of this matter will not pass current, even if they escape adverse criticism, we may pass on and briefly notice a few of the derivations.

It is hardly to a catalogue of birds that one would turn for a brief reminder of a great crime; and yet on p. 31, after the name of a wren, *Troglodytes parkmani*, we read: "To Dr. George Parkman of Boston, murdered by Professor John W. Webster in 1849." Another curious record is that respecting the ancestry of the founder of the Smithsonian Institution. On p. 34 a new suggestion is given for the derivation of the name of the New World; Madame Blavatsky being quoted as boldly stating, in 'Isis Unveiled,' that "it is most plausible that the State of Central America, where we find the name Americ, signifying great mountain, gave the continent its name"; the same author also seeking to establish a connexion with the Hindoo Meru or Meruah of similar signification! Turning over the pages, we find săvă'nă thus accentuated, with the explanation that it is the Spanish *sabana* or *savana*, and that "the quantity of the penult is marked by the general rule for accentuation in Spanish, that words ending in a vowel have the accent on the penult." Rule or exception, the word in Spanish is undoubtedly pronounced *sábana*, and means a sheet, or a meadow spread out flat like a sheet. The bunting to which Mr. Ridgway gave the name of *Spiza townsendi* furnishes an evolutionary joke, no second specimen of this alleged species being known, whilst it is not improbable that the type came from an egg laid by *Spiza americana*; "but even such immediate ancestry would not forbid recognition of 'specific characters'; the solitary bird having been killed, it represents a species which died at its birth." The derivation of *Quiscalus*, the generic name of the crow-blackbirds, belonging to the *Icteridæ*, has puzzled many authors, who find nothing like it in Latin or Greek, and Prof. Newton has suggested the Spanish word *quisquilla*, given in dictionaries as meaning a trifling dispute, suggestive, perhaps, of the fussy bickerings of the birds in question. But is there no Mexican Indian word like *quezcal* which would be Latinized into *Quiscalus*? *Urubitinga* is cited as a barbarous word of some South American dialect, the first portion, *urubu*, meaning a vulture, the latter being unknown. We may state that *tinga* is a word of the widely diffused Tupi language, spoken throughout a great part of Brazil, and meaning "white," in the sense of "bright," and *Urubu-tinga* is simply beautiful vulture. With regard to the derivation of the principal author's name there is apparently less uncertainty; we are told that it is Norman-French, pronounced Coo-ayz, and that the male line of the bearers is nearly extinct; followed by the confession "the meaning of the word is unknown to us": a remark which would apply to a good many other surnames. On p. 120 is a printer's error, to be corrected in the next edition—a great naturalist of the last century being described as "Jean Louis Le Clerc, Compte [*sic*] de Buffon, the famous French panegyrist of nature." Of the thick-billed guillemot, *Lomvia arra* (Pallas), it is remarked, "Lat. *Arra*, or *Arrha*, was purchase-money, or a pledge in earnest of a contract, and might have been applied by Pallas to a bird in such demand by the natives as to serve as a sort of unit or standard of exchange in barter"—an ingenious suggestion, albeit a far-fetched one. We might multiply quotations indefinitely, but the above will serve as examples of the varied contents of this book, and space will not admit of more.

The appendix contains a catalogue of what are styled Dr. Coues's ornithological publications from 1861 to 1881 inclusive; and by the insertion of reviews, anonymous articles, and even scraps of information furnished to other naturalists, in addition to his really high-class works, the total number of contributions is brought up to 300. Some of the papers which swell the list can, indeed, scarcely be termed ornithological, such as "Small Shot," "How to Shoot," or "Shells [cartridges]—Paper or Brass?" although Dr. Coues's experience has doubtless qualified him to express an opinion upon the respective merits of these materials. On the other hand, he has omitted from his list all mention of some verses recently contributed to an ornithological magazine, and which unite in the happiest manner the tinkle of the brass with the murmur of the shell.

ASTRONOMICAL NOTES.

Two more small planets have been discovered by Dr. J. Palisa at Vienna, each of them only equal in brightness to a star of the twelfth and a half magnitude. No. 228 was discovered on August 19th; No. 229 on the 22nd of the same month. Dr. Palisa has now discovered thirty-six of these bodies.

It was mentioned in the *Athenæum* for August 5th (p. 180) that a new nebula had been discovered at Vienna in the constellation Virgo. Attention is called in *Astronomische Nachrichten*, No. 2452, to the fact that this nebula is not a new discovery, but was found by Mr. Marth when he was at Malta in 1865, and is contained in the catalogue of new nebulæ communicated by Mr. Lassell to the thirty-sixth volume of the *Memoirs* of the Royal Astronomical Society. Prof. Krüger remarks that he has several times observed it at Kiel, and that it is south following a beautiful red star numbered 277 in Mr. Birmingham's Catalogue (=145 in that of Schjellerup).

We learn from the *Sidereal Messenger* for August that the new telescope of the Halsted Observatory at Princeton, New Jersey, U.S., is now at last in position and nearly ready for work. It is at present the second largest telescope in the United States, the aperture of the object-glass being 23 inches, and the focal length within an inch or two of 30 feet. It was constructed by the famous makers Alvan Clark & Sons, of Cambridge, U.S., and the glass discs furnished by Feil of Paris. The lenses which compose the object-glass are separated by a space of nearly seven inches, which arrangement not only, by allowing a free circulation of air between them, secures a rapid equalization of temperature, but also avoids the formation of those troublesome appearances called "ghosts," which are often produced in large instruments by reflections between the lenses. It is intended at present mainly to devote this fine instrument to spectroscopic observations of stars. The spectroscope employed upon it is one of the form in use at Greenwich, contrived by the present Astronomer-Royal, Mr. Christie, who has kindly supervised its construction; it is by Hilger of London, is nearly six feet long, and admits through the prisms a beam of light 2¼ inches in diameter. Prof. Young is to be congratulated on having at last an instrument at his disposal suitable for his researches, which have been hitherto carried on at the small observatory of the John C. Green School of Science, scarcely adapted for more than a means of giving instruction. The Halsted Observatory was built in 1870, but has hitherto remained unprovided with instruments.

GEOGRAPHICAL NOTES.

The papers which appear in the September number of the *Proceedings* of the Royal Geographical Society are not of exceptional interest, but they comprise some useful contributions to geography. The Rev. W. D. Cowan's paper on his geographical excursions in South Central Madagascar conveys information respecting one of those few regions on the earth's surface which still present an almost virgin field to explorers, a country vested with peculiar interest, partly because of its remarkable fauna, and partly, as Sir G. Bowen has pointed out, because of the relations which have always subsisted between the Hovas, or the warlike nationality of Madagascar, and the governors of the British colony of Mauritius. Some notes on the Shaktu valley in Waziristan, sent by Capt. G. F. Young, of the Bengal Staff Corps, describe a tract intermediate between the Kaisor and Tank Zam valleys, and hitherto entirely unknown to Indian topographers, in spite of its close proximity to the frontier station of Bannu. The cause has, of course, been the hostility of the Mahsud Waziris, the most powerful of the three main branches of the great Waziri clan, a tribe whose repeated murders, cattle-liftings, and raids on British villages have twice entailed on them condign punishment at our hands—once in 1860, and again last year, when Generals Kennedy and Gordon were despatched with a couple of brigades to chastise them for their burning of the frontier station of Tank. Capt. Young describes the Waziris as treacherous and degraded, like all other Afghans, but also as brave and of splendid physique. Having few firearms, they fight principally with sword and shield and with stones, which all ages and both sexes are wonderfully expert in throwing. Various publications respecting Assab noticed in these *Proceedings* show that this future colony of the Italian Government contains at present only 177 inhabitants.

The Italian Government is certainly making strenuous efforts to develope the commercial re-

XUM

sources of Assab Bay. Count Pietro Antonelli has just left Italy for Zeila, whence he will proceed to Shoa, and Signor Bianchi will follow him in the course of October, charged with a mission to King John and the Dejaj of Gojam. Both convey rich presents from the King of Italy, and their primary object will be to direct caravans from the interior towards Assab Bay. Prof. Licata, of Naples, will accompany Signor Bianchi. The latter, on the termination of his mission, proposes to build a bridge across the Abbai and to penetrate into the Galla countries. From a report on the commercial capabilities of Abyssinia and Shoa, which appeared in the last number of *L'Esploratore*, it does not, however, appear as if very sanguine expectations of their future development can justly be entertained. The people are poor, their requirements small, and the commercial products of the country hardly such as would justify a costly transport by land, and through regions rendered unsafe by prowling Bedouins.

Dr. Harmand, the French Consul in Siam, and M. F. Deloncle have returned from an exploration of the isthmus of Kra, in the course of which they made a careful survey, with a view to the construction of a ship canal. M. Deloncle is shortly expected in France.

In Admiral Count Fedor Petrovich Lütke, whose death took place at St. Petersburg on the 20th of August, Russia has lost one of her most prominent scientific naval officers. Born in 1797, he won distinction during four voyages into the Arctic Ocean, 1821–24, and as leader of a scientific voyage round the world, 1826–28. He was the virtual founder of the Russian Geographical Society, and in 1864 succeeded Count Bludov as President of the Imperial Academy of St. Petersburg.

The Russian expedition organized by Lieut. Scholz-Ragozinsky for the exploration of Africa has fallen through, and several of its members have already returned to St. Petersburg.

Iceland, after a succession of bad seasons, has been plunged into a state in which it has not found itself for upwards of a century. The winter of 1880–81 was one of the severest on record, and a summer followed so cold that it yielded a hay harvest amounting scarcely to one-half of an ordinary average one, which towards autumn necessitated a large reduction of live stock. Last winter was raw and sleety and excessively changeable—that kind of winter, in fact, which Bishop Hannes Finson declares to be infinitely more hurtful to live stock than a frosty one. The scanty hay proved all but useless; horses and sheep had to be turned out on winter pasture, which meant little but protracted exhaustion, and then down came the Arctic pack ice, which still encompassed the north country at the end of July. Accompanied by persistent northerly gales, it not only nipped spring in the bud, but destroyed the domestic animals by hundreds. In addition to this, measles, brought to the country from abroad, are spreading, accompanied by a mortality which in Reykjavik itself reached 7 to 8 per cent. This, with the exception of the last statement, which is based on trustworthy private information, is the substance of the official reports published in the Government *Gazette* of Copenhagen, July 27th and August 22nd. To be timely, relief must be within reach in the distressed districts not later than October. What the Mansion House Committee want is 5,000*l*. The districts immediately affected contain a population of some 38,000 souls. It is easy to see that operations on a large scale are wanted for the feeding of such a number of persons with their flocks for a whole year.

The new geological map of Belgium will be surveyed and published on a scale of 1 : 20,000, or about three inches to the mile. The director of the Royal Natural History Museum is placed in charge of the survey. The geological surveyors attached to the museum will receive (in addition to their regular pay) an annual allowance of 80*l*., and 1*l*. for every day employed in actual survey. These terms, we believe, are far more liberal than those granted to the gentlemen employed on our own survey. The aid of competent geologists not on the staff of the museum is invited.

Messrs. Philip & Son have sent us a new map of Egypt by Mr. Ravenstein, drawn with that well-known geographer's usual skill. The map is made particularly convenient for general use by containing plans of Port Said, Suez, Alexandria, and Cairo.

MEETINGS FOR THE ENSUING WEEK.

TUES. Horticultural, 11.—Fruit and Floral Committees.

Science Gossip.

THE Society of Arts' Council have issued their programme, and they desire to draw the attention of secretaries of institutions and others interested in their examinations to the important alterations made in the examination system. The complete programme can be obtained from the Secretary of the Society of Arts, John Street, Adelphi.

THE Department of Public Works in France have issued some comparative statistics of the state of the mining industry in Europe for 1880, from which it appears that the quantity of coal and ore raised in that year was 291,362,276 tons, valued at 122,273,188*l*.

MM. JARRIANT AND GRENET have been exhibiting at the Comptoir d'Escompte, Paris, a system of electric lighting by means of the lamps of Swan and the electric arcs of Siemens and Gravier excited by a modification of the bichromate of soda battery. Each battery employed consisted of 48 elements, in two sets of 24 each. The electro-motive force of each set of 48 cells was 82 volts, and the intensity of current was 24 ampères. The constructors estimate that each battery in full working order is equivalent to a horse power and a half of electric energy. M. Corroyer, the engineer, deeming a steam engine dangerous in an establishment full of valuable documents, proposed the installation of this voltaic battery, and his experiment has been crowned with complete success.

M. JULES BERGERON described to the Académie des Sciences at the Séance of the 14th of August a method by which he obtains imitations of lunar craters. A current of hot air is driven through a brass tube inserted obliquely in a metallic alloy (such as Wood's, composed of bismuth, 7 parts; cadmium, 2 parts; tin, 2 parts; lead, 2 parts) which has been liquefied and is slowly cooling. The bubbling clears away the pellicle which begins to form, and the heaped-up matter produces a miniature crater. As the mass by cooling becomes pasty, a prominence or cone is formed in the middle, while the crater becomes hollower.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Bartolozzi and his Works. By A. W. Tuer. 2 vols. Illustrated. (Field & Tuer.)

THE printing, paper, and binding of these volumes are in all respects so excellent and tasteful that they demand and deserve the warmest praise. The style of the books is that proper, or supposed to be proper, to the early part of the last century, including such additions to the model as the use of "y^{e}" for the, and "Presse" for Press, on the title-pages, but not elsewhere. The binding is a pleasant white, the paper of the stoutest substance which is consistent with flexibility, as becomes a material intended to remind the reader of the fine hand-made leaves of the days of Queen Anne. Every reader of old books knows how great is the difference between turning over the thick yet brittle modern paper which often does duty in what are quaintly called "antique" volumes, and the old-fashioned material on which were printed the best publications of Herringman, the Tonsons, and B. Lintot, to say nothing of the rest of the "crew" of publishers whom Pope belaboured and before more than one of whom poor Dryden stooped, if he did not cringe, as he told Bolingbroke he had been compelled to do with regard to "Jacob the First." Pope would have been delighted had it been possible to issue his Homer in as sumptuous guise as Mr. Tuer's two volumes. Mr. Tuer is at his best in these respects, and the book is, like other publications by Messrs. Field & Tuer which we have already reviewed, a model of good craftsmanship.

Apart from this, 'Bartolozzi and his Works' is scarcely a success. We are quite within the mark in saying that three-fourths of the book seem to have been written to be printed rather than to be read, not to say referred to by those to whom time is of value. The "works" of Bartolozzi are pretty, and famous enough to be worthy of a memoir and a correct and exhaustive descriptive catalogue, if not of what the title of these volumes promises, "the most extensive record yet compiled of the great engraver's works." The compiler has certainly kept his word as to the extent of his "list of upwards of 2,000" examples. His is, beyond question, the largest—at least the longest—list of Bartolozzi's prints; but it is so far from being a valuable account that, apart from the portions borrowed from the British Museum hand list and from Bartsch, the record is not correct, nor descriptive, nor exhaustive.

So many defects of description occur in the body of the book that most readers will suppose that the author can only recently have turned his attention to a subject which is very far indeed from being difficult; at least signs of haste, if not of insufficient observation, are frequently apparent. Let it suffice to mention, by way of example, that on pp. 27 and 28, vol. i., Mr. Tuer twice speaks with high praise and in particular detail of Bartolozzi's transcripts from Guercino as "etchings"; and he says that "the rapid play of his etching point on the copper was aptly compared to 'the contact of flint and steel,' and, indeed, from that point leapt the spark of genius." The statement is picturesque enough, but it is fallacious. So far from there having been any "rapid play" of the etching needle on the plates, they were not etched at all, but carefully and laboriously drawn in line! On p. 121, line 1, Bartolozzi's "etchings after Guercino" are again mentioned. On p. 70, vol. ii., in a perfectly supererogatory memoir of Charles Turner, it is stated that he engraved in aquatint with great success, and in that "method produced the early numbers of J. M. W. Turner's 'Liber Studiorum.'" This is so far from being correct that one plate only of the 'Liber' was executed in aquatint throughout, and that—'The Bridge with Goats'—was produced, not by C. Turner, but by F. C. Lewis. C. Turner mezzotinted many

"Libers," but he aquatinted none. J. M. W. Turner, finding that aquatint, even in the hands of Lewis, the best practitioner of the day, did not answer his purpose, abandoned that process for mezzotinting, which till then had been little used except for engraving portraits, and the result was so fortunate that C. Turner adopted it with triumphant success, as in the lovely 'Junction of the Severn and the Wye.' On p. 15, vol. ii., Mr. Tuer speaks of Morland's prints as being mostly aquatints; the fact is that they are mostly mezzotints, few of them are aquatints. Yet there is no difficulty in distinguishing a mezzotint from an aquatint. The criticism on Bartolozzi's or Chamberlain's reproductions of the Holbein heads at Windsor is as correct as it was easy to make; but the notices of the technical process employed are incorrect. Mr. Tuer's experience of the skill of modern engravers must be but limited if he thinks (see p. 60, vol. i.) that Bartolozzi's prints can never be successfully imitated by "any living engraver." On p. 77 are some questionable statements about Angelica Kauffman, to the effect that the rascality of her first husband "ruined her life as a woman, though it did not mar her artistic career," and that "Sir Joshua Reynolds had previously admired her, and proposed for her hand." The facts are that, however sweetly she "set her cap at him," it was well for Reynolds he did not "propose for her hand," and that, after the death of her first husband, she married Zucchi, A.R.A., and lived happily with him for many years. A note on p. 80, vol. i., says that steel engraving was first practised by George Maile: this is a mistake.

Such are a few of a number of slips which ought not to have occurred in a book of the pretensions of this one. We might fill a page with examples. Turning from these matters to the catalogue proper of Bartolozzi's works, which ought to be the staple of Mr. Tuer's labours, it is hard to express the depth of our disappointment. We hoped to find, by the aid of "a list of upwards of 2,000—the most extensive record yet compiled—of the great engraver's works," sufficient material to enable any one to arrange a collection of the charming and popular prints in question. A list so copious as this might well have been constructed on the lines laid down by Bartsch in the preface to his 'Peintre-Graveur,' *i.e.*, so that "each print is described with sufficient details to enable the reader to recognize it without difficulty." We supposed that Mr. Tuer would supply with each entry describing a print a concise description of the subject, the designer's name, the manner of engraving, and the shape and size of the plate. But unfortunately he gives little more than a bald enumeration of titles, not always correct, and arranged capriciously under eighteen heads! Such a list, however deficient in details such as measurements and the like, might have been, to a small extent, useful if its classification had been good, and the names of the prints always recognizable; but this cannot be said of Mr. Tuer's compilation. A *catalogue raisonné* is to the print collector what a dictionary is to the student of a language, but what help can the tyro get out of such entries as these?—"25, Commerce"; "37, Contentment"; "70, Infancy"; "74, Justice"; "220, Doralice"; "1037, Ancient Ruins"; "1160, The Moralist"; "1249, Profane History," and so on. What would a member of the Index Society say to Mr. Tuer's method of cataloguing when he found one hundred and ninety entries under "The," and about eighty under "A" or "An"? Mr. Tuer divides his subjects into eighteen classes, and he adheres so loosely to his own classification as frequently to enter a print under two or three separate heads! Without assuming to have made an exhaustive examination of the list, we have noted two hundred and thirty prints which are entered twice under different numbers, sixty-three prints which are entered thrice under different numbers, and three prints which are so entered five times, and in no instance is there a cross-reference. The double entries are often side by side, as "234, Imogen lying asleep (Cymbeline), W. Martin"; "235, Iachimo in Imogen's Chamber, W. Martin,"—"1423, Bas-relief, drawn at Ephesus, by W. Pars"; "1424, Bas-relief, drawn at Ephesus, by W. Pars,"—likewise Nos. 1484 and 1485; 1503 and 1504; 1505 and 1506; 1762 and 1763; 1966 and 1968. In these instances the identity of the two prints is obvious, but it is not always so. The inexperienced collector would certainly be puzzled by the following double entries: "58, Genius raising the Fine Arts, B. West"; "112, The Archangel and the Arts and Sciences, B. West,"—"81, Love and Music, Tresham"; "1107, La gara fra l'Amore e la Musica, K. Tresham,"—"87, Mercury flying between two women—Commercial Ticket or Bill, 'Blessed are the Peacemakers'"; "1523, Minerva giving her hand to another goddess to raise her from the ground, Mercury above them; on the top is written 'Il Mercurio Italico,' Burney."

There is a singular upright print of some size (12½ in. by 17½ in.) which bears the following signatures: left, "Anibale Caracci inv."; right, "F. Bartolozzi sculp., 1765." The method is etching and pseudo-mezzotint in imitation of a washed sepia drawing. The subject is an allegory of the 'Indifference of Fortune to Human Suffering.' This print appears in the list before us three times: "53, Fortune, A. Caracci"; "433, Fortune sitting leaning on a Globe, with a humorous subject above, N. del Abate"; "1012, A Group of Three Men, and a Child laughing, a Dog on the left; beneath them on the right is an Angel seated and resting her elbow on a Globe, A. Caracci." Compare likewise Nos. 211, 1429, and 1475; Nos. 231, 244, and 1230; these are examples of triple entry. Quadruple entries occur in Nos. 78, 179, 1473, and 1577; Nos. 290, 520, 922, and 1015, which have differing titles (!); and Nos. 994, 1180, 1375, and 1451.

Among Bartolozzi's prints not any are more sought for than the tickets, especially the cards done for Giardini. There are twelve of these, all bearing Giardini's name. What has Mr. Tuer to say about them? "Tickets for Giardini's Concert in London, G. B. Cipriani, eight plates." He then enumerates only six plates, for his No. 2193 was not done for Giardini, and No. 2194 is unknown to modern collectors. The first account of Bartolozzi's engravings was given by C. H. de Heineken in vol. ii. of his 'Dictionnaire des Artistes,' Leipzig, 1788, and Mr. Tuer's list of Giardini's tickets is plainly copied from this rather obsolete work. His preference for Heineken is remarkable from the fact that in his first volume, pp. 137, 186–7, in extracts from sale catalogues, he enumerates twelve Giardini tickets under their proper designations. This is not a solitary instance of the compiler's indebtedness to Heineken; he owes to him "No. 231, Henrietta and Rosamond." See also Nos. 2057 and 766, where Elijah is called "the Elysian Prophet," a statement derived from Heineken's "L'Ange arrivant auprès du Prophète Elisée."

Mr. Tuer, when speaking of book illustrations, has not followed the proper practice of citing the first editions in which those works appear. He sometimes mentions third editions. We have not space for examples of this slip. Under the head of female portraits we notice No. 1676, Lais; 1679, Lucy of Leinster; 1688, Mulines Marie (Sterne's "Maria"); and 1691, which are purely fancy subjects. No. 1791, 'Vestris standing on one leg,' is not the female Vestris; compare Nos. 931 and 1720, the same differently described. Among the male portraits are six females, Nos. 1730, 1735, 1802, 1803, 1814, and 1858. Nor are Mr. Tuer's occasional descriptions more trustworthy than his enumerations and grouping. We have not space for more indications of the need for revision of this very unsatisfactory catalogue, which, errors apart, is not complete. As it is, more than three hundred numbers ought to be struck out.

The two volumes of the work contain eleven illustrations, of which only two are from coppers engraved by Bartolozzi. The Wilkes ticket, p. 48, vol. i., is a photogravure, and this ought to have been stated, since as published there is nothing to prevent its sale to the unwary as a genuine engraving. At the head of the list it is stated that copies have been struck off for "the use of the British Museum." It would be interesting to know what use Mr. Reid has made of them.

Pompeii: die neuesten Ausgrabungen von 1874 *bis* 1881 *für Kunst und Alterthumsfreunde.* Von Emil Presuhn. Mit 80 Tafeln in Chromolithographie. (Leipzig, Weigel.)

IT is true but inevitable that the excavation of Pompeii dooms much that is most interesting to a second and final catastrophe. Even when weather does not speedily detach painted stucco from the walls, colours fade in a few years under exposure, and some of the more delicate designs live only a few days after they are brought to light. Slight success has attended a variety of schemes of preservation and protection, and fac-similes under official direction have not been executed very abundantly. Designs of archæological interest are, indeed, invariably well cared for by the Roman Institute, which, however, is not concerned about colour; and Pompeii without colour, says the editor of this gracefully illustrated book, is landscape without the sun. Chromo-lithography is here applied to reproduce the most important decorations recovered within the last seven years; these were copied in their first freshness as they were brought to light, by the official draughtsman Signor Discanno

and a very accomplished English assistant, Miss Amy Butts. Those who are familiar with Pompeii will certify to the conscientiousness with which the true Pompeian character has been conserved even where there is usually irresistible temptation to falsification of style, in figure subjects; the brightness of colour given to the purely decorative designs does not exceed authority, and is welcome assistance to the effort which always has to be made on the spot to revive in imagination original effects.

This ornamental work will be valued and enjoyed by those who are familiar with the scene of the uncovered city, but nevertheless may be glad to have the hurried impressions of the excursionist from Naples confirmed and defined. The descriptions are written in a popular style, and at the same time scholars and antiquaries are provided in each section with a page of references to the copious literature and apparatus of criticism that would encumber a publication which rests its chief claim upon elegance.

A general plan shows that only half the city is at present laid open—literally, we may say, exhumed; and there remains work for a century, if excavation continues at the present rate of progress, which we would not wish quickened if it were only to be quickened by a reduction of the present high standard of care and thoroughness.

The excavations of the eight *insulæ* or groups of houses here illustrated penetrated to almost the exact centre of the city, and disclosed one of the most important dwellings yet discovered. The scheme of the author is to give a detailed ground plan of each *insula*, and then chromo-lithographs of the chief mural paintings and decorations and mosaics, and some plain lithographs of other designs. Enumerations are given of the objects recovered, but not illustrations except in a few instances. Three plates represent victims of the catastrophe, the reproduction being obtained by pouring plaster into the moulds of ashes which hardened round their prostrate forms, and within which all but their skeletons have decayed. One of these victims was a house dog, that reappears as it expired, very miserably contracted, yet even so retaining a curious identity with his semblance in mosaic.

In one house, which was that of a well-to-do man of business, as many as ten skeletons were found; of these four were crowded in one small room and three in another. The author remarks on the strangeness of such numbers perishing here, considering that the bulk of the population surely escaped. But he fails to notice that a special cause of alarm amidst the general horrors of the time very probably contributed here to paralyze a panic-stricken group of refugees. The adjacent house, as appears from his description, was severely struck by lightning, and so also was another close at hand. These Pompeian houses, large and small, adhere with pertinacity to a single type. The two open courts, the atrium with impluvium at entrance, the garden-like viridarium with its colonnade at the rear, and the intermediate ceiled but open apartment, the tablinum, may vary in proportion, but it is only reluctantly that any element of the combination is entirely omitted. Exigencies of restricted space occasionally oblige the architect to renounce that complete vista from end to end from the entrance passage which gave such picturesqueness to interiors; but some maimed semblance of it is preserved wherever possible, at even considerable sacrifice. It is even so that the typical London private house is repeated through small streets and large, with an identical distribution of rooms. Imitation has some influence in both cases, but no doubt at Pompeii, as in London, the popularity of the prevalent type was mainly due to accordance with the requirements of the prevalent organization of family and household.

If the Londoner may ever be fairly excused for envying the Pompeian householder, it is in respect of his cheerful and fanciful mural decorations, or perhaps, in the first instance, of his smokeless atmosphere, which encouraged and permitted such a style of embellishment as this publication sets before us to tantalize us. As the case stands it is perhaps matter for congratulation—for gloomy congratulation—that fashion allows us to baffle the smoke of London by anticipating it with sombre tints, even as the New Zealander was studious to conceal the ravages of age by a system of tattooing early in life which left old age nothing to ravage.

For some unexplained reason the desertion of Ariadne by Theseus was a favourite subject for a picture with the Pompeians, whether from sympathy with Ariadne or with Theseus does not appear; some dozen repetitions have been found. The example which is reproduced for us is deserving of note for originality of conception, little as there is to be said for accuracy of draughtsmanship. The false lover has already one foot on the plank between shore and galley as he looks back to his ill-requited benefactress, who lies under an awning asleep; his face and flinching hand betray his guilty alarm as a slight but well-expressed movement gives token of her restlessness; and a comrade seizes him by wrist and elbow to guide him in his confusion and hurry him aboard.

Not the least interesting details of the book are fac-similes of inscriptions—"graffiti," scribbled lines, sometimes of satire, sometimes of sentiment—and of the tablets of the factor L. Cæcilius Jucundus, which, charred as they appear to be, still retain legibly on their waxed surfaces the quittances and obligations which were carefully put away by the punctual man of business, to recover importance again, but such as he little dreamed of, after the lapse of exactly eighteen hundred years.

MR. MURBY has sent us No. 1 of *The Imperial Drawing Books*, which contains diagrams of simple objects delineated according to the plan adopted at South Kensington, that is, with measuring lines setting out the cardinal points of each subject. Blank spaces serve for the pupil's copies. Printed instructions accompany each example. The simplicity, good style, and good arrangement of these examples are excellent points, and the book, which is very cheap, is likely to be as useful as a drawing copybook can be.

THE WORCESTER EXHIBITION.

THE Worcestershire Exhibition of Fine Arts, Industries, and Historical Objects has increased largely in interest since the period of the opening in July last, and may be said now to have attained maturity. Many objects of importance have recently been added to the Fine-Arts Court, and considerable changes have taken place in the section of Art Needlework and Tapestry, under the superintendence of Lady Alwyne Compton. In the latter, in accordance with a preconcerted arrangement, a magnificent series of ecclesiastical vestments and embroideries was withdrawn to make way for lace, which is of great excellence.

Very recently the portrait of Lord Beaconsfield by J. E. Millais, R.A., was added to the collection, having been lent by the Right Hon. W. H. Smith. The picture has improved in general effect since it was exhibited to the public at Burlington House. It is mellower, and the glaring red colour of the lower lip seems advantageously subdued. Few historical pictures of any consequence have been added since the commencement, and in this department it must indeed be admitted that the gathering does not shine conspicuously.

The building in which the exhibition is held is conveniently near to the principal railway station, and has a very imposing external appearance. In plan it is a simple square, divided down the middle by two cross walls into three longitudinal sections. The middle one, somewhat less in width than the others, is called the nave, and is kept clear for promenades, having only isolated showcases and groups of plants down the centre, with an orchestra at the upper extremity. The space to the left of the centre is devoted to pictures and needlework, that to the right to industry, the further corner being occupied by machinery in motion.

Next to the ever memorable exhibition of Leeds this Worcestershire exhibition is the most perfect local collection that has been achieved in England. The portraits of "Worcestershire Worthies" follow close upon the "Yorkshire Worthies," and although woollen fabrics appear in both, the beautiful porcelain works and productions of the potter's art give to the faithful city of Worcester a very marked pre-eminence.

The nature of the building at Leeds, appropriated as it was for a time to works of art of every possible variety, but intended finally to become an infirmary, with long wards and separate galleries, was singularly well adapted for the display of works of art and favourable to their subdivision into different classes according to schools. At Worcester, on the other hand, spacious though the ground plan dimensions really are, the whole is brought into a condensed form requiring artificial subdivision, and therefore less favourable to the circulation of visitors. The pictures are hung closely together, and the narrow passages which they line are rendered narrower still by the introduction of lofty showcases. But the exhibition as a whole is one eminently deserving of attention. The great liberality shown by the wealthy possessors of works of art in freely lending them is not likely ever to be repeated on the same magnificent scale. The well-known private galleries of art and historical portraits, for which the county of Worcester is so distinguished, have been freely placed at the disposal of the Fine-Arts Committee; and it will suffice to mention the names of the Marquess of Hertford, Earl Beauchamp, Earl Somers, Lord Northwick, Lord Lyttelton, Lord Hampton (Packington), Sir F. Winnington, and Sir Edmund Lechmere, to guarantee the superior quality and historical interest of the artistic treasures now, and for only a short time longer, on view. The larger full-length portraits, many of them in cumbrous frames, are placed in a very imposing line on both sides of the central division. Many of these are official dignitaries in scarlet and embroidered robes; but near the entrance are two very quaint Elizabethan portraits of thin-legged gentlemen, with enormous ruffs. They are contributed by Lord Hampton, and represent Sir John Packington,

the sturdy favourite of Queen Elizabeth, and Sir John Packington of Hampton Lovett, befriended by Henry VIII., who bestowed upon him the monastic building which has now developed into the mansion of Westwood Park. The latter picture is a curious piece of costume, but apparently later than the date of 1560, at which time this worthy is said to have terminated his mortal career. A very different portrait from these, but still connected with the Packington family, is one on the same wall, calculated to awaken a warm interest in readers of the *Spectator*. It is the portly and benign figure of Sir John Packington, the fourth baronet, traditionally believed to be the person from whom Addison drew his immortal Sir Roger de Coverley. He is exhibited in an ample flowing wig and cravat, with long falling lace ends, and ruffles of the same material, enveloped in a rich brown mantle of many folds. The benevolent but complacent countenance is well rendered by the pencil of Riley. This portrait is contributed by Lord Hampton. Another, a full-length bearing the same name, and contributed by the Corporation of Worcester, is scarcely recognizable as representing the same individual. It is attributed to an artist named Shuter, and is the essence of vulgarity. The knight is here attired in a long wig, with the pseudo-classical peculiarities of costume in vogue at the end of the seventeenth century. Two fine pictures, full-lengths of Sir George Winter and his wife, are placed between them, and help by their excellence to moderate the violence of the contrast. These two pictures of comparatively unknown characters are fine specimens of the period of Van Dyck, the figure of the lady being quite worthy of the master; that of the gentleman is disfigured by a curious arrangement of legging between the top of his boots and his knees. Another Packington portrait lent by Lord Hampton is that of Dorothy, Lady Packington, a picture of the middle of the seventeenth century, representing a young lady seen to the waist, wearing her rich dark hair in ringlets, and a white satin dress partly covered with a pale blue drapery, which she supports with her right hand. To this lady has been attributed the composition of 'The Whole Duty of Man.'

Lord Northwick is a liberal contributor from Northwick Park, and his pictures are of the most varied character. The 'Presentation in the Temple,' attributed to Giotto, and a pleasing little scene from the story of 'SS. Cosmo and Damian,' a small long predella picture by Angelico da Fiesole, are excellent specimens of the early Italian school. A complicated picture of the early Flemish school, 'The Mass of St. Gregory,' exhibits a singular variety of saints and emblems crowded together. The elaborate workmanship of the dresses and ornamentation is characteristic of the early fifteenth century. No gilding is introduced in the picture, excepting upon a large flat round nimbus to each saint, the flames of the burning candles, and on the shield of arms held by St. Gereon at the left extremity of the picture. A very impressive half-length portrait of an Italian ecclesiastic, called 'Cardinal Fisher,' holding a square red biretta, is a fine specimen of the school of Pontormo in grandeur of style and rich brown well-massed shadows. Two full-length standing figures of a boy and a girl in courtly dresses are more correctly designated 'Prince and Princess of Orange' (the parents of our William III.) than attributed to Van Dyck. The heavier shadows incline nearer to Honthorst. Two half-length figures of warriors in armour, with very marked countenances, are erroneously named 'Prince Rupert and Prince Maurice.' They are, in fact, the Earl of Newport and Lord Goring. A similar picture may be seen at Knole, in Kent.

A stately full-length of the beautiful Duchess of Argyll is in fine condition, and contains one of Sir Joshua's rich landscape backgrounds. The well-known engraved picture, by Sir Joshua Reynolds, of Warren Hastings seated at a table, appears somewhat pale, but the forms are admirably modelled and the shadows rich in tone. It is almost difficult to reconcile the youthful features in the portrait of this Worcestershire worthy (he was born at Daylesford, a property which he eventually succeeded in obtaining, and where he closed his chequered career) with others of a later period by Zoffany and Abbott, which are also in this exhibition, contributed respectively by Col. Davies, of Elmley Castle, Pershore, and by Mr. W. H. W. Hastings, of Malvern.

Lord Hertford contributes a rich store of portraits that had till recently remained in London, and which now have been removed to Ragley. There are several Conway portraits, and a very quaint picture of the Countess of Hertford, afterwards Duchess of Somerset, wearing a pointed black hat and a basket on her arm, attributed to Hayman or Hogarth, but worthy of neither. The well-known standing figure of Horace Walpole, resting his cheek on his right hand, by Sir Joshua Reynolds, is here. It is ghastly pale, with very dark shadows. The eyes are intensely black. Lord George Seymour as a boy, on the contrary, is one of Reynolds's freshest and best preserved portraits. Mrs. Robinson (Perdita) in hat and feather is a lovely Sir Joshua, with an effective combination of pure black and white. 'Van Helmont the Chemist,' attributed to Lely, is of very superior quality, singularly rich in tone, and one of the most impressive portraits in the collection. A large and rather pretentious picture of the 'Garden of Love,' by Rubens, calls to mind the exquisite smaller versions at Dresden and Madrid, in which variations occur. This is roughly painted on canvas and exhibits a crowd of people in the porch, with the statue of Venus on the fountain seated. A standing figure, nearly full length, in amber-coloured satin and called 'Nell Gwynne,' belongs to one of Lely's well-known costumes, and may be seen at Savernake and in the National Portrait Gallery with the countenance of Barbara, Duchess of Cleveland. The face here is not that of Nell Gwynne, nor is the building held in her hand "a model of Chelsea Hospital," as stated in the catalogue. It is simply the conventional tower of St. Barbara, in which character, holding also the palm branch of martyrdom, the lady is represented. 'Lady Cheeke' is a very good Lely portrait contributed by Lord Windsor, who shows also a clever picture by Ferneley, a skilful animal painter, of the 'Quorn Hunt.' Lord Windsor's group entitled 'The Kitcat Club' shows an assemblage of ugly-looking persons of the time of Queen Anne, but not any of them to be identified with the eminent characters connected with the celebrated club at that period. Of the beautiful Miss Gunnings there is nothing really striking. The two pictures by old Morland of a girl ironing and a girl washing, arbitrarily associated with the names of Mary and Elizabeth Gunning, are interesting as the productions of Henry Morland and well known by the engravings. A charming crayon of Maria, Countess of Coventry, is lent by Mrs. W. Coventry.

Lord Lyttelton contributes several pictures of historical interest, many of which were seen at the great loan exhibitions in London of 1867 and 1868. It is to be regretted that the error observed during the Portrait Exhibition at London, 1866, in describing the full-length figure of Sir Edward Lyttelton, Keeper of the Great Seal, who died in 1641, as "Judge Littleton, author of the 'Tenures,' who died in 1481," has been repeated on the present occasion. The Hagley picture is known to be a copy by Arthur Pond in the last century after Van Dyck. The mistake may have been caused by the engravings in Nash's 'Worcestershire,' where portraits diversely named really represent the same person. An admirable portrait of the late Lord Lyttelton by Mr. George Richmond, R.A., is one of the most successful productions of modern portraiture, considering the peculiarities of the original subject. Sir Edmund Lechmere contributes three Rembrandts, one of which is 'The Vision of Daniel,' which formerly belonged to Sir Joshua Reynolds. An excellent Opie, entitled 'The Lovers,' represents a young soldier in scarlet uniform persuasively addressing a young lady in white, sitting in a garden. The figures are the size of life and nearly seen full length. The forms, expression, and sentiment are far more refined than are usually to be met with in the works of this painter. This picture comes from Hadzor, the residence of Mr. Galton, who also contributes a fine specimen of Nicholas Maes, 'St. Anne teaching the Virgin Mary to Read.' It consists of two figures the size of life, a scale very rarely adopted by this painter, and will be remembered as having held a prominent position in the Manchester Exhibition of 1857.

One of the leading features of this exhibition is the very extensive and valuable collection of portraits of the Bishops of Worcester, arranged as nearly as possible in chronological order. To this the Universities of Oxford and Cambridge, the Bishops of London and Worcester, and the Deans of Westminster, Canterbury, and Worcester, are large contributors. In connexion with this series may be named a fine and not generally known portrait of Archbishop Juxon, who was eleven years Dean of Worcester, painted by Sir Peter Lely. It is the counterpart, with exception of the countenance, and alteration in colours of curtain and table-cover, of one in the present exhibition of George Morley, Bishop of Winchester, lent by Christ Church, Oxford. Another portrait contributed by Christ Church is the famous one of Samuel Butler, author of 'Hudibras,' who was born at Strensham, in the county of Worcester.

Among the modern pictures will be gladly welcomed Sir Frederic Leighton's 'Elisha raising the Widow's Son,' 'The Shadow of Death,' by Holman Hunt, 'The Death of Sarpedon,' by Richmond, jun., and 'The Rider on the White Horse,' by G. F. Watts, followed by a noble series of modern portraits by the last-named artist, which were recently seen at the Grosvenor Gallery. There is also in the same department the very powerful portrait, by Mr. Ouless, of Sir R. Paul Amphlett, in scarlet robes. An excellent idea, but rendered abortive by the clumsy manner in which the materials were arranged, is traceable in the assemblage of old English furniture, musical instruments, kitchen utensils, and garments, meant to realize a Worcestershire house of the seventeenth century. A magnificent collection of Sèvres china and Limoges enamels has been lent by Earl Beauchamp, and the Earl of Dudley contributes a choice selection of old Worcester porcelain. In addition to these may be named a fine rosewater dish of Limoges enamel, by P. Courtois, the property of Sir Edmund Lechmere, and an instructive series of Worcester ware, lent by Mr. Frederick Bodenham.

Many cases are filled with ancient charters and manuscripts, lent by the Dean and Chapter and the Corporation of Worcester, the Corporations of Bewdley and Droitwich, and the Rev. Francis Hopkinson. Choice specimens of early printing, including the 'Godly Sayings of the Old Ancient Fathers,' imprinted 1550 at Worcester, and the first edition of Butler's 'Hudibras,' 1663–73, have been contributed by Earl Beauchamp. They fill a large table-case.

The general impression produced by the exhibition is that it is too crowded, and that half the quantity now shown would have been ample for the space available. The pictures, especially the modern ones, owing to the light coming directly from above and the projection of the frames, placed upon the screens, are not shown to advantage. The catalogue, which has been compiled with much care, defeats its own purpose in one respect by an arbitrary division of the pictures into an historical and a fine-art section without the distinctions being properly observed

in the paintings themselves. The exhibition will close on the 17th of October, and the opportunity of seeing so many fine things from private collections of the Midland Counties is not likely ever to occur again. GEORGE SCHARF.

Fine-Art Gossip.

THE sixty-second annual exhibition at the Royal Manchester Institution opens on Wednesday next. The private view is on Tuesday. The press view took place yesterday (Friday).

ALL our readers who have personal and artistic associations with Hastings will remember with regret that on the 29th ult. a high tide swept away all but six of the picturesque net and rope drying sheds, not "shops," under the East Cliff of that town, which have been the subjects of innumerable studies and sketches by painters since the first days of English landscape art, and have furnished materials to draughtsmen from Cozens to the tyros of the present, including especially J. J. Chalon, Turner, W. Hunt, Linnell, and David Cox. The whole of the sea-front of old Hastings has been irreparably damaged; vast masses of shingle have been carried off, and the remainder of the drying sheds may have been engulfed while we write. It appears that more than two years ago a storm swept on to the land, above the range of the tides, on the Pevensey side of the bay, a prodigious quantity of the shingle which, under ordinary conditions, travels to the eastward, from Beachy Head to Dungeness. The shingle being thus stranded failed to fill the place of that which was removed from the front of Hastings. The absence of the latter has resulted in the destruction of the sheds, the devastation of the esplanade, and threatened demolition of the sea-wall, from the summit of which one used to step to the shingle, which is now twelve or fifteen feet lower than of yore. This is not the whole of the bad news we have from Hastings. The well-remembered profile of the East Cliff as seen from the esplanade, the dignity of which was almost architectural in its severity and beauty, has been irreparably injured by the paring away of its crown of rock and earth, an operation performed because it was assumed to be in a dangerous state. Incursions of 'Arry and 'Arriet have deprived Fairlight Glen of its purest charm and strewn the once beautiful place with greasy papers and broken bottles; bill-stickers have defiled the posts and walls with advertisements; the ferngatherer and the excursionist have left but few fronds; Clive Vale has become the prey of building societies; and many of the trees about Fishponds have been blighted or cut down.

A NEW hall has been opened in the Exposition des Arts Décoratifs, Champs Élysées, Paris, and is dedicated to the illustration of costume by engravings largely taken from the magnificent contributions of M. Sardou, who has edited the catalogue of the whole.

THE late M. Henri Lehmann has bequeathed to the Académie des Beaux-Arts a number of *objets d'art*, which his will directs shall be sold by auction and the proceeds invested to found a triennial prize, to be given to that young artist (the age is limited to twenty-five) who during the previous three years shall have produced the work which by subject and style "protestera le plus éloquemment contre l'abaissement de l'art, que les doctrines préconisées aujourd'hui semblent favoriser." The prize is intended to be of the value of 1,000*l*.

THE magnificent "Collection Timbal," comprising ivories, bronzes, &c., of the true Renaissance, recently acquired by the Louvre, has been placed in the Salles de la Colonnade.

THE Luxembourg was reopened on the 9th ult. with ten additions, including 'Paye des Moissonneurs,' by M. L'Hermitte; 'L'Intérieur d'Église,' by M. P. Sautai; and what it is hoped will be the last of its kind, a picture by M. Courbet.

THE French papers record the death of M. Émile Renard, an able designer connected with the manufactory at Sèvres.

THE Union of German Architects and Engineers has issued an appeal to the German people to aid in a partial restoration of the Schloss at Heidelberg. This is somewhat alarming news. By all means let further decay be prevented; but any attempt at restoration will ruin the artistic charm of the place. German architects have not been more fortunate than English ones when they have practised restorations, and their doings are by no means calculated to inspire much confidence in them.

MUSIC

THE WEEK.

BIRMINGHAM MUSICAL FESTIVAL.

IT will give some idea of the attraction exercised by M. Gounod's 'Redemption' to state that the official returns show that the sum realized by the sale of tickets for the first performance reached the astonishing total of 2,305*l*. 16*s*. Such an amount is absolutely without precedent at a provincial festival, and has only in very exceptional cases been surpassed even in London, and the result is the best justification of the bold course adopted by the Birmingham committee in commissioning the composer to write his new work.

Wednesday evening, the 30th ult., may be described as an "English night," the two chief works brought forward at the concert being Mr. A. R. Gaul's cantata, 'The Holy City,' and Mr. C. Villiers Stanford's Serenade for Orchestra in G, both of which were composed expressly for the festival. Mr. Gaul, a professor of music residing in Birmingham, has been hitherto known chiefly as a writer of several flowing and melodious part-songs, one of which, 'The Silent Land,' has been given with much acceptance by Mr. Leslie's choir. In 'The Holy City' the composer has taken a higher flight. The words of the cantata are chiefly reflective, and are taken partly from the Scriptures and partly from various sacred poems. The only objection that can be made to the selection of passages is a want of sufficient contrast. This necessarily reacts to a certain extent on the music, and is more noticeable in the solos of the work than in the choruses. Moreover, Mr. Gaul has been injudicious in the way in which he has laid out his cantata. For example, towards the close we find in succession a contralto song, a soprano song, and a duet for two soprani—in all three pieces for the female voice following one another. To complete what little fault-finding there is to be done, we may add that two of the choruses in the first part ("No shadows yonder" and "For thee, O dear, dear country") are too simple in style for a work designed for an important festival, being a kind of cross-breed between a part-song and a psalm tune with orchestral accompaniment.

Coming now to the much more pleasant duty of commendation, we must first recognize the genuine musical feeling shown by the composer. Of this traces may be found in almost every number. Mr. Gaul always writes naturally and intelligibly; there is no straining after effect, no attempt to be original, even at the cost of ugliness; the composer knows what he wants to say, and says it in a simple and straightforward manner. There is no very striking individuality of style in the music; but this may be said of nineteen out of twenty modern composers. The influence of Mendelssohn, and in a less degree of Spohr, is to be traced in Mr. Gaul's work, but positive reminiscences are very rare. The vocal writing is excellent, and in the specimens of fugal work which he has given the composer shows good command of the resources of counterpoint. Furthermore, he deserves special praise for being able to write a fugue which is not dry. To sum up, 'The Holy City,' though not a great, is a musicianly and pleasing work, which does credit to its composer, and which justified the selection of the managers of the festival. The performance was admirable. The work was conducted by Mr. Stockley, and the Birmingham chorus, desiring to do all honour to their townsman, sang their very best, which is equivalent to saying that their share of the work was perfect. The solos were given by Miss Anna Williams, Mesdames Trebelli and Patey, and Messrs. Joseph Maas and F. King. The reception of the work was very hearty, the composer being called for at the close, and bowing his thanks from his seat in the gallery.

English art scored another success with Mr. Stanford's Serenade. The conductor of the Cambridge University Musical Society is no novice in his art, and his claims as one of our representative musicians have not now to be recognized for the first time. His new work will certainly rank as among the best which he has yet written. It is symphonic in its general character, though not in its form, as it consists of five movements, or more strictly of six, the last two of which are linked together. The opening *allegro*, in the ordinary "binary" form, is very attractive in its themes, and perfectly clear in treatment. The succeeding *scherzo*, though somewhat reminiscent of Beethoven—in style, be it understood, not in its subjects—is most vigorous and effective. The third movement is a *notturno*, full of grace and elegance, and one of the best portions of the work; while the *intermezzo* which follows it, though not the most original number (the influence of Schumann being clearly discernible), is perhaps the most taking with the general public at a first hearing. The *finale* is again in symphonic form, concluding with a truly charming lullaby, constructed upon a tonic pedal. The scoring of the work is thoroughout most interesting, and Mr. Stanford deserves especial praise for the moderation of the instrumental effects; his fortes never degenerate into mere noise. The performance of the work, which was conducted by the composer, was most excellent, and its enthusastic reception by the large audience was fully warranted by its merits. A miscellaneous selection concluded the concert.

Passing over the performance of so familiar a work as the 'Messiah,' which was given on the Thursday morning, with the mere record of the fact that the solo parts were sung by Mesdames Albani, Trebelli, and Patey, Mr. Joseph Maas, and Signor Foli, we have next to notice the concert of Thursday evening, at which two more of the novelties of the festival were brought for-

ward. These were Niels Gade's cantata 'Psyche,' and Mr. Hubert Parry's Symphony in G. Herr Gade is no stranger to Birmingham. For the festival of 1876 he composed his 'Zion,' and on the same occasion he conducted his cantata 'The Crusaders.' He therefore came as an old friend; and the reception accorded to him showed the esteem in which he is held in the Midland metropolis.

The argument of the new cantata is thus given in the published score:—

"Psyche, a daughter of a king in Hellas, a maiden beautiful and pure, excited the wrath of Venus by refusing to join in the rites of that goddess, and at the command of her from whose altar she had turned away she was borne off to a lonely height, there to be made the bride of a fearful demon. At night, when at length, overcome by terror and despair, she falls asleep, a Zephyr and some Genii are sent to bear her to a place of safety and happiness. When she wakes, darkness still around her, an invisible Chorus tells her she is destined to become the bride of a god, who will hereafter disclose himself. The god calls to Psyche, without discovering himself, and tells her he wishes to espouse her, but warns her, on pain of separation from him and death, never to give way to her curiosity, and ask who he is. They thereupon plight their troth, and an invisible Chorus invokes night to conceal the lovers' joy. Before daybreak he departs, to return at nightfall. During the day the Zephyr and the Genii beguile the loneliness of Psyche by assurances of his certain reappearance. Psyche, however, doubts whether the revelation of the god may not be some malevolent device of Venus, or if not, whether the jealousy and envy of the goddess will allow him to return. The remembrance of her former sufferings so overpowers Psyche, that, in renewed terror and despair, she demands from the Chorus the name of her husband. They lament her fatal question, and announce her predicted doom. Her husband appears, and in him she recognizes the beautiful god Eros, who in sorrow declares to her that he has not the power to alter the decree of fate and of Venus. But as Psyche passes away in death, he proclaims his intention of appealing to Zeus for a reversal of the doom. In the third part of the cantata the scene is laid in Hades, whither Psyche has descended. She is counselled, but in vain, to drown the memory of her love in the waters of Lethe. Her tears and prayers prevail with Proserpine, the queen of the lower world, who grants her permission to revisit earth, in order to obtain from Eros the forgiveness of her fault. When she leaves Hades, she is met by Eros, who freely forgives her. Assured of pardon, she would cheerfully have returned to Hades, but Eros transports her with himself to the celestial abodes of the gods, where she receives from Zeus the gift of immortal youth."

In his setting of this beautiful story Herr Gade is heard at his best. He is not one of those pioneers of music who strike out an entirely new path; his style has not the individuality of that of Brahms or of Schumann. He is rather a disciple of the Mendelssohn school, though he is far from being a mere imitator. He speaks the same language, but in that language he expresses his own thoughts. We find in his music the same limpid clearness, the same highly artistic finish of workmanship that characterize the composer of 'Elijah.' His themes are always melodious, and frequently full of charm, though they seldom or never rise to the lofty heights of the inspirations of a Beethoven. We can imagine Gade writing a 'Pastoral,' but not a C minor or a 'Choral,' Symphony. In 'Psyche' the interest of the music is sustained throughout; while some numbers are superior to others in musical value, it can at least be said that none is dull. Among the more specially striking may be mentioned the trio, "Psyche, hear thou what we have to tell thee," and the long and expressive duet between Eros and Psyche in the first part of the work, and the charming trio and chorus of Zephyr and Genii which opens the second part—in which, by the way, the composer has written his chorus of spirits without any bass voices, just as Weber has done in the opening chorus of 'Oberon.' Of rare beauty also is Psyche's solo, "With meekness, godlike Eros," with its striking refrain, "Forgive thou me," while the concluding chorus of the second part, "Thou art mighty, O Eros," is very broad and vigorous. The whole of the scene in Hades, which forms the third part, is admirable and highly dramatic. The fourth part is as a whole hardly equal to the preceding, but the air with which it commences, "Still rests the morning twilight," is one of the gems of the work. We think 'Psyche' likely to be one of the most popular of its composer's works. It presents no excessive difficulties to the executants, though it undoubtedly requires finished orchestral playing; but even without orchestra it will be found effective, and is well suited for choral societies of fair acquirements. The performance was admirable; the part of Psyche was exactly suited to the talent of Madame Marie Roze, while Mr. Santley did ample justice to the music of Eros, and Miss Eleanor Farnol, Madame Trebelli, and Mr. Lloyd rendered most effective aid in the trios of the Zephyr and Genii. The choir, with whom Herr Gade is evidently a favourite, sang splendidly throughout, and the orchestral accompaniments were given to perfection. The cantata unquestionably scored one of the greatest successes of the festival.

Mr. Hubert Parry, whose Symphony in G opened the second part, is one of the most earnest musicians whom we have among us. Whatever he writes is characterized by loftiness of aim and by a devotion to art for its own sake which it is to be wished were more frequently to be met with. His works, therefore, will always appeal rather to the cultivated musician than to the general public. His style resembles that of Brahms more nearly than that of any other composer; there is a similar vein of deep thought and of contrapuntal ingenuity, occasionally with a slight tendency towards obscurity, which is to be found in the German master. It is therefore with much pleasure that we are able to say that in his new symphony we find a distinct advance towards clearness of expression as compared with his earlier works. There are passages in the symphony, more particularly in the slow movement and the *finale*, which require more than one hearing for their due appreciation; but in general there is little difficulty in following the train of the composer's thought. His ideas are often full of charm, their treatment is musicianly, and the orchestration well balanced and effective. The symphony was received with a warmth which agreeably surprised us, and which said not a little for the good taste of the Birmingham audience. The remainder of the programme requires no detailed notice.

The miscellaneous concert given on the Friday morning was one of the most interesting of the whole festival. It commenced with an excellent performance of Mozart's ever-welcome Symphony in G minor, the composer's later version of the work (with clarinet parts) being used, greatly to the advantage of the music. The applause at the close of the work was so prolonged that Sir Michael Costa, evidently pleased with the compliment paid to his orchestra, repeated the *finale*. We cannot but think this an error of judgment, as destroying the artistic balance of the work. To the symphony succeeded Brahms's 'Triumphlied,' for double choir with orchestra. This very remarkable work had only once before been attempted in England, at Herr Henschel's concert in St. James's Hall, on December 2nd, 1879. As it was then noticed in these columns (*Athen.*, No. 2719), we confine our remarks now to the performance. This was a veritable "Song of Triumph" for the Birmingham choristers; for such absolute certainty and such precision of attack in music which is unquestionably among the most difficult ever written for a chorus were simply marvellous. We speak advisedly when we say that we never heard finer singing from a choir than on this occasion; and Mr. Stockley, the choirmaster, cannot be too warmly congratulated on the results of his zeal and patience. The incidental bass solo in the work was finely declaimed by Mr. F. King.

Cherubini's Fourth Mass (in C major), which came next in the programme, though not equal in grandeur or extent to the great Mass in D minor, which has been performed by the Bach Choir, and which was also given at the Worcester Festival last year, is a work of great beauty. Its most striking feature is its deeply devotional feeling. Such movements as the "Kyrie," the "Et incarnatus," and the "O salutaris" are in their way unsurpassed by anything in church music, while the fugues ending the "Gloria" and "Credo" are masterly examples of the skill of one of the greatest theorists of modern times. The instrumentation is never heavy, no trombones being used in the score, but is full of fancy, and of those delicate orchestral tints so characteristic of Cherubini's music. In this respect the lovely duet "O salutaris," for soprano and tenor—perhaps the gem of the whole work—may be especially noticed. It is scored for strings only, with two solo violoncellos, yet the combinations obtained from these few instruments leave nothing to desire, either in variety or beauty. The old Florentine master understood the art (now, unfortunately, but too seldom practised) of obtaining the most effect with the fewest notes. The performance of the mass was fully up to the level of excellence which has been maintained, with hardly an exception, throughout the festival. The solo parts were sung by Madame Albani, Miss Anna Williams, Madame Trebelli, Madame Patey, Messrs. Joseph Maas, W. H. Cummings, and F. King, and Signor Foli. A remarkably fine rendering of Beethoven's 'Mount of Olives,' in which the solos were sustained by Miss Anna Williams and Messrs. Maas and King, concluded the concert.

The repetition of 'The Redemption,' with which the festival was brought to a close on the Friday evening, was in all respects as

great a success as the first performance on the preceding Wednesday. The soloists were the same as before; and increased familiarity with the music on the part of all concerned naturally led to an even finer rendering of the work than on the previous occasion. As before, the hall was crowded to excess, the demand for tickets being far greater than it was possible to meet.

After what has been already said, it is almost superfluous to add that the festival just concluded has been artistically a most brilliant success. Indeed, we can recall no recent musical gathering which for interest and variety of the programmes has equalled it, and certainly none which for general excellence of execution has surpassed it. It is gratifying to be able to add that the attendance at the festival showed an advance of over 7,000 on that of 1879, while the receipts were about 3,300*l.* in excess of those of three years ago. The enterprising and energetic action of the new committee of management has thus been completely vindicated; it has been proved that novelties, when judiciously selected, can be made to pay, and that the public is not necessarily frightened away from a concert-room by the presence in the programmes of the names of English composers. We heartily congratulate the managers of the festival on the result of their endeavours, and feel sure that they will be encouraged in the future to persevere in the course which on the present occasion has proved so successful, and which has enabled them completely to recover the prestige of their celebrated meetings, which a mistaken policy had previously endangered.

NEW ORGAN MUSIC.

ALTHOUGH original compositions for the organ are now issued in greater abundance than formerly, the so-called king of instruments does not seem to attract much attention from the best composers, and very few of the new pieces which come under our notice deserve higher commendation than is due to technical skill and sound musicianship. Messrs. Novello, Ewer & Co. send us a large number of new publications, from which we shall select for primary mention some numbers of *Original Compositions* by Gustav Merkel. The eminent Dresden organist has written extensively for the instrument, and much of his music is extremely pleasing and effective. The present series already extends to ten numbers, of which three are before us. No. 2 consists of a Fantasia in E minor and major, elegant in style, and rather suggestive of Mendelssohn. It presents no inordinate executive difficulties. No. 3 contains a dozen brief preludes, possibly useful as voluntaries. No. 4 includes a Pastorale in G and an Adagio in F, the former of which may be pronounced very pretty.—*Original Compositions for the Organ* is the title of a series of pieces by miscellaneous composers. No. 3, a Christmas Postlude by Dr. Garrett, introducing the old carol 'Good King Wenceslas'; No. 4, an Andante con moto, by the same composer; No. 8, another 'Voluntary for Christmastide,' by Sir F. G. Ouseley, somewhat pastoral in style; and No. 12, a spirited Postlude in C minor and major, by Dr. Steggall, are the most likely, of those now to hand, to meet with the approval of organists.—*The Organist's Quarterly Journal*, edited by Dr. Spark, continues its useful existence. Part 53, for January, 1882, contains a Postlude in E flat, by Julius Katterfeldt, and an elaborate fantasia on an air of Mendelssohn's, by George Hepworth, both these composers being organists at Schwerin; also smaller pieces in various styles. Part 54 is chiefly noteworthy for a set of variations on Henry Smart's tune 'Lancashire,' by J. Matthews. Part 55, the last issued, consists entirely of a sonata in three lengthy movements by Otto Dienel of Berlin. The work is elaborate, but orthodox as to form; and the second and third sections, a solemn march in G minor and an *allegro* in D minor, are exceedingly effective and by no means easy.—*First Sonata*, in D, by B. Luard Selby, is a work in three movements, a prelude, *grave e sostenuto*, a *larghetto* in F sharp minor, and an *allegro con brio*, of which the last is by far the longest and most elaborate. The writing is for the most part patchy and commonplace, but there are some passages which seem to imply ability of a natural as well as of an acquired order on the part of the composer.—We have also received the first book of a new edition of Bach's organ works edited by Dr. Bridge and Mr. James Higgs. This section contains the eight short preludes and fugues (Peters, Book 8) which form such exceedingly useful practice for students. A feature of the edition is that the distribution of the parts between the hands is in all doubtful cases clearly indicated. Some pedal marks have been added, and as the edition is not only accurate, but remarkably well printed, it may be warmly recommended to the notice of organists.

Messrs. Weekes & Co. send us *Four Select Pieces*, arranged by J. C. Bridge. It is only natural that organ players should prefer transcriptions of high-class music to original compositions of third or fourth rate merit; and so long as the arranger does not lay his hand on works unsuitable for the instrument he is scarcely to be blamed for inartistic procedure. Mr. Bridge has selected a romance from a concerto of J. B. Cramer, a Bourrée of Handel, the same composer's Overture to 'Ætius,' and a trifle from Schumann. These excerpts have been dealt with fairly well, and the series may perhaps be found useful. Mention may also be made of a *Minuet and Trio*, by W. S. Hoyte, originally composed as an orchestral piece for the Philharmonic Society; and a fairly effective *March* by W. A. Blakeley.

Musical Gossip.

THE one hundred and fifty-ninth meeting of the Three Choirs takes place at Hereford next week. The principal vocalists announced are Madame Albani, Miss Marian Fenna, Miss Anna Williams, Madame Patey, Miss Hilda Wilson, and Messrs. Edward Lloyd, Frank Boyle, C. W. Fredericks, F. King, and Santley. Mr. Carrodus will be the leader, and Mr. Langdon Colborne, the organist of Hereford Cathedral, will conduct. The festival will commence with 'Elijah' on Tuesday morning in the Cathedral. On the same evening the first miscellaneous concert will be given in the Shire Hall, when the most important item of the programme will be Mrs. Meadows White's setting of Collins's 'Ode to the Passions.' On Wednesday morning Handel's 'Judas Maccabæus,' or rather a large selection from that work, is to be performed, followed by Beethoven's Fourth Symphony, Goetz's '137th Psalm,' and Bach's "Magnificat." 'St. Paul' is to occupy Wednesday evening; and on Thursday morning Dr. Garrett's sacred cantata 'The Shunammite,' Beethoven's Mass in C, and a selection from Molique's 'Abraham' will be performed. On Thursday evening there will be a second miscellaneous concert in the Shire Hall. The 'Messiah' will be given on Friday morning, and a chamber concert in the evening, at which quartets of Beethoven, Mendelssohn, and Haydn will be performed, will conclude the festival.

MR. F. H. COWEN has been unanimously selected as Principal of the proposed Academy of Music in Edinburgh. A better choice for the post could not have been made. It is hoped that the arrangements will be so far completed as to enable the Academy to commence operations early next year.

THE performances of 'Parsifal' at Bayreuth came to a close on the 29th ult. The *Musikalisches Wochenblatt* states, on what it considers the best information, that a series of performances will be given in the Wagner Theatre next year, for which the services of Frau Materna and of Herren Scaria, Winkelmann, and Reichmann have already been secured. The last performance but one (on the 27th) was attended by the Crown Prince of Germany. After the second act he is reported to have said to a member of the Committee of Management, "I find no words for the impression I have received; it surpasses all that I had expected; it is grand. I am deeply moved, and understand that the work cannot be given in the modern *répertoire*."

Le Ménestrel states that M. Carvalho is projecting a grand performance of Gounod's 'Redemption,' to be given under the direction of the composer, at the Opéra Comique, Paris.

AT the Munich Opera the novelties intended to be produced during the coming season are 'The Vikings,' by the Swedish composer Ivar Hallstroem; Schubert's 'Alphonso and Estrella,' and Gluck's 'Der Betrogene Cadi' ('Le Cadi Dupé'). Among other interesting works to be included in the *répertoire* are Marschner's 'Templer und Jüdin,' Spohr's 'Jessonda,' Spontini's 'Vestale,' and Schumann's 'Genoveva.'

MR. R. LANE POOLE writes from Riesbach, Zürich:—"In thanking your reviewer for noticing an omission of mine, namely of Bach's concerto for four harpsichords, I should like to explain that the 'rather odd expressions' which he finds in my book are, in two cases out of three, simple misprints. 'Figured subject' (p. 83) should of course be 'fugued subject,' and 'multiplying with the parts' (p. 54) 'multiplying the parts.' I take this opportunity of correcting a mistake of my own, which, in view of the constant comparisons that are made between Bach and Handel, is more serious than it looks. I wrote on p. 121 that Mattheson decided that as organists 'their names must stand in alphabetical order'; in other words, that Bach must rank above Handel. But the truth is that Mattheson, after dwelling upon their different and characteristic excellences, merely concluded that 'their names must stand *outside* the alphabetical order' of organists. They ranked by themselves; both were greater than any others; but which was the greater of the two Mattheson did not attempt to decide."

THE death is announced from Paris, at the age of seventy-six, of Pierre François Wartel, formerly a tenor at the Grand Opéra, and a well-known teacher of singing, among his pupils having been Mesdames Nilsson and Trebelli.

DR. WÜLLNER, of Dresden, has been offered the post of Director of the Hoch'sche Conservatorium at Frankfort-on-the-Main, rendered vacant by the death of Joachim Raff; but it is not yet known whether he will accept the invitation.

THE theatre of La Scala, Milan, will commence its autumn season with 'L'Étoile du Nord,' with M. Maurel as Peter the Great and Mdlle. Dalti as Catherine.

Two more journals devoted to music have just appeared: the *Musical Album* in Montreal, and *La Revista Musical* at Havana.

MISCELLANEA

Briefs.—Referring to your observations on briefs (p. 142), I beg to furnish the following extract from a list of briefs contained in a register book of Pirbright, Woking. The list itself is probably complete from 1660 to 1690 inclusive. "June 6, 1689.—Collected for the Releif of ye Irish Protestants ye sum of Three Pounds six shillings and Ten Pence halfpenny. 3*l.* 6*s.* 10½*d.*" F. OWSTON.

TO CORRESPONDENTS.—J. S.—M. E. P.—A. H. G.—J. H. R.—D. D.—E. M. G.—T. F.—J. B.—J. F. H.—received

LITERATURE

The British Navy: its Strength, Resources, and Administration. By Sir Thomas Brassey, K.C.B., M.P. Vol. III. (Longmans & Co.)

THE third volume of Sir Thomas Brassey's work is wholly a compilation, consisting entirely of a collection of opinions on the main subjects of controversy with reference not only to our own, but to all the foreign policies of building ships for purposes of war. The Civil Lord of the Admiralty has brought together the most varied and opposite views of naval officers, nautical authorities, architects, engineers, and ministers of marine of other naval powers; and even amateurs are not excluded from the list of contributors.

The compiler claims, with justice, to have made an impartial selection of matter, and certainly all who interest themselves in problems of shipbuilding will find ample means of forming their own judgment on the subject. The collection embraces every variety of opinion and discussion from different points of view, taken with great discrimination from all sources, such as official reports, speeches on naval estimates, papers read at institutions, articles in service magazines, and periodical literature generally, each arranged, however, under convenient headings, so that the ephemeral bibliography of the subject can readily be referred to. Sir Thomas Brassey has not attempted either to paraphrase or condense the numerous extracts from the press and technical publications, as, although more homogeneity of character would be assumed by the volume, the main object of the compiler has been to bring together the most correct information as well as to acknowledge freely the sources whence it was derived. The third volume, of necessity less interesting than its predecessors, possesses also the same defect noticeable in them, viz., that the statistics and figures are only of dates anterior to 1879; and in these days three years of progress in departments where novelties are ever being introduced represent a considerable advance, and sometimes even a revolution of opinion. For instance, the late bombardment of the forts at Alexandria has taught us a practical lesson in naval gunnery *versus* earthworks, which, it is to be hoped, has not been lost upon the authorities. Had the forts and batteries at Alexandria been defended by more skilled artillerymen, the fleet, whose ammunition was all but, if not entirely, expended for the time, could not have renewed the combat on the succeeding days, and the delay would have enabled an active commander to replace a large proportion of his dismounted ordnance. The returns of the number of rounds expended per gun during the bombardment and the number remaining after the action will be interesting when (if ever) they are published.

The greater portion of the volume is taken up with the questions of type of vessel, limitations as to tonnage, armoured *versus* unarmoured ships, their internal cellular construction, armament, &c.

The American *Army and Navy Journal* is frequently quoted, and its pages are full of incident and example. Take the following:—

"Our ships of war must be either destined for a specific service, like the ram or the torpedo-boat, or else, if designed for general service, must be a compromise between different aims and needs. Commodore Parker, in his history of the battle of Mobile Bay, from which we quote elsewhere, tells the story of one famous episode thus: 'As the Hartford and Metacomet were slowly passing the Brooklyn, her captain reported "a heavy line of torpedoes across the channel." "Damn the torpedoes!" was the emphatic reply of Farragut. "Jouett, full speed! four bells, Captain Drayton!" So across the torpedoes the flagship went. Admiral Farragut told us the same story in a little different language. He said, as nearly as we remember, that when the alarm of torpedoes was sounded he could not help saying, "Torpedoes? Why they're all torpedoes! Those guns in the forts are torpedoes. We're here to fight torpedoes! Go ahead!"' The war-ships must evidently be built with a view to all contingencies. Of what use is it for some of the finest ironclads to carry enormously thick armour down to the water-line, when below it they are vulnerable to an ordinary torpedo? Of what use is armour if there is not quickness enough to avoid the attack of the ram?"

The most valuable document in the volume is, however, the translation of a *Pro-memoria* on the shipbuilding policy of the German Admiralty distributed to the North German Parliament as late as last year, and its general tenor of argument is in favour of small ironclads. The naval policy of Berlin must ever be of great interest to Great Britain, and an extract or two will not be out of place:—

"The contest between the armour which protects the battle ships and the heavy breech-loading guns, in which the victory seems always to incline more and more on the side of the gun, has led to much discussion as to whether armour affords a protection to ships of sufficient value to justify its retention, when we consider the grave objections which can be urged against armoured ships, not the least important of which is the enormous cost, both in the original construction and in the maintenance and repairs. It may be said by those who object to the policy of building armoured ships, that there is nothing to justify the retention of armour, now that it is no longer impenetrable at the distance within which ships must approach one another in order to bring an action to a decisive issue. The advocates of this view point to the recent innovations in naval warfare in confirmation of their opinion. They argue that the invention of the torpedo has placed a new weapon in the hands of seamen. The power of the gun had already been so greatly developed that the most thickly armoured ships could be destroyed by a single well-directed shot. The torpedo has rendered it possible to attack the powerful Colossus of the seas with small vessels, with every prospect of success."

The *Pro-memoria* then proceeds with a brief survey of the history of ironclad construction and its development from the days of the Gloire in France and the Warrior in England, after the Crimean War, followed by the ironclad Merrimac of the Southerners, and the Monitor of the Northerners in America during the Civil War. The effect of the famous action of Lissa is next discussed:—

"The battle of Lissa gave a further proof of the value of armour protection, and supplied a strong impetus to the construction of ironclads at a comparatively early stage. It also showed the necessity of the system of internal construction already extensively adopted, in which the interior of the hull was subdivided into numerous compartments separated from one another by watertight bulkheads. Such a subdivision is a most effective method of avoiding a catastrophe like that which befell the Rè d'Italia. In modern ships of war it has been largely developed."

The relative value of the gun, the ram, and the torpedo is thus discussed with considerable acumen:—

"The principal naval weapon is still the gun. Rams and torpedoes must be regarded as nothing more than auxiliaries, which indeed give a most valuable support to the gun, and under special circumstances are equally destructive and produce even more decisive results. They are not, however, to be regarded as a substitute for guns, and can only be used with effect in action under special circumstances. In an engagement between ships and forts they are of necessity quite useless, and in an engagement between ships the opportunities for using them will be so few and far between that we are obliged to regard the guns as of primary importance in the armament of the ship.....The decisive effect of a well-delivered blow with a ram is indeed indisputable. On the other hand, it is difficult, by the use of the engine and the rudder, to penetrate the side of an adversary with an oblique blow, and the probability is so great of a small error of judgment, both as to the distance and the speed, that very few instances are on record of a successful attempt to ram an uninjured ship in action. It is when the gun and the torpedo have done their work, and deprived the enemy of his motive power or the use of the rudder, that the rams can be brought into play for the purpose of bringing the engagement to a speedy close..... Torpedoes will exercise a great influence on naval warfare and on the tactical movements of fleets. The torpedo will make it necessary to use extreme caution in the attempt to ram. Commanders will take care not to fight an action at close quarters. But, as compared with the gun, the torpedo will play a distinctly subordinate part. In the present day, as in the past, it is by the gun that victories will be gained at sea. Ships must be designed mainly with the view to develope the power of the gun to the best advantage. The ram and the torpedo must be ranked as of minor importance."

The extracts from the 'Report of the Debate on the Navy Estimates for 1881 in the Italian Chamber' are also new to the British public, and will be read with interest. The speeches of Admiral Acton, the Minister of Marine, and of Capt. Albini, so well known for his newly invented gun-carriage, are full of information and common-sense argument.

Here is a characteristic letter from Hobart Pasha, March 23rd, 1879:—

XUM

"What we want are small, heavily armed, fast vessels, that can, as it were, 'hop round their enemy like a cooper round a cask,' hitting him on every vulnerable point, shelling his decks at long range, and worrying him to death.....Of course the small vessels would be liable to a hard knock now and then; but you cannot go to war in kid gloves. As to bombarding forts, rely on it, in these days of 35-tons in masked batteries, or batteries cased with thirty inches of iron, the idea is obsolete—no sane man would think of such a thing. Fleets' guns can only be used against land defences in making a diversion while landing troops. Remember also the immense cost of losing by torpedoes or otherwise one of the new monsters such as Italy has built."

The following anecdote, referring to the eccentricities of character possessed by the Whitehead torpedo, is given by Admiral Porter, U.S.N.:—

"To show the unreliability of the Whitehead torpedo, I will refer to the engagement between the Peruvian ironclad Huascar and two British men-of-war. The Shah, one of the latter, sent a fish torpedo against the Huascar, which, seeing the bubbles of air rising to the surface, avoided the machine, and it ran straight into a harbour near by; there, the compressed air being gradually expended, the torpedo rested quietly alongside a Dutch merchant vessel at anchor with no power to do harm. The Dutch captain, seeing what he supposed to be a live fish alongside, got out his fishing tackle, but was disgusted at not getting a bite; only after several unsuccessful attempts with a harpoon did he discover the nature of his visitor."

The incident reminds one of the opening scene in the 'Vingt Mille Lieues sous les Mers,' by Jules Verne.

A selection of Sir Thomas Brassey's Parliamentary speeches forms the conclusion of his third volume, and the pith of his own opinion in regard to our future policy in naval construction is embodied in the following. Quoting Capt. Colomb's observations in the prize essay of the United Service Institution, he proceeds:—

"Viewed in this way, and assuming that the object of strategy is to ensure the right force being at the right time in the right place, Capt. Colomb would, as a matter of sound policy, increase the number of ships rather than attempt to gain tactical results satisfactorily in one ship by the sacrifice of strategical qualities. I rejoice that these principles have prevailed in the latest decisions of the Admiralty in respect to shipbuilding. The four largest ships now building are under 9,100 tons, and the Conqueror seems to be designed especially to meet the suggestion put forth by Mr. King, the chief engineer of the United States navy. In his report on the ironclads of the European navies, he concludes the description of the Inflexible with a suggestion that two vessels of smaller dimensions, each carrying two 80-ton guns instead of four, would probably have been a safer and, in some respects, a better investment. We have an excellent example of the fighting powers which can be obtained within comparatively narrow limits as to tonnage in the Belleisle and the Orion, built by Messrs. Samuda for the Turkish Government, and purchased out of the vote of credit. These ships would have been an invaluable adjunct to the squadron in the Sea of Marmora."

Since the foregoing was written the Orion, under the command of Capt. Fitzroy, has proved herself of value in the Suez Canal and in Lake Timsah.

Records of the English Province of the Society of Jesus. Vol. VII. Part I. By Henry Foley, S.J. (Burns & Oates.)

"In addition to a number of interesting particulars respecting the early Mission of the Society in England, now for the first time given, a complete *statistical history of the English Province*, with its numerous Colleges and Residences at home and abroad, will be found in detail almost year by year from its first formation in 1619 until the temporary suppression of the Society, effected in 1773."

This is Mr. Foley's account of the contents of his latest volume. Let no man for the future say that the Jesuits are a mysterious body, who work in the dark, and of whose doings no account can be found. Perhaps no other religious society has ever made so clean a breast of it as the Society of Jesus has made through the mouth of its accredited spokesman, Mr. Foley, during the last ten years. For the future there will be no excuse for such random statements as platform orators have been wont to fling about at their pleasure. It has been resolved to put forth in print an immense mass of statistics hitherto only existing in manuscript, and so to rescue from the danger of destruction documents which have run too many risks already, and which if once lost would be sure to be much more injurious to the reputation of the society by their absence than they ever can become by being made public property.

Henceforth any one who chooses may find out the income of the Jesuits in any one or all of their colleges for any year, the number of their fathers, their names, their previous history, their parentage, education, and career. If he has a taste for such researches, he may decipher the secret letters of the Jesuit emissaries by the help of the keys now printed by Mr. Foley. If he wants to find out how many Jesuits there were labouring in England during any given year and what their names were, and to make a fair guess as to where they were to be found, he has only to consult this volume, and with some little trouble he may get what he wants. Thus in 1593 there were six fathers in England at large; in 1598 there were fourteen; in 1610 there were fifty-one; and in 1659, *the year before the Restoration*, no less than a hundred and fifty priests of the society were labouring up and down the land. They who only know Dr. Oliver's 'Collectanea,' and they who peradventure may have been vainly seeking for a copy for years, may comfort themselves with the assurance that Mr. Foley's book incorporates all that is trustworthy in Dr. Oliver's thin volume, and supplements it by matter much more accurate and with the stamp of authority upon it; while Mr. Foley's new materials will, when complete, make up at least six times the bulk of the old 'Collectanea.' As a handy book of reference this new work will go far to supersede the long labours of the learned editor in his previous volumes. Those are more adapted for the study and edification of the faithful; this, for the student who desires a convenient biographical history of the English Jesuits without being compelled to wade through a great deal of reading that to most men is distasteful and repulsive. All who value hard work and who honour the resolute workman, unsparing of himself and unselfish in his aim, will rejoice that Mr. Foley has been permitted to bring his labours to the point which they have at present reached, and that he has recovered his eyesight sufficiently to see this huge volume through the press. May he be spared to complete a series of works which was begun without hope or thought of gain or reward, and has been carried on with an enthusiastic devotion and indomitable perseverance unhappily seldom to be found!

BOOKS ABOUT JAPAN AND CHINA.

Genji Monogatari: the most Celebrated of the Classical Japanese Romances. Translated by Suyematz Kenchio. (Trübner & Co.)

Abstract of Four Lectures on Buddhist Literature in China delivered at University College, London. By Samuel Beal. (Same publishers.)

The Divine Classic of Nan-hua: being the Works of Chuang-tsze, Taoist Philosopher. With an Excursus, and Copious Annotations in English and Chinese, by F. H. Balfour, F.R.G.S. (Same publishers.)

Historic China, and other Sketches. By Herbert A. Giles. (De La Rue & Co.)

China. By R. K. Douglas. (Society for Promoting Christian Knowledge.)

The strange story which heads our list carries us back a long way in the history of the world and in the progress of morals. It transports us into an entirely new atmosphere of life and thought, and gives us a curious insight into the manners and customs of the Japanese of the tenth century. "The aims which the authoress" (for it was the work of a lady) "seems always to have kept in view are revealed to us at some length by the mouth of her hero," says Mr. Suyematz Kenchio in his introduction:—

"'Ordinary histories,' we thus learn, 'are the mere records of events, and are generally treated in a one-sided manner. They give no insight into the true state of society. This, however, is the very sphere on which romances principally dwell. Romances are indeed fictions, but they are by no means always pure inventions; their only peculiarities being these, that in them the writers often trace out, among numerous real characters, the best when they wish to represent the good, and the oddest when they wish to amuse.'"

Neither of these types was, however, chosen by the writer, who seems to have had a desire to try her hand at a third, and to describe the adventures of one of the worst characters—an endeavour in which, it must be confessed, she has been successful. Her hero is an imperial prince who is as beautiful as he is high born and as fascinating as he is rich, possessing also numerous accomplishments, not the least conspicuous of which is his power of improvising verses. Occupying the vantage ground so liberally bestowed upon him by nature and fortune, he finds it easy to follow the bent of his inclination for amatory adventures. Through a succession of these the writer leads him, and describes, occasionally with power, the passions of all kinds to which his wayward temperament is the victim. As the translator points out in his preface, there is, as there always is in Oriental romances, a certain want of continuity in the narrative. The whole history is made up of a succession of episodes which bear little or no relation to each other. Nor does he regard it mainly as a work of absorbing interest, but as reflecting a state

of society sufficiently interesting to justify its publication in English. The translation is excellent, and we can heartily congratulate Mr. Suyematz Kenchio on the mastery he has acquired over our most difficult language. The thanks of the reading public are also due to Messrs. Trübner & Co., who have placed within our reach so many translations, this among the rest, from Oriental literatures and so many works on the languages and nations of the East.

No one else in England has devoted so much time and energy to the study of Buddhist literature in China as Mr. Beal, and no one, therefore, is more fitted to be an exponent of the subject. He has, however, another claim to be listened to on this occasion. Until lately we did not possess in England a complete set of 'Tripiṭaka' as they are known in China and Japan; and it was originally at the instigation of Mr. Beal that the Japanese ambassador, Mr. Iwakura Tomomi, procured for the India Office library a copy of the edition known in Japan as the 'Ming-tsong,' or 'Tripiṭaka' of the (Chinese) Ming dynasty. A similar request was made to the Chinese Government; but the Peking mandarins, being possessed by the idea that in any such request there must be concealed some deep political motive, declined to accede to it. However, having now got what we wanted, we can afford to smile at the ignorant jealousy of the Peking officials.

The religious effect produced in China by the introduction of Buddhism was prodigious, and was facilitated, Mr. Beal considers, by the presence at Magadha, the earliest headquarters of the faith, of the Vajjians, or Yue-chi of Chinese history. This fact would doubtless tend to favour the introduction of Buddhism among the tribes of Central Asia in communication with the Yue-chi, but we should doubt whether it had more than a very slight and indirect influence on the reception of the religion in China. But apart from the results to religion of the adoption of Buddhism by the Chinese, the gain to the literary wealth of the country was very great. An entirely new literature was introduced into the empire, opening out a new intellectual life not only in matters of religion and philosophy, but also of the imagination. The industry of the Indian translators was extraordinary. The Shaman 'An-tsing, who arrived in China in the year 149 A.D., translated in the interval between that year and 171, when he was killed in a riot at Canton, no fewer than one hundred and seventy-six distinct works. And this was but a type of the energy which these men, one and all, displayed. With reference to the history of the sounds of the Chinese language their writings are of great value, as in the transcriptions of Indian names which they contain we have preserved the sounds of the characters as they existed at the time in the dialects of the provinces in which they wrote. But not only this, in their works we find translations of the various editions of the Buddhist Sutras published in the different dialects of India. Thus in the Chinese 'Tripiṭaka' there are three or four distinct versions of the celebrated Pali work called 'Dhammapada,' corresponding to as many translations of the original in the Prakrit dialects.

In the present lectures Mr. Beal has confined himself almost entirely to the religious aspect of the question, and from time to time takes occasion to point out the remarkable similarities which exist between some of the doctrines of Buddha and of those held by Christians on the one hand and by the Essenes on the other. In connexion with this part of the subject, the sermons of Asvaghosha given in the third lecture are extremely interesting, and plainly point to the probability of his having derived many of his allusions and illustrations from Christian sources. As a *résumé* of Buddhist literature in China, Mr. Beal's lectures form a very compendious handbook, and they contain also much which will be new to those who have studied Buddhism only from an Indian standpoint.

In his translation Mr. Balfour has opened up a new field of Chinese studies. With the exception of Laou-tsze, the early Taouist philosophers have found no place in English literature. This probably is mainly due to the difficulty of rendering into English the obscure style and still more obscure thoughts of these philosophers; but the fact that, after all, there is very little worth reproducing in their writings may also have had its share in preserving their obscurity. They all follow in the footsteps of Laou-tsze, only differing from him in a tendency more or less pronounced towards the heretical opinions which afterwards prevailed. But though professing to be followers of Laou-tsze, they never perfectly understood him, and perverted his doctrines into childish babblings about the identity of existence and non-existence, the evolution of species, and the sublimation of matter. On one point, however, they were all in entire agreement with him, and that was in their hatred of Confucianism. Page after page of Chuang-tsze's work is devoted to attacks upon Confucius and his disciples. There was something particularly distasteful to these advocates of meditation and retirement in the pushing, self-satisfied attitude of the Confucianists, and they, therefore, never wearied of reproducing accounts of the discomfitures inflicted on these prophets of mannerism by more enlightened philosophers.

But since Mr. Balfour has elected to translate the writings of Chuang-tsze, it is to be regretted that his translation is not more accurate. We cannot believe that Chuang-tsze wrote such nonsense as this: "In loving one's mother it is not her outward body that one loves, but that which gives her body life. When a man dies and is buried, there is no longer any occasion for expense on his behalf. No one wants the boots of a man whose feet have been cut off. Both such persons are devoid of virtue." We have not had an opportunity of consulting the original in this case; but we have compared the text of an allegory related by Chuang-tsze as a rebuke to the conceit engendered by a little knowledge with Mr. Balfour's translation, and the result is not such as to make us place confidence in the general accuracy of his version.

In this instance Kung Tsze-nou says to a presumptuous Confucianist: "Have you alone never heard of the frog at the bottom of the well who said to the Turtle of the Eastern Sea, 'My delight is by myself to hop about self-reliantly on the well curb; to enter on repose on the edge of the broken brick lining; when jumping into the water, with joined fore-legs to press my cheeks; and to slip into the mud until my feet and toes have disappeared. [Mr. Balfour's version runs thus: "'Would you find any pleasure in having a dance with me upon the parapet of this well, resting on the broken brick-work at the bottom, and swimming arm-in-arm with me while we look in each other's faces? Three leaps and your feet will be hidden under the water.'"] Looking at the red insects, crabs, and tadpoles (about me, I see that) they are not able to do as I do. Thus, then, to be despot of the waters of a pit, and to excel in going and stopping, are the pleasures to be enjoyed in a well, and they are supreme ones. Why do you never come to behold (such delights as mine)?" [Mr. Balfour: "'Then we will look behind us at the cockles, crabs, and tadpoles, none of which can compete with me in swimming.' Now this pluming oneself upon the delights of a narrow well was a most unwarrantable injustice to the deep. 'Sir,' continues the frog, 'why do you not come here often to see me?'"] But before the Turtle of the Eastern Sea had got his left foot down, while his right knee was drawn up, he hesitated and shrank back. Then he informed the frog about the sea, saying, "A thousand le are not enough to measure the greatness of the ocean; a thousand jin (=100,000 feet) are not enough to probe its depth. In the days of Yu nine years out of ten were years of flood, yet the water (of the ocean) did not seem to be abundantly increased. In the time of T'ang seven years out of eight were years of drought, and yet the banks did not seem to lose. [Mr. Balfour: "'Yet the river banks did not find the water at all diminished.'"] Neither in a moment nor in a long time does it appear to shift or change, neither much nor little to advance or recede. [Mr. Balfour: "'The sea changes not according to whether the drought be of long or short duration; nor does it expand or shrink according to whether the water is plentiful or scarce.'"] This is the great delight of the Eastern Sea."

If such is the translation in the green tree of narrative, what must we expect to find it in the dry tree of abstract reasoning?

Mr. Giles always writes well, and as his knowledge of China and the Chinese is the result of many years' residence in the Flowery Land, he has always something to say which is worth listening to. The present volume is made up of a number of articles which have appeared from time to time in periodicals both in China and in England, together with some dynastic sketches and judicial records. Mr. Giles accepts without question the statements of Chinese historians concerning the origin of their race, and is content to consider that its history began with the establishment of the "black-haired people" on the plains of Northern China. Perhaps he may have considered that a deep survey of such a subject was beyond the scope of a book of sketches, but we should have been glad to have learnt to what conclusions his wide reading in Chinese literature has led him with regard to the origin of the language and the racial affinities of the people.

The chapter on the penal code of China is very interesting, but should be read care-

XUM

fully, for Mr. Giles appears to take a pleasure in explaining with elaboration that certain generally accepted judicial cruelties do not exist, and then in quoting the words of the code to prove that they do. At p. 125 he says:—

"The punishments of the Chinese, under the present dynasty, are confined to (1) flogging with the bamboo, (2) banishment for a given time or permanently to a given distance, and (3) death by decapitation or strangulation."

And on the following page he writes:—

"It is also worthy of note that the 'lingering death,' about which so many horrible stories have been told, is not among the punishments here formally enumerated. Mention of it, however, occurs in another part of the code, as the proper punishment for high treason. But again all evidence tends to prove that though many are condemned, no one is ever subjected to this truly barbarous process, the very exceptions which might possibly be discovered forming, of course, part of the proof."

Many as they read these words will believe that the Chinese have really given up this "truly barbarous process"; and with a glow of pleasure they will reflect that the humanitarian influences of the nineteenth century are producing their effects even at so great a distance from the centre of civilization as China. But so far they have only been allowed to share Mr. Giles's views, and the process of arousing them from their dream has to be performed by means of a quotation from the code. At p. 133 we are told:—

"Book VI.....opens with the terrible punishment of 'a slow and painful execution,' commonly known as the 'lingering death,' for all persons found guilty of high treason, which crime includes destruction, as principal or accessory, of the tombs of the emperors of the present dynasty. The same punishment is set apart for the equally hideous crime of parricide; and once every now and again the *Peking Gazette* records the due execution by this process of some unnatural child. A slave who kills his master is also similarly liable."

Unfortunately it is more than "now and again" that the *Peking Gazette* bears evidence of the due execution of this process. In 1877 nine cases were there recorded, and in 1878 seven criminals suffered the same fate.

The chapters containing "Judicial Sketches" well represent the practice of the law in China. The absence of all lawyers and the more than usual difficulty of extracting truthful evidence throw an undue weight of responsibility on the presiding judges. That there are many who possess equal acumen with the judge whose decisions Mr. Giles quotes there can be no doubt; but the difficulties of arriving at a just finding, which he describes without exaggeration, are such as to make one shudder for the suitors in a majority of the courts in China, where men possessing no other knowledge than that depicted by Mr. Giles in his chapter on "Education in China" have the lives and fortunes of their fellow subjects at their disposal.

The concluding sketches on social subjects are well worth reading, and we are glad to see them here reproduced in a permanent form. Mr. Giles is an able though a somewhat crotchety writer, and no one who reads his present volume with discrimination can fail to learn much that is strange and interesting about historic and modern China.

Prof. Douglas has produced one of those readable and yet complete volumes that only one who has an entire mastery of his subject can write. After a brief sketch of Chinese history, Prof. Douglas gives a series of chapters on the government, customs, arts, language, literature, and religion of the Chinese. Prof. Douglas writes in a kindly spirit, and takes care to point out the good qualities of the Chinese. A quotation may be given from the chapter on Chinese honours (in China both sexes are recipients of Government rewards):—

"The following edict in the *Peking Gazette* of May 25th, 1877, affords a good example. Le Hung-chang, the Viceroy of Chih-li, there reports the case of a Miss Wang, who, from her earliest youth, 'exhibited a decorous propriety of conduct and a love of study. She was a diligent reader of Lew Heang's 'Lives of Virtuous Women,' and the poems of Muh Lan. At the age of thirteen it was proposed to betroth her. At the first hint of this reaching her ears, she retired to her room, and drew, with a pointed instrument, blood from her arm, with which she wrote a sentence declaring her intention to remain single in order to devote herself to the care of her parents. At the age of eighteen she refused in like manner; and when, in 1852, the remains of her father and second brother, who had perished at the taking of Woo-ch'ang by the rebels, were brought back to Kao-yeo, she exclaimed, amid her tears, that since she could not follow her father to the tomb, her mother being still alive, her blood should at least serve to varnish his coffin; so saying she gashed her arm with a knife, allowing a stream of blood to mingle with the lacquer of the coffin. She had reached the age of twenty-six when her father's obsequies were completed, and her mother and elder brother were anxious that she should marry; but she steadfastly refused to do so, and devoted herself to attending upon her mother, with whom she shortly afterwards removed to Choh-chow, on her brother receiving an appointment at Peking, as a reward for his services. She allowed no other hands but her own to wait upon her mother, and when, in 1862, her mother was attacked with dangerous illness, she cut a piece of flesh from her left thigh to be administered as a remedy. In less than a year a fresh attack of illness supervened, and she cut a piece of flesh from her right thigh on this occasion, recovery ensuing as before. On subsequent occasions, when her parent was attacked with slight ailments, she applied burning incense-stick to her arms, and used the calcined flesh to mingle with the remedies prescribed, with invariably successful results. After her mother's death, in 1872, she refused all sustenance during a period of three days, and was with difficulty persuaded at length to take food. Her brother shortly afterwards died, whereupon she escorted his remains to the ancestral home at Kao-yeo, and afterwards, returning thence, performed the same journey once more in attendance on her mother's coffin. The devotion and energy she has displayed, exceed what might be expected from one of the opposite sex, and it is solicited, in view of the wide repute which has been gained by her virtues at Choh-chow, that a monument may be erected to her honour under imperial sanction.—Granted by rescript.'"

The Gypsies. By Charles G. Leland. (Trübner & Co.)

Mr. Leland possesses the knack of gossiping pleasantly on many subjects, but he is at his best when he is discoursing about his gipsy friends. He can sympathize with the scholar who derives from staid books a sober and decorous pleasure, and he can appreciate the artist who pays a willing obedience to the laws and traditions of society; but he is apparently most thoroughly in accord with the possessors of ancient lore to whom a library would convey the idea of a prison, the workers in metal who wander untrammelled through a world stiff with conventional ties, or the singers who set at defiance the cultured circles through which their untutored strains send a thrill of rapture. The Russian gipsies whose acquaintance the author made at Moscow seem not to have been very far wrong when they recognized him as a brother, for if not by descent, at least by sympathy, he can put in a claim to be considered, at all events, an amateur Bohemian.

Of these Russian gipsies Mr. Leland gives an amusing account, to which the flame of his imagination has, if we are not mistaken, communicated a somewhat rosy colouring. But as his recollections of the visits he paid them at Moscow have been made familiar to many readers by their appearance, not long ago, in one of our magazines, there is no need to dwell at length upon this part of his volume. It is interesting, however, to know that in 1878 he met his Moscow friends in Paris, where they formed one of the numerous attractions of the Exhibition. Unfortunately, in the midst of the moving crowds which encompassed them their music was at a disadvantage, and they did not sing with their old barbaric spirit. "The voices were the same, but the sweet wild charm of the Romany carolling, bird-like, for pleasure was gone." For this comparative failure full amends were made by the immense spirit with which a gipsy band performed in the Hungarian *café*, their dance music having in it an apparently diabolical element which turned the heads and stirred the heels of their Parisian hearers, and led their American brother to describe it as "music whirling the soul away as on a rushing river, the violin notes falling like ripples, the flute tones all aflow among the rocks." Three other Austrian gipsies Mr. Leland once met as he was walking down Chestnut Street, Philadelphia, and he would have had an interesting conversation with them had it not been for the curiosity of a number of "inquisitive, questioning, well-dressed people," who put a stop to the talk by their determination to listen to it. These Philadelphian gipsies wore their hair hanging in black ringlets down their shoulders, and were dressed in "very good clothes of a quite theatrical foreign fashion, bearing silver buttons as large as and of the shape of hen's eggs." Later on Mr. Leland made the acquaintance of several other gipsies in Pennsylvania, all of whom seemed to be thriving to their hearts' content. On one occasion he found a tent pitched in the outskirts of Philadelphia, with a waggon and horse hard by, and he soon settled down into conversation in "the black language" with its inmates.

"It was a fine autumnal day, Indian-summery,—the many in one of all that is fine in weather all the world over, put into a single glorious sense,—a sense of bracing air and sunshine not over-bold or bright, and purple, tawny hues in western skies, and dim, sweet feelings of the olden time. And as we sat lounging in lowly seats, and talked about the people and their ways, it seemed to me as if I were again in Devonshire or Surrey."

America, according to these nomads, is "a good country for travellers," being a land which, as one of them remarked, is "big enough to go to a warm side in winter and a cool one in summer," and inhabited by sensible persons, who, if they are cheated in horse-dealing, "stand it as gentlemen always ought to do among themselves in such games." Here and there, however, the gipsy immigrants have been received in America with some suspicion, as in Tennessee, where, "when an old Romany mother had succeeded in hoaxing a farmer's wife out of all she had in the world, the neighbouring farmers took the witch" and burned her alive. American gipsies, we are told, "do not beg, like their English brothers, and particularly their English sisters"—a fact which Mr. Leland attributes not only to their greater prosperity, but also to "the influence which association with a proud race has on the poorest people." However, they continue to tell fortunes, and they sometimes get into trouble by selling quack medicines; for in America, as elsewhere, "it makes an enormous difference whether you sell by advertisement in the newspapers or on the sidewalk, which shows that there is one law for the rich and another for the poor, even in a republic." Another time Mr. Leland paid a visit to a river dell near Williamsport, in Pennsylvania, which is "the favourite camping ground of the Romany." There he found a number of low round tents, with smoke rising from their tops, and near them gaily painted vans. The whole scene was so English that Mr. Leland felt a flutter at his heart. "It was a bit from over the sea; it seemed as if hedgerows should have been round, and an old Gothic steeple looking over the trees." Inside one of the tents, wherein prevailed "a perfect Rembrandt blending of rosy-red with dreamy half-darkness," he was received by "as regularly determined a lot of hard old Romanys as ever battered a policeman," whose black eyes all "flashed up" together at him "like those of a row of eagles in a cage." However, they received him very kindly when he had proved his brothership by replying to an ancient sorceress, who spoke to him in her own tongue, "with a burning gush of the same language." She was an incarnation of gipsyhood in its advanced stage, being "so quadruply dark, so fourfold uncanny, so too-too witch-like in her eyes," that she rendered commonplace the four other hags in the tent, who were sufficiently startling when seen apart from her. As the conversation went on the wind howled outside, and the rain pattered a kind of refrain on the canvas covering, and the whole scene made a weird impression on the mind of Mr. Leland, who says:—

"In after days I became quite familiar with the several families who made the camp, and visited them in sunshine. But they always occur to me in memory as in a deep Rembrandt picture, a wonderful picture, and their voices as in vocal chiaroscuro; singing to the wind without and the rain on the tent,—*Dum, dum, dum, patter, dum!*"

A separate chapter, written by the author's niece, Miss Elizabeth Robins, gives an account of a gipsy house in Philadelphia. Just as the type of the tent is to be found in the dwellings of many once nomad races, so was a suggestion of the tent and the waggon to be found in the arrangement of the furniture in the principal room, which was evidently the common home of a large family. On the wall hung an engraving which often figures in gipsy tents, representing a very dark Italian youth. "It is a favourite also with Roman Catholics, because the boy has a consecrated medal. The gypsies, however, believe that the boy stole the medal." In the room were several young people, including "a girl of the pantherine type, and one damsel of about ten, who had light hair and fair complexion, but whose air was gypsy and whose youthful countenance suggested not the golden, but the brazenest, age of life." With the children and their parents an interesting conversation ensued, turning for the most part on fortune-telling and stealing and lying and other accomplishments of the race to which Mr. Leland is so devoted, and terminated by him with a parting address: "Child of the old Egyptians, mother of all the witches, sister of the stars, daughter of darkness, farewell!"

Mr. Leland remarks that there are poets of the present day "who cast their gold ornaments hollow, as jewellers do, lest they should be too heavy." In reading his present work we cannot too much admire the skill with which he has made a very small amount of gipsy gold go a very long way in ornamentation. The actual facts he has to chronicle about his gipsy friends might have been recorded in a cold-blooded manner within the space of an ordinary magazine article. He has dallied with his fascinating subject, often making it a thread on which to string poetic fancies, sometimes even deserting it for a scamper through alien fields, or a daydream in which he can surrender his soul "to tender and vague reveries, in which all definite thoughts swim overpowered, yet happy, in a sea of voluptuous emotions inspired by clouds lost in the blue sea of heaven and valleys visioned away into the purple sky"; and so he has produced a respectably substantial volume, visibly of Transatlantic typographical parentage. It is impossible also, in reading the accounts of Mr. Leland's converse with his unconventional friends, not to admire the mastery which he seems to have obtained over the languages of the world—in spite of his having passed such a misprint as that in "Cives sum Romanus" (p. 261), and his having indulged in such an etymological freak as suggested the following statement: "The progress of degradation is curiously marked in their language..... *Rashai*, a clergyman, even of the smallest dissenting type, rises in the original *rishi* to a saint of the highest order." Now the ordinary English gipsy word for "parson" is given by Smart and Crofton in their vocabulary as *ráshei* or *ráshrei*, which they compare with *rashái*, the form adopted by Paspati in his work on the Turkish gipsy dialect. But it is a venturesome proceeding to connect *rashai*, a parson, with the Sanskrit *rishi*, originally an inspired poet or sage, afterwards a hermit or other ascetic, but never a clergyman of any kind.

Part of Mr. Leland's book is devoted to the English gipsies. In the neighbourhood of Oatlands, near Netley Abbey, at Cobham Fair, and Hampton Races, Mr. Leland found many wandering friends, and he has poetically described his experiences in those happy hunting grounds. Moreover, he has talked about the gipsies with many persons of distinction, including the late Mr. George Borrow, of whom he says, "It is commonly reported among gipsies that Mr. Borrow was one by blood, and that his real name was Boro, or great. This is not true. He was of pure English extraction"; and he has recorded some of their remarks, which have, for the most part, nothing that is very remarkable about them. He has given, moreover, an account of some Welsh gipsies who seem to be superior specimens of their race, especially a young couple of the name of Lee, of whom the husband is a clever violinist, into whose melodies, "when he gave himself up to playing with *abandon* or self-forgetfulness," there came "the same wild gypsy expression, the same chords and tones, which abound in the music of the Austrian Tsigane"; and the wife so splendid a specimen of gipsy comeliness that "in a London ball-room or on the stage she would have been a really startling beauty." So picturesque were these young people, and at the same time so suggestive of a free life out of doors, that Mr. Leland says, "They always seemed to me in the house like two wild birds, and tropical ones at that, in a cage. There was a tawny-gold, black and scarlet tone about them and their garb, an Indian Spanish duskiness and glow which I loved to look at." Something of the same kind may be said of Mr. Leland's book, which is suffused with an Oriental warmth of colouring of a genial and attractive nature, and which is as suggestive of uncontrolled liberty as is the scent of the sea or the music of the forest.

Manual of Greek Historical Inscriptions. By E. L. Hicks. (Oxford, Clarendon Press.)

By the publication of this excellent and scholarly volume Mr. Hicks has begun to fill a notable gap in our philological literature. We are far behind the rest of Europe in any diffused knowledge of inscriptions and their treatment, and the interest in them is only beginning to dawn at the universities. Mr. Newton has led the way in his well-known essays, and now his pupil, Mr. Hicks, in a short, modest, but deeply interesting preface, shows the historical value of this kind of research, which he exemplifies by an excellent selection of documents. In his volume no attempt is made to guide the student in deciphering—a very special study—but rather in comprehending the historical bearing of isolated facts, lists of numbers, names, and the like, for verifying and supplementing our classical texts. This help from inscriptions is peculiarly valuable for the period of the Diadochi, when we are deserted by all literary authorities save Plutarch and Diodorus, and when the simple sequence of events is often hardly to be determined. The contributions to this period printed by Mr. Hicks are very full and instructive, but have already, as he remarks, been utilized by Droysen in the new edition of his 'Hellenismus.' This manual does not profess to give new texts, but an accurate version of the best already published; nevertheless one finds here and there, as in Nos. 174 and 182 from Iasos,

XUM

that the author has added materials not before printed; he has also carefully re-collated many texts now in English museums.

His commentary is in the main sound and cautious; but there are a few points on which we do not feel confidence in his conclusions. For example, we do not hold that the year 776 B.C. can be called in any sense the "beginning of definite chronology in Greece" (p. 2), nor is it at all likely that Pausanias saw any genuine monument of that age. It is probably out of deference to the Germans that Mr. Hicks hesitates (p. 94) about the inscription which Thucydides copied in V. 47, and which has now been recovered in the somewhat mutilated original. There are certainly many variations in Thucydides' copy not to be attributed to the copyists, but to the historian, whose notions of verbal accuracy may be gauged by the speeches he composes for historical characters. The general sense of the inscription is perfectly preserved, and the variations are such as could only assume importance among pedants. Still more decidedly do we differ from the statement (p. 280) that the "sober judgment of antiquity" denied to Novum Ilium its right to be called the site of Troy. One of Mr. Hicks's main authorities, Grote, had long since proved that this scepticism was merely the fad of Demetrius of Scepsis, copied by Strabo, and unknown in earlier times. In the citation of ancient authorities on this question Mr. Hicks also omits the most important, Hellanicus.

There are two valuable Locrian inscriptions, Nos. 31 and 63, which the author reports to be "now missing," or to have "disappeared" from the Woodhouse collection, once in Corfu, but acquired by the British Museum. We are happy to be able to give him such information about the bronze plates containing these inscriptions as may lead to their recovery by some museum or scholar, in whose possession they may be consulted. Both plates were in the possession of Mr. J. H. Taylor, sometime vice-consul at Corfu, in April, 1877, and he had no doubt acquired them directly from the Woodhouse collection. He valued them greatly, and used to show them to scholars landing at Corfu. This gentleman died about two years ago, so that doubtless the plates are in the possession of his representatives, from whom they might be purchased. In addition to the editions mentioned by Mr. Hicks, there were monographs printed in Greece on each of them—the contract between Chaleion and Oeanthia, by Œconomides (Corfu, 1850); the Naupaktian, by G. N. Œconomides (Athens, 1869). The author of the latter held that the tablet was, so to speak, a palimpsest, and that there were traces of the older characters still visible. This is not the case, though there are a good many round dots dug into the plate, which seem to have no meaning, though done deliberately, and to all appearance by the hand of the carver. We trust these interesting relics of a very difficult dialect, with its *digamma* and its *koph*, may soon be recovered by the philological public.

It remains for Mr. Hicks to enlarge the great obligation he has conferred on English scholars by another volume, in which, after an introduction on the deciphering of these inscriptions, which should be accompanied with some fac-similes, he should give a selection of those non-historical inscriptions which introduce us to the private life and habits of the Greeks. Thus, for example, no other inscription from the island of Ceos approaches in interest that on the educational system of the island and the fees paid to the various teachers. A sketch of the history of the Greek alphabet, after the manner of Kirchhoff's 'Studien,' would also be very welcome, since Mr. Paley's heresies on that subject are still cited by some people as of importance. But all these wishes are only evidences of how much Mr. Hicks has excited us to expect from a continuation of his valuable labours.

Memoir of Alexander Seton, Earl of Dunfermline. By George Seton, Advocate, M.A. (Blackwood & Sons.)

Alexander Seton, President of the Court of Session and Chancellor of Scotland, is not only an important figure in the reign of James I., but what may be called an "interesting character." As the godchild of Queen Mary, who gave him the priory of Pluscarden as a sponsorial gift; as a high-born youth studying for the priesthood in the Jesuits' College at Rome, with a probable cardinal's hat before him, and declaiming in the Vatican before Pope Gregory on the Ascension; as a law student in France and a licentiate of the Scottish bar; as an Extraordinary Lord and a member of the Privy Council at the age of thirty; as one of the obnoxious Octavians, under suspicion of Popish leanings, and a special object of the rancour of the extreme Presbyterians; as Lord Provost of Edinburgh — the "Provost Alexander Seytoun of Pleasance" of Birrel's 'Diary'; as tutor of the Duke of York (Charles I.) in babyhood; as President of the College of Justice and Chancellor of Scotland in the days of Kinmont Willie and of the Auchendrane tragedy; as a wise promoter of the abortive attempt at union with England; as an accomplished though pedantic scholar imbued with a passion for architecture; as a patron of the turf; as a good-natured, easy-minded gentleman, who married a third wife of the age of fifteen — he certainly appears in a variety of aspects. He is a fine type of the "canny Scot" in the days of Melville. Although of a courtly turn and suspected of Popish leanings, he showed himself capable of firm resistance to the unlawful and irritating exercise of the king's authority against the Presbyterians. "You are our king," said he, in the case of the Rev. Robert Bruce against the Crown;

"we, your subjects, bound and ready to obey you with our lives and substance; but this is a matter of law, in which we are sworn to do justice according to our conscience and the statutes of the realm."

The reputation he left behind him among both parties in the Church, of being an honest and humane judge, was well deserved. We can hardly agree with Mr. Seton's opinion that he was Erastian; the fact rather appears to be that he wished to keep ecclesiastical squabbles out of the civil courts. "You that are bishops," said he, on the vexed subject of the Five Articles, "should take order with these things, which are mere spiritual, and not trouble the Council with them." He loved retirement, and in true Baconian spirit took pleasure in extending and adorning his country mansions at Pinkie, Fyvie, and Elgin; the second of these is one of the noblest specimens of the domestic architecture of the period. In his last will—he died in 1622 in his sixty-seventh year—the old senator requested his executors to complete his building plans at Pinkie. He left many valuable jewels, including more than five hundred diamonds. The nature of the man is finely shown in a letter written to Sir Robert Ker, of Ancrum, in the summer of 1621:—

"I hope shortlie to discouer my port. Think nocht for this, Sir Robert, that I think me onye neirar to death, farder nor that I knaw thair is sa monye yiers of my mortalitie past.....I haue bein twayis or thrise this spring ellis at Archerie, and the same bowis that serued me 40 yiers sence fittis me als weill now as eiuer, and ar als weill now my command.....It is bot greate viris decayis fast and soune; mediocritie contented me eiuir, and sua sall still be God his grace."

A piece of honest work was to be expected from the practised hand of Mr. Seton, and on the whole the reader will not be disappointed. This volume has been issued as a foretaste of a series of lives of all the presidents of the Court of Session from the establishment of that tribunal in 1532. The author "has done his best to give a human interest to his narrative"; he has aimed at showing that "antiquarian biography" need not be "dry as a bone, hard as a stone, and cold as a cucumber."

Our fear was that the author would display a weakness for prolixity and gossip, and he has done so. Such remarks as that the description of the weather of 1610 "is strikingly suitable for that which has been experienced by the denizens of the Scottish metropolis during the past summer," "which I commend to the attention of the Scottish Meteorological Society," are surely more in the style of a newspaper sketch than of a serious memorial of a great lawyer and statesman, meant to have a place on the shelves for many long years to come.

A still greater fault presents itself. The life of any one president ought to be written as a link in an historical chain, so that the whole may throw a clear and continuous light on the influence of its successive members on the political and social history of the country. Mr. Seton's first instalment is rather a gossiping repertory of information about a distinguished member of a great family. Dunfermline only moves through the book as a somewhat vague political personality; there is no clear outline given of the part he played in the political struggles of the time. For instance, we have no reference to his first political appearance as a member of the coalition ministry after Arran's fall; and when Mr. Seton mentions the Octavians he furnishes no definite idea of the work of these "commissioners of exchequer." Was it because there was no "human interest" in these matters? He might, at least, have supplied an extract from the document in which James appoints Seton and the other auditors (Octavians) to remedy the state of the royal revenues, which had become rotten by neglect of casualties, increase of pensions, diminution of customs, decay of castles, and so forth, when "all things have come to

sick confusion that after tryall takine it is found that there is no wheat nor beare, silver nor uther rent to serve his Hienesse sufficientlie in bread and drink nor utherwayes." As regards style, the work is disfigured by disconnected jottings, inverted commas, and useless petty quotations.

A comparison of this biography with that in Brunton and Haig and with others shows that the author has explored extensively. A work of this kind can hardly be expected to be exhaustive. We may point out in a kindly spirit a few of Mr. Seton's omissions — the Chancellor's connexion with the repairs in Dunfermline Abbey; his receipt of 500*l.* for bringing Prince Charles to England, and of several English manors when in England; his grim suggestion of slow torture by torchlight for the Gunpowder plotters; and more especially some unpublished letters, in which he reveals an acquaintance with Petrarch and other writers of the time, acknowledges to Prince Henry's tutor the receipt of a "most sweet, ornat, and wyse letter" from the prince, and expresses pleasure at the king's acceptance of his "trew purgation" from the imputation that he had absented himself from the Council's consultations on the Orkney disorders in 1614. It is not easy to see why the author should call attention to a word like "lippen," which was not peculiarly Scottish. We may in conclusion remark that "Ainmiller" is not the spelling of the Munich artist's name, and that Lyoun's 'Teares' was issued in 1622, not in 1662.

The Ancient Liturgy of the Church of England according to the Uses of Sarum, York, Hereford, and Bangor, and the Roman Liturgy. Arranged in Parallel Columns, with Preface and Notes by William Maskell, M.A. Third Edition. (Oxford, Clarendon Press.)

Monumenta Ritualia Ecclesiæ Anglicanæ: the Occasional Offices of the Church of England according to the old Use of Salisbury, the Prymer in English, and other Prayers and Forms. With Dissertations and Notes by William Maskell, M.A. 3 vols. Second Edition. (Same publisher.)

About thirty-five years have elapsed since the appearance of the second edition of Mr. Maskell's 'Ancient Liturgy' and the first of his 'Monumenta Ritualia.' So many books relating to liturgical matters or to the study of ritual have been published in the interval that it seems surprising only that the call for a new edition of the works before us should not have come sooner.

Having compared the four volumes, page by page, with the corresponding portions in the preceding editions, we feel that we may congratulate the author or editor on having to make so few alterations, alike in the valuable and learned notes which he supplies and in the text which he places before us. He has kept himself *au courant* with recent publications in England and elsewhere, and it is satisfactory to find that this veteran ritualist speaks on the whole with approval of the work of younger students in this now important branch of literature.

The original publisher, Mr. W. Pickering, was ever famous for the typographical beauties of the works which he produced. It is perhaps partly due to the example set by him (and followed by others of his name) that we are able to compliment the Clarendon Press on the elegance of its type as well as on other traditionary excellence. And certainly there has been an improvement in cloth bindings in recent times, if we may judge by the books before us.

We now proceed to mention, for the benefit of those who know the old editions, the chief alterations which we have noticed in the one before us. We will then add, in the interest of those who are not so fortunate, a general summary of the contents of the four volumes as they now appear.

In the text of 'The Ancient Liturgy' we notice (p. 82) the appearance, in the proper place in the Sarum column, of the words "Acceptum sit . . . novum," which we had supplied in MS. on p. 56 of our copy of the previous edition, in the Ordinary of the Mass. The full Sarum rubric at the Commemoratio pro Vivis is now given (p. 122). In the foot-notes there are more frequent extracts from the 'Layfolks Mass Book' (recently edited by Canon Simmons for the E.E.T.S.), in addition to those which appeared before under the title of "Museum MS."

Among the documents in the Additional Note the Missa pro Rege, which appeared as No. iv. and now stands last, is taken from a Missal of Henry VII.'s (instead of Henry VIII.'s) reign, and some new remarks are added. Also the Præparatio ad Missam is now given (p. 275), as it was commonly attached to it. This has already appeared in the 'Sarum Breviary' (Cambridge, 1879).

The Order of the Communion (1548), which was the step between the Missal and the first Prayer Book of Edward VI., has also been printed in modern times; nevertheless it is quite right that Mr. Maskell should include it in his volume. The late Mr. Coxe appears to have discovered a copy among the treasures of the Bodleian, which was not known to possess one in 1846. Eighty or ninety pages of the old preface (pp. lxv–cl)—which contained a eulogy on that Order and a reference to auricular confession, with a discussion on what was once a burning question, the practice of clergy hurrying from one church to take part in the communion at another at a late point in the service, and a long argument against non-communicating attendance, beside other passages relating to Convocation, a full argument in favour of the reformed English communion service, and such like topics—have been removed. It seems to us rather a pity that Mr. Maskell should have put any other controversial matter in their place. Nevertheless the note to which we allude (pp. lxxii, lxxiii) will be read with interest by many as a criticism on recent ecclesiastical decisions coming from an independent observer. In spite of the omissions the new edition contains about a sheet and a half more than the previous one. This is mainly taken up by many slight additions to the notes.

The index must not be forgotten among improvements. Such things are never perfect to all tastes and requirements; but we should have liked to find such items as "Bangor," "Hereford," "York," or at least a fuller article at "Sarum" or "Use," to include pp. lxx, lxxvii, &c.

But still more in the 'Monumenta Ritualia' will the reader find the advantage of having a general index in vol. iii. It strikes us as being somewhat quaint to find everybody's mistakes (including one by the author in his earlier edition) put into the index. By the way, we recommend any reader who has a taste for funny blunders to refer to the story of an illiterate clergyman given on p. 254 of 'The Ancient Liturgy.'

In the 'Monumenta Ritualia' the editor has controlled the inclination to controversy with which he charges himself. The additional matter which we have noted in these three volumes consists of a slight enlargement of the Dissertation on Service Books (with its index, p. ccxxx); the Benedictio Primarii Lapidis, vol. i. p. 192; a litany sung at the coronation of Queen Matilda (1068), vol. ii. p. 85; a portion of a metrical calendar, iii. 224; versions of the Decalogue and *Quicunque vult*, iii. 254–60; an additional form of the Manner to make a Nun, the Office for King Henry VI., and two Indulgences in English, iii. 360–77. The notes to the Prymer in English contain extracts from a Brit. Mus. MS. which was not used before.

We may describe the work as a whole by saying that 'The Ancient Liturgy' contains (with abundant notes and dissertations) the Ordinary and Canon of the Mass according to the four mediæval "uses" mentioned in its title. It is, in the strictest sense of that word, the liturgy (with its complete rubrics and *cautelæ*) apart from the body of masses, which are the variable portions differing for every feast or other occasion. Expressed in terms of the English Common Prayer Book, it is "The Order of the Administration of the Lord's Supper or Holy Communion," without the "Collects, Epistles, &c., to be used throughout the year."

The 'Monumenta Ritualia,' according to the new arrangement of the volumes, contains (Vol. I.), after the valuable Dissertation on the ancient Service Books of the Church of England, the Occasional Offices (Baptism, Confirmation, Matrimony, Visitation and Unction of the Sick, Burial; Blessing of holy water, bells, banners, bishop's ring, &c.; Consecration of a church and churchyard; Reconciliation after pollution of the same; Form of holding a Synod). Vol. II.: Coronation (ancient and modern); notes on royal obsequies; Ordination services; the pall, inthronization, and other matters referring to episcopal and archiepiscopal honours; likewise forms of degradation, excommunication, and reconciliation, and the tract called 'Defensorium Directorii,' divorced still (as we see) from its companion the 'Crede Michi.' These were the attempts of learned ritualists to appease certain doubts or diverse takings of ceremonial directions in the books of Sarum use. Vol. III.: The Prymer in English, kalendars, and many other pre-Reformation prayers, forms of instruction, &c., in the vulgar tongue; the general index. It is obvious from the foregoing summary that students owe a very great debt of gratitude to the collector of these documents, even apart from the learned notes and disquisitions which accompany them.

On a matter of pure liturgiology we should be very slow to question Mr. Maskell's judgment, but there is one point of historical

XUM

inference on which we venture to join issue. Arguing against the supposition of several modern scholars that Greek was the language of the liturgy used in the primitive Church in Rome, he says it is "scarcely to be believed that St. Peter or St. Paul, having collected a congregation of new Christians, would have allowed them to offer up the most solemn service of their faith in a language which they did not understand." Not to inquire now what proportion of them would be likely to understand Greek, it seems enough to say that St. Paul *did* write an epistle to be read in Greek in their congregation, which according to the judgment of Dr. Lightfoot (now Bishop of Durham), in Dr. Smith's 'Dict. Bibl.,' iii. 1055, was "a mixed Church of Jews and Gentiles, the latter perhaps being the more numerous."

NOVELS OF THE WEEK.

Born to Luck. By the Author of 'Wrecked Early in Life.' 2 vols. (Remington & Co.)

Leone. (Boston, U.S., Osgood & Co.; London, Trübner & Co.)

CHARITY and Evelyn Joyce, the heroines of 'Born to Luck,' are two sisters bred and nurtured in humble circumstances, whereof the younger, being the prettier, the lighter, and the more fortunate, becomes the wife of a lunatic baronet and the mother of an idiot daughter. Charity marries an honest man, with whom she emigrates to Australia; so that if their life histories were arrested at this point it might well be urged that the legend of the title-page would apply better to the elder than to the younger of the two. But Eve has better things in store for her than her melancholy widowhood, and her good fortune fairly matches that of her sister. The tale is simply told, the characters being bright and lifelike, and the incidents sufficiently varied. There is a little too much in the moralizing vein, for the framework of the story is not strong enough to support a superstructure of philosophic maxims, and the simple pointing of obvious morals becomes too commonplace for the mass of modern readers.

'Leone' is well worth introducing to the English public. Save for a few Americanisms, with which it is useless to find fault, it would take a good place amongst the most respectable English romances; though not even the licence which covers "odor," "to be through" in the sense of "to have finished," and so forth, can justify the use of such phrases as "he belongs in our neighbourhood." This is mere verbal criticism, but it clearly affects the chance of any book of Transatlantic origin becoming popular in England. Passing, however, to more general considerations, it may be granted that the story is vivacious, well constructed, graceful, and natural in its narration. The plot is not new. A brigand deposits a child with a monk, and keeps it well supplied with money; the child becomes a noted artist, and encounters a sea of difficulties by being supposed to have a brigand for his father; and eventually the Nemesis of the outlaw brings relief for everybody else. But if the matter is not original, its treatment is inoffensive and, for the most part, fresh. All the leading characters have our sympathy throughout, and under these conditions it is not surprising that the story as a whole should be pleasant to read.

GUIDE-BOOKS.

MR. C. S. WARD'S *Guide to North Devon and North Cornwall*, which Messrs. Dulau publish as part of the "Thorough Guide" series, is very well done. It contains much information in a small compass and the maps are excellent.

Tourists' Guide to Warwickshire. By G. P. Bevan. With a Map. (Stanford.)—Mr. Bevan's effort to produce a cheap and portable guide-book has been successful. In a terse and systematic manner he indicates rather than describes the leading places and objects of interest in the central English county, a shire of woodland, downs, green lanes, bright streams, and one world-famous river, the beautiful Avon of Shakspeare. The county contains in Sutton Coldfield a phenomenal place "which enjoys a unique freedom from rates." This distinction is due to Bishop Vesey, whose altar tomb is in the church. He bequeathed the manor to burgesses, and they have so utilized the estate as to make it produce about 3,000*l.* a year. Mr. Bevan asserts that this benevolent prelate died at the age of 103. An equally remarkable object is the church at Stivichall, which is said to have been built by the sole hands of William Green, a mason, who spent forty years in the execution of his task. This little book is one of the best of its class, being compact and, so far as we have been able to test it, correct in all respects. The archæological portions are marked by exceptional good taste and variety; they are, allowing for the bulk of the volume, copious and animated. In respect to the enumeration of so-called fine pictures in private collections which shall be nameless, Mr. Bevan, having followed the old-fashioned authorities without discrimination, is unfortunate in scattering broadcast the names of Van Dyck, Holbein, and Titian, where, except popular and family belief, no justification exists for such liberality. It would have been as well if the compiler had abstained from speaking of the curious prostrate and erect stones near Cherrington, called the Whispering Knights, as "of Druidical origin." He ought to know that they are, as every Warwickshire man believes, the weather-reduced relics of five gigantic Danish thegns and their king, who were turned into stones because they had invaded the shire of shires.

Tourists' Guide to Essex. By E. Walford. With a Map. (Stanford.)—Mr. Walford has given much of the history of the towns and villages of Essex, but he has not expended equal labour on the by no means important or numerous relics of architecture existent in the county. Undoubtedly the greatest of men's construction in Essex is that marvellous embankment, probably the work of British slaves and Roman legionaries, which defends more than one hundred miles of its shore against the Thames and the North Sea. As to the inhabitants of the county river, there is a probably unintended touch of humour in Mr. Walford's notice:—"Curiously enough, the only fish which seems now to thrive on the filthy condition of the lower Thames is the whitebait." Turbots, congers, whiting, and even ling—King James's much abhorred ling—turn up their noses at the stream and speedily retrace their ways. Not so the bathers of Southend. As a sketch of the history of the shire and its inhabitants, Mr. Walford's book is at once compact and handy, but it is less useful as an itinerary than we have found the "Tourists' Guides" of other counties to be. The bicyclist, to whom the level ways of Essex offer most tempting facilities, may improve his mind by reading Mr. Walford's notes, but he will not be quite so fortunate in using this work as a road-book. This inferiority is, however, only comparative.

THEOLOGICAL BOOKS.

APOCRYPHAL books of the Old or New Testament, of whatever date or language, are of some importance in religious history. We welcome, therefore, the Rev. S. C. Malan's translation of an apocryphal book written in Ethiopic, which bears upon the history of the early Eastern Church, and contains chiefly a history of the first man. It is censured in the Apostolic Constitutions among other works, such as the Apocrypha on Moses, Enoch, Isaiah, &c. They were all published in Ethiopic, in which language they are preserved complete, and have been translated into German, and the last two also into English. By an oversight Mr. Malan quotes only Bishop Laurence's text and translation of the 'Ascension of Isaiah,' and not the later translation by Dr. Dillmann, with a more accurate text. *The Book of Adam and Eve, also called The Conflict of Adam and Eve with Satan*, by Mr. Malan, is a translation based upon the Ethiopic text edited recently by Prof. Trumpp, of Munich. The translator had the advantage of making use of Prof. Dillmann's edition of the less perfect Arabic text of this apocryphal book with his German translation, and of the essay by Dr. Meyer of Munich, 'Vitæ Adæ et Evæ,' from Greek and Latin texts. We agree with Mr. Malan that the Ethiopic translation is made from an Arabic text, but we do not think that the Arabic is the original. Mr. Malan, in the preface, after having mentioned that no Greek or Egyptian original of it is as yet known to exist, says: "There is, indeed, a Syriac work of the early Church, called 'M'ārath Gāze' ('The Cave of Treasures'), mentioned by Asseman.....Judging from its title, it may have much in common with the present work; yet in the absence of all knowledge of that Syriac MS., one can, for the present, only look upon the Arabic copy, written in Egypt, as the probable original." Mr. Malan must have overlooked the statement of Prof. Trumpp, from Dr. Wright's Catalogue, that a Syriac MS. of it exists in the British Museum, which, if it is not the original, was no doubt the text from which the Arabic is derived. Mr. Malan is right in saying that whilst "the apocryphal books of Moses, Enoch, and Isaiah are apparently of Jewish origin, this 'Conflict of Adam' is altogether a Christian work, and of a later date than those writings." Indeed, it can scarcely be earlier than the fifth century, and is certainly not later than the beginning of the ninth century, since it is quoted by writers of the ninth century. This apocryphal book having nothing to do with Jewish ideas, we fail to understand why Mr. Malan accumulates comparative notes from Jewish writers, and not only from the Targums and the Midrash, which might through some channel have influenced the author of the 'Conflict of Adam,' but from Maimonides (twelfth century), from the 'Zohar' (thirteenth century), and even from the 'Yalkut Reubeni' (seventeenth century). The translator's not giving the dates of his authorities will certainly mislead readers unacquainted with Rabbinical literature. Or does Mr. Malan mean to say that these later Rabbis have read a translation of the 'Book of Adam'? We are astonished that he does not mention that the 'Zohar' names a 'Book of the First Adam.'

DR. WRIGHT'S critical edition of the *Chronicle of Joshua the Stylite*, composed in Syriac A.D. 507, with an English translation and notes (Cambridge, University Press), will not only be useful to students of the Syriac language, but also to historians. This is one of the earliest chronicles in Syriac, which are not very numerous. It contains an account of the wars between the Greeks and the Persians in Mesopotamia from the years A.D. 362 to 507. The well-known Syriac scholar M. l'Abbé P. Martin prepared an edition of it based on the unique manuscript of the Vatican Library, and published it with a French translation in 1876. This MS. being

in some parts difficult to read, and, as it seems, M. Martin having had no time for a thorough collation, his text and consequently his translation are in many respects inaccurate. Dr. Wright, having obtained Prof. Guidi's collation of the MS., now gives us an accurate text, a trustworthy translation, and copious notes, geographical as well as historical. Thanks to the Syndics of the University Press, we possess this valuable document in a satisfactory state.

MR. NASSAU MOLESWORTH'S *History of the Church of England from* 1660 (Kegan Paul, Trench & Co.) may be anything else, but it is certainly not what it professes to be. For writing ecclesiastical history Mr. Molesworth has not a single qualification. An author who confesses in his preface that he was "not made aware [!] of the existence of the very elaborate essays of Abbey and Overton until a great part of this book was already in type" is ingenuous as far as he goes; but it would have taken a very long preface indeed to notice the authorities which an historian ought to be familiar with and of the existence of which Mr. Molesworth was not "made aware." The "history" of the Church of England in the eighteenth century is dismissed in less than forty pages. Mr. Molesworth evidently thinks that he has given the century as much as it deserves. Such men as Berkeley and Butler and Waterland are beneath his notice. For that matter, he does not even mention the names of Bingham or Wall or Bull, and it may be doubted if he has ever heard of Cudworth or Whichcote. He knows so little of Isaac Barrow as to call him a bishop, and he passes by with serene contempt so inconsiderable a personage as Jeremy Taylor. After this it is hardly worth while to notice the loose and slovenly style of the writing or to point out mistakes in the manner and the matter of this volume.

OUR LIBRARY TABLE.

English Political Leaders.—Lord Palmerston. By Anthony Trollope.—*William Pitt.* By Lewis Sergeant. (Isbister.)—After a very long interval these two volumes follow the memoir of Sir Robert Peel, which started the series. The notion of condensing into short and cheap books all that is most important in the lives and exploits of prominent statesmen is a good one, and it is hardly a serious fault in its working out that, the different volumes being written by different hands and prepared without regard to chronological order, a good deal of repetition, contradiction, and incoherence is inevitable. There is a special art in writing such books well, however, which is by no means certain to be possessed by writers famous in other and perhaps higher kinds of literature. The selection of Mr. Anthony Trollope as the compiler of a small memoir of Lord Palmerston, at any rate, has not been judicious. Mr. Trollope has the advantage of being an enthusiastic admirer of Palmerston, and of having watched his public life during its later and more important half. This gives point and originality to many of his reminiscences and to some of his criticisms, and Mr. Trollope could probably write a very racy and instructive review of Lord Dalling's and Mr. Ashley's biographies. But the personal flavour imparted to some of the episodes and comments set forth in this volume is not in harmony with the bald and slipshod statement of facts about which the author's recollections were not exact, and which he has not taken the trouble to correct or amplify by consulting competent authorities. The book, moreover, has evidently been written too hastily for care to be taken with regard to artistic arrangement of its materials or grace of style. It abounds in shrewd remarks, and fairly illustrates Lord Palmerston's character, which Mr. Trollope admiringly sums up in the words, "He was ready to fight any man who was not an Englishman for any point, and any man who was an Englishman who opposed him as long as he had a leg to stand upon." But it is by no means a sufficient or satisfactory account of Palmerston as an English political leader.—Mr. Lewis Sergeant's companion volume is a less pretentious book than Mr. Trollope's, but more in keeping with the plan of the series. It is a careful and, within its limits, comprehensive review of Pitt's public life and its political surroundings. It shows under what conditions the "boy without judgment," as Fox called him, jumped into the most responsible office in the state, and, in a time of peculiar difficulty, administered its affairs with such skill as perhaps no other English Premier has shown. Mr. Sergeant attempts nothing more than an honest epitome of facts that have been often and more fully set forth in other works, and his admiration of Pitt's genius does not prevent him from taking exception to some important lines in his hero's policy; but he has succeeded in compiling a very interesting little volume, from which "the general reader" may learn much.

Scottish Myths, a book by Dr. R. Craig Maclagan, has been sent to us by Messrs. Maclachlan & Stewart, of Edinburgh. Three or four years ago the author prepared for private circulation a little tract on the Maclagans, entitled 'The Clan of the Bell of St. Fillan,' in which he quoted an opinion of the late Bishop of Brechin that this old sacred bell bore a phallic emblem. Although he does not even refer to his previous *brochure*, it may be presumed that this slight circumstance led the author into the daring speculation of the 'Scottish Myths.' He shows immense industry, ingenuity, and confidence; but the "Notes" he has ventured to publish, without a single break in the whole 233 pages, are a mass of incoherent conjectures and daring assumptions, and, in fact, are scarcely intelligible. The subject of the book is not capable of discussion in a public journal, while its utter lack of method or signpost, its crudeness, its inconsistencies, its contortions of every possible word, historical statement, or fabulous narrative—even poor old Boece's invention as to the origin of the Hays is pressed into the author's service—in favour of a preconceived theory, place the work beyond the pale of serious criticism. Dr. Maclagan's conjectures, however obviously inconsistent, from whatever quarter fetched, are always so pointed as to bear out his theory. Take the word Scot, as it appears in different parts of the book. *Scocha*, we are told, is Walloon for a pea, and has reference to the pulse used in certain religious rites—"a 'pease bannock' is not an unknown form of diet at the present day in Scotland"; Σκότιοι are those born of unlawful nuptials; "*Scoth* or *scoacc*, in modern Breton *skoe*, *skoaz*—also signifying a vine branch, of which the modern form is *skod*." In actual historic times—so late as the close of the thirteenth century—the familiar story of the Inverkeithing priest, given in the Book of Lanercost and reproduced by Kemble (after all, a second-hand story, transmitted to a great distance, perhaps invented, and at best recording what was palpably no more than a local custom), would seem to furnish evidence of the survival of a lascivious pagan worship, and there are traces of other forms of superstition; but the study of our ancient myths is not likely to be advanced by such imprudent productions as that of Dr. Maclagan.

A NEW edition of *Longfellow's Poetical Works* has been sent to us by Mr. Warne. It is a reprint of the last American edition. From the same publisher come a neat little *Longfellow Birthday Book* and a *Shakspeare Birthday Book*.

Life's Pathway, and other Poems, by Mr. T. Leech, of the Metropolitan Police (Satchell & Co.), is a volume creditable to the writer, having been written amid what he calls "disenhancing" associations. He should be a little less licentious in his rhymes. Even a constable of Irish descent has no right to make "joy" rhyme with "high" and "shook" with "struck."

WE have received from Messrs. Cornish, of Birmingham, the *Calendar of the Mason Science College at Birmingham*, from which it would seem that Sir Josiah Mason's foundation is prospering.—We have further received from Newcastle-on-Tyne the *Calendar of the College of Physical Science*. It is rather shabbily printed.—We have also on our table the *Catalogue of the Lending Department of the Central Library at Sheffield* (Sheffield, Robertshaw), which contains both a list of authors and an index of subjects.—*The Handbook of Jamaica*, printed by the Government Press, is compiled by Mr. A. C. Sinclair and Mr. L. R. Fyfe, and is an elaborate work, containing, among other things, a chronological history of the island.

THE *Specimens of Brass Rules* published by Messrs. Stephenson, Blake & Co. are neat and clear.

WE have on our table *Early Shorthand Systems*, Part I., by J. Westby-Gibson (Wade),—*The Rapid Shorthand Writer*, by F. J. Lock (Dawson),—*Standard Stenography*, by A. Janes (Author),—*First Series of Examples in Book-keeping by Double Entry* (Burns & Oates),—*John Byrom's Journal, Letters, &c.*, by J. E. Bailey (Manchester, Gray),—*Country Notes*, Parts I. and II., reprinted from 'The Manchester City News': *The Arsenical Springs at La Bourboule*, by G. H. Brandt (Lewis),—*Madeira Meteorologic*, by C. P. Smyth (Edinburgh, Douglas),—*Worms and Crustacea*, by A. Hyatt (Boston, U.S., Ginn & Heath),—*Art in Everything*, by H. Fawcett (Houlston),—*Holt Castle*, by Prof. H. Tanner (Chapman & Hall),—*The Relation of Political Economy to the Labour Question*, by C. D. Wright (Boston, U.S., Williams),—*The Crops of the Farm*, edited by J. C. Morton (Bradbury),—*Handbook to Chester Cathedral*, by the Rev. J. S. Howson (Chester, Phillipson & Co.),—*The Rise and Progress of the Order of St. John of Jerusalem*, by E. Surtees-Allnatt (Griffith & Farran),—*Bicycles and Tricycles of the Year* 1882, by H. H. Griffin (Gill),—*Dogs and Cats and how to Manage Them* (Ward & Lock),—*The Burgomaster's Wife*, by G. Ebers (Macmillan),—*Prudence*, by Lucy C. Lillie (Low),—*My Watch Below*, by a Seafarer (Low),—*Benderloch*, by W. A. Smith (Paisley, Gardner),—*The New Clarissa*, by Lord Monroe (Remington),—*National Pictures*, from the Spanish of F. Caballero (Burns & Oates),—*Peace and War in the Transvaal*, by Mrs. W. H. C. Long (Low),—*The Drama as an Element of Education*, by F. S. Dumaresq de Carteret-Bisson (Simpkin),—*An Introduction to the Study of Poetry*, by H. B. Cotterill (Kegan Paul),—*Translations from Heine*, by E. Radford (Reeves),—*Poems*, by H. I. D. Ryder (Dublin, Gill),—*Alfonso Petrucci, an Historical Tragedy*, by R. C. Jenkins (Kegan Paul),—*In Memoriam of Bishop Utterton*, by G. Dewdney (Prentice & Co.),—*Day-Breezes, and other Poems*, by E. W. Spawton (Blackwood),—*Cien Sonetos Nuevos*, by N. P. Llona (Lima, De Carlos Prince),—*Interrogaciones, Poemas Filosóficos*, by N. P. Llona (Lima, De Carlos Prince),—*Reflexionen Kants zur Kritischen Philosophie*, Vol. I., by B. Erdmann (Williams & Norgate),—*Les Révolutions du Droit, Études Historiques*, Vol. II., by H. Brocher (Geneva, Georg),—*Der Buddhismus in seiner Psychologie*, by A. Bastian (Berlin, Dümmler),—and *Polyeucte dans l'Histoire*, by B. Aubé (Paris, Firmin-Didot & Co.). Among New Editions we have *More than Coronets*, by Mrs. G. L. Banks (Simpkin),—*Maude Bolingbroke*, by Emma J. Worboise (Clarke),—*Fanny Lee's Testimony*, by Mrs. Hanson (Heywood),—*Philæ, a Drama of Ancient Egypt* (Chapman & Hall),—*An Essay concerning Human Understanding*, by J. Locke (Sonnenschein),—*The Spirit of Saint Francis de Sales*, by M. Camus (Dublin, Gill),—*Collins's Guide to London* (Collins),—*Practical Geometry for Art Students*, by J. Carroll (Burns & Oates),—*Forewarned, Forearmed*, by the Right Hon. Lord Henry G. Lennox, M.P. (Ridgway),—and *Notes on Ceremonial: the Order of Holy*

XUM

Communion with Prayers and Rubries from the Sarum Missal (Pickering). Also the following Pamphlets: *Employment of Women in the Public Service*, by Lady John Manners (Blackwood),—*A Fragment on Political Education*, by G. Whale (Ridgway),—*Copyright in Books*, by S. E. Dawson (Montreal, Dawson Brothers),—*An Essay on the Transfer of Land by Registration*, by Sir Robert Torrens, K.C.M.G. (Cassell),—*Sprengel's Vacuum-Pump*, by H. Sprengel (Spon),—*The Uselessness of Vivisection upon Animals*, by L. Tait (Birmingham, 'Herald' Press),—and *The Pope and Italy*, by A. Wood (Burns & Oates).

LOVE AND VISION.

My love is more than life to me,
And you look on and wonder
In what can that enchantment be
You think I labour under.

Yet you, too, have you never gone
Some wet and yellow even
Where russet moors reach on and on
Beneath a windy heaven?—

Brown moors which at the western edge
A watery sunset brushes
With misty rays yon sullen ledge
Of cloud casts down on the rushes.

You see no more; but shade your eyes,
Forget the showery weather,
Forget the wet, tempestuous skies,
And look upon the heather.

Oh, fairyland, fairyland!
It sparkles, lives, and dances;
By every gust swayed down and fanned;
And every rain-drop glances.

Never in jewel or wine the light
Burned like the purple heather;
And some is the palest pink, some white,
Swaying and dancing together.

Every stem is sharp and clear,
Every bell is ringing,
No doubt, some tune we do not hear
For the thrushes' sleepy singing.

Over all, like the bloom on a grape,
The lilac seeding-grasses
Have made a haze, vague, without shape,
For the wind to change as it passes.

Under all is the budding ling
Grey-green with scarlet notches,
Bossed with many a mossy thing,
And gold with lichen-blotches.

Here and there slim rushes stand
Aslant like carried lances.
I saw it and called it fairyland;
You never saw it, the chance is.

Brown moors and stormy skies that kiss
At eve in rainy weather—
Pronounce on that—what the heather is
I know, for I saw the heather.

A. MARY F. ROBINSON.

THE FIFTH ANNUAL MEETING OF THE LIBRARY ASSOCIATION.

Cambridge, Sept. 9, 1882.

TO-DAY our proceedings were brought to a close by a visit to the University Library under the guidance of Mr. Bradshaw, who, with infinite patience, explained in minute detail the system of cataloguing, shelving, and distributing the books under his charge. A better conclusion of the visit could hardly have been conceived.

Mr. Garnett's review last Tuesday of the progress which had been made in printing the catalogue of the British Museum Library, beginning with 1841, when the volume containing letter A was published, seemed to admit that the Association was entitled to some share of the glory which justly redounds to Mr. Bond and the Trustees for having boldly grappled with that onerous undertaking. Six years ago the subject was discussed with great animation at the first conference of librarians, at which presided Mr. Winter Jones, the late Principal Librarian of the British Museum. It is certain that then "very few," as Mr. Garnett said, "expected that at the sixth meeting it would be possible to announce that the work was actually in progress." Public discussion must have had some effect in stimulating to action. The prudent manner in which the expense of this great work is spread over a series of years is doubtless grateful to the feelings of the taxpayer, but forty years is a long time to wait for the completion of a work which is of comparatively little use till it is complete. Three pounds ten is not a high price to pay for fourteen hundred pages of such a work every year, and it is to be hoped that the portion of the public which is to benefit specially by its publication will subscribe that sum annually, thus helping to swell the Treasury grant. None the less fervently is it to be hoped that the grant will be enlarged by the Government, and Mr. Garnett's aspiration for the completion of the catalogue by the end of the century become an accomplished fact. No doubt the volumes devoted to one particular subject, such as the Bible or Shakspeare, will command a profitable sale. The reduction of the two thousand folio manuscript volumes now in use in the Reading Room to five hundred quarto volumes will in itself be a great gain to the readers who gather there. That photography may be introduced to cheapen the multiplication of the catalogue and its various parts is not the least valuable of the many admirable suggestions with which Mr. Garnett's paper abounds. A lively discussion followed the reading of the paper, in which it was generally admitted that the catalogue when complete will be as nearly a universal catalogue of literature as is attainable in these present days. Mr. Cornelius Walford's suggestion of a catalogue of books *not* in the library of the Museum would, of course, if it could be carried out, make the universality of the work less nominal. The paper of Mr. Magnusson, on 'The Spread of Books in Early Times,' was in the main a treatise on the book-migration from England to Iceland in the twelfth century. Evidence from ancient records was given to show that the Icelanders got their alphabet from England, and drew all their ideas of the philosophy of sound and word formation, their pronunciation and orthography, from this country. The English alphabet of Ælfric's time was the current alphabet of Iceland.

Mr. C. Walford's account of early book fairs contained very much that was new to his hearers, and excited a general desire for an exhaustive treatment of the subject. Starting with an allusion to the fairs held at Stourbridge in the fourteenth and fifteenth centuries under the patronage of the great religious houses, he spoke of the monkish transcribers, and pointed out the natural connexion of the precincts of Westminster Abbey and of St. Paul's Cathedral with the production of books, a connexion that has been maintained in the case of St. Paul's to the present day, when Paternoster Row, Ave Maria Lane, and Amen Corner continue to be the home of the producers of books. He also gave some account of the German book fairs held at Frankfort and Leipzig, not forgetting Augsburg and Nuremberg. The dissemination of books in America in the seventeenth century by Harris and Duncombe, who employed pedlars for the purpose, was referred to by Mr. Henry Stevens.

Mr. Bowker, of New York, in an epigrammatic paper on 'The Work of the Nineteenth Century Librarian for the Librarian of the Twentieth,' endeavoured to show that the arduous labours of the former in helping to organize knowledge would confer a great boon on the people to come after by smoothing the way for all learners. By classifying and cataloguing, he said, bringing the books to readers and the readers to books, the librarian becomes the merchant, the middleman of thought, and makes time for his fellow mortals by saving it. He is a bridge-builder, and not so much a keeper as a liberator of books, his missionary relation being one of the discoveries which the nineteenth century will hand along to the twentieth.

The question of lighting libraries by means of electricity, which has been tried at the Liverpool Free Library as well as at the British Museum, was well discussed after a paper read by Mr. Peter Cowell, of Liverpool. The superiority of this mode of lighting over gas was generally admitted, but the expense at present of setting it up and keeping it in order was held to be prohibitive for all but the largest libraries. Mr. Yates, of Leeds, spoke earnestly on the subject of giving to the principal libraries in the kingdom all the Blue-Books and other publications printed by order of the Government, and

the discussion which ensued ended in a resolution of the meeting, "That it should be an instruction to the Council to promote the necessary measures to secure that those documents which were printed at the public expense be regularly distributed to at least the larger libraries established under the Public Libraries Act."

The consumption of time in the reading of these several papers and the subsequent discussions compelled the Council to rearrange the papers put down for Thursday. Mr. H. R. Tedder led off with a paper on 'Librarianship as a Profession,' in which he set before his hearers the elevated views of their work which they should entertain, and intimated that their profession had risen already in public consideration since the formation of the Association, and had still a great future before it. He advocated a more systematic study of library science and the training of students, who should submit to examinations by an authorized body, as do the members of other liberal professions. The Report of the Committee on the Training of Library Assistants, which was then read, was in consonance with Mr. Tedder's views, and recommended the granting of certificates of proficiency to all candidates who pass an examination.

A pleasant three-cornered duel then ensued between Mr. Henry Stevens and two experts, Mr. Blades and Mr. Wyman, on the subject of the manufacture of English books. The title of Mr. Stevens's paper, 'Who Spoils our Books?' was a challenge, and the answer, "the uncritical consumer and untrained manufacturer," very freely enlarged upon, drove the charge home. Mr. Stevens's æsthetical aspirations for beautiful books provoked the reply that the matter is entirely one of expense. *Éditions de luxe* are to be had if you will pay for them, but the diffusion of literature by means of very cheap editions of books can only be accomplished by the use of coarse materials and inferior workmanship in their manufacture, unless the booksellers will forego a large share of their profits. The subject of binding and that of classification were hurried over at the close of Thursday's meeting, owing to the pressure of other business. For the same reason Mr. Wright's paper on librarians and local bibliography was taken as read. Mr. Nicholson brought forward a resolution which seems likely to become annual in favour of opening libraries on part at least of Sunday. A decision on the subject was evaded by the passing of the previous question. A motion by Mr. Campbell, pledging the Association to urge upon Government and the Legislature the importance of consolidating and amending the law relating to free libraries, was more fortunate, being carried by a large majority. Liverpool was chosen as the scene of the next annual meeting, and Sir James A. Picton, chairman of the Free Libraries Committee there, was elected President of the Association for the ensuing year.

Mr. Bowker had warmly urged upon the meeting an invitation he had been instructed to offer to the members of the Association that they should visit the United States in 1883 or 1884. Special arrangements could be made that the cost of the journey should not amount to more than 50*l.* or 60*l.*, a notion that rather tickled some of the auditors as they reflected on the amount of their stipends. During the week visits to various college libraries, where the respective librarians gave an historical account of the collections under their charge, were diversified by an evening reception at King's College by Mr. Bradshaw, another at the Free Library by the Mayor of Cambridge, and by a dinner on Thursday, to which the assembled librarians invited Mr. Bradshaw, the Vice-Chancellor of the University, Dr. Porter, and other hospitable friends.

Among the pleasant incidents of the meeting was that of photographing the group of librarians seated in front of the venerable porch of King's College Chapel. Every librarian present will doubtless carry away this memento of his colleagues, of the time, and of the place, for it may be said with confidence that this has been one of the most successful meetings that the Association has enjoyed, and that it has justified the policy, once considered doubtful, of making the librarians come together at least once in every year. H.

P.S.—May I ask for a correction of my previous letter by inserting the words "in English" after "never yet been published" in the fifth line from the bottom? 'Uffenbachs Reisen' were published at Frankfort and Leipzig, 1735–54, in 3 vols. 8vo.

THE 'QUARTERLY REVIEW' ON SWIFT.

Everything may be pardoned to the critic who brings us nearer to a mind so noble yet in many ways so inaccessible as Swift's, except inaccuracy; each blunder the *Quarterly* reviewer has made must impair the general value of his testimony, and so mar the service he has rendered to all of us who have long hoped to see Swift more reverently appreciated. Permit me, then, as a matter of more than passing interest, to point out that your contributor has been misled, in most cases very pardonably, as to all the supposed errors which he cites from the *Quarterly* article.

1. Swift's own autobiography (printed in Forster's 'Life,' p. 12) distinctly states, "By the time he was *three* years old he could read any chapter in the Bible." F. G. in correcting this to "his *fifth* year" has been misled by Scott.

2. The statement of the *Quarterly* reviewer that in 1713 Pope was busy with the second edition of the 'Rape of the Lock' is confirmed by Pope's own words in a letter to Caryll dated December 15th, 1713: "I have been employed since my being here in the country in finishing the additions to the 'Rape of the Lock'" (Elwin's edition, vol. i. pp. 198–9).

3. The *Quarterly* is probably right in saying that Pope was engaged on the translation of the Iliad in 1713, for to Johnson's statement, "He began it in 1712," Mr. Cunningham (p. 29) adds the note, "This is not quite correct; he began the Iliad in 1713."

4. There is no discrepancy in describing Swift as "uncouth" when he was a youth of twenty-one, and as of a most striking and impressive appearance at forty-four, for the *Quarterly* reviewer distinguishes between these very different periods. I do not know upon what evidence he relies, but his epithets are at least plausible, inasmuch as the prominent, strongly pronounced features which lend force and majesty to age sit uncouthly enough on the face of youth. E. P.

BENGALI TRANSLATIONS OF SANSKRIT TEXTS.

Protap Chandra Roy, whose name is well known to Oriental scholars by his Bengali translations of Sanskrit texts, has undertaken two new publications of great importance, an edition of the 'Mahâbhârata' and an edition of the 'Râmâyana' in Sanskrit, followed by Bengali translations. It is interesting to learn from his preface that he published his first translation of the 'Mahâbhârata' in an edition of 3,000 copies in seventy-six parts. This edition was partly subscribed for by natives, partly distributed gratuitously. Protap Chandra Roy then founded a society for the gratuitous distribution of Bengali translations of Sanskrit texts, the Dâtavya Bhârata Kâryâlaya, and he states that the number of copies of the 'Mahâbhârata' thus distributed by the society amounts to 9,000, and of the 'Harivamsa' to 2,000. Encouraged by this success he is now bringing out an edition of the 'Râmâyana' in Sanskrit and Bengali, in monthly parts of 2,500 copies each, of which ten parts have appeared, and of the 'Mahâbhârata,' of which two parts [illegible] peared. The chief patron of the unde[illegible] is the Mahârâjah of Kashmir, Ranaviras[illegible] but many other native noblemen and gentlem[illegible] have joined the society. Protap Chandra Ro[illegible] is a true patriot, and in his Sanskrit preface speaks out very strongly, mourning the decay of Sanskrit scholarship and the absence of all real interest in the ancient literature of India. Yet he is not discouraged, and with the help of his countrymen, poor as they are, he hopes to be able not only to continue the gratuitous distribution of his Bengali translations of Sanskrit texts, but to publish also a complete English version of the 'Mahâbhârata.'

RAINSBOROUGH.

Will you allow me to point out in reply to your reviewer that if he had referred to the Reports on Historical MSS. he would have seen that the Colchester municipal records are to be dealt with in due course; also that, as he charges me with being "singularly incorrect" in speaking of "Fort Rainsborough" (*sic*), he will find the name so spelt in the well-known siege map of Colchester published at the time? Such, indeed, is the usual spelling, as is seen in Clarendon's description of this "bold and barbarous" Independent. Moreover, it is "singularly incorrect" to say that I am "strongly on the side of" the Parliament in the Civil Wars, the precise reverse being the case, though in dealing with the second civil war I have called attention to a fact not sufficiently realized, namely, that the gallant defence of Colchester, by removing the pressure of "the Army party" (as it was well termed at the time), gave free play to the Royalist reaction in Parliament, while the fall of Colchester ultimately led to Pride's purge and the triumph of the sword. It can hardly be expected that this reminder should prove agreeable to Cromwellians.

The Author.

*** By a slip of the pen we wrote "latter" for *former*. We intended to say that our correspondent is a strong partisan of the royal cause. So far we owe him an apology, but the proper spelling of Rainsborough is certainly Rainborowe. In every letter of "the fanatical seaman" that is known to be in existence the signature is Rainborowe. His father and others of his family signed the same way. It is frequently printed Rainsborough, but none of the family ever deviated from the Rainborowe spelling. When our correspondent said, "We are looking right into Fort Rainsborough. We smile as we think of the fanatical seaman who commands it—they have transformed him into a colonel now," he was altogether wrong. There is not the slightest shadow of evidence that Rainborowe was a fanatic, and the inference to be drawn from "they have transformed him into a colonel now" is erroneous. He was brought up to the sea, but the greater part of his services were on land; for instance:—June, 1643, on the sea, vice-admiral; September, 1644, at the muster at Tiverton as a soldier; December, 1644, took Crowland; July, 1645, at Naseby, commanding the reserves, in conjunction with Hammond and Pride; September, 1645, at siege of Bristol, and later in the month took Berkeley Castle; winter, 1645–1646, at Abingdon as colonel; May, 1647, in command of a regiment; September, 1647, appointed admiral; May, 1648, ships revolt and put Rainborowe on shore; June, 1648, Rainborowe as a soldier before Colchester. There is no need to trace his career further. He was murdered at Doncaster in October, 1648. Nearly every event in his whole career that is of importance is connected with his actions as a soldier on land.

XUM

LOLO AND VEI CHARACTERS.

32, St. George's Square, S.W., Sept. 8, 1882.

THE Royal Geographical Society in printing the 'Travels and Researches in Western China,' by E. Colborne Baber (*Athen.* No. 2862), have thought it right to reproduce several pages of Lolo MS. The Lolos, and none the less their handwriting, constitute one of the most remarkable discoveries of Mr. Baber. For the purpose of giving some notion of what these Lolo characters are I call attention to the following selection, with corresponding characters in Vei :—

	Lolo.	*Vei.*		*Lolo.*	*Vei.*
1.			14.		
2.			15.		
3.			16.		
4.			17.		
5.			18.		
6.			19.		
7.			20.		
8.			21.		
9.			22.		
10.			23.		
11.			24.		
12.			25.		
13.			26.		

It is not necessary to dilate on the coincidences of these characters. They speak for themselves. It may be noted that the position of the characters varies in Lolo and Vei or Vy, as   ,   , &c. It will be seen that the characters here compared are to be found in many a syllabary and alphabet, old Chinese, Cypriote, Tamashek, Iberian, Albanian, Rune, Lepcha, &c. Further, many of the characters are the same in the other MS. brought from Western China by Capt. Gill, R.E., and styled Moso. Although some of the Lolo and Vy characters are to be found in Khita (or Hittite), the latter have a greater resemblance to Moso, and, as I have stated, there are passages nearly parallel in Khita from Carchemish and in Moso.

The Vy language is spoken and written, alongside of English, in the republic of Liberia in West Africa, remote enough from West China. For Vy we are chiefly dependent on the account of the special mission of the Rev. Dr. Koelle. It is described as of modern invention according to the statement made to Dr. Koelle by Duala. If this were true this black philosopher must have been a more remarkable man than he was, for he must have invented, as is seen, characters which are now written thousands of miles off on the other side of the continent. That account I have, therefore, rejected, and classed the Vy as an ancient syllabary.

Just as the Lolo characters are taken from Capt. Baber's MSS., so are the Vy from a communication just sent me from the Bishop of Cape Palmas. Dr. Koelle was much interested to find that Vy has extended so far south since his time, but the bishop describes the Vy people as dying out. At all events, we have in actual use in these regions so remote from each other syllabaries such as were used in the ancient world, and from which the alphabets, ancient and modern, were selected.

Closer observation of the Vy enables me in some degree to reconcile the statement of Duala with the fact. He had got hold of a syllabary, and his invention consisted in adapting it to the Vy language. Thus the Vy syllabary is not in a pure state, for Duala has varied the values of the ideographs. My efforts are now devoted to the discovery of the real syllabary, which must have been in use in the youth of Duala, if it is not now. Where it appears to me likely to be found is among the nations of Class V. of Dr. Koelle's 'Polyglotta,' § B and C, called by him North Delta of Niger languages, including Sobo, Oloma, and Okuloma. Many of these people are to be found in Sierra Leone, and I shall be much obliged to missionaries who will institute inquiries. The original of the Vy syllabary appears to conform best to the ancient or original models from which the others are derived, and it is of particular interest from its relations with Cypriote, Iberian, Libyan, and the Mediterranean alphabets. HYDE CLARKE.

'THE FOUR SONS OF AYMON.'

REFERRING to a letter in the *Athenæum* of the 26th ult. by Mr. S. L. Lee (to whose forthcoming account of this interesting romance every book-lover will wish success), I would like to make a few remarks. I should not, however, have encroached again upon your valuable space had I not the interesting fact to announce that a fragment of W. de Worde's long-lost edition has been discovered. Mr. Bradshaw, of Cambridge, to whom all early printed rarities seem by nature to gravitate, purchased some time ago a volume of printed fragments, and among them one leaf of Wynken de Worde's edition of 'The Four Sons,' so that at last we have not only the supposed but the visible genealogy of the earliest editions complete. They now stand thus:—

First edition, Caxton, *c.* 1490.—An imperfect copy at Althorp, and four leaves (lately belonging to Mr. Green) in the University Library, Cambridge.

Second edition, W. de Worde, 1504.—One leaf in the University Library, Cambridge.

Third edition, Copland, 1554.—A perfect copy in the British Museum.

As I said in my former letter, a Caxton edition of 'The Four Sons' was unknown to bibliographers until the copy now at Althorp came into the hands of Earl Spencer. Dr. Dibdin's "padded" remarks in the 'Decameron' upon his patron's belief that Caxton had printed this romance were not grounded upon positive evidence, but upon an old manuscript list of books, all of which he supposed were printed by Caxton because the first few were known to have issued from the Westminster press. Even a well-grounded belief is not "knowledge," and even the famous doctor himself could not "know" a book in 1813 which was undiscovered until 1822. Mr. Lee is quite right in saying that it was not in 1863, but in 1822, that the Caxton 'Four Sons' was first described. I was unaware that it was noticed in the 'Ædes Althorpianæ,' which one has to hunt through from beginning to end as there is no index.

WILLIAM BLADES.

THE COMING PUBLISHING SEASON.

IN October Messrs. Longman & Co. will publish 'A Dictionary of Medicine,' edited by Richard Quain, M.D., F.R.S. The work, which will be in one large volume, will furnish a complete record of the present state of medical science.

Messrs. Sampson Low & Co.'s major list of announcements includes :—'The Renaissance of Art in Italy,' by Leader Scott, author of 'A Nook in the Apennines,' with more than 150 illustrations,—'Italian Art in the National Gallery,' by Dr. Jean Paul Friedrich Richter, with 40 engravings,—'Modern Etchings of Celebrated Paintings,' examples of the work of Unger, Rajon, Waltner, Flameng, and others, with an essay by J. W. Mollett, B.A. (also of this an *édition de luxe* on India paper, of which but fifty copies will be produced),—'Painting, English and American,' by H. J. Wilmot Buxton, M.A., and S. R. Köhler, with 80 illustrations,—'A Selection of the Poetry of Robert Herrick,' by E. A. Abbey, with a preface by Mr. Austin Dobson,—'Ancient Greek Female Costume, illustrated by Passages from the Greek Classics,' arranged by J. Moir Smith, with 112 full-page plates,—'Rock me to sleep, Mother,' by Elizabeth Akers Allen, with 18 designs,—'Float Fishing and Spinning in the Nottingham Style,' by J. W. Martin, the "Trent Otter," with illustrations,—'Port Phillip Settlement,' by James Bonwick, author of 'The Last of the Tasmanians,'—'An Illustrated Dictionary of Words used in Art and Archæology,' by J. W. Mollett, B.A., illustrated with about 750 engravings,—'A History of Ancient Art,' by Dr. Franz von Reber, with 310 illustrations and a glossary, translated and augmented by Joseph Thacker Clarke,—Lord Ronald Gower's 'Great Historic Galleries of England,' volume for 1882, with 36 photographs of paintings,—'The Etcher,' volume for 1882, with 36 plates,—'Studies in Russian Literature,' by Charles Edward Turner, English Lector in the University of St. Petersburg,—'English Dramatists of To-day,' by William Archer, M.A.,—'The Law of Electric Lighting,' the Act of 1882 with a continuous commentary, notes, and suggestions, by George Spencer Bower, B.A., barrister-at-law, and Walter Webb, solicitor,—'A Manual of Historical Literature for Students, General Readers, and Collectors of Books,' by Charles Kendall Adams, LL.D.,—'Hints on Catalogue Titles, Index Entries, and some Points in the Care of Books,' by Charles F. Blackburn, with a vocabulary of terms and abbreviations from foreign catalogues of autographs, books, maps, prints, and portraits,—'A History of English Literature,' by Prof. Scherr, — and 'The Laws of Public Health,' edited by Dr. W. R. Smith. The new volumes of the larger series for young people are :—'Red Cloud, the Solitary Sioux,' by Colonel Butler,—'The Mutiny on board the Leander,' by Bernard Heldmann,—'Godfrey Morgan, a Californian Mystery,' and 'The Cryptogram,' by Jules Verne,—and a new edition of 'Under the Sunset,' by Bram Stoker. The following are to be added to the quarto series of books for young people :—'Fairy Tales,' by Hans Andersen, with coloured plates designed by E. V. B.,—'The Flowers of Shakespeare,' with coloured plates designed by Viola,—and 'Up-stream, a Journey from the Present to the Past,' with coloured plates and text by R. André. The list of juvenile books also includes :—'Winning his Spurs, a Tale of the Crusades,' by G. A. Henty, with illustrations by Horace Petherick,—'The Son of the Constable of France,' and 'The Drummer Boy, a Story of the Days of Washington,' by Louis Rousselet,—and 'An Old-fashioned Thanksgiving Day' and 'Proverbs,' by Louisa M. Alcott. The same publishers announce a new edition of 'Through Siberia,' by Henry Lansdell,—'The Wild Flowers of Switzerland, a Year in the Alps,' by H. C. W., with plates,—the Geoffrey Crayon unabridged edition, in twenty-seven volumes, of Washington Irving's works, with the author's latest revisions,—'The Wit and Wisdom of Don Quixote,' with a biographical sketch of Cervantes by Emma Thompson,—and 'Pathways of Palestine,' by Canon Tristram, illustrated by photographs, 2 vols. Messrs. Low & Co. also announce new volumes of their serials and a number of reissues.

Among the new books to be published by Messrs. Routledge & Sons are the following:—'English Rustic Pictures,' drawn by the late F. Walker, A.R.A., and the late G. J. Pinwell, engraved by Dalziel Brothers,—'Military Misreadings from Shakespeare,' designed by Lieut.-Col. Seccombe, R.A., and printed in colours,—'Routledge's Every Boy's Annual for 1883,' edited by Edmund Routledge, F.R.G.S., and 'Routledge's Every Girl's Annual for 1883,' edited by Alicia Amy Leith, each with illustrations and full-page coloured plates,—'Little Wide-Awake for 1883,' edited by Mrs. Sale Barker, with coloured illustrations by M. E. Edwards, M. Kerns, F. A. Fraser, F. Barraud, Gordon Browne, Charlotte Weekes, L. Hopkins, and A. C. Corbould,—'Warrior Kings, from

Charlemagne to Frederick the Great,' by Lady Lamb, with numerous woodcuts and full-page plates,—'Naomi,' by Mrs. Webb, new and cheaper edition, with woodcuts and illustrations by Sir John Gilbert, R.A.,—'Ferdinand's Adventure,' a new volume of fairy tales by the Right Hon. E. H. Knatchbull-Hugessen (Lord Brabourne), —'History of the Bastille and its Principal Captives,' by R. A. Davenport, with illustrations in colours, —'Jumbo's Picture-Book of Natural History,' with full-page illustrations by F. Specht,—'Children of the Village,' by Mary Russell Mitford, with illustrations by F. Barnard, R. Barnes, M. E. Edwards, M. Kerns, C. O. Murray, and other artists,—'Wit and Wisdom of Lord Lytton: Select Passages from his Various Works and Speeches,'—'Song-Land, a Series of Ditties for Small Folks,' selected, arranged, and composed by William M. Hutchinson, with illustrations by A. W. Cooper, Miriam Kerns, and others,—'The Boys and I, a Child's Story for Children,' by Mrs. Molesworth, author of 'Hermy,'—'Jeannette, a Story of the Huguenots,' by the author of 'The Rose Garden,' with six illustrations by F. A. Fraser,—'Dinglefield,' by Mrs. O'Reilly, author of 'Girls of the Square,' with illustrations by A. C. Corbould,—'The New House that Jack Built,' by Mrs. Willoughby Luxton, with illustrations by M. E. Edwards,—'Travellers' Tales, a Book of Marvels,' by the Rev. H. C. Adams, M.A., with illustrations by A. W. Cooper,—'The Mutiny and Piratical Seizure of H.M.S. Bounty,' by J. Barrow, F.R.S., with woodcuts and steel plates,—'The Fables of Æsop,' with 114 illustrations by Harrison Weir,—'Grimm's Fairy Tales,' an entirely new edition, with illustrations and coloured plates,—'Nine Little Goslings,' by Susan Coolidge, with illustrations, —'The Poems of Oliver Wendell Holmes,' revised edition, with red lines and steel portrait, —'A Thousand and One Gems of Song,' selected and edited by Charles Mackay, LL.D., with illustrations by J. E. Millais, R.A., Sir John Gilbert, R.A., and other artists,—'Some of my Feathered and Four-footed Friends,' by Mrs. Sale Barker, with full-page coloured plates by J. B. Zwecker,—and 'Uncle Remus: Legends of the Old Plantation,' by Joel Chandler Harris, with illustrations by A. T. Elwes.

Messrs. Griffith & Farran's list includes:—'St. Aubyn's Laddie,' by Miss E. C. Phillips,—'Dolly Dear!' by Mrs. Gellie (M. E. B.),—'The Golden Curl, and other Fairy Tales,' by A. E. A.,—'The Adventures of the Pig Family,' in verse with pictures in black and white,—new and cheaper editions of 'Fairy Gifts,' with pictures by Kate Greenaway, and 'Fairy Land,' by Thomas Jane Hood,—'Our Sketching Tour,' by Two of the Artists, with 100 illustrations, being an account of a tour in England by five girls in search of the picturesque,—'A Key to all the Waverley Novels in Chronological Sequence,' a series of brief sketches of Scott's historical novels by Henry Grey,—'Whispers of Love and Wisdom,' with a preface by C. M. Yonge,—'The Children's Daily Help for the Christian Year, taken from the Psalms and Lessons,' selected by E. G.,—'Poker: How to Play It,' by One of its Victims,—and 'The Stage in the Drawing-Room; or, the Theatre at Home: Practical Hints on Amateur Acting for Amateur Actors,' by Henry J. Dakin, illustrated with diagrams.

Messrs. Hodder & Stoughton's forthcoming works include the following:—'Gesta Christi,' by C. Loring Brace,—'A Study of Origins; or, the Problems of Knowledge, Being, and Duty,' by E. de Pressensé, D.D.,—'Egypt, Palestine, and Syria,' by Felix Bonet, translated by the Hon. and Rev. Canon W. H. Lyttelton,—'Parabolic Teaching of Christ,' by Rev. Prof. A. B. Bruce, D.D.,—'William Penn, the Founder of Pennsylvania: a New Biography,' by John Stoughton, D.D.,—'Oliver Cromwell and his Contemporaries,' by Paxton Hood,—'Wesley's Designated Successor: a Life of Fletcher of Madeley,' by Rev. Luke Tyerman,—'The Author of "Stepping Heavenward": a Biography,' by her husband, the Rev. Dr. Prentiss,—'James Burn, the Beggar Boy: an Autobiography,'—'Andrew Fuller,' by his son, a new volume of "Men Worth Remembering,"—'The Book of Koheleth considered in relation to Modern Criticism,' by Rev. C. H. H. Wright, D.D.,—'The City of God, and other Sermons,' by Rev. Principal Fairbairn, D.D.,—'The Epistle to the Ephesians: its Doctrine and Ethics,' by Rev. R. W. Dale, M.A.,—'The Epistles to the Corinthians: a Commentary,' by Rev. J. Agar Beet,—'The Foundations of Morality,' by Rev. Prof. Stanley Leathes, D.D.,—'The Falls of Niagara and other Famous Cataracts,' with illustrations,—'A History of the Jews in Rome,' by E. H. Hudson,—'A Short History of the People called Methodists,' by Rev. W. H. Daniels, M.A.,—'Outlines of Sermons on the Old Testament,' a new volume of "The Clerical Library,"—'The Great Memorial Name,' by P. W. Grant,—'In Christ,' by Rev. A. J. Gordon, D.D.,—'Student's Handbook of Psychology,' by B. F. Cocker, D.D.,—and 'Evidences of Religion,' by C. M'Arthur. The same publishers' new books for the young are:—'James Braithwaite, the Supercargo,' by W. H. G. Kingston, —'The Cruise of the Snowbird: a Story of Arctic Adventure,' by Gordon Stables, M.D., R.N.,—'Friar Hildebrand's Cross,' by M. A. Paull,—'Daisy Snowflake's Secret,' by Mrs. G. S. Reaney,—'The Westons of Riverdale: a Temperance Story,' by E. C. A. Allen,—'Launching Away; or, Roger Larksway's Strange Mission,' by the author of 'The Pioneer of the Family,'—and two American stories: 'Yensie Walton' and 'Nettie and Kate.'

Messrs. Tinsley Brothers' announcements for October are:—'The Lives of the Royal Dukes and Princesses of the Family of George III.,' by Percy Fitzgerald,—'The Peril of Paris,' by Henry Vizetelly, author of 'Berlin under the New Empire,'—'With a Show through Southern Africa, and Reminiscences of the Transvaal War,' by Charles Du Val,—'Strains from the Strand,' a new volume of verse by Henry S. Leigh, author of 'Carols of Cockayne,'—the Christmas number of *Tinsleys' Magazine*, containing a complete story by Richard Dowling, with illustrations by Harry Furniss,—and new novels by Jean Middlemass, E. C. Clayton, and the author of 'Crushed beneath his Idol.'

Messrs. Remington will publish 'Living London,' by George Augustus Sala, with original illustrations by the author,—'Modern Landscape,' by J. Comyns Carr, with etchings after the works of Crome, Constable, Rousseau, Corot, and others, —'An Historical Handbook to Italian Sculpture,' by Charles C. Perkins, based upon the author's larger work, —a biography of Balfe, by W. A. Barrett, with portraits of the musical celebrities of his day,—'The Blackest of Lies,' a new novel by Albany de Fonblanque, —'For King and Kent,' an historical novel by Col. Colomb,—'Roman Cameos and Florentine Mosaics,' a series of studies by Mary Jeaffreson, —'Studies in Art,' by J. Comyns Carr,—'Millicent's Children,' a new novel by Mrs. Baseley,—'Dark Pages,' a work of fiction by Mrs. Horace Dobell,—'The Bankers of St. Hubert,' a novel by C. K. Loch,—'A Narrative of the Boer War,' by T. F. Carter,—'Among the Woblins,' a Christmas book by Sydney Hodges,—'Summer Songs,' by J. A. Hewitt, —the first volume of 'Art and Letters,'—and new editions of 'A Life's Love,' by George Barlow, and 'Among the Gibjigs,' by Sydney Hodges.

Messrs. W. P. Nimmo & Co. will publish immediately 'The Highways of Literature; or, What to Read and How to Read,' by David Pryde, LL.D., F.R.S.E.

Literary Gossip.

THE Emerson-Carlyle correspondence, edited by Prof. Norton, of Harvard University, which we mentioned last week, will be published in December by Messrs. Chatto & Windus. The collecting and editing of Emerson's papers and the preparation of materials for his biography will be a very heavy task, and Dr. Edward Emerson, of Concord, has resolved to abandon his profession for the present, in order to assist in the work entrusted by his father to Mr. Eliot Cabot. We believe that an immediate biography will not be attempted, but that letters and papers of importance will first appear. Among the letters written to Emerson some of the most interesting are from John Sterling.

MESSRS. LONGMAN & Co. will shortly publish 'An Examination of the Structural Principles of Mr. Herbert Spencer's Philosophy,' by the Rev. W. D. Ground, author of 'Ecce Christianus.' The writer accepts the evolution hypothesis, and argues that this is consistent not with agnosticism, but with theism.

WE understand that Canon Farrar's new work, 'The Early Days of Christianity,' which will be published by Messrs. Cassell Petter, Galpin & Co., will be ready for delivery on the 22nd inst.

THE author of 'Hogan, M.P.,' is engaged upon, and will shortly publish, a translation of Prosper Mérimée's 'Colomba.'

MESSRS. CHAPMAN & HALL have now in the press a new book by Mr. G. Baden Powell, dealing with the problem of State interference in the domains of industry and commerce. The subject is treated by the means of a variety of recorded results.

MRS. W. K. CLIFFORD has in the press a little volume called 'Anyhow Stories.' It will probably be published at Christmas.

THE unique copy of Caxton's 'Four Sons of Aymon' is to be reprinted, by permission of Earl Spencer, as a part of the Early English Text Society's collection of English Charlemagne Romances. Mr. S. L. Lee, who is at present engaged on 'Huon of Bordeaux,' will be the editor.

IT is proposed to erect a memorial of the late James Thomson, author of 'The City of Dreadful Night,' in the Secular Hall, Leicester, on the opening of which building he wrote a dedicatory poem.

A NEW romance by Mr. Richard Dowling, entitled 'Sweet Inisfail,' will be published this month by Messrs. Tinsley Brothers.

A COMMITTEE has been formed to promote the adoption of the Public Libraries Acts in Hull. Hull is the only town of its size in the kingdom that has not adopted the Acts. Attempts were made, without success, in 1857 and 1872 to obtain the adoption of the Acts, and a third attempt is now about to be made. Hull (on the authority of the mayor of the town) "is more cheaply rated than any other town in England," and a rate of 1·6 farthings in the pound, and certainly of less than a halfpenny in the pound, would secure a good public library. Unfortunately there is likely, as on the two previous occasions, to be bitter opposition on the part of the tenants of small properties, and the difficulty has been to induce the

general body of ratepayers to take an interest in the movement. We are glad to see that an excellent address on the subject by Dr. Rollit has been printed, and we trust it may give strength to the movement.

On Monday last the foundation stone of a free library and fine-art gallery was laid at Leek. The cost of erection will be about 20,000*l.*

A course of lectures on Shakspeare will be delivered by Mr. Hall Caine at the Liverpool Free Library in the autumn.

'Ballads of the Bench and Bar' is the title of a volume of verse about the Court of Session and some advocates, recently printed at Edinburgh for private circulation, with pen-and-ink sketches of the whole Bench and a haphazard selection of the Bar, more or less successful. The letter-press is furnished by members of the Bar, and the editors are Mr. J. Balfour Paul and Mr. J. J. Reid. The issue is limited, and the plates are destroyed.

"Old Scotch Judges" will be the subject of an article by Mr. James Purves in next month's *Fraser*.

Early in October, Mr. Walter Smith will publish a new work by the author of the 'Englishman's Brief,' entitled 'The Dead Hand in the Free Churches, with Pictures of their Inner Life, as sketched by Eminent Nonconformists.'

A large number of American literary men are just now in London, and were recently entertained by Mr. J. R. Osgood, of Boston. Among the guests were Messrs. W. D. Howells, Henry James, T. B. Aldrich, Bret Harte, John Hay, Moncure Conway, Charles Dudley Warner, Clarence King, and Edwin Booth.

Among the contributions promised for the next volume of the American magazine the *Youth's Companion* are papers by Canon Farrar giving reminiscences of the late Dean Stanley; a serial story by Mr. William Black; papers on nervous ailments by Dr. Brown-Sequard; several articles called 'Behind the Scenes at Westminster,' by Mr. H. W. Lucy; and 'Life in an Irish Fishing Village,' by Mr. Julian Hawthorne.

M. Tourguénief's numerous admirers will be delighted to hear that a decided improvement has taken place in his health. One of his friends who paid him a visit last week at Bougival, near Paris, where he possesses a charming *dacha*, or summer residence, on the slope of a hill crowned by shady woods, found him able to move about a little, and to converse as brilliantly as ever. He is for the present restricted to a milk diet; But he looks forward to a return to an ordinary fashion of life, and even to a possible visit to Russia next year. The novel which he was to have finished this summer has been laid aside for the present, but his visitor found him engaged upon a shorter story, which will probably appear in the *Vestnik Evropy* of St. Petersburg.

Another well-known novelist has been of late seriously ill. M. Erckmann, who now resides at Toul, in Lorraine, was attacked some time ago, first by jaundice, then by gastric fever. A fortnight ago his life was in danger. But a change for the better took place on the 6th inst., and it is to be hoped that he will soon be convalescent. Since the annexation he has lived away from Alsace, but it is expected that he will pay his native country a visit next year. M. Chatrian was at Toul three weeks ago, but he is now in Paris superintending the rehearsals of 'Madame Thérèse.'

The Russian papers relate a little misadventure which recently happened to the Rev. Henry Lansdell, the author of 'Through Siberia,' who is at present making his way into Central Asia. At the departure of the train in which he was seated from one of the stations on the Oural extension of the Perm railway, the traveller, according to his custom, distributed among the crowd which was watching the train leave the platform a number of religious tracts. Official suspicion was aroused. They might be revolutionary pamphlets! A telegram was despatched to the next station directing the arrest of Mr. Lansdell, who was accordingly taken back in the custody of the police to Perm, where, fortunately, the mistake was rectified and the traveller allowed to proceed on his journey.

We learn from the recently published catalogue of accessions to the library of the St. Petersburg University that that collection has received some valuable additions. Chief among these is the bequest of the late director of the Government archives, J. S. Zlobin, which consists of 6,266 volumes, comprising most valuable and important works in all branches of knowledge. Another very valuable collection of books and pamphlets upon mathematical and physical science has been presented by M. J. Stein, while still more important gifts have been made by Prof. J. V. Pomialovsky and State secretary Prince A. B. Lobanof-Rostovsky.

M. James Darmesteter, of the École des Hautes Études, Paris, has in the press three volumes of 'Études Iraniennes,' the first of which will contain the greater part of his historical grammar of the Persian language, which obtained a prize from the Académie des Inscriptions et Belles-Lettres.

The Association of German Authors opened its annual meeting this week at Brunswick. It now numbers 334 members, of whom seventy-four have been added since the Association met at Vienna last year. One of the subjects discussed by the Association at Brunswick is a change in the law, or rather an addition to the law, with regard to publishers transferring the copyright in a book to another publisher. The Association considers that this ought not to be done without the author assenting to the transfer. Another subject which caused much discussion, but was not finally decided one way or the other, concerned the increase of circulating libraries and the consequent diminution of purchasers of new books. Many of the authors present held that it would be well if the books taken by these libraries were charged at much higher rates than those bought for personal reading. In Germany, as in England, the reverse is now the rule.

A Correspondent writes:—

"Mr. John Laffan Hanly died at Constantinople on the 29th of August, at the age of forty-seven. He was proprietor and editor of the *Stamboul*, a newspaper which he started, chiefly in French, but with occasional English articles. About two years ago he started in London a newspaper for Eastern affairs, but it soon failed. Mr. Hanly had been connected with the London and provincial press, and at one time established an English paper at Constantinople. He was the son of a reporter, and is said to have reported in the House of Commons when fourteen years old. A dictionary of quotations he had compiled perished in a fire at Constantinople some years ago."

Mr. Jardine, the Judicial Commissioner of British Burma, has recently published some much-needed notes on Burmese Buddhist law. The only translation of a Buddhist law book extant is Richardson's 'Damalhat,' which is confused in its arrangement. Most of the 'Damalhat,' moreover, is completely antiquated, the work having evidently been written for a nation somewhat similar in its character and traditions to the tribes for which the Mosaic law was laid down.

It is a sign of the enthusiasm on the subject of education now prevailing in the North-West Provinces of India that at a large meeting of native gentry, lately held at Agra for the purpose of memorializing the Education Commission against the abolition of the Agra College, the sum of 10,000 rupees was subscribed for the purpose of founding scholarships in the college, and the memorialists offered to manage the institution themselves by means of a local board. We pointed out some time since that at this college during 1880–1 the expenditure was on an average 1,610 rupees for the education of each pupil, or as much as would pay for the year's education of 300 village schoolboys.

Dr. Yavorsky, who was private physician to the late Ameer of Afghanistan, is about to publish an illustrated work containing an account of his travels in Central Asia.

We regret to announce the death, on the 13th inst., of Mr. Bernard Barker, editor of the literary portion of the *Bazaar*. He was the author of a novel called 'Eliot the Younger.'

SCIENCE

A History of Coal Mining in Great Britain. By Robert L. Galloway. (Macmillan & Co.)—In many respects this work must be regarded as satisfactory. From the commencement of the eighteenth century the progress of coal mining, and generally the condition of the coal trade, is stated with much exactness, and the introduction of improved machinery is clearly described. Especially all that relates to the invention of the safety lamp by Davy and the alterations—not always improvements—which were brought forward by others is cautiously examined. Ventilation, both by furnaces and by mechanical arrangements, is a strong feature in the book, and everything which has been effected of late years for removing the gas which by its mixture with air produces the fatal fire-damp is given in much detail. Beyond this the suggestions made by the author for removing some sources of explosion and for protecting the miners from the great dangers by which they are surrounded deserve the close attention of all who are engaged in working our coal seams. As a history of coal mining in the earlier days, when coal fires were few and those few were regarded as pernicious, the information given is not so satisfactory. We are told, indeed, that early in the thirteenth century the monks of Holyrood Abbey and of Newbottle Abbey collected a tithe of coal and received grants of

collieries, but we have no intimation of the authority upon which these statements are founded; Chalmers's 'Caledonia' would have furnished much information beyond that given, and a brief visit to the Record Office in Edinburgh—where the chartulary of Dunfermline and a charter of Seyer de Quincey granting "carbonarium" to the monks of Newbottle exist, with many other similar documents—would have furnished Mr. Galloway with information which would have greatly enriched his interesting volume. In giving the early history of the use of railways our author quotes a passage from Prof. Pepper's 'Playbook of Metals,' and complains of his not "adducing any evidence in support of the statement." Feeling the desirability of this in a history, we are surprised that he has rendered himself liable to the same complaint from the readers of his 'History of Coal Mining.'

Les Mouvements du Sol sur les Côtes Occidentales de la France. Par Alexandre Chèvremont. (Paris, Leroux.)—We are informed on the title-page that this work was honoured with a reward by the Académie des Sciences, and a favourable report by M. Alfred Maury of the Académie des Inscriptions et Belles-Lettres. At the Séance of March 10th, 1879, the Academy of Sciences proposed for the subject of the *prix Gay* the following question in physical geography: "Étudier les mouvements d'exhaussement et d'abaissement qui se sont produits sur le littoral océanique de la France, de Dunkerque à la Bidassoa, depuis l'époque romaine jusqu'à nos jours," &c. On March 14th, 1881, M. Edmond Becquerel, at the annual public Séance of the Academy, stated that several memoirs had been received, but that the commission appointed to examine them had especially distinguished as very worthy of encouragement one by M. Delage and another by M. A. Chèvremont. The memoir by the last-named geologist has been printed in the handsome volume now before us and illustrated by fourteen coloured plates. In this work M. Alexandre Chèvremont has given his readers the results of a very detailed study of the Normanno-Breton Gulf comprised between Cherbourg and Brest. He treats especially in great detail all that concerns Mont St. Michel, which is of special interest to English readers, our own St. Michael's Mount, in Cornwall, being in nearly all respects an interesting representation of the more important French fortress and prison. The traditionary history of the Cornish Mount states that it was once six miles from the sea, and was known as "The White Rock in the Wood." It is now at high water an island, and a rough causeway connects it with the mainland when the tide recedes. The same conditions prevail at Mont St. Michel, and the evidences of submerged forests still exist on both sides of the Channel. M. Chèvremont gives, quoting from six manuscripts, the origin of Mont St. Michel. He is sceptical on the miraculous appearance of the archangel of the monkish legend and of the flood of March, 709, "which committed many horrible ravages on our coast," and which is the same onrush of waters that swept over and destroyed the district of Lioness and the forests of Mount's Bay. "We find, however," he says, "in an old manuscript some mention of a trembling of the earth which took place in March of that same year (709), but it does not appear to be mentioned again by any others. Another old manuscript in describing the island says that twice a day the sea retired, leaving a free passage for pious people to walk to the threshold of the church of the Archangel. This place was formerly surrounded by thick forests inhabited by wild beasts, and by the will of the Almighty it was destined to be the theatre of a great miracle for the worship of the Holy Archangel; for He caused the sea, which had been distant, to rise little by little and gradually to cover the vast forests, and thus make an easy way for the people to go to bear witness to the miracles of God." This treatise is divided into five parts. The first treats of the "Constitution du Sol des deux Presqu'îles Armoricaine and Constantienne"; the second of "La Période Glaciaire dans le Golfe Normanno-Breton"; the third of "Le Littoral aux Époques Continentales et Insulaires du Golfe"; the fourth of "Le Marais de Dol et la Baie du Mont Saint Michel"; while the fifth part examines the "Affaissement de la Période Géologique Moderne et Dernier Retour de la Mer dans le Golfe; Concordances et Synchronismes invoqués sur les Rivages de la Mer du Nord, de la Manche et du Golfe de Gascogne." To all who are interested in the remarkable phenomena which M. Alexandre Chèvremont has examined so thoroughly and describes so well this book will prove most useful, and will be found to possess a peculiar charm from its elucidation of an obscure subject.

GEOGRAPHICAL NOTES.

MR. STANLEY is shortly expected in Europe. His work on the Congo has evidently been of the most arduous nature. He has placed seven steamers on the lower river, founded four factories on ground formally ceded by the native kings, and constructed roads past the cataracts. There can be no doubt that the road along the river, which Stanley has chosen after mature consideration, is far preferable to the route recently suggested by M. de Brazza. The latter may present fewer physical obstacles to the railway which the French explorer proposes to construct to Stanley Pool, at the head of the cataracts, but it is considerably longer, and, worst of all, leads to a part of the coast where communication with the land is only possible in surf-boats. Compare with this the noble estuary of the Congo, accessible at all times to vessels of the largest burden.

M. Soleillet writes in a hopeful strain from Obok, on the Gulf of Tajura. A caravan had recently arrived there from Shoa, and M. Soleillet himself is about to proceed to Ankobar. "Obock est fondé et bien fondé," he says. Still, with all this success, he longs to leave the place in order to resume his exploration of the Sahara, which is the work he has most at heart.

Herr Flegel writes to the editor of Petermann's *Mittheilungen* that his prospects have considerably brightened. The Hausa ivory trader in whose company he travels has proved a faithful friend and guide. The traveller left Loko on March 9th, and reached Avoi in Bauchi on April 7th. He looks forward with much pleasure to the bracing air and the flesh-pots of Adamaua, where he hopes to recover his health, which has somewhat suffered in consequence of the irregular supply of provisions.

The "Club Africano" of Naples has been reorganized as a "Società Africana d'Italia," and will henceforth publish a monthly *Bollettino*, the first two numbers of which have already reached us. The scope of the new society will be the same as that of the defunct club, and if the means placed at its disposal keep pace with the ambitious designs of its founders, the geographical exploration of Africa is likely to make much progress. At present the society appears to content itself with offering gold medals to explorers who succeed in determining the courses of the Welle and Jub. Medals are likewise offered to Italian explorers and geographers on conditions far less onerous. The numbers before us contain an article on the Soddo Galla, by Signor Bianchi, the substance of which appeared long since in *L'Esploratore*, as well as a few notes of slight interest. This multiplication of geographical periodicals is matter for regret. The African Society of Naples might surely be content with the publication of an annual report, and forward any original records that reach it to Cora's *Cosmos* or the secretary of the Italian Geographical Society.

The Marchese Antinori has after all failed to reach Lake Zway in Guraghe. His last letter is written from Dembo, in the country of the Ada Galla, and bears date March 22nd, 1882. His journey thus far has resulted in the discovery of two more lakelets, and in the recovery of much property that had been stolen from Cecchi and Chiarini. In the mean time King Menelik is extending his conquests to the south-east and south-west. Ras Gobana, so say native traders, has broken up the kingdom of Kafa, and amassed an immense booty at Bonga, its capital. An expedition against the Arusi Galla is preparing.

Behm and Wagner's *Bevölkerung der Erde, VII.* (Gotha, Perthes) has just been published, and is unusually rich in new information. Abstracts of the recent censuses taken in the German Empire, Austria, Hungary, the United Kingdom with most of the colonies, Switzerland, France, Portugal, Sweden, the United States, and several other countries are given as well as copies of all the treaties or warrants which affect the boundaries of states, provinces, and in many instances even of parishes. The new boundaries between Russia and China in Asia are shown on two maps. The compilers do not content themselves with furnishing mere abstracts of official documents, but make every fact presented to them pass the ordeal of a very searching criticism. What they say, for instance, about the Indian census returns is worth attending to, whilst the fact that the area of the British Islands should be given more correctly in a foreign compilation than in the reports issued from Somerset House and other Government offices is somewhat provoking. The area of the British Islands as adopted in the most recent official publications amounts to 121,608 square miles, whilst General Strelbitsky computes it to be 121,337 square miles. The difference is even more considerable if county be compared with county. Altogether the work before us is a marvel of painstaking industry, and we are glad that the public takes sufficient interest in the question of area and population to warrant its publication at intervals of two years.

ASTRONOMICAL NOTES.

EXCEPTING the comet which, momentarily seen near the sun during the total eclipse of May 17th, appears on the photographs taken of that eclipse in Egypt, the one discovered by Mr. Wells at Albany, New York, on March 18th, remains as yet the only comet of the present year. It is generally thought that the brightness of that comet did not increase so much at the end of May and the beginning of June as was expected when its orbit was determined. But it appears from a series of photometric observations of it, made by Dr. G. Müller, of the Astrophysical Observatory at Potsdam, that this was not the case, but that the difficulty of seeing the comet with the naked eye during that period arose solely from its low position in the heavens and the considerable amount of twilight which still prevailed in the evening when the comet could be observed. Indeed, he finds by direct comparison with the light of some stars that the brightness of the comet increased *more* rapidly during the second half of May than had been predicted, indicating an unexpected development of proper light in the comet itself. This increase was most marked just about the very time when the sodium line was first observed in the spectrum, and Dr. Müller therefore concludes that great changes must have occurred about that time in the physical condition of the comet. He finds (*Astronomische Nachrichten*, No. 2453) that the brightness of its nucleus was equal on the 6th of June to that of a star of the third magnitude, whilst on the 19th of May it did not exceed that of a star of between the eighth and ninth magnitudes. Dr. Müller did not succeed in observing it after the 6th of June, though he just saw it through a gap in the clouds very near the sun on the day of perihelion passage (June 10th), when it was not possible to

obtain an observation or photometric measurement.

The planet Venus will be in her aphelion on the 19th inst., and at her greatest eastern elongation from the sun on the 26th.

The second part (*livraison*) of the eighth volume of the *Annales* of the Moscow Observatory has just been published under the direction of Prof. Bredichin. It includes (1) the results of two series of spectroscopic observations of the sun made by Dr. Bredichin himself during the summer and part of the autumn of the years 1872 and 1873, at a small town on the banks of the Volga named Kineschma, near Kostroma, to which place he had transported an excellent small refracting telescope by Merz, furnished with a helioscope and direct-vision spectroscope; (2) an investigation by M. Socoloff (founded on a series of observations made at Moscow by M. G. Schweizer in 1863-1866) of the annual parallaxes of four stars, viz., 61 Cygni, Œltzen 17,415-6, μ Cassiopeiæ, and η Cassiopeiæ, the results being 0″·433, 0″·147, 0″·084, and 0″·275 respectively (but that for μ Cassiopeiæ is not considered to be entitled to much weight on account of the faintness of the star of comparison); and (3) the observations of the sun's surface made at the Moscow Observatory by M. Bélopolsky with the photo-heliograph during 1881.

Science Gossip.

Mr. W. Crookes, F.R.S., has received a highly satisfactory testimony from the jury of the International Exhibition of Electricity at Paris. In their official report, after discussing the merits of four systems of incandescent lamps, they say:—"None of them would have succeeded had it not been for these extreme vacua which Mr. Crookes has taught us to manage. The members of the Jury of Recompenses are anxious to express to Mr. Crookes their high approval of his beautiful researches, and at the same time their regret that it is not in their power to award him a prize."

Capt. John Harvey, R.N., the inventor of the torpedo which bears his name, died on the 3rd inst. at Sandwich, in his eighty-ninth year.

The committee appointed to consider the question of substituting a nickel coinage for the bronze coinage now circulating in France has decided in favour of nickel, which has already been adopted in Germany and Belgium.

M. H. Geoffroy has brought before the Académie des Sciences of Paris a specimen of wire clothed with asbestos and threaded through a leaden pipe, for the prevention of fires where electricity is employed for lighting. M. Henri Lippmann, engineer to the Faure Accumulator Company, states that the copper conductor has been entirely volatilized in some experiments made by him without the leaden pipe being in the least affected.

M. Bouquet de la Grye, at the concluding meeting at Rochelle of the French Association for the Advancement of Science, was nominated vice-president for 1883 and president for 1884.

M. Chapier is to be sent by the French Government to India for the purpose of studying its geology and mineralogy; Prof. Joret is to examine the ethnology of Denmark and Sweden; and M. Raffray is commissioned to form a collection of the fauna of Madagascar.

Herr Helmerson has been appointed Director of the Geological Institute of Russia. He is also charged with the superintendence of the construction of a detailed geological map of the Russian Empire under the care of the Institute, for which a credit of 3,000*l.* has been provided.

The census of Victoria for 1881 has been received. The total number of persons is given as 862,364; of these 12,128 are Chinese and 780 aborigines. The completeness of these returns deserves our especial commendation.

The fourth International Congress for Hygiene and Denography was held last week at Geneva.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Hopes and Fears for Art: Five Lectures. By W. Morris. (Ellis & White.)

These lectures, by the author of 'The Earthly Paradise,'—himself a practised decorator and artist, or rather, as he prefers to call himself, a "craftsman,"—were delivered in Birmingham, London, and Nottingham. It would be difficult to give a general account of them, because they traverse very large and not very clearly defined fields of opinion; but it is easy to indicate what is their tendency, to praise their energy and common sense, and even to illustrate the occasional bits of whim, the genial dogmatism, and the poetic fancy which add not a little to their charm and secure for Mr. Morris the sympathy of his hearers. Excellent lectures have been delivered with earnestness equal to his, and yet have moved no one; and men as learned as our author have failed to make themselves heard; but even the truisms of Mr. Morris catch the ears of h audiences, and fix themselves in the memory of most of those who read his books.

The secret of Mr. Morris's success lies in the fact that the last thing he is thinking of is Mr. Morris. One of the first things he mentions—and he delights to repeat the declaration again and again—is his indebtedness to Mr. Ruskin. Speaking about 'The Lesser Arts' to a body of craftsmen, he justly calls attention to his text, which is taken from the writings of the first Oxford Slade Professor, and truly it is one the British workman has not by any means taken to heart, *i.e.*, the chapter in the second volume of 'The Stones of Venice,' "On the Nature of Gothic, and the Office of the Workman therein." The main subjects of these discourses are the honourableness, and above all the delight to the worker, of work honourably done. The intelligent exercise of the lesser arts will "beautify our labour," and the workman will take a pride in his work. "No man," adds Mr. Morris,

"will any longer have an excuse for talking about the curse of labour; no man will any longer have an excuse for evading the blessing of labour. I believe there is nothing that will aid the world's progress so much as the attainment of this. I protest there is nothing in the world that I desire so much as this, wrapped up, as I am sure it is, with changes, political and social, that in one way or another we all desire."

Such optimism is in itself refreshing, even to those who refuse to believe with Mr. Morris that, in the ordinary sense of the words, Westminster Abbey, or even the church of St. Sophia, a much more probable example, was built, *i.e.*, designed or invented, by "men like you and me, handicraftsmen, who have left no names behind them, nothing but their work." This notion of the powers of the handicraftsman is put forward so often in these pages, that it is incumbent on a critic to challenge its truth, and even, in a practical way, its value. Briefly, then, let us say there is no proof that such craftsmen as those Mr. Morris addressed are, or ever were, or ever will be, capable of the feat attributed to them. That, if prepared by the practice of generations, a considerable number of the members of such an audience might, each man according to his powers, have borne a part in such a work is, of course, a truism. But that the splendid artistic motives of St. Sophia, or, still more, the perfect grace and dignity of the Abbey, were due, in the ordinary sense of the term, to what we call a handicraftsman, or any number of handicraftsmen, is little else than a charming delusion of an enthusiastic lover of his art and his kind. No proof of the lecturer's theory can be produced, and the analogies of history and recent experience directly contradict it.

Perhaps, however, Mr. Morris merely means that a modern professor of the artistic crafts or lesser arts may, if he follows the "Lamp of Truth," hope to have a share in the production of triumphs of design. Something to this effect appears, if we read it rightly, on pp. 55–7 of this book. Qualified as is the statement referred to—which we regret not to be able to quote—it is difficult to accept it in its entirety without large reserves. Still, much as we may demur to Mr. Morris's views of the sphere of the handicraftsman, it is impossible not to turn with pleasure to the wholesome passage which follows, and which describes eloquently the bearings of the lesser arts on many grand facts in human history:—

"Now as these arts call people's attention and interest to the matters of everyday life in the present, so also, and that I think is no little matter, they call our attention at every step to that history, of which, I said before, they are so great a part; for no nation, no state of society, however rude, has been wholly without them; nay, there are peoples not a few, of whom we know scarcely anything, save that they thought such and such forms beautiful. So strong is the bond between history and decoration, that in the practice of the latter we cannot, if we would, wholly shake off the influence of past times over what we do at present. I do not think it is too much to say that no man, however original he may be, can sit down to-day and draw the ornament of a cloth, or the form of an ordinary vessel or piece of furniture, that will be other than a development of or degradation of forms used hundreds of years ago; and these, too, very often, forms that once had a serious meaning, though they are now become little more than a habit of the hand; forms that were once perhaps the mysterious symbols of worship and beliefs now little remembered or wholly forgotten. Those who have diligently followed the delightful study of these arts are able as if through windows to look upon the life of the past:—the very beginnings of thought among nations whom we cannot even name; the terrible empires of the ancient East; the free vigour and glory of Greece; the heavy weight, the firm grasp of Rome; the fall of her temporal empire which spread so wide about the world all that good and evil which men can never forget, and never cease to feel; the clashing of East and West, South and North, about her rich and fruitful daughter Byzantium; the rise, the dissensions, and the waning of Islam; the wanderings of Scandinavia; the Crusades; the foundation of the States of modern Europe; the struggles of free thought with ancient dying system—with all these events and their meaning is the history of popular art interwoven; with all this, I say, the careful student of decoration as an historical industry must be familiar. When I think of this, and the usefulness of all this knowledge, at a time when history has become so earnest a study amongst us as to have given us, as it were, a new sense; at a time when we so long to know the reality of all that has happened,

and are to be put off no longer with the dull records of the battles and intrigues of kings and scoundrels;—I say when I think of all this, I hardly know how to say that this interweaving of the Decorative Arts with the history of the past is of less importance than their dealings with the life of the present; for should not these memories also be a part of our daily life?"

It may be that not one of the carvers whose exquisite work enriched the regal architecture of Westminster, not one of the mosaicists who spread glorious tints on the walls of St. Sophia—nay, not one of the designers to whom we owe these buildings, these immortal thoughts in stone — knew anything of the history of that which was past to them. This consideration, however, does not affect the justice of the demand made by Mr. Morris on the intelligence of the craftsman. If the views Mr. Morris enunciates can be impressed on the mind of the craftsman, they will undoubtedly ennoble his work. And the histories of the battles that marked the "death days of empires," and swept the workmen and their works into oblivion, may ultimately prove worthy of the attention of the typical craftsman in the intervals of his labour.

Having affirmed the value of the lesser arts, Mr. Morris proceeds to ask of his audience whether they will have these good things or whether they will cast them from them. He remarks—and it is impossible not to agree with him—that it is time such an audience answered these questions; and if they reply in the affirmative, that they should set about carrying their wishes into effect. The Decorative Arts are, our author says, in a state of anarchy which makes a sweeping change necessary and certain. He fears that the world "will be clean rid in her impatience of the whole matter, with all its tangle and trouble." To such a pass have matters come, through the neglect, falsities, and perfunctory performances of the handicraftsmen of this and recent generations. What is to be done? what shall those do who long for a reform in the arts? and in whom shall they seek to kindle an eager desire for beauty, and, better still, for the development of the faculty that creates beauty? Help is not to be had by making art "the fashion," as some have suggested. The only real help, says Mr. Morris, for the Decorative Arts must come from those who work in them; "nor must they be led, they must lead." Craftsmen must all be artists, and good artists, too, before the public at large can take real interest in what they produce. Commerce, "which should be called the greed of money," cannot and will not help. The handicraftsman must again join the artist, from whom he has been divorced, or rather with whom he has failed to keep up in the work of the world. How is he to do this and regain the place Mr. Morris believes the craftsman once occupied? He must, we are told, study nature and the history of art. What he has to learn of the former is so obvious to our author that he does not dwell upon it. We are not quite so sure of this, and indeed Mr. Morris qualifies the declaration with a "now," which would seem to indicate that he hopes to return to the matter by-and-by. The workman must study, and, above all, learn to understand, ancient art, lest the feebleness of the art about us should enfeeble him. The museums of London will help the seeker after beauty, and they ought to be open, we are told, seven days in the week, best of all on the seventh. Perhaps he had better study nature in the open air on one day at least. Preliminary instruction is needed to enable the visitor to use the national collections at their best. The "ghost of the great church at Westminster" and the neighbouring hall will, smirched and falsified as they are, help the learner. English art, though not the biggest or the best of its kind, is, though limited, good and above all sincere. This advice is followed by a fine outburst against the Renaissance commonly so called, which "over-seas"

"had extinguished all nature and freedom, and art was become, in France especially, the mere expression of that successful and excellent rascality which in the flesh no long time afterwards went down into the pit for ever."

How the learner is to avail himself of the light of art may be gathered from the following:—

"You will see by all that I have said on this study of ancient art that I mean by education therein something much wider than the teaching of a definite art in schools of design, and that it must be something that we must do more or less for ourselves: I mean by it a systematic concentration of our thoughts on the matter, a studying of it in all ways, careful and laborious practice of it, and a determination to do nothing but what is known to be good in workmanship and design."

The art of drawing should be taught to all, but "designing cannot be taught in any school." Drawing the figure is essential, at least it is the best mode of study. Such is the sum of the practical part of the counsel Mr. Morris has to give to working men desirous of bettering their condition, technically, morally, and artistically. It is advice offered by one who has done his utmost to carry his convictions into effect, and in several respects has not wasted his labour or spent himself in vain.

The remaining lectures are: 1, 'The Art of the People,' which has so close a relationship to the preceding lecture that it demands no separate criticism, although it is in no respect inferior; 2, 'The Beauty of Life'; 3, 'Making the Best of It'; 4, 'The Prospects of Architecture in Civilization,' which is not encouraging, although it is not hopeless. As to the style of these discourses, Mr. Morris would do well to rid himself of his taste for false archaisms and affected roughness of expression, which at the best are but whims unworthy of his powers.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXIX.—GALLERIES NEAR LIVERPOOL.

As might be expected from the number and wealth of the gentry and merchants who reside near the great seaport on the Mersey, there are not a few collections of works of art in the immediate neighbourhood of Liverpool. Two of the more important of these, the accumulations of successive Earls of Derby at Knowsley and the wholly modern collections of Mr. George Rae, of Redcourt, Birkenhead, have already been fully described in these columns. Of a character similar to Mr. Rae's, and boasting of several fine productions of Messrs. Legros, F. M. Brown, and E. Burne Jones, as well as some noteworthy pictures by the old masters, especially a superb portrait by Velazquez, a Giorgione, and a Rembrandt, is the collection of Mr. F. Leyland, of Woolton Hall. The possessions of Mr. Weld Blundell, at Ince-Blundell Hall, Great Crosby, are chiefly antique sculptures, that is, Roman of the middle and late periods; with these are a number of pictures, a few of which, especially a signed John Van Eyck and four noble Wilsons, are of great value.

Before noticing these galleries we purpose to speak of a group of collections of modern paintings in private houses, which the owners have kindly allowed us to examine and comment upon. The collections to which our present notes refer belong to Mrs. Heywood, of Norris Green; Mr. Henry Bright, of Ashfield, Broad Green; Mr. George Holt, of Bradstones; Mr. Brocklebank, of Childwall Hall; Mr. S. H. Thompson, of Thingwall; and Messrs. J. Beausire, P. Douglas, and E. Quaile, of Claughton, near Birkenhead. There are more collections in this district not yet embraced by our opportunities, such as those of Messrs. Royden, Jardine (comprising some fine Linnells), Kurtz (among which are noteworthy examples by the P.R.A.), Rankin, Bibby, and Hope, and that of Mr. Hill, of Claughton, which includes a fine Reynolds and several pictures of considerable merit, the best being Gainsborough's marvellous portrait of Tenducci the singer, which was at the Academy exhibition of a few winters since.

The art possessions of Mrs. Heywood include many sketches and small pictures, among which we noticed portraits of Mrs. Heywood seated in a garden, and Mr. Heywood with a groom and horses, which are unusually agreeable and spirited productions, examples of a class in which his art was at its best, by Sir Francis Grant; one of the many reproductions of one of the innumerable portraits of the Duchess of Orleans (?"La Belle Henriette"); and a portrait of the Duchess of Mazarin as 'Cleopatra dissolving a Pearl,' from Strawberry Hill. A picture by D. Maas, showing men at the door of an inn, has many good qualities, including solidity, finish, and brightness of touch. Near it are 'The Fortress of Nimwegen,' by Haakert, with figures by Berchem, a sunny picture of sunlight and open air; a portrait of Marion de Lorme, by Mignard; and a portrait of Madame de Montespan. An 'Assumption of the Virgin,' painted on copper by Poelemberg, is a good school picture in the later academical manner of the artist, but nevertheless is almost pretty enough to be charming; the Amorini in the air would not disgrace Albano. A more important painting is a thoroughly characteristic sandy landscape by Wynants, with cattle attributed, no doubt correctly, to A. Van de Velde, a sunny, smooth, somewhat mannered, and very careful example of style which inevitably led to deterioration, art of this kind being certain to become mechanical and void of life and energy. Excellent although it is, there are so many similar versions of one of the most characteristic manifestations of the style of Ruysdael that it is hard to vouch for the originality of the impressive and cloudy landscape which bears the name of this master. It is true there is no reason why, personal fatigue apart, he should not have produced any reasonable number of pictures like this, which includes clear and solid representation of black clouds and gloomy, almost shadowless daylight on a rocky view. In the centre is a house on a dark brown rock, down the side of which a cascade tumbles furiously. The modelling of the rocks is more than commonly precise and firm, the water is unusually glossy and sharply defined, streaks of foam declare the direction of its forces. The hollows of the river bed are filled by waves which have been churned to the colour of golden cream, and toss and whirl until they are released, only to fall again. The coldness of the sky, which is unbroken by warm tints and not redeemed by any nobility in the disposition of its masses, gives to the picture a depressing effect which over-

XUM

powers the charms of the energetic treatment and fine expressiveness of the rocks and the wild spirit of the cascade. Conventionalism pervades the picture, but even that has a peculiar charm for those who remember to how high a pitch the appreciation of nature, or rather of that sentiment pervading nature which is the essence of landscape art, must have been carried before it could possibly crystallize in conventionalities of expression, execution, and choice of subject and material. It has been foolishly said that the poetic inspiration of nature was unrecognized in landscape until Turner developed it before the eyes of a wondering world. It is true that Turner, by favouring certain almost melo-dramatic modes of expression, made the sentiment of rocks, waters, clouds, and sunlight more obvious to ordinary observers, and thus vastly enlarged the number of those who sympathize with natural beauty. On the other hand, he must know but little of the achievements of some of the best Dutchmen of the seventeenth century, to say nothing of the Italians of the preceding age, who has failed to discover the delight men then took in pathetic landscape. Even the icy pictures of Backhuizen manifest sympathetic power to deal with the pathos of tumultuous skies and turbulent seas. The skies of Wouwermans are often enchantingly beautiful, although his land views are tame, if not mechanical. The ragged woodlands and sandy heaths of Hobbema—the banks, ruddy gravel pits, and sunlit roads of Huysman—the torrents of Ruysdael—the panoramas of De Koningh—the silvery coast scenes and sleeping seas of Van de Velde, are each and all proofs of the existence of fine perception of landscape inspired by sentiment in the artists' minds. Each of these painters hackneyed his motives and made a traffic of his art, but these facts, so far from showing that the pathos of landscape was not recognized in his day, distinctly prove how popular and widely recognized it was.

A good picture, attributed to Hobbema, but much more like a Huysman, gives a rich view of a sunny landscape on the margin of a wood; a herd is in front. One of the best of Isaac Ostade's works, produced in the vein which was so happily cultivated by Michiels and Millet, gives us the sandy beach of Scheveningen in wan but not weak sunlight, and is softly and delicately painted, with groups of fishermen that are deftly touched with firm draughtsmanship and neat modelling. A cart is on our left. A capital D. Teniers of the class we lately saw illustrated by Lord Derby's 'Interior of a Guardhouse' (Knowsley, No. 38) is Mrs. Heywood's 'Guardhouse,' in the middle of which soldiers are grouped about a form or stool on which the cards they use in gambling are lying. Flags, drums, trumpets, arms, saddles, and other accoutrements are cleverly disposed on the right and left of the figures. Under an open archway is a vista of a road and distant buildings. The deft execution of the figures, weapons, and costumes, the animated actions, and the variety of the expressions are noteworthy elements of an excellent, though somewhat laboured and probably late production of the artist. This picture shows more of study than spontaneity. Attributed to "Mieris," and possibly by William Mieris, is a hard, smooth, but otherwise meritorious cabinet picture of a girl, with a basket of shrimps before her, in the act of holding up a flat fish. By P. Wouwermans, or one of his clever followers or assistants—the artist himself did not paint one-third of the works which, even when the pictures of his namesakes have been eliminated from the large category, bear his name—is 'Repos du Voyageur,' comprising the good figures of a lady on a white horse and her companions. The sky has that expansiveness and that look of elevation which are so often to be enjoyed in Wouwermans's works. Otherwise the painting is sunny, clear, and soft in quality throughout. By Jan Steen is a picture of an interior, where an old woman holds a horoscope as if she were casting a nativity or otherwise prying into the future. A woman is at a spinning-wheel; her son sleeps. It possesses the usual characteristics of the painter. Very bright, pure, and elaborate, characteristically hard, and neatly finished is Van de Heyde's view of a red-brick Dutch country house by a roadside. It is one of the best examples at Norris Green. Another picture by Mieris (or an accomplished follower) is the companion to the above-named representation of a shrimp girl; it shows a man holding up a fish on his forefinger as if to tempt a customer with it. By Moucheron is a pleasing landscape, in sunlight, with many figures crossing a bridge. The figures may be due to one of Moucheron's companions, Brekelencamp, Beerestraeten, or another (see our reviews of the third and fourth parts of M. Henry Havard's 'L'Art et les Artistes Hollandais'). Our thanks are due to Mrs Heywood for permission to see and notice the pictures in her house.

We are indebted to Mr. Henry Bright for many facilities for the writing of these notes, and especially for leave to comment on the works of art at Ashfield. In the hall of this house is Schadow of Berlin's pretty statue in white marble, which, famous under the title of 'La Filatrice,' represents with delicacy and great skill, aided by much finish, a young damsel leaning against a rock, and holding in her hands a distaff, a spun thread, and its pendent whorl. This graceful creation of the Prussian sculptor lacks only a little animation and spontaneity of design, some additional strength imparted to its elegance, to approach the beautiful art of R. Wyatt, who was happiest when dealing with quasi-classic figures and poetic compositions of the class of which 'La Filatrice' is a charming specimen. In Mr. Bright's possession are a certain number of English drawings. Among these are several by N. Pocock and good specimens of the vigorous skill of Rowlandson. The splendid wizardry of Blake pervades his 'Baptism of Christ,' a drawing comprising a sweet and effective, not to say touching and lovely vista of lines of angels disposed in the sky with true sense of beauty and spiritual charm. 'Saul and the Witch of Endor' is a perfectly fine and characteristic drawing, but much inferior in inspiration and pathos to the 'Baptism.' Besides several meritorious and interesting pictures of the Dutch school of landscape art, not specially inspired, which decorate the walls of Ashfield, we have noticed W. Bird's masterpiece, 'The Surrender of Calais to Edward III.,' the history of which has been given by Cunningham and with superior correctness by Redgrave. It is well known by a careful contemporary engraving. It is, however, not generally known that the king was delineated from Bird himself, the queen from Mrs. Bird; the lively figures of the boys on our left represent the sons of Sir Charles Elton, who lost their lives in 1819—we believe by drowning. The Black Prince was painted from Mr. Bright's father. All these personages belonged to Bird's *locale*, Bristol. The execution of this picture is more than sufficiently accomplished, sound, and genuine to account for the fact that Bird, being in possession of the public eye when Wilkie began to be distinguished, was not for a comparatively long time displaced by the abler, sounder, more powerful Scotchman. Poor Bird now ranks just below T. S. Good and other second-rate *genre* painters of the beginning and early part of the second quarter of this century; and justly so, because of the dulness of his expressions, the lack of energy and spontaneity in his designs, and the clumsy commonplace of his modes of composition. A man of resources as limited as Bird was sure to be ousted by the far better equipped and more intelligent Wilkie. So completely in the end was Bird eclipsed that, if we do not mistake, this picture, which is by far the best he did, hardly found an owner, and afterwards was secured at a very moderate price for Ashfield.

The paintings collected by Mr. George Holt at Bradstones, West Derby, attest the independence of the owner's judgment as well as his comprehensive tastes. A pretty, but somewhat jejune, dry, and flat painting of the most popular modern mode is M. Perugini's 'Playing at Work,' a lady in a garden wheeling rhododendrons in a barrow. Contrasting with this in most respects is Sir Frederic Leighton's 'Weaving the Wreath,' which has been made known to our readers at the Royal Academy Exhibition. A beautiful lady, wearing a blue dress, is seated and twining leaves to form a garland, while she herself wears a similar ornament above her abundant hair. She is seated on a sumptuously-hued carpet placed on a marble floor, and her figure is relieved with rare skill against a wall of sculptured marble. The blue robe forms delicate yet powerful local colour, fortunately harmonized with its surroundings. The graces of the figure and its action are statuesque and severely simple. The whole is replete with elegance combined with dignity, and illustrates that phase of Sir Frederic Leighton's art which we are fain to accept as the best, if not the most popular. A phase of sentimental design, which years ago lost much of its popularity because the world has learnt to know better things, is represented by Ary Scheffer's picture of 'The Salutation,' comprising small figures of the Virgin and St. Elizabeth. This seems to be an authentic version, if not the original of the engraved painting, and, despite the lack of spirit in the design and the mechanical execution, has charm enough to account for the admiration which formerly waited on every production of the artist. A much more manly mode of design is represented by two landscapes by M. Auguste Bonheur, one of which shows a castle standing high on a rock detached in the middle of a champaign country; an ox-cart and figures attending it appear on a road. The other landscape gives a mountain land and a plough and its followers at work in misty sunlit weather, an effect which was many times depicted with rare success by Troyon and Mdlle. R. Bonheur, to whose great examples much of the art of M. A. Bonheur is due. He paints with firmness, breadth of effect and touch, and never fails in dignity of composition and almost classic force of sentiment. The sunlight in these pictures would have charmed Gaspar Poussin.

Some of Creswick's most graceful and agreeable pictures are in this house. We notice the well-known 'Stepping Stones,' which represents with undeniable pathos and brilliancy a charming English scene and peculiar effect of twilight deepening while the sun is yet supreme. The motto, if not the title, of this example is

The West still glimmers with departing Day.

A stream crosses the front of the picture and swiftly fills the hollows of its rocky bed; a rustic bridge is behind; a group of trees in the middle distance has been delineated in that graceful, if somewhat weak manner of the painter which supplied the place of studies and research by means of a mechanical and conventional touch, agreeable in itself, and only by artists and thoughtful observers recognized as fallacious. Apart from this and the too frequent defect of solid painting, it is undeniable that the beautiful and serene sentiment of the subject, which, of course, includes the inspiration of the effect proper, has been rendered with sympathy and grace. Another acceptable Creswick is a picture of a mill with a view over a river, the whole painted with clearness, neatness, and delicacy, but with the constant shortcomings, not to say the shallowness, of the art of the producer, content with rendering the superficial characteristics of English landscape, its brightness, smallness of scale, and prettiness. Here, as is commonly the case in the works of the deceased R.A., there is a lack of energy, solidity, and that fine

essential of masculine design, character. As a Creswick *per se*, standing on its own merits, this is a very good example, only inferior to the picture of evening just described; but neither rivals the fine coast view, with a storm impending and long ranks of cumuli drifting above a vast stretch of yellow sands, belonging to Mrs. Gibbons. The last we take to be the best of Creswick's paintings; it is much superior to the large upright landscape of a rocky scene, with a stag drinking from a torrent under a brilliant twilight sky, which was at the Academy a few years before the painter died, and is commonly considered his masterpiece. Mrs. Gibbons's picture was never, we believe, exhibited in public.

An unusually powerful Callcott adds much to the attractions of the dining-room at Bradstones. We have not preserved its name, but were much impressed by the design. It is a coast scene, under a stormy effect, with boats, from one of which a pilot is shouting to his comrades. This incident was more than once delineated by Turner, and may have been borrowed by Callcott. Technically speaking, the picture reminds us of a good J. J. Chalon, it is so full of energy and expression. By Mr. William Linnell is a capital picture, called 'A Scene in the Abruzzi,' giving a large far-spreading view over lofty mountain tops which, rising in immeasurable confusion of peaks and shadows, bar out the horizon, and display wealth of impressive forms and powerful tones. A line of finely delineated fir trees seem, to borrow a phrase from Mr. Browning, like figures in procession, to climb a stony road in an undulating rank, and yet to move as one. Another good picture by the same artist, possessing qualities similar to the above, pleased us greatly. A group of works of an agreeable kind may, without special reference to any one of the number, be properly named in this place. These pictures are by Collins (an ordinarily good specimen of its class), Nasmyth, and J. B. Pyne.

The more remarkable figure pictures in Mr. George Holt's collection are of varied characters and values. They comprise the sketch, or a small replica, of E. M. Ward's capital picture of 'Dr. Johnson reading the Manuscript of Goldsmith's "She Stoops to Conquer,"' the well-known design which includes the figure of the earnest doctor with the book held near his face, and one hand admirably designed to express an intention to deprecate interruptions in the study. Goldsmith, chin in hand, sits emphatically awaiting the verdict he dare not anticipate. The sketch has more animation of design and displays clearer colour and a more vigorous touch than the picture to which it refers. A capital picture in the artist's best manner, painted by M. E. Frère a few years ago, represents a French cottage interior where a group of bright and sweet-faced children has been formed about their mother or elder sister, who is about to cut some delicacy lying before her in a dish and distribute the same among the eager spectators. The group is admirable as a whole; each face is idiosyncratic in expression, each figure has its proper and distinct air and action. Each figure and countenance was painted with delicacy, softness, and tact. The accessories of the background, which are numerous, are equally acceptable. These parts and the background proper, being unusually solid in painting, are not unworthy of A. Van Ostade, a model whom M. Frère has fortunately and without plagiarizing faithfully adopted as his guide in art. By means of cleverly arranged light and shade, faithful coloration, a broad effect, and wealth of reflected light, a scheme of chiaroscuro of unusual value has been ably illustrated in this picture. Mr. T. Faed's figure of a Scotch lassie of unusually clean habits and extremely *débonnair* aspect, seated on a bank and shaping a bouquet of red flowers, will be fresh in the memories of those who saw it a few years since at the Academy, when it bore the title 'Free fra' Care.' The deep and rich ruddiness of the blossoms assorts well with the many tints of the blue gown of the damsel, and also with her yellow scarf and the felt hat at her side.

Near this popular picture hangs a sparkling, but rather showy and flimsy sketch by Mr. Frith, representing his very attractive and spirited picture 'A Scene from Molière.' A work of Mr. Calderon's shows a damsel in white standing and looking out of the picture, and bears the happily descriptive motto:—

> Her eyes are where her heart is,
> And that is far away.

This example was lately at the Academy, and was noticed by us at some length on that occasion. At least equally well known, and quite recently before the public, is Mr. Marks's capital production, called 'What is it?' which comprises a group of men and women massed variously on a bridge and looking eagerly into the water which is beneath their feet and invisible to us. The backs of the figures are so full of energy and expression that we have no difficulty in guessing what the faces look like. Two pictures by Sir E. Landseer are now at Bradstones; one was bought for Mr. Holt at the artist's sale. They are 'Stags,' painted in the manner of the well-known 'Taking of the Deer,' and a landscape, which seems to be due to the period of 'Chevy Chase.' The latter represents a lake scene with mountains beyond the further shore, the whole being in a stormy effect including low slaty clouds and steel-like water.

The next paper of this series will describe the collection of modern pictures of Mr. Brocklebank, of Childwall Hall, which includes Mr. Millais's 'The Wolf's Den'; Turner's 'Ehrenbreitstein,' 'Blessing the Adriatic,' and the beautiful 'Somerhill,' a jewel of that fine period, *c.* 1810, which was not long since re-exhibited at the Academy; 'Gravel Pits,' by Linnell; Stanfield's 'Avignon'; Creswick's 'Barnard Castle'; Phillips's 'La Bomba'; Wilkie's 'Letter of Introduction'; Egg's 'Esmond returning from the Wars'; and works by Collins, Callcott, Nasmyth, Messrs. Frith, J. Faed, T. Faed, Roberts, Hook, and other painters.

'BARTOLOZZI AND HIS WORKS.'

Ye Leadenhalle Presse, Sept. 11, 1882.

I am indebted to your reviewer for the trouble he has taken to point out inaccuracies in my book 'Bartolozzi and his Works.' The obligation would be increased if he would place at my service for another edition the full result of his somewhat laborious emendations. Perhaps he will allow me to return the compliment by offering him information with regard to certain points on which he seems to be a little vague. He states that I am principally indebted "to the British Museum hand list"—whatever that may be—for my record of Bartolozzi's prints. The only manuscript list of Bartolozzi's engravings that the Print Room possesses is a translation of Le Blanc's, which has naturally nothing whatever to do with the British Museum collection of Bartolozzi. This list being unavailable to students, I translated it again from the original, and then, however imperfectly, catalogued for the first time the British Museum collection. Your reviewer gives it as his opinion that I can only recently have turned my attention to the subject of engraving, and by way of illustration informs your readers that on pp. 27 and 28, vol. i., I twice speak "with high praise and in particular detail of Bartolozzi's transcripts from Guercino as 'etchings'"; whereas "they were not etched at all, but carefully and laboriously drawn in line!" I write with a pile of these beautiful transcripts before me, all of which are etched and afterwards finished with the graver. Turning to the first reference book that comes to hand, 'The South Kensington Universal Catalogue of Books on Art' (1870), vol. i. p. 72, there is the following entry:—"Bartolozzi (Francesco), etchings from the drawings of Guercino, *fol.* Bodl." Being a question of fact and not of opinion, it is unnecessary to quote writers contemporaneous with Bartolozzi who have described these works as etchings. Those of your readers who are curious may satisfy themselves by referring to a beautiful copy of the first volume in the Print Room (No. 18 and others show foul biting), or can see both volumes by calling on Mr. Quaritch, the Piccadilly bookseller, who has republished the series, and in whose possession are the original copper-plates. Finally, in reply to his question, let me inform your critic that Mr. Reid has had for some years past the intention of compiling a *catalogue raisonné* of Bartolozzi's prints—a task he is infinitely better fitted for and more competent to undertake than myself—and it was at his request that extra copies were struck off "for the use of the British Museum."

Andrew W. Tuer.

*** If, notwithstanding what we have already said about the technique of Bartolozzi's transcripts from Guercino's etchings, Mr. Tuer retains any doubts about that very simple matter, he cannot do better than consult his friend Mr. Reid, who will, doubtless, satisfy him on this and other matters respecting the subject of 'Bartolozzi and his Works.'

LARGE PARISHES.

Sevenoaks, Sept. 7, 1882.

In a notice of the archæologists' visit to Plymouth you assume Lidford to be, perhaps, "the largest parish in England." I find that Lidford is stated to be 58,000 acres in area, but Kendal, in Westmoreland, amounts to 68,360 acres; while Halifax, in Yorkshire, is returned as 75,740 acres, and Whalley, in Lancashire, mounts up to 108,000 acres. A. H.

Fine-Art Gossip.

A renewed attempt has been made to secure the destruction of the ancient and picturesque Toll-House at Yarmouth. This is, we believe, a unique work of its kind in England, and has so many points of interest that no pains ought to be spared to protect it. The Town Council, whose meeting-house the Toll-House has been during four centuries, has been strongly urged to destroy the building. On the other hand, Sir John Lubbock and an influential party are urging the authorities to preserve it and appropriate it as a museum, thus saving it the ignominious fate of the Carliol Tower at Newcastle-on-Tyne, and imitating the wise act which appropriated the old house at Cluny, Paris, to public service as a museum.

Sir F. Leighton's heroic-size figure of 'Phryne at Eleusis,' which was much noticed in the Academy of this year, is now in the Walker Art-Gallery at Liverpool, besides more than eight hundred other pictures, nearly seven hundred and fifty drawings, and forty sculptures.

We have received a long communication from a relation of Mr. J. Scarlett Davis, a landscape painter who died in 1845, complaining of sundry statements in biographies of the latter published in both editions of Mr. S. Redgrave's 'Dictionary of British Artists.' Our correspondent sends a very lengthy, and, as he declares, correct, biography of the painter, which we have no room to print. He encloses a written promise from the responsible editor of the 'Dictionary' that a third issue of that work shall contain the desired corrections. There is, therefore, no need for our entering into the matter.

The Treasury has sanctioned the purchase from the heirs of the satirist of the original studies for "H. B.'s" celebrated caricatures. The price is 1 000*l.* (not 2,000*l.*, as stated in the House of Commons by Mr. Walpole), to be paid when funds are available, no special grants being obtainable in the present hard times. The moment the collection is paid for it will, we presume, be exhibited in the King's Library in its entirety, and it is expected to afford amusement and gratification to the general public.

Be this as it may, there is not the slightest doubt that in transferring the designs to the lithographic stones they lost a great deal of their spirit; the prints are, therefore, far inferior to the drawings.

ACCORDING to the reports of the discourses delivered to the Durham and Northumberland Archæological and Architectural Society, attention is likely to be directed with increased interest to the manner in which restoring operations have been performed on the once venerable Abbey-Church at Hexham. Mr. Hodges severely condemned the way in which, as he alleged, many of the ancient parts of this building have been destroyed.

AN amateur art exhibition was opened on Monday, the 28th ult., at Lancaster, and will remain open for a month. There are nearly four hundred water-colour drawings, thirty-four oil paintings, and upwards of fifty items of china painting, embroidery, &c. About half the exhibits are by amateurs in the immediate neighbourhood of Lancaster. The exhibition is in every way unofficial, several ladies and gentlemen having formed themselves into a committee, and sent circulars to their friends, and the result is an exhibition in interest surpassing their expectations.

OUR French contemporaries are devoting considerable attention to the long proposed exhibition, or rather group of exhibitions, analogous to the Crystal Palace, which is to be opened near St. Cloud, and close to the railway from Paris to Versailles. The building is to be nearly 1,700 feet in length, 165 feet high, and 460 feet wide. It will comprise museums of industrial crafts, paintings, sculptures, and specimens of architecture obtained from various parts of France; galleries for the display of panoramas, such as are now in vogue with our neighbours, besides gymnasia and concert halls.

THE current exhibition of *mobilier*, &c., in the Palais des Champs Élysées, Paris, has called forth loud and continued complaints of the manner in which specimens of ancient furniture and similar objects belonging to the Garde-Meuble have been prepared for the exhibition. It is said that not a few of these relics have been "done up" with a vengeance.

THE fourth centenary of the birth of Raffaelle is to be celebrated by the erection of a monument of the "Divino Pittore" on the Piazza Maggiore at Urbino, in front of the Ducal Palace. There is to be a competition for the commission, and an exhibition of models is to be opened at Urbino on the four hundredth anniversary of the birth of Raffaelle, March 28th, 1883. The models should be sent in a month before. Three prizes are offered for the best designs.

WE learn that Dr. Karl Woermann, professor at the Kunst-Akademie at Düsseldorf, has been appointed to the directorship of the Dresden Gallery.

AMONG the considerable works of "restoration" which have been in progress of late on the Continent are the operations performed on the great church of Basle, a fine Romanesque building, erected during the reign of the Emperor Henry II. The western towers, which are conspicuous in the landscape of that region, are now not only thoroughly repaired, but have been deprived of all their venerableness and pathetic interest. They are said to have been in a much neglected condition. It is proposed to imitate at Berne the achievements which have robbed Cologne Cathedral of all its history and charm. Berne Cathedral is soon to be put into the hands of the restorer, who is to carry out the original plan of this edifice as designed in 1421, and among other things finish the tower.

THE death is announced of Herr J. de Halbig, of Munich, sculptor of the colossal group of the 'Descent from the Cross,' erected on the mountain near Ober-Ammergau. This artist was sixty-nine years of age.

"H. W." writes from Naples under the date of September 5th:—"Much interest has been excited by the discovery of a sarcophagus at Atripalda, in the district of Avellino. The whole of this neighbourhood at one time belonged to the Hirpini, and from time to time excavations have been carried on there with rich results. The Minister of Public Instruction on the discovery of the sarcophagus gave orders that the course of the road should be temporarily changed so as to admit of the continuance of the excavations. He has also expressed a desire to co-operate in the formation of a museum at Atripalda, which, as having been one of the principal stations of the Hirpini, who possessed also the sites of Beneventum, Caudium, Abellinum, and Compsa, offers a wide and rich field for the labours of the archæologist. The Municipal Giunta has this week sanctioned the expenditure of a sum required for a *corniche* of marble with bronze ornaments to enclose the memorial *lapide* of Garibaldi. It is to be placed in the vestibule of S. Giacomo, the name of the municipal palace. Three other *lapidi* were voted to the memory of Giuseppe Pisanelli, F. del Giudice, and Ottavio Tupperto. They were men who in various ways served and suffered for their country in times when patriotism and learning were regarded with more than suspicion."

MUSIC

THE WEEK.

THE HEREFORD FESTIVAL.

FROM the sketch of the programme given in last week's *Athenæum* it will be seen that the promoters of the time-honoured festival of the three choirs have not deemed it expedient this year to depart widely from routine, either in the direction of novelty or of revivals of important but neglected works. It cannot be said that the scheme is wholly without interest; but it does not afford much evidence of a spirit of enterprise, and it compares somewhat unfavourably with that of Worcester last year. If these gatherings are to maintain their position in the musical world, and not to be regarded as mere local celebrations, some efforts must be made to keep pace with the times; but it would, of course, be wholly unreasonable to look for the adoption of a policy similar to that which should characterize a large town such as Birmingham in festival matters, and any comparison between the recent performance in the midland centre and those given in Hereford is to be deprecated as unjust, if not absurd. That improvements could be made, however, which would enhance the Three Choir Festivals in a musical sense, without injuring the charity for whose benefit they partly exist, must, we think, be admitted, and reference shall be made to them in the course of our observations on the performances of the week.

The festival may be said to have been formally inaugurated on Tuesday morning by a full choral service, with a sermon by the Rev. Sir G. H. Cornewall, Bart. The preacher made a spirited defence of the strictly musical aspect of the institution, in which regard Hereford has on more than one occasion displayed a more liberal feeling than the sister dioceses. At a quarter past one o'clock commenced the first regular performance, that of 'Elijah.' With regard to the interpretation of Mendelssohn's work not very much need be said. The orchestra, consisting of sixty-five professional players, led by Mr. Carrodus, left nothing to desire, and the chorus proved to be of exceedingly fine quality, a large proportion of the singers being from Bradford. The engagement of these Yorkshire choralists is a point worthy of commendation. The only noticeable instance of unsteadiness occurred in "Behold, God the Lord passed by," and here the blame could scarcely be imputed to the performers. It would be superfluous to criticize the efforts of Madame Albani, Miss Anna Williams, Madame Patey, Mr. Edward Lloyd, and Mr. Santley, especially as these artists took part also in the recent Birmingham performance. But a special word of approval must be given to Miss Hilda Wilson, who had a large share in the contralto music. This young lady has a full and rich contralto voice, and promises to become a vocalist of the highest class. The conductor, Mr. Langdon Colborne, has a clear, firm beat, but his intentions were not always easy to follow, especially in the recitatives; and it would be interesting to learn his authority for the excessive speed he adopted in the choruses "Blessed are the men," "He watching over Israel," and one or two more instances. With the exceptions indicated, the performance was generally worthy of praise.

The first evening concert in the Shire Hall was in one respect the most interesting of the festival, as it included the only absolute novelty of importance, Mrs. Meadows White's setting of Collins's 'Ode to the Passions.' We are not, perhaps, implying very much in stating that the composer of this work occupies the most prominent place among living female composers; but we may go further, and declare that in earnestness of purpose and laudable ambition she deserves to be named among the foremost of English musicians. Her former productions, among which may be named the overtures 'Endymion,' 'Pandora,' and 'Jason,' and a setting of Kingsley's 'Ode to the North-East Wind,' show a high aim in the choice of subject, and a determination to win success, if at all, by the most legitimate means. In the present instance all the qualities we have named are again conspicuous, and if Mrs. Meadows White had failed to render justice to her theme she would have been blameworthy only in attempting too much. It may be said at once that she has not failed, but, on the contrary, has succeeded in a measure that should be extremely gratifying to her and also to those who gave her a place in the festival scheme. The 'Ode to the Passions,' though belonging to a style of poetry which has had its day, suggests musical treatment, if only on account of the opportunities it affords for variety and contrast. There exists a setting by Dr. Benjamin Cooke published in 1784, but this has been long forgotten by concert-givers. The Handelian feeling so strongly observable in the present work may or may not have been purposely infused into the music, but it is entirely appropriate to the subject, which bears a strong likeness to that of Dryden's 'Alexander's Feast.' Most of the numbers are broadly diatonic in character, and more remarkable for a certain rude vigour than for sentimentality or complication in the technical details. The choruses, "Anger rushed, his eyes on fire,"

"O how altered its sprightlier tone," and the final number, "O Music! sphere-descended maid," forcibly illustrate these remarks. Of the solos, "But thou, O Hope!" for soprano, may be quoted as undeniably pretty, and a tenor air, "Last came joy's ecstatic trial," for its pastoral, not to say bucolic, style. Speaking generally, the resemblance to Handel lies more in manner than in actual reminiscences; but there are two episodes that suggest the influence of Mendelssohn—the chorus in G minor, "Thy numbers, Jealousy," and the opening of the last chorus—the one recalling the 'Lobgesang' and the other 'Elijah.' In her orchestration Mrs. Meadows White is not altogether happy, the treatment of the wind being frequently ineffective; but in this respect we note an improvement on her former efforts, and when full cognizance has been taken of every imperfection, the 'Ode to the Passions' must still be considered a work of great merit and quite worthy of its position in a festival programme. It should prove an exceedingly useful addition to the *répertoire* of choral societies. The performance on Tuesday evening was on the whole commendable, but there were a few unfortunate slips. The conductor had a strange fancy for beating four in a bar where the composer had indicated *alla breve*, and some of the movements were therefore taken at a much slower pace than that indicated by the metronomic marks. At the close Mrs. Meadows White was called to the platform and applauded with much warmth. In the miscellaneous part of the programme the only items worthy of mention were Beethoven's Overture to 'Egmont,' and Cherubini's to 'Les Deux Journées.'

The concert on Wednesday morning was remarkable on account of the length of the programme if in no other respect. 'Judas Maccabæus,' with the omission of a few numbers, was performed as a first part, occupying more than two hours and a half; and with Beethoven's B flat Symphony, Goetz's 137th Psalm, and Bach's 'Magnificat' in the second part, the concert lasted five hours and a half, including the interval. It is not too much to say that a grave error of judgment was displayed in this instance. Not only must the performers have been completely exhausted under such a continuous strain, but the audience must have felt a sense of weariness injurious to the appreciation of the music and possibly to the interests of the festival itself. As the works presented are all more or less familiar to musicians, criticism may be confined to the interpretation, which in each case left room for both praise and blame. In Handel's oratorio a peculiarity was the accompaniment of the airs for the most part with the simple *basso continuo*, the effect, of course, being bald and meagre in the extreme. This could not have been done in order to satisfy the purists who object to additions of any kind, for Vincent Novello's accompaniments were used in the choruses. It may be noted that all the principal vocalists, with the exception of Mr. F. King, indulged in the claptrap device of introducing high notes at the close of the airs, a proceeding without excuse in a cathedral performance, where, of course, applause is impossible. The choruses were for the most part finely sung, but there were one or two false starts, the result of misunderstanding with the conductor. It may be doubted whether the selection of Beethoven's Fourth Symphony was a wise one under the circumstances. The characteristics of the work are cheerfulness and humour, and although the beautiful *adagio* seemed appropriate enough, the surroundings gave a sense of incongruity to the third and fourth movements. We admit that there are but few symphonies thoroughly suitable to performance in a cathedral, but the present choice was not the best that could have been made. The rendering was tame and colourless, but not open to censure on graver grounds. The same, unfortunately, cannot be said of Goetz's beautiful work, which suffered extremely under the *bâton* of Mr. Colborne. Some of the movements were taken at a pace at least half as slow again as that indicated, and most of the marks of expression were absolutely disregarded, *pianissimo* being sung as if it was synonymous with *forte*. By the side of these serious defects the introduction of an organ part for which there is no authority in the score was quite a venial offence. The conductors at these Three Choir Festivals deserve indulgence, if not commiseration, on being called upon to assume duties for which, in the nature of things, they can scarcely be prepared by frequent experience; but it is difficult to find excuse for such faults as we have indicated in the performance of Goetz's work. With a well-trained orchestra and chorus the observance of the proper *tempi* and of the *nuances* should be matters easy of accomplishment. The difficulties of Bach's 'Magnificat' were fairly overcome, and such unsteadiness as was noticeable may be considered as the result of fatigue, under which every one concerned must have been suffering.

According to a custom introduced a few years ago, Wednesday evening was devoted to oratorio in the cathedral in place of secular music in the Shire Hall, the work selected on this occasion being Mendelssohn's 'St. Paul.' It is needless to dwell upon the peculiar fitness of this music, more severe and less dramatic than that of 'Elijah,' for performance in a consecrated building; and the rendering on Wednesday, though unequal, was on the whole very impressive, the magnificent choruses "Rise up, arise," and "O great is the depth" creating an effect that was almost overwhelming. Regarding the soloists, Miss Anna Williams, Madame Patey, and Mr. Santley sang in a manner worthy of unqualified praise. The whole of the tenor solos fell to the lot of Mr. F. Boyle, who should be warned against defects of method which if not corrected will prove detrimental to his progress as a vocalist. He indulges much too freely in the *portamento*, and, what is more serious, displays symptoms of the *vibrato* in a peculiarly unpleasant form. As Mr. Boyle is young in his profession, it is but kindness to indicate shortcomings which may easily be amended with a little care and study.

Musical Gossip.

Gounod's new oratorio 'The Redemption' will be given for the first time in London at the Royal Albert Hall on Wednesday evening, November 1st. Engagements have been made with Madame Albani and nearly all the other artists who took part in the first performance at Birmingham, and it is hoped that M. Gounod will be able to come to London and conduct the performance himself.

Madame Marie Roze has been singing at Liverpool with the Carl Rosa Opera Company. The Liverpool papers speak in the highest terms of her impersonation of the part of Leonora in 'Fidelio.'

It is with much regret that we learn of the retirement of Mr. Frederick Corder from the conductorship of the music at the Brighton Aquarium. During the time that he has held the appointment he has done all in his power to raise the musical character of the institution. On the occasion of his retirement two grand concerts will be given at the Aquarium for his benefit, on the afternoon and evening of Saturday, October 7th. At the afternoon concert Beethoven's 'Choral' Symphony will be the principal work performed, and the programme will include the 'Tannhäuser' Overture, Handel's Largo, and Mr. Corder's Overture to 'Ossian.' The evening concert will be miscellaneous.

We learn on good authority that the performances of 'Parsifal' at Bayreuth have pecuniarily been far more successful than was anticipated, the nett profits amounting to 120,000 marks (6,000*l.*). The *Volkszeitung* calculates that, in spite of the fact that some of the artists gave their services, while others accepted very reduced terms, the expense of the production of Wagner's latest work has been about 700,000 marks!

A monument has lately been erected to the memory of Rouget de Lisle, the composer of the 'Marseillaise,' at Choisy-le-Roi, the town in which he is buried.

The chief novelties to be produced at the Vienna Opera during the coming season are Verdi's 'Simon Boccanegra,' Dvorák's 'Der Bauer ein Schelm,' Grammann's 'Andreasfest,' Erkel's 'Ladislaus Huniady,' and Wagner's 'Tristan und Isolde.'

Charles Voss, formerly popular as a composer of fashionable drawing-room pieces for the piano, died at Verona on the 29th ult., at the age of sixty-seven.

DRAMA

THE WEEK.

Toole's Theatre.—'Diane,' a New Play in Five Acts. Adapted from 'Diane de Lys' of Alexandre Dumas the Younger. By James Mortimer.

Criterion.—'Little Miss Muffet,' in Three Acts. Adapted from the French of A. Hennequin (and A. Millaud). By James Albery.

The difficulty of producing upon an English stage the social studies of MM. Alexandre Dumas, Émile Augier, and other prominent French dramatists, extends beyond the limits imposed by the inadequate supply of actors capable of presenting intelligently, or even without suggestion of ridicule, the characters by which the action is supported. As nothing in English manners corresponds to the modes of life constantly shown upon the Parisian stage, nothing in the English language is quite suited to the special forms of logic or sophistry which constitute the basis of modern French dramatic fiction. National characteristics are more distinct and more prevalent than is sometimes supposed. Vice in England may be as current and as well developed as it is in France. It is at least different. We are as far from understanding the problems concerning adultery which the French drama loves to state as from appreciating the Anna Matilda sentimentalities which abound in German comedy. If, then, we are to have a piece like 'Diane

de Lys,' let us have it in French. In a language which might seem to have been invented for the purpose of expressing shades of difference, utterance becomes possible of views which, when put forward in plain English, are ludicrous or revolting.

Miss Fanny Davenport, whose first appeal to an English public is made as the heroine of M. Dumas's play of 'Diane de Lys,' is singularly unfortunate or ill advised in her choice of an opening character. Her handsome but robust physique is as little suited to the *rôle* of Diane as is her pronounced style of acting. With less of illogicality than at first appears, the world has decided that gambols, whether moral or physical, are only acceptable or pardonable in the young or those who may be taken as such. Pushed to its extreme and told with brutal sincerity, this moral is expressed in the fable of the donkey and the lap-dog. We are not concerned to apply to art this old apologue. It is, however, to be noted that the actresses who have found acceptance in such *rôles* as Diane de Lys or Marguerite Gautier have been women like Rose Chéri (the first exponent), Mdlle. Desclée, and Mdlle. Bernhardt, of whose gifts or method a certain juvenility of style and a grace at times almost infantile constituted a portion. Miss Davenport charges her face with much intensity, and displays in the stronger scenes of the play much power of expression. When, however, in the earlier scenes she gives way to the extravagances of which the heroine is guilty during her ill-judged and compromising visit to the artist's studio, a sense of incongruity is stirred of which during the following action it is impossible wholly to divest ourselves. Altogether unimportant are the questions concerning dress and jewellery which the appearance of Miss Davenport has provoked. The first duty of an actress is to look the *rôle* she presents, the second duty is to fill it. No aid, external or internal, will enable Miss Davenport to do the former. In the support afforded Miss Davenport there is little to be praised. Mr. Hermann Vezin plays with admirable quietude and impressiveness as the Comte de Lys, the husband of the heroine. Mr. Eben Plympton strives hard to render sympathetic the character, at once unsympathetic and insignificant, of the hero, but fails to assign him a single claim to consideration or indulgence. Mr. Philip Day, from whom better things were to be expected, assigns a burlesque physiognomy to the Vicomte de Ternon. Miss Sophie Eyre acts agreeably as Madame Delaunay, the friend of Diane, but her anger is not that of a Parisian woman of the world. The performance all round, indeed, is wanting in distinction. In subordinate characters Mr. Reeves Smith, Mr. E. Lyons, and Miss Bufton are noteworthy. A demonstratively favourable reception was afforded on the first night. It is difficult to see Mr. Mortimer's reason for changing the termination and killing the heroine instead of the lover. The excisions that have been made are generally judicious.

Wholly extravagant and preposterous as is the version of 'La Femme à Papa' produced at the Criterion under the title of 'Little Miss Muffet,' it is not without claims on attention. As a specimen of the manner in which wickedness may be extracted from one of the least decent of French plays, and a residuum left which is not wholly flavourless, it is, indeed, noteworthy. Its wildly improbable story and its absurd incidents are likely to be productive of amusement to a certain class of playgoers, and to inspire aversion and even animosity in a second class. Though suggestive its story is scarcely objectionable, and the interpretation forced by the audience upon certain passages is ascribable to the determination of the public to find wickedness in the piece rather than to the denunciation of the presence of that quality. The great double *rôle* of M. Dupuis Florestan de la Boucanière and Aristide his son is divided between Mr. N. Standing and Mr. Beerbohm Tree, who acquit themselves excellently in their respective parts or fragments of parts. Miss K. Rorke plays intelligently and pleasingly the character of Minette (Anna), which was triumphantly created by Mdlle. Judic. Others of the *dramatis personæ* are well presented by Mr. Lytton Sothern, Mr. A. Knight, and Mr. Maltby; and the entire performance, though inferior to what has been seen at this house, is creditable.

Dramatic Gossip.

MRS. LANGTRY commences this evening a final engagement in London previous to her departure for America, playing at the Imperial Theatre the part of Hester Grazebrook in the 'Unequal Match,' in which she has obtained some success in the country. During her occupation of the theatre, which is limited to twelve nights, she will play Rosalind in 'As You Like It.'

THE new burlesque of Mr. Robert Reece, 'Little Robin Hood,' was to be produced last night at the Gaiety Theatre. At this house a new comedy, adapted by Mrs. Forrester from a novel of Whyte Melville, and entitled 'Black but Comely,' is this afternoon to be played.

Two novelties have been produced at the Odéon. The more important of these, 'Le Mariage d'André,' a four-act piece of MM. Hippolyte Lemaire and Philippe de Rouvre, shows how far afield French dramatists are driven in their search after dramatic situation. André Sirvet, a sculptor of illegitimate birth, espouses a young girl, and finds after marriage she is his sister. From the grief and horror this discovery causes he is freed by the confession of his mother-in-law that she has been false to her husband, and that the heroine is the offspring of her fault. Thanks to the double adultery that has been committed, André may continue his nuptial relations without dreading any interference of the Eumenides. We would suggest as a title for this precious piece 'A quoi servent les Belles-Mères.' MM. Chelles, Cosset, and Amaury, and Madame Tessandier take part in the interpretation.

AT the same house a *bluette* in verse by M. Ernest Boysse, entitled 'L'Écran du Roi,' has been played. Its action is supported by the familiar characters of Molière, Géronte, Valère, Isabelle, Scapin, and Martine.

A DRAMA extracted by M. Albert Miral from the 'Splendeurs et Misères des Courtisanes' of Balzac, and produced under the title of 'Lydie' at the Théâtre des Nations, has met with an unfavourable reception.

'LA CRIMINELLE,' a four-act drama of MM. Delacour and Lermina, with which the Gaîté has reopened, shows a woman slaying with a pistol-shot the lover who endeavours to extort money from her under the threat of showing her letters. At this house 'Le Juif Polonais' of MM. Erckmann-Chatrian has been revived.

TO CORRESPONDENTS.—E. M. S.—J. L.—received.
R. R.—Too late.

SAMPSON LOW, MARSTON & CO.'S
LIST.

Further progress in Central and West African Exploration. Companion Volumes to Major SERPA PINTO'S 'How I Crossed Africa.'

Two Volumes, demy 8vo. with Maps and over 130 Full-Page and Text Illustrations, price 2*l.* 2*s.*

FROM BENGUELLA
TO THE
TERRITORY OF YACCA.

By H. CAPELLO and R. IVENS,
Officers of the Royal Portuguese Navy.

Translated by ALFRED ELWES, Ph.D.
(Translator of Pinto's 'How I Crossed Africa.')

2 vols. [*Nearly ready.*

The two gentlemen whose valuable discoveries and scientific surveys are now about to be published, formed part of the Expedition which was organized by the Portuguese Government in 1877–80. The present Work will be found to contain most interesting and valuable data upon the sources of the rivers Cunene, Cubango, Luando, Cutanza, and Cuango, the course of great part of the two latter having been explored by the intrepid travellers. Several other rivers were likewise discovered and surveyed by them, and countries hitherto but little known or entirely unknown were visited by the explorers, and are minutely and picturesquely described.

The Work, furnished with complete Maps, Portraits of the Travellers, and copious Illustrations, will form an important contribution to the physical and ethnological geography of the vast African Continent.

RE-ISSUE IN CHEAP FORM OF BRYANT'S POPULAR HISTORY OF THE UNITED STATES.

HISTORY of the UNITED STATES,
from the First Discovery of the Western Hemisphere by the Northmen to the End of the First Century of the Union of the States. Preceded by a Sketch of the Prehistoric Period and the Age of the Mound Builders. By WILLIAM CULLEN BRYANT and SYDNEY HOWARD GAY. Fully illustrated with Original Designs by the leading English, French, and American Artists.

The Four Volumes, originally issued at 40*s.* each, or 8*l.* complete, are now offered to the public at 15*s.* per Volume, or the Set complete for 3*l.* Vol. I. in new binding will be ready for issue OCTOBER 1, and subsequent Volumes Monthly.

VOLUME I.

Extending from the First Discovery of the Western Hemisphere to the Establishment of the several Colonies along the Atlantic, and the beginning of their Colonial Career.

Illustrations of Volume I.—Frontispiece, Portrait of William Cullen Bryant, Engraved on Steel, in pure line (after a photograph by Sarony), by Charles Burt—4 Full-Page Engravings on Steel—12 Full-Page Woodcuts, and nearly 300 Illustrations in the Text.

PUBLIC LIFE of the Right Hon.
BENJAMIN DISRAELI, EARL of BEACONSFIELD, K.G. By FRANCIS HITCHMAN. Crown 8vo. about 600 pages, prices 8*s.* 6*d.* Now Re-issued in Cheap Form and new Binding at 3*s.* 6*d.*

N.B.—This Edition contains the very fine Photographic Portrait of his Lordship, by W. & D. Downey, taken when in office, as Prime Minister, in attendance on the Queen at Balmoral.

Now ready, small quarto, glazed coloured cover, 5*s.*

The FLOWERS of SHAKESPEARE
DEPICTED. By VIOLA. 32 large Coloured Plates.

Now ready, small quarto, glazed coloured cover, 5*s.*

FAIRY TALES. By Andersen. With
10 large Coloured Illustrations after designs by E. V. B.

NEW NOVEL.

UNDER the DOWNS. By E. Gilliat.
2 vols. [*Ready.*

FOUR VOLUMES NEARLY READY IN

LOW'S STANDARD NOVELS.

Small post 8vo. cloth, 6*s.* each.

CHRISTOWELL: a Dartmoor Tale.
By R. D. BLACKMORE. New Edition. [*Immediately.*

A LAODICEAN. By Thomas Hardy.
New Edition. [*Nearly ready.*

ADELA CATHCART. By George
MAC DONALD. New Edition.

THREE RECRUITS, and the Girls
They Left Behind Them. By JOSEPH HATTON. Author of 'Clytie,' &c. [*In the press.*

LITERATURE

Amazulu: the Zulus, their past History, Manners, Customs, and Language, with Observations on the Country and its Productions, Climate, &c., the Zulu War, and Zululand since the War. By Thomas B. Jenkinson, B.A. (Allen & Co.)

MR. JENKINSON resided in Natal from 1873 to 1879, and during that period laboured among the natives at the mission station at Springvale. His personal narrative is meagre, and contains little to interest the general reader. His account of the manners and customs of the Zulus is chiefly valuable for the translation he gives of the native deacon Umpengula's account of the law of heritage in polygamic households. His historical notices of the Zulu nation largely consist of extracts from Capt. Allen Gardiner's journals and the *Missionary Register*. Mr. Jenkinson does not profess to have any personal acquaintance with Zululand; but the closing pages of his work are made up of selections from the correspondence of three relatives who live in Hlubi's district. He sheds some borrowed light upon the sanguinary careers of Chaka and Dingaan, but Panda is barely mentioned; and although he gives very little real information concerning Cetywayo, he yet adopts the most prejudiced colonial estimate of the character and conduct of the captive king. For example, the reader is informed that "at the sitting of the Commission at Rorke's Drift, British officers were insulted, and defiance hurled against them again and again." Mr. Jenkinson's authority for this statement is an anonymous correspondent of a Natal paper, whose charge against the Zulus is unsupported by a single scrap of official testimony. If Mr. Jenkinson had taken the trouble to refer to the Blue-Books, he would have discovered not only that the Commissioners make no complaint of their treatment by the Zulus, but that in May, 1878, when their labours had terminated, Cetywayo, in the name of the whole Zulu nation, sent a message to the Lieutenant-Governor of Natal, thanking him in grateful terms "for having sent the three white indunas to hear what the Zulu people had to say concerning the country in dispute between the Zulus and the Transvaal Boers." Cetywayo added that he and his people "were perfectly satisfied with the way in which the inquiry was conducted throughout, the way in which everything went on from day to day in proper order and without the least misunderstanding, but that each party understood the subject that was being talked about." It seems hardly credible that this message refers to the same transaction as that described in the passage from the Natal paper which Mr. Jenkinson approvingly quotes. He also lays stress on the fact that ever since 1835, when Capt. Gardiner obtained from Dingaan a large grant of territory, refugees from Zululand, "fleeing from cruel oppression," have been flocking into Natal. This is quite true; but having regard to the inference which he wishes to be drawn from the fact, it would have been only fair if he had stated—what is susceptible of proof—that the influx of Zulus into Natal was far greater under Panda—the mildness of whose rule compared with that of his savage predecessors is generally recognized—than it was under his son. During the six years of Cetywayo's reign only 2,056 Zulus, including men, women, and children, crossed the border, while from time to time many Zulus who had settled in Natal returned to their own country. Indeed, only a few months before the Zulu War broke out Beje, at the head of some thirty Natal natives, settled in Zululand. When hostilities were in progress they actually fought against the British, and some of them being taken prisoners, they were subsequently tried at Pietermaritzburg on a charge of high treason, and sentenced to various terms of imprisonment. Whatever may be the explanation, it is certain that the emigration to which Mr. Jenkinson refers had greatly diminished under Cetywayo, and that the Zulu people were, on the whole, well content with the rule of their king.

Mr. Jenkinson makes very slight reference to his own missionary labours. He gives us an occasional glimpse of Bishop Callaway or Bishop McKenzie, but he furnishes no detailed statement of work done and results accomplished. Although there is the evidence of baptisms and confirmations to show that some converts were made, he more than once hints at the existence of unexplained causes of discouragement; and when he once hopefully refers to an increase in the attendance at the daily services, he suggestively remarks that the people come "to pray for rain chiefly." Even when he explains that all the native Christians wear clothing, and praises a striped blue tunic as "a complete and becoming dress," he yet admits that the blanket would be the simplest and best covering for the people, if it were only possible to induce them to wear it habitually, instead of leaving it at home. Bishop Callaway, in writing of the Zulu language, says:—

"It is the language of a pastoral and agricultural people; of a people thinking gravely and cleverly within a certain circle of thought; of a people among whom exist rights of property and citizenship in a certain sense; a people among whom peaceful pursuits were more acceptable than warfare; an intensely superstitious people, who, being unable to explain the phenomena of nature, referred them to spiritual agencies, which, however, they attempted to control by incantations and medicines."

It is manifest that a people who possess these characteristics are not likely to yield readily to missionary influences, and that, in particular, they will expect to find some correspondence between the profession and the practice of their religious instructors. It is creditable to Mr. Jenkinson's judgment that he recognizes this fact, and that while describing the field for missionary enterprise in Natal and Zululand as being almost boundless, he confesses that much ground for discouragement exists, and that this arises mainly from the conduct of some of our own countrymen. He praises the frugal and simple habits of the Zulus, and says that they suffer much less from sickness than their civilized neighbours. He compares the beer they brew for domestic use to "sour gruel, very thick." It will be remembered that Cetywayo, in replying to a temperance deputation, employed a precisely similar expression to describe the native beer. They make a rude kind of pottery, and show much skill in weaving mats and baskets. Cetywayo before visiting England sent to Zululand for some of the most beautiful specimens of this work in order that he might make an appropriate present to the Queen.

Polygamy is necessarily one of the chief obstacles to the conversion of the Zulus to Christianity. Their marriage laws are of the most complex character. The position of the chief wife as well as that of the chief secondary wife are very carefully defined, and the most minute provisions are made for the inheritance of property by the lawful representatives of the two "houses." It is hardly necessary to state that if the chief wife commits adultery she forfeits her position, but it is not so generally known that the betrayal on her part of an inhospitable temper entails a similar penalty. Umpengula thus quaintly explains the usage of the Zulus in this respect:—

"Among black men the head house is that to which strangers from all parts go, and are treated well there; for the treatment of strangers is an obligation resting on the chief wife of the village. When we say to treat them we mean to give them food, and to give it without weariness; not to know them is that she should grudge them food, denying that she has any, and if there is any concealing it, and eating it secretly unknown to them; scolding them and turning them out of her house in anger. Among us such a wife goes out; she is not fit to bear the village; it is proper that she should go lower and take her position at the entrance, and another take her place who is able to fill it aright."

The concluding section of Mr. Jenkinson's little work is devoted to the condition of Zululand since the war, and contains emphatic testimony as to the total failure of Sir Garnet Wolseley's settlement. We do not now read for the first time that the cardinal mistake which the British general made was in arbitrarily dividing Zululand into thirteen districts, under chiefs whom he appointed without consulting the wishes of the people, instead of recognizing the various clans which are spread over the country, and allowing each clan to be governed by its own chief:—

"Chaka, savage as he was, showed far wiser statecraft. He, after conquering the clans, bound them to himself, yet left each under its own chief."

Mr. Jenkinson insists that the Zulus are

XUM

anxious to become subjects of the Queen. He therefore proposes to establish British authority in Zululand in the manner in which it is enforced in the native districts of Natal—that is to say, by recognizing the position of the chiefs, while at the same time appointing British magistrates to administer the law. He gravely adds:—

"I should also advise that the Governor of Zululand should have a personal acquaintance with the people, their language, manners, and customs; that he should reside in a central district, and should have a good large fort and a strong garrison; that he should avoid taxation, if possible, and not allow alienation of land on any pretence."

This is, we presume, the missionary view of what the resettlement of Zululand should be—a military occupation of the country at the sole cost of the British people, the Zulus themselves being conciliated by complete exemption from taxation. We think that to explain Mr. Jenkinson's views is to refute them. An appendix contains a letter from a resident at Isandhlwana, who, while admitting that Cetywayo has a large following, yet declares that the great majority of the Zulus are "clamouring" for annexation; and in another letter we read that the party favourable to British rule "takes in nine of the thirteen chiefs." It is unfortunate for Mr. Jenkinson's argument that his correspondent commits himself to figures, for it is a singular coincidence that "nine" represents the exact number of chiefs who took part in the several Zulu deputations which came down to Pietermaritzburg to ask for the restoration of Cetywayo; and we therefore think that the public will be disposed to accept the testimony of the Zulus themselves as to what they want rather than that of officious and self-constituted interpreters of their feelings.

Mr. Jenkinson closes his work with a note on the king's name, which he spells "Ketchwayo." He is in error when he says that Bishop Colenso writes it "Cetywayo." This was the spelling adopted by our late visitor in the autographs which he wrote when in England, but the bishop invariably spells the name "Cetshwayo."

La Mythologie des Plantes; ou, les Légendes du Règne Végétal. Par Angelo De Gubernatis. Tome II. (Paris, Reinwald.)

Almost four years have elapsed since the first volume of the present work appeared (see *Athenæum*, April 19th, 1879). Difficulties which neither the author nor the publisher foresaw have, it seems, retarded the completion of the task. At length, however, Count De Gubernatis has succeeded, as he says in his modest concluding remarks, "in furnishing the canvas for a mythological history of plants, after having sketched the mythological history of animals." Not content with these results, he proposes to complete his work by a legendary history of minerals, stars, meteors, "and all the other products and phenomena of nature which have produced the most striking effect upon popular imagination, especially that of a race so poetic and impressionable as the Indo-European, which has given to all its conceptions plastic and brilliant forms." We sincerely trust that Count De Gubernatis may be able to carry out his plan. But even if he is obliged to leave his work incomplete, that part of it which we already possess will long remain to bear witness to his untiring industry and his wide knowledge. It forms a rich storehouse of materials brought together from all parts of the world for the benefit of comparative mythologists and students of folk-lore. We will give a few specimens of the contents of the present instalment—in which, we may observe by the way, the "solar myth," though at times apparent, does not figure so prominently as in some other of the author's writings.

The first volume of the work was devoted to "La Botanique Générale," and formed a dictionary, beginning with "Abondance (Arbre d')" and ending with "Yggdrasil." The second deals with "La Botanique Spéciale," and gives the mythological aspects of a great number of plants, from "Abricotier" to "Virina." Lovers of absinthe may be glad to hear that the plant from which their nectar derives its name was highly esteemed by Pliny. According to Macer Floridus,

Plinius attollit magnis hanc laudibus herbam;

and a popular belief holds that a child will never suffer from either heat or cold in its after life provided its hands are rubbed, during the first twelve weeks of its existence, with the juice of this plant. Aconite, on the other hand, has always borne an evil name, ever since its birth was brought about by the foam which dropped from the mouth of Cerberus, when Hercules dragged that monster into the light of day. With wormwood (*armoise*) several pleasing legends are connected. On Ascension Eve the women of a village near Syracuse make wormwood crosses, "and place them on the roofs of houses, believing that during the night Jesus Christ will bless them while ascending into heaven." They are kept for a year. During that time they have the power, if placed in stables and sheds, of taming the fiercest animals. Among the trees which are connected with the idea of death is the *aune*, or alder. But a Tyrolese legend makes it play the part of "un arbre anthropogonique." A lad who had climbed up a tree saw a number of warlocks down below engaged in cutting up the corpse of a woman. When they had finished, they flung the fragments into the air. The lad got hold of a rib and kept it. The warlocks proceeded to put the woman together again, but they found a rib missing, so they supplied its place with a piece of alderwood; thereupon the woman instantly came to life. With *basilic*, or basil, a number of stories are associated. It is a plant dear to women—linked with ideas of love as well as of death. Count De Gubernatis is inclined to attribute a Greek origin to Boccaccio's story of the pot of basil, which appears to have been founded on a tale which had afforded a theme for many popular songs at a very early period. This notion seems more probable than the suggestion that Breton mothers have invented the saying that "hedge primroses give fevers to children," with a view to preventing their little ones from haunting the hedges overmuch during the damp days of spring.

A modern Greek legend invests the holm oak with a very bad reputation. When the Crucifixion was about to take place, all the trees met together and determined not to lend their wood to the construction of the cross. They all kept their word except the holm oak. The other trees broke in pieces when an attempt was made to utilize them for cross-making. The holm oak alone allowed itself to be made use of; wherefore it is looked upon as accursed. Wild chicory has been made the subject of many legends, especially in Germany, where it is known by several names, one of them being *Wegewarte*, or road-guardian. The popular explanation of the term is as follows. A young princess whom her beloved spouse had abandoned declared that she would like to die, but yet she longed to see the loved one again; and the maidens who bore her company expressed a similar desire. Their wishes were realized. They were turned into flowers, white and blue, and stationed along the sides of roads, so as to be able to see the loved and lost prince whenever he rode by. And since that time the plant has been called the guardian of roads.

With cotton a strange legend is linked in Brazil. The first of men was a demigod. He had a son of whom he wanted to get rid; so he formed an armadillo and buried it in the ground all but its tail. Then he sent his son to fetch it. No sooner had the youth seized the armadillo by the tail than it plunged into the bowels of the earth, dragging him after it. On emerging from the lower world the young man told his father that there existed down below men and women who might cultivate the soil if they were brought to the surface. The demigod created the cotton tree, and formed out of it a cord with which he hauled up some of the inhabitants of the subterranean region. The first specimens of the race were small and ugly; but they improved as the extracting process went on. Unfortunately, the cotton rope broke before the best types were brought up—a fact which accounts, say the Brazilians, for the rarity of human beauty upon earth. To find it in its perfection one must go down below. A more poetic belief is that of some bereaved German mothers who up to St. John's Day abstain from eating strawberries, for they think that at that time little children who have died recently go up to heaven concealed in those fruits. It seems strange that the rush, which ought to be considered the friend of man, should have acquired in some lands a diabolical character. According to a Little Russian legend, the devil has taken up his abode in it. Having met the Lord one day, the devil asked for oats and buckwheat as his reward for having taken part in the creation of the world. The request was granted, whereupon the devil began to dance for joy. The wolf came up and suddenly asked the meaning of this frivolity. In his confusion the devil forgot what had been given to him, and replied that he was dancing for joy at having received the rush and the thistle; to which plants he still adheres.

The creation of the tea plant is due, says a Japanese legend, of which the Chinese appear to be unaware, to the piety of a Buddhist priest who visited China about A.D. 519. In order to dedicate his soul entirely to God he made a vow

never to go to sleep, but to meditate uninterruptedly day and night. After some years of watching he yielded to a severe attack of somnolence and went fast asleep. On awaking, he became so remorseful that, in order to render any similar weakness impossible in future, he cut off both his eyelids and threw them on the ground. Returning to the spot next day, he discovered that each eyelid had become a shrub. From these two shrubs is descended the great family of tea plants. The story throws some light on the fact that tea-drinking often prevents the fall of "tired eyelids upon tired eyes."

By way of conclusion we may mention one of the stories connected with tobacco. The tobacco plant fully deserves to rank among the greatest friends to man which the vegetable world has produced. In some parts of Russia, however, it is looked upon as a deadly foe. The Raskolniks call it the devil's herb, and in Little Russia the following legend is current as to its origin. Certain virtuous Little Russian carriers were in danger of being led astray by a heathen woman. A voice from heaven ordered that she should be put to death. The carriers obeyed, and buried her alive. Her husband planted a twig above her remains; it grew and grew and became a large-leaved plant. As the Christian carriers and the heathen widower passed that way, they saw that he broke off some of the leaves, filled a pipe with them, and smoked it. They followed his example, and smoked what has since been known as tobacco. So delighted were they that they went on smoking without ceasing; until at length the smoke gave way one day to fire, which burnt them all up.

Linguistic Essays. By Dr. Carl Abel. (Trübner & Co.)

THIS volume contains ten essays on very diverse matters. We have first one on language as the expression of national modes of thought; the second deals with different conceptions of love in different languages; the third is a very full discussion of the English verbs which are connected with the idea of commanding; the fourth is on synonyms; the fifth and sixth (on 'Philological Methods' and 'Dictionary and Grammar') develope chiefly the author's method; the seventh considers the possibility of a common literary language for the Slav nations; the eighth is on Coptic intensification, and the ninth seeks to throw light from the ancient Egyptian on the origin of language; lastly, the tenth is a short study on the order and position of words in the Latin sentence. Variety such as this requires the explanation which the author gives of his scheme. The first six essays aim at deriving from philology "a comparative conceptology of nations"; the seventh applies the conclusions already reached to "an important political and linguistic question." The eighth and ninth must be regarded as the contributions to the history of language which the author's special studies have best enabled him to supply; while in the tenth essay "the sensitive intellectualism of language is shown to extend from grammar and dictionary to the arrangement and position of words." The author's aim is large, and though we may doubt both whether his ideal can possibly be realized, and whether he does not in practice omit considerations which would in any case be necessary to its attainment, yet we have to thank him for a suggestive book which brings forward a side of philology which does not receive much attention in England. Most of the essays, if not all, have already appeared in Germany. Why they should have been reprinted in Trübner's series is not very easy to see; the Sanskrit and Chinese languages, which have been specially dealt with therein, do not supply any matter to the author of this volume, which also differs from all the others in scope and general character.

The writer belongs to the school of philologists of which Steinthal is the chief representative, though even he is perhaps best known in England by Prof. Whitney's fervid denunciations of him. This school deals with the problems of language from the psychological side. Its members regard language as a sort of necessary outburst of a nation's thought; the essential character of each language can only be grasped when the moral and mental character of the nation is thoroughly understood. That character will be faithfully reflected in the language, and when the nation itself has passed away its views of life may be seen with certainty in the records of its speech. To such students of language psychology must be more important than physiology. The laws of phonetics, which are physiological, investigated with so much care by other students, who nowadays have more caught the public ear, are secondary matters. They deal with the form of the language only; the essence is to be discovered by the application of laws of thought. Such a theory may be useful as a corrective to the one-sided studies of mere phonologists; but it can only lead to an equally one-sided view of language, which will affect the studies even of those who (like Dr. Abel) show no ignorance of phonology, and formally acknowledge its claims.

Influenced by this leading principle, Dr. Abel endeavours to find in different languages the different national modes of thought. His method is very clearly set forth by himself (p. 162). He there says:—

"If desirous to find out what the English think about freedom we shall have to investigate the meaning of 'freedom,' 'liberty,' 'independent,' 'self-dependent,' 'unrestrained,' 'uncurbed,' 'unrestricted,' 'unbound,' 'untrammeled,' &c. We shall have to compare these several meanings and ascertain in what they supplement or restrict each other. Finally, it will be necessary in a general summary to indicate the proper position of each shade of meaning in the concept, and thus present the complete idea in a clear and classified digest. Wishing to discover what the English think about 'time,' we shall have to set forth the meanings of 'time,' 'hour,' 'year,' 'when,' 'before,' 'after,' 'soon,' 'early,' 'late,' 'short,' 'long,' 'fleeting,' 'passing away,' 'eternal,' 'become,' 'be,' 'cease,' and many other words coming under the same comprehensive category, irrespective of the part of speech they belong to. To these we shall have to append an account of the origin, signification, and use of the grammatical forms which serve to express notions of time in declension, conjugation, and in the structure of sentences. Since conjugation is essentially a union of ideas of action, condition, personality, and time, the temporal notion will have to be extracted from the compounds in which it appears, and inserted in its proper place in the list of independent chronological words, if the concept is to be apprehended in its totality. Supposing several languages to be examined in this way and the results compared, we shall obtain a thoroughgoing insight into the views and characters of the nations concerned."

Specimens of some of the simpler results to be thus obtained may be seen in the second and third essays. The second deals comparatively with the conception of love, as shown in Latin, English, Hebrew, and Russian; it seems a pity that Sanskrit was excluded, as the conception embodied in *sneha* is curious. Thus, under Latin is discussed all that was meant by "amare," "diligere," "carus," "pius," "affectus," "affectio," "studium." Having gone so far, Dr. Abel might have noticed the peculiarly Roman character of the cognate idea denoted by "officium." In English "love," "fondness," "affection," "charity," "passion," "liking," are analyzed; and so on in Hebrew and Russian. The general conception of love thus discovered for one nation from the consideration of all its terms is compared with the parallel conception formed by each other nation, and finally the different conceptions are combined to show us all that can be thought or said about love—a result which we certainly cannot attain to without a much larger induction of facts; the Sanskrit alone, as we have said above, would add an entirely different conception. The results are summarized in fifteen pages, which we cannot here give, and it would be unfair to summarize still further. The third essay compares cognate conceptions of a single language—English, to wit, "the eleven principal verbs of command," to command, to order, to enjoin, to bid, to ordain, to decree, to dictate, to prescribe, to direct, to charge, to appoint—a number which seems large, but might have been extended by others, as to instruct, to require, to will, &c. But the analysis, though perhaps needlessly long, is certainly very ingenious and most carefully worked out, and the results are tabulated under six heads: (1) that on which the command is based, (2) the kind of title, (3) whether binding or not, (4) purpose defined or not, (5) object, (6) that from which it proceeds; with the result that, *e.g.*, "to enjoin" expresses (1) an appeal to our moral nature, to our sense of what is right and good; (2) it gives a strong reminder of God, virtue, and moral duty; (3) it is binding: the moral appeal is sufficiently powerful to act peremptorily; (4) it is accentuated only in so far as every moral action is an end in itself; (5) it has for object more frequently a general moral duty than a single right action; (6) it proceeds from every person whom we sufficiently respect to allow him to make an appeal to our moral self. On the other hand, "to direct" denotes command: (1) which is based on superior knowledge, with its appeal to the reason and common sense of those directed; (2) with authority, undefined, but mostly implied in the certainty with which it awaits obedience; (3) it gives reasonable directions for the details of daily life: he who directs takes it for granted that the advisability of his directions and the superiority of his position will be duly

recognized; (4) purpose defined as right and expedient: according to circumstances it may be used in the interest either of the director or the directed; (5) the object is by single directions to rule and order passing events; (6) it proceeds from him who has superior knowledge and therefore claims authority, which may or may not be supported by social rank. And in this very exhaustive way all the other nine verbs are analyzed through fifty-four pages.

From this study we are to learn the whole idea of command as conceived by the English mind. Its merit lies in the acuteness with which each verb is distinguished from every other, both in what it is and in what it is not, and in the thoroughness with which examples are given, ranging (*e.g.*, for the verb "to prescribe") from Milton's "Why hast thou, Satan, broke the bounds *prescribed* to thy transgressions?" to an extract from the *Evening News* of March 4th, 1882, in which Mr. Slagg "disclaimed the intention of *prescribing* to the Government any particular course of action." Its defect is the curious absence of any adequate historical treatment of each verb. Not only is there no etymology, no inquiry how the word is specially fitted by its earliest known sense for its later derived meanings, but there is no clear account of what meanings have arisen and what others have fallen out at some known time. Indications, indeed, are sometimes given, as in the account of "bid" (p. 104) and "command" (p. 113); but no real history of each word is attempted; no tracing the gradual development of a term, both in English and (if possible) in other languages in which the same term occurs; no indication of the different associations which a word must have brought with it according as it has come from a Teutonic or a Latin or other source; and yet this is surely a most important matter in such a study. We are even left to observe for ourselves from the examples how some words (as "order") have been generalized, others (as "prescribe," "ordain") specialized, or at least restricted in their use; and how one verb has either supplanted or supplemented another.

A reader of Dr. Abel's essay might almost infer that each verb had sprung up in the language full grown, with all its meanings about it. We do not, of course, mean that Dr. Abel thinks this; but his psychological method can hardly help ignoring the historical. It lends itself also to the fallacy that language is the exact counterpart of thought, which underlies most of this book, though not, we gladly observe, the most valuable essay—the ninth. Language indeed tends to that goal, but from the nature of the case it can never reach it, because thought is constantly changing, and language toils after it, but always in the rear. Sometimes again Dr. Abel expresses himself as though he believed in an arbitrary origin of language, as though men consciously set themselves to make their words, instead of employing those they already had in modified senses; thus at p. 144 we read that the "linguistic task" of developing words out of roots is "one of the noblest imposed upon the wise and the good"; at p. 147 that such words "have to be endorsed by legislative and administrative authorities," which is a puzzle to us. Again, at p. 159 we are told that "when the idea of freedom had become familiar to Englishmen there was occasion to create the word which should embody the thought"; does, then, the word "free" exist in English only, or does *-dom* as distinguished from *-heit* make the difference between the English and the German conception of freedom? Surely it need hardly be said that a word is not suddenly produced just when the idea is consciously realized; on the contrary, the word has commonly existed long before that time in a somewhat different sense, and it may be long after that time when it is first applied to its new use.

Still the principle of comparative study of the vocabularies of different nations is valuable, and when carried on with the zeal of the present writer and with somewhat greater circumspection it cannot but yield valuable results. His comparative treatment of grammar seems liable to more objection. He again advances the doctrine, which we had thought finally disposed of, that grammatical forms were struck out to meet previously felt logical wants. He holds (p. 172) that the cases arise out of "relations of origin and aim, communication and operation, time and space"; and at p. 174 he writes, "Whoever wants to find out the purport of an oblique case termination denoting cause must not only inquire into its application and use, but also investigate the meanings of the independent words of the language signifying cause and effect, and discover the mental connexion uniting the two results." It seems almost ludicrous if, in application of this doctrine, we are to seek, *e.g.*, for the origin of the Latin ablative of "cause," not by comparison of similar forms in Sanskrit and other languages, but in the meaning of "caussa" and the like. Surely it is demonstrable that most cases denoted in their earliest known usage concrete space relations, and were then more or less cleverly applied to express the abstract ideas of cause, purpose, and the like. We may legitimately inquire into the different ways and the different degrees of success with which different nations have applied rough material common to them all to these finer ends. This is the proper subject of comparative syntax. According to Dr. Abel, we need first to know each nation's logical modes, and then we shall see the meanings of their case-forms, as though each European nation had special forms of its own. The same principle is applied to the history of the verb (p. 160): "The conjunctive could not exist prior to the appreciation of the contingent"—prior to the "budding of the idea of the conditional and potential in certain advanced minds." Now the *form* unquestionably existed long before the "idea of the conditional" arose; it existed and was used as an independent future. On the other hand, the *name* of course did not exist till the thing had long been in use, and was the work of no specially "advanced" mind, but of a respectable grammarian. Dr. Abel is not ignorant of the current views of the origin of grammar; he mentions them to reject them in a note (p. 175). It is curious how he there "disposes of" the infinitely important doctrine that "grammatical categories are absolutely distinct from logical"; he does it by the remark (apparently based on Steinthal) that "every language has its own logic, *i.e.*, its psychologic." This is perplexing as an argument, and seems out of place as a joke.

We have written of necessity at so much length on the fundamental points on which we differ from Dr. Abel that we have left ourselves no space to examine what seems the most valuable essay in his book, in which he endeavours to throw some light on the origin of language from the Egyptian homonymy, *i.e.*, the employment of a large number of totally different terms to express exactly the same idea. This essay deserves careful study, and will be found very suggestive. One of its conclusions—that directly opposite ideas were combined in the same word in order to bring out more clearly the conception of one of them—is hardly sufficiently made out by the author's Egyptian evidence; the fact of such combination is to be seen in other languages—*e.g.*, in Greek compounds like *ὑπέκ*, *διαπρό*, &c., which admit perhaps of a simpler explanation.

Dr. Abel is an opponent from whom it is pleasant to differ, for he writes with enthusiasm and temper, and his mastery over the English language fits him to be a champion of unpopular doctrines. On one point we would give a caution in conclusion. We do not impugn his Latin scholarship, but when he quotes Latin authors in illustration of Latin conceptions of things, he gives with the passage quoted a free English translation. Englishmen are credited by Dr. Abel with many virtues; there is one which English scholars perhaps carry to excess—the love of accuracy—and they may be horrified by translations which are so free at times as to be quite wrong. To translate (p. 67) "Est enim pietas iustitia adversum deos" by "If we love the gods we are only doing what is right" is too free; neither should we render "Iustitiam cole et pietatem, quae cum magna sit in parentibus et propinquis, tum in patria maxima est," by "Practise justice and dutiful love towards parents and relatives, and especially towards thy country."

La Russia Sotterranea: Profili e Bozzetti Revoluzionarj dal Vero. By Stepniak. With a Preface by P. Lavroff. (Milan, Treves.)

THE sketches and profiles of which this very remarkable little volume is composed are reprinted from an Italian journal published (in the Conservative interest) at Naples. They are addressed to the world at large, and they are worthy the audience. In their original form and place they seem to have attracted little or no attention, but to have gone the way of all *feuilletons* with unusual celerity. There can be no doubt that they deserved a very different fate, and that in their present guise they should everywhere be popular. They are practically the only things of their kind in existence; they are not less brilliant than they are authoritative; they are studies—and studies from the life—of a political movement that is perhaps the most mysterious and romantic the world has ever known; and they are no more to be passed over by the general reader than they are to be neglected by the student.

Their author, who writes under the pseudonym of "Stepniak," is a leader of the Russian revolutionary party, and has borne a principal part in the Russian revolutionary movement. Unlike the majority of his fellows, whose term of service is commonly cut short by exile, or banishment, or the gallows, or the gaol, he has had a good ten years' experience of the movement, and is qualified to speak of it with insight and authority, in its earliest and latest developments alike. Such a qualification, we are assured by M. Lavroff, is possessed by few. To be in exile is to have no sort of influence on the conduct of the Nihilistic case, and is usually to know little more than the general public as to how affairs are going, or as to what remedies are in contemplation and what surprises are in course of preparation. "Stepniak" a refugee, in fact, is no longer an authority on the circumstances of the present, and could give no manner of advice or information—even were he minded to do so—as to the possibilities of the next three weeks or the next three months. This being the case, it will readily be understood how precious is an experience so full and so long sustained as that to which we owe the facts and conclusions set forth in 'La Russia Sotterranea.' It includes the propaganda and the terror—the years of persuasion by lectures and tracts, and the years of persuasion by dynamite; it reaches from the prelections of Tchernichevsky and Dobruliaboff to the bombs of Sophy Perovsky and the revolver of Vera Zazulich; it embraces all the triumphs and all the vicissitudes of which the revolutionary life is capable, from editing so famous an anarchical print as *Land and Liberty* itself to dodging a spy through the streets of St. Petersburg, and living in hugger-mugger, under a feigned name and an imaginative identity, with one or another of the "ukrivateli"—a sort of revolutionaries whose function it is to receive the more active members of the party when they are wanted by the police, and to keep them in hiding until the scent is lost and the hunt is over. It will be seen that if "Stepniak" chose to tell but the half of what he knows, the book in which he told it would be, as far as matter goes, more strange and moving than the story of D'Artagnan and the Musketeers themselves. In the present volume what is said is obviously but a trifle in comparison with what is left unsaid.

In an introductory essay of singular breadth and comprehensiveness "Stepniak" sets forth the many causes of which the revolutionary movement is the effect, and traces it through the several stages of its development from the scientific Nihilism of men like the Bazaroff of Tourguénief and Tchernichevsky's Kirsanoff to the socialism pure and simple of Lavroff and Krapotkine, and the practical terrorism of Geliaboff and Valerian Ossinsky. This, perhaps the most valuable portion of his work, is remarkable for grasp and understanding of facts and for clearness and ease of style, and should of itself secure a welcome for the book wherever history is studied. To the great majority in Europe the origins of the Russian revolutionary movement are absolutely unknown. As regards the peoples of the West, the party has been as good as voiceless. When it spoke it spoke in dynamite; instead of issuing a manifesto it shot a policeman; and in lieu of proclamations and appeals it announced itself in explosions. It declined to explain that the state of matters pictured in Tourguénief's 'Fathers and Sons' and 'Virgin Soil' had ceased to exist; that it had nothing but the name in common with the Nihilists of the past; and that if it outraged the susceptibilities of Europe, it did so on what it held to be good and sufficient grounds. The consequence was that its case was lost in advance, and that judgment was given against it before a single argument had been put forward. With the publication of 'La Russia Sotterranea' a good deal of ignorance and misapprehension should cease. The ambition of the party and the means it adopts to achieve its ends may be found as abominable as ever; but it will be the public's own fault if they do not learn what Nihilism means and how Nihilism grew to be the tremendous agency it is. The story—as told by "Stepniak," and as repeated in other terms by Prince Krapotkine in the pages of a contemporary—is at once instructive and appalling. The movement at its commencement was purely intellectual and moral. The original Nihilist was a scientific utilitarian. He read Comte and Darwin and Moleschott; he preferred a pair of brogues to the 'Transfiguration,' and a common cobbler to Raphael; he was a devout materialist, and abolished God with a view to mental improvement and the cultivation and development of the quality of egoism. He appears to have been a poor creature enough; but, for all that, his influence was considerable, and his achievement was one of some magnitude. He proved that, in the teeth of the Third Section, it was possible to study forbidden literature; he perfected a habit of intellectual independence; and he contrived the emancipation of woman. When his work was done he disappeared, and the scientific tendencies he had embodied gave place to others the bent of which lay in the direction of anarchism and socialism. The apostles of the new doctrine were Tchernichevsky and Dobruliaboff, were Ogareff and Micailoff and Herzen; Proudhon and Fourier were its prophets; its heroes were Pyat and Vallès and the men of '71; and with Marx and Bakunine and the International it became in some sort militant, and sent forth its evangelists over the length and breadth of Russia. The ambition of these, according to "Stepniak," was simple and laudable enough. They had no other object in view than the education and the intellectual development of the masses; and this they pursued with an enthusiasm, a courage, a constancy under affliction, a "determination of martyrdom to the head," that are worthy of all praise. The consequences we know but too well. The propaganda was stamped out with every circumstance of severity; the gaols were crowded with prisoners, the penal settlements with convicts; half the youth of Russia were in durance and the other half under the ban of the law. The party knew not what to be at, and it seemed as if the movement must of necessity be stayed, when suddenly it occurred to Vera Zazulich that it would be a good thing to pistol General Trepoff, and to the jury by whom she was tried that it would be a good thing to bring in a verdict of "Not guilty." That was the end of the propaganda. The apostle disappeared, the terrorist reigned in his stead. The current set strong and swift towards reprisals; a system of terrorism was invented and perfected; and since the hideous affair of the 13th of March Perovsky and Geliaboff have become as saints and are revered and mourned by all the youth of Russia, so that a sofa on which they once sat down has earned promotion, and is no longer a piece of furniture, but a relic.

The portraits sketched in by "Stepniak" are skilful and suggestive work. They make us acquainted with Vera Zazulich, an interesting and uncommon type of woman if ever there was one; with Valerian Ossinsky, a kind of terroristic Apollo; with Prince Krapotkine, who is an "agitatore impareggiabile," a distinguished geologist and geographer, and the most determined anarchist of them all; with Stevanovich, who is the genius of organization; with Dmitri Lisogub, humourist, preacher, and saint; with Jessie Helfmann, who is but an everyday heroine; and with Sophy Perovsky, who is the terroristic ideal, and one of the most remarkable personalities of the century. One of the "Sketches" that complete the volume tells the story of the Moscow mine; and a wonderful story it is. In another, Prince Krapotkine relates the circumstances of his escape from the Nicholas Hospital—a little masterpiece of invention and calculation; and Bokanovsky, called the Cossack, explains how Stevanovich and he broke the prison at Kieff. Of special interest are the chapters on the "ukrivateli"—a class to which we have already referred—and on the secret printing press; while that called "Una Gita a Pietroburgo" not only reads like a romance throughout, but includes some very curious details indeed in respect of the assassination of the Czar.

A Register of the Scholars admitted into Merchant Taylors' School from A.D. 1562 *to* 1874. Compiled from Authentic Sources and edited, with Biographical Notices, by the Rev. Charles J. Robinson, M.A. Vol. I. (Lewes, Farncombe & Co.)

THE school lists in the volume before us are brought down to the end of the year 1699, and are very fully and creditably annotated by the author, who is already known to the public by 'The Castles of Herefordshire and their Lords' and 'The Mansions and Manors of Herefordshire.' The lists themselves appear to have been drawn up with very laudable care by successive head masters; and from the books of the Merchant Taylors' Company and other sources the author has in most cases been able to give the dates of admission of the boys to the school and the Christian names of their fathers. Mr. Robinson must have expended a vast amount of time and trouble in collecting the information here published, both as to the earlier lists which he has compiled himself and as to the biographical notes with which the work is enriched throughout, and he may fairly be congratulated on the results of his labours. It is to be hoped that before long the admission registers of the great public schools will be as carefully

edited, and that they may prove as valuable to genealogists, as the present work.

The school was founded by the Merchant Taylors' Company in 1561, and soon afterwards was endowed by Sir Thomas White, who had been Lord Mayor of London in Queen Mary's reign, and was a member of the company, with forty-three out of the fifty fellowships belonging to St. John's College, Oxford, which he had recently founded. By a later clause in the college statutes, however, he attached six of these school fellowships to his own kin so long as any such might be found, and while this endowment lasted the school never held more than thirty-seven of the St. John's fellowships at one time. Boys elected from the school to the college under Sir Thomas White's statutes were probationary fellows for three years, after which time, if found qualified and of good conduct, they became life fellows. This magnificent benefaction came into full operation in 1575 and lasted till 1862, in which year, under an ordinance of the Privy Council issued in pursuance of an Act of Parliament passed in 1861, the fifty fellowships of St. John's were reduced in number to eighteen (all of which were thrown open, as the Oxford University Commission of 1850 had suggested); and the revenues of the college thus set free were by the same ordinance appropriated to the maintenance of thirty-three scholarships of 100*l.* per annum, tenable for seven years, twenty-one of these scholarships being attached to the Merchant Taylors' School.

Until the Great Fire the school occupied a portion of the buildings of the "Manor of the Rose," in the parish of St. Lawrence Pountney, built by a Lord Mayor in the fourteenth century, and mentioned by Shakspeare in his 'Henry VIII.' After the Fire of London, by which the old buildings were destroyed, a new school-house was erected on the same site, and was occupied by the school till 1875, when the Merchant Taylors' Company, having previously purchased the Charterhouse School buildings, removed its own school thither.

The Rev. Richard Mulcaster was the first head master, and he reigned over the school, somewhat in the style of the famous Dr. Busby, from 1561 to 1586. Fuller describes this worthy as follows:—

"In a morning he would exactly and plainly construe and parse the lesson to his scholars; which done he slept his hour (custom made him critical to proportion it) in his desk in the school, but woe be to the scholar that slept the while. Awaking he heard them accurately; and *Atropos* might be persuaded to pity as soon as he to pardon where he found just fault. The prayers of cockering mothers prevailed with him as much as the requests of indulgent fathers, rather increasing than mitigating his severity on their offending children; but his sharpness was the better endured because impartial; and many excellent scholars were bred under him."

The names of the boys at Merchant Taylors' School do not seem to have been very carefully recorded prior to 1607, but from that time forward lists were made, called Probation Lists, at first three times a year and afterwards half-yearly, and these lists, with very few exceptions, are still extant. From 1644 to 1661 the Rev. William Du Gard, who was then head master, kept an admission register, which he posted up with a conscientious minuteness that is worthy of all praise, and that makes one wish that all school and college matriculation registers had always been kept with the like care. It was Mr. Du Gard's practice as long as he presided over the school to require from all boys presenting themselves for admission full particulars as to their parentage, to be recorded in the register. The following is a copy of the first entry, and all the succeeding entries are equally precise:—

"Gulielmus Lenthall, filius unicus Thomæ Lenthall, mercatoris, natus Londini in parœcia de St. Mary Hill, Sept. 24, 1628, annorum 16 admissus est in scholam liberam Mercatorum Scissorum Maii 13, 1644, solvitque pro ingressu, 2*s.* 6*d.*"

Though the Merchant Taylors' School probation lists do not go further back than 1607, Mr. Robinson has compiled from various sources a surprisingly full list of earlier scholars, and is able to give the names, and in general the parentage or birthdays, of upwards of one thousand boys who were educated at the school in the sixteenth century. Amongst these may be mentioned the poet Edmund Spenser and Ralph Brooke. The date of the former's admission to the school is not known, but he must have been one of its earliest alumni as he left the school for Pembroke Hall, Cambridge, in the year 1569. Ralph Brooke, the herald who so bitterly attacked Camden, was admitted to the school on the 3rd of July, 1564, when ten or eleven years of age.

Until the year 1700 Merchant Taylors' School does not appear, from Mr. Robinson's lists or notes, to have turned out many famous laymen, though it can boast of having educated numerous ecclesiastical dignitaries, several of whom, including Archbishop Juxon, were raised to the episcopal bench. Amongst the few laymen of note who were educated at the school, and whose names appear in the present volume, may be mentioned James Shirley the dramatist, Titus Oates the informer, Peter Le Neve the herald, and Bulstrode Whitelock, whose 'Memorials of English Affairs' in the time of Charles I. and the Commonwealth is such a high authority for the period to which it relates. A note of the editor's on p. 302, which states that Jemmet Raymond was knighted in 1680 before he left the school (his father being sheriff in that year), tempts one to wonder what would be thought by the lieges if such an exercise of the royal prerogative were to happen nowadays.

Cameos from the Silver-Land; or, the Experiences of a Young Naturalist in the Argentine Republic. By E. W. White, F.Z.S. 2 vols. (Van Voorst.)

For "a very young man," as he describes himself, the author of these volumes has chosen a somewhat ambitious title. Fortunately for him, the result of his labours in a large measure justifies his choice, and many of his presentations of Argentine life may not inaptly be likened to cameos. The author writes well, and the judgments pronounced by him on men and things show little of the inexperience of youth. His style occasionally runs wild, and if we did not know that the regions depicted by him lie beyond the southern tropic we should be inclined to say that it had been influenced by the exuberance of tropical vegetation. What, for instance, can the creature be like which "hovers over society" at Buenos Ayres and is described as a "Cupid with a dash of Venus"? What can the author mean when he says, with reference to the ladies of the same adorable city, that their premature *embonpoint* is like "a monster which destroys corporeal elegance, but is powerless to retard spiritual ripeness"? Again, we are seriously informed, in connexion with the telephone, that "a time is looming when man will scarcely need bodily presence and activity, but, the subtlety of ethereal intercourse banishing corporeality, will begin his immortality on this side the grave."

It is only fair to the author to state that incomprehensible passages like these are rare in his book, and that if his language now and then lacks coherency, it is, as a rule, sober, graphic, and enjoyable, and occasionally even rises into eloquence. His work is almost wholly based upon personal experience. A succinct account of the physical geography of the Argentine Republic and of its social and political condition forms an apt introduction to a narrative of travel and adventure. We are made familiar with the gay life of pleasure-loving Buenos Ayres; carried eastward into the bracing air of Mendoza, a "very Utopia" for consumptive patients; taken north-west to the borders of Bolivia, where the Indian still holds his own; and conducted over the ruined cities of the "Missiones," whose civilization depended upon the institution of communism, and where superstition is more rife now than in any other part of the republic.

Numerous natural history notes scattered throughout the pages give a peculiar charm and value to this narrative. Of scientific interest are likewise the description of an intermittent mud spring near Colalao, and the humorous account of the appearance of an *ignis fatuus* at Itapua, which kept the population astir for days in succession, and whose appearance the author is unable to account for. Nor is the material condition of the country forgotten. The author waxes eloquent on its "boundless resources." Nowhere are better chances offered to judicious immigrants than in the Argentine Republic.

"The growth of Irish influence and wealth is perfectly astonishing; and many sons of Erin, who started almost without means, have realized vast fortunes as sheep farmers. And all this success has been achieved notwithstanding the internal feuds which divide Irish society in the Argentina as elsewhere."

The English merchant, on the other hand, we regret to learn, "lags behind both French and Germans, and if the Teuton had a greater command of capital would soon have to retire completely to a secondary position."

But perhaps the most interesting chapters of these volumes are those which refer to the people. The "land and its inhabitants" are the elements out of which great states are made, and if in the case before us the land yields all those resources which form the foundation of wealth, the man who inhabits it is a "noble work in embryo." The author brings us face to face with the aboriginal Indians of the Pampas, who are dying out or are gradually being absorbed;

with the people in the interior, "who still retain a preponderance of Indian blood and character, and are perhaps the most independent set of fellows on the face of the earth, a peculiar people, with whom money is not a motive power, and whose only talisman is the 'hagame el favor'"; and, lastly, with those descendants of Spaniards and Indians who form the bulk of the population, and speak a language, the author somewhat maliciously observes, "which bears about the same relation to Castilian as American does to English." These, the real Argentines, he describes as follows:—

"Endowed with a vigorous imagination, the Argentine is ever ready to lend ear to Utopian political schemes, and forgets, in his pursuit of idealistic perfection, the more practical life of society, and is thus easily made the dupe of anarchy; and although capable of managing his own concerns with a rare degree of tact and intelligence, is a child in concert, and wanting in that enterprise and sustained energy necessary to educe great results from combined action. Although well aware of the boundless resources of his country, he makes but feeble efforts to promote them, and in his aversion to everything new, rests satisfied with pinning his faith to the bovine tail, as his fathers did, and seeing the foreigner gradually filch from his grasp the rich interests daily arising on all hands. Personally dignified and cultivating self-respect, he demands what he readily concedes, courtesy. Well-bred, polite and hospitable, to the gentler emotions a slave, but to most of the Spartan virtues a stranger, he excels as a companion and acquaintance, but is too fickle to endure the chains of abiding friendship."

This character of the people is reflected in the political and social condition of the country. The Argentine constitution is one of the most perfect on earth, and "the shade either of Plato or Sir Thomas More might have presided over its birth"; yet from lack of moral education, want of conviction, and utter apathy it remains largely a dead letter. Of this the author furnishes numerous illustrations.

Strenuous efforts are made to spread education, and "it is rare to find a man or woman, however ill dressed, who cannot both read and write"; universities and colleges are numerous, and scientific societies and public libraries abound.

"Yet notwithstanding all this commendable scholastic provision, with its turgid programmes and abundance of professors and inspectors, it may be safely affirmed that the higher instruction throughout the Republic is deficient in one main element, the moral. Conscientiousness, which makes the pursuit of truth for its own sake a life devotion, and leads to the diligent study of fundamentals, eschewing all scamping of work, is not so much divorced from the intellect, as its very existence is quietly ignored."

The same character is reflected, too, in the literature of the country:—

"Witty, lively, superficial, polished, the exponent of sentiment rather than the matrix of deep thought, it indicates the sway of words and the sovereignty of rhetoric over logic; if, however, not clothed with grandeur, it is decked with beauty, the pose of attitude and drapery are its, the swelling muscle and the expanding nostril; but philosophy, whose latent fire dwells within, is degraded to mere emotion."

The people of the Argentina are, in fact, passing through a process of fermentation, in the course of which all impurities rise to the surface, but which will leave a bright substance behind it. The same process may be watched in other countries peopled by heterogeneous elements, and notably in the United States, where, owing to different conditions, the phenomena presented are also different. But though nature may work slowly, and try the patience of bystanders watching its operations, it will of a surety transform such apparently discordant elements into nations fit to take their places as useful members of the human family. That this will be the result of the process in the Argentina the author does not doubt for a moment:—

"Prometheus directs the transformation, preparing his plastic material and modelling a new type, taking the bone, sinew, and muscle, the blood, energy, character, and vital force of the European, the lively sensibility of the Frank, the solidity of the Teuton, the dogged perseverance of the Anglo-Saxon, and the frolicsome humour of the Kelt, and infusing them with the polish and amiability of the Argentine, is slowly precipitating a Godo-Pelasgic race, which, with the heaven-born fire of the philosophic, poetic, and Platonic native, the more practical and sober, yet subtler intellectual flame of Europe, is destined to give birth in this Arcadia to a galaxy of statesmen, orators, jurisconsults, savans, architects, painters, poets, and musicians, who shall nourish the souls and strengthen the minds, as will its acres the bodies, of the civilized world. It is, in fine, as safe to predict a great and noble future for this country, materially, morally, and intellectually, as it is to announce that the sun will rise to-morrow."

Certain it is that none of these enthusiastic and eloquent, if somewhat incoherent, prognostications of the author is likely to be fulfilled in our time.

These two volumes are sure to add to the popularity of the Argentine Republic, and let us hope that they will not merely serve to divert the omnivorous general reader, but also find their way into the hands of merchants and others whose vocation it is to seek new outlets for British commerce and industry.

NOVELS OF THE WEEK.

Alasnam's Lady. By Leslie Keith. 3 vols. (Bentley & Son.)

Gabrielle de Bourdaine. By Mrs. John Kent Spender. 3 vols. (Hurst & Blackett.)

All among the Barley. By Flora Hayter. 3 vols. (White & Co.)

Chums: a Tale of the Queen's Navy. 3 vols. (Tinsley Brothers.)

THE title of Mr. Keith's new novel lets his readers into the main secret of his plot before they have had time to feel interested in the fate of his heroes and heroines. By the main secret is meant, of course, the identification of Prince Alasnam and his lady, who, in accordance with the fable, must be linked together at the end of the third volume. The veracious Scheherazade has placed it on record that the fortunate prince, after discovering his eight diamond statues, was enjoined to seek a ninth, more precious than all the rest, and when he found it the figure was not of diamond, but of living flesh and blood. Felix Chester is young, handsome, light-hearted, with a large income and devoted friends. These are his diamond statues, but he secures something far better in the perfect little wife whom Mr. Keith has created for him with skilful and delicate art. Deonys Ouvry has, indeed, one great fault, as it will appear to many readers of this story, inasmuch as she prefers to marry a giddy and unstable youth, whilst a man of more noble character, whom she loves and respects, and who is manifestly pining for her, is left unrewarded and unconsoled. But the author may plead that he is not responsible for human nature, which he has tried to describe as it is, and not as it ideally ought to be. There is force in the contention; and at any rate the three principal actors in this very natural drama are drawn with a loving hand, and are incontestably true to life. The darker lights of the picture are supplied by Mr. Ouvry, a cleverly sketched swindler of the most respectable type, by Mrs. Henshaw and her daughter Philippa, and by one of Philippa's lovers — the last a repulsive and exaggerated character, who goes near to destroying the artistic effect of the whole story. The scene is laid for the most part in Spain, with which country (and especially with the English community in Madrid) Mr. Keith would seem to have some personal acquaintance. Several members of this community are hit off with no little humour and smartness, Miss Piper in particular being a very characteristic study. On the whole, 'Alasnam's Lady' is much above the average of modern romances, and in many respects a distinct advance on the author's earlier novels. The plot is a little intricate, and by no means so strongly worked out as it might have been. There are inadequate motives and inadequate explanations, the most glaring, perhaps, being the motive and explanation of Ouvry's marriage to the mother of Deonys. Mr. Keith's ability is most clearly proved in the conception and development of the leading characters of his story, and for these the reader will owe him a debt of recognition and praise.

Mrs. Spender writes a preface to her story, though at the same time she admits that in doing so she "breaks through a canon of custom." It is rarely indeed that the justice of this canon, or the wisdom of this custom, is not enforced by a novelist who ventures to neglect it; and certainly Mrs. Spender takes nothing by her wilfulness. Her introductory words to the reader merely explain that, against the advice of friends and critics, and even against her own intention, she has written another melancholy story. Surely if there be an objection or drawback in pressing the careful breast, like Philomel, against the thorn, it is only increased by drawing special attention to it at the outset. Novel-readers who cannot abide melancholy will scarcely be more disposed to put up with it because an author starts off with a profuse apology for being lacrymose. But the fact is that Mrs. Spender does herself an injustice in this way, her story, though it is unquestionably sad, being quite readable and attractive. Gabrielle is the daughter of a French settler in Guernsey, a scholarly man with a sorrowful past and a somewhat morose disposition, who begins by freezing and neglecting his child. Gabrielle's goodness of heart gradually overcomes him, as it overcomes most of those with whom she is brought in contact. She is left happy at the end, and so are her early playmates and lovers. The book is not free from blemishes, but it is a pleasant story in its quiet and simple way. As the name Phillippe occurs with this spelling throughout the book, Mrs.

XUM

Spender has, perhaps, given it a deliberate preference over the more usual form.

Miss Hayter's title is well chosen, and it is a pity the idyllic wooing of the heroine should be contrasted with so much that is of doubtful good taste. The autobiographical form of some of the narrative is a hazardous experiment, and the heroine's account of herself and her doings is not attractive. Of her personal appearance she has a good opinion. "After all, my inventory of charms is not very great — deep-blue eyes, which flicker a greenish-grey sometimes, long-arched brows of brown, chestnut hair which just curls, a complexion which grandpapa calls his peach, a white row of very small teeth," &c. All this is very well, and the young lady has looked in her glass to some purpose. The heroine's mother is unfortunately not an impossible specimen of a bad type of Anglo-Indian, though the extent to which she manages to hoodwink her doting husband is less credible than her own treachery. The end of this couple is tragic enough to relieve the dreary commonplace of their domestic misfortunes. The central figure of the romance is all that a lady's hero should be in the way of muscular beauty, but he has certainly little other manliness. He is tricked by a forged letter, and, having promptly married the forger, does his best to induce the heroine to elope with him as a consolation. Of course the unhappy wife dies in due time, and the young lady of the barley fields receives the reward of her strict adherence to the Decalogue.

The opening scene of 'Chums' is laid in Gibraltar, or, to use the author's words, "Gibraltar is Scene I." And a quaint scene it is—made up of guide-book lore, of eulogies in the style of "dear old Gib" and "grand old rock," of invectives against the "money-grubbing humbugs" who advocate restoration, and of gibes at the presumptuous Spaniard who dares to appoint a "Governor of Algesiras and Gibraltar, now in temporary possession of the English." Whether this be patriotism or nonsense, there is plenty of it in the book, and that of a hearty, lively, phantasmagoric kind. The writer evidently knows his ground, and the service of which he is probably an ornament; and he gives us an esoteric view of Gibraltar, mixed up with a rollicking, rattling story of naval life, which will doubtless find many readers to appreciate it. It is in parts decidedly clever, whilst it brims over with humour from beginning to end. The flag-lieutenant's adieu to his ship is not a bad piece of mariner's poetry, though "cradle" does not rhyme with "stable," any more than "billow," in another sample of original verse, rhymes with "widow." It is only candid to say that an hour may be very hilariously spent over this tale of the Queen's Navy; but it would be a misuse of terms to call it a thoroughly good novel.

OUR LIBRARY TABLE.

An attractive little volume has lately been published at Paris (Lahure) under the title of *Poésies d'un Voyageur*, 1834-1878. Its title-page bears no author's name, only a vignette representing a seaside forest, with the motto, "Sit nomen sub umbrâ." But as the letters "X. M." figure on the bark of one of the trees of the forest, we fancy we shall not be wrong if we attribute the authorship to M. Xavier Marmier, of the Institute. The contents of the volume are partly original compositions, partly translations from English, German, Swedish, and Russian poets. We may take as a specimen of the former the following lines, written in 1870, entitled 'Patria Cara!'—

Dans le salon d'un club, dit Horace Walpole,
Plusieurs hommes, rangés autour d'un tapis vert,
Jouaient depuis longtemps avec une ardeur folle.
Triomphe de qui gagne, et rage de qui perd.
Fronts pâles, cœurs serrés, soif de gain, triste scène!
Passion du trictrac, sombre amour du piquet.
Tout à coup un vieillard, qui luttait avec peine
Contre un mal intérieur, tombe sur le parquet.
—Fini, dit une voix.—Non pas, réplique une autre.
Cent livres qu'il vivra.—Cent livres qu'il est mort.
—Vous tenez mon pari; moi, j'accepte le vôtre.
Voilà tous les joueurs en un nouveau transport.
Pourtant près du malade à la hâte s'avance
Un zélé médecin, habile et généreux.
—Halte-là, lui dit-on, laissez-nous notre chance;
Si cet homme revit, nous perdons nos enjeux.
En lisant ce récit, je songeais que la France
Est comme ce vieillard frappé d'un mal cruel;
D'exécrables boursiers, observant sa souffrance,
Font entre eux des paris sur son péril mortel.
Vous voulez raviver sa débile espérance,
Vous voulez éclairer son sentier nébuleux;
Mais les joueurs sont là qui défendent leur chance;
Périsse le pays plutôt que leurs enjeux!

The fourth edition of Sir Garnet Wolseley's *Soldier's Pocket-Book for Field Service* has been sent to us by Messrs. Macmillan & Co. The author expresses his regret that his departure for Egypt prevented his "seeing the proof-sheets through the press, and adding a few articles on new subjects of interest." The subjects already treated of are wonderfully various. The soldier will find information upon almost everything—how to make a plum pudding or a bridge, to mend a railway engine or pack a kit-bag. We observe that in the instructions for forming a laager of waggons reference is made to a diagram which appears to have been forgotten.

We have received from Messrs. Nimmo & Bain four volumes of their "Old English Romance" series, viz., *Robinson Crusoe* (2 vols.), *Gulliver's Travels* (1 vol.), and *A Sentimental Journey* and *A Tale of a Tub* (1 vol.). The volumes have been printed at the Ballantyne Press, with type that seems to have been excellent, but to have become somewhat worn by use. The edition is limited to one thousand copies, and the type has been distributed. There are some etchings by Lalauze, Flameng, Mouilleron, and Hédouin, but these are not first-rate.

The third volume has just appeared at Leipzig (Winter) of Dr. Ferdinand Löwe's excellent translation of Mr. Lecky's *History of England in the Eighteenth Century*. The fourth volume is promised before the end of the year, Mr. Lecky having supplied Dr. Löwe with his proof-sheets while the work was passing through the press. Mr. Lecky has been fortunate in his German translators. His former works were admirably rendered by Dr. H. Jolowicz. The 'History' loses nothing in its change of speech, thanks to the perfect acquaintance with our language of Dr. Löwe, who is well known as the translator into German of Krilof's Russian 'Fables' and Kreutzwald's 'Esthonian Popular Tales.'

M. Georges Bengesco, Secretary of the Roumanian Legation in London, sends us the first volume of an exceedingly elaborate bibliography of Voltaire which he has compiled (Paris, Rouveyre & Blond). We have had occasion before now to remark that a bibliography can hardly be criticized on its first appearance, or, indeed, till long afterwards. No one, not even the librarian of the greatest library in the world, is in a position to pronounce off-hand on its merits or defects, unless, which is *primâ facie* improbable, he has made the particular subject as much of a study as the author himself has. When the student has had the book on his shelves for years, and has, as occasion offers, tested its accuracy and its completeness, then he can pronounce on it, but not before. We can, therefore, only say that M. Bengesco's book is undoubtedly a great advance on his predecessor Quérard, not merely in amount, but in arrangement of information. The division, not into vague subject-headings, such as "Science," "Literature," and so forth, but into definite literary departments, "Dramas," "Prose Tales," "Verse Tales," &c., is a great gain; the indication of the several editions is full and precise, and M. Bengesco's rigid system of always specifying the place of abode of an actual copy of each edition he names leaves nothing to desire: hearsay is bad in all things, but hearsay bibliography is intolerable. The enormous difficulty of satisfactorily cataloguing Voltaire, owing not merely to the vast number of his writings, but to the eccentric fashion in which they were for the most part originally issued, is well known, and there is probably no other task of the kind which is even half so arduous. However, bibliography, if not an extremely brilliant department of literature, has the advantage that success in it can not only be deserved, but commanded, by any one who has patience, intelligence, industry, and moderate gifts of fortune. M. Bengesco seems to be fully possessed of these qualifications.

We have on our table *Camps in the Rockies*, by W. A. Baillie-Grohman (Low),—*Egypt under its Khedives*, by Edwin de Leon (Low),—*Cetywayo and his White Neighbours*, by H. R. Haggard (Trübner),—*Zululand and Cetewayo*, by Capt. W. R. Ludlow (Birmingham, Cornish),—*The Theætetus of Plato*, by B. H. Kennedy (Cambridge, University Press),—*Thirteen Satires of Juvenal*, by H. A. Strong and A. Leeper (Macmillan),—*The Speech of Cicero for Cluentius*, translated into English by W. Peterson (Oxford, Thornton),—*Q. Horatii Flacci de Arte Poetica Liber ad Pisones*, by J. J. Johnson (Hachette),—*First Lessons in the Maori Language of New Zealand*, by W. L. Williams (Williams & Norgate),—*Institute of Actuaries' Text-Book*, Part I., by W. Sutton (Layton),—*Proceedings of the Royal Colonial Institute*, 1881-2 (Low),—*The Metal Turner's Handbook*, by P. N. Hasluck (Lockwood),—*Picture Frame Making for Amateurs*, by J. Lukin (Gill),—*Indian Outfits and Establishments*, by an Anglo-Indian (Gill),—*Hot-Water Heating*, by F. A. Fawkes (Batsford),—*A Practical Treatise on the Larch*, by C. Y. Michie (Blackwood),—*The Alphabet of Gardening*, Part I., by S. Hibberd ('Gardener's Magazine' Office),—*Round Bromley and Keston* (Unwin),—*Jottings on some of the Objects of Interest in the Stonehenge Excursion*, by E. T. Stevens (Salisbury, Brown),—*Curiosities of Superstition*, by W. H. Davenport Adams (Masters),—*Our Noble Selves*, by the Author of 'Notes on the Months' (Unwin),—*The Invasion of England*, by an Old Soldier (Low),—*Essays from 'The Critic'* (Boston, U.S., Osgood),—*Speeches and Minutes of the Hon. Kristo Das Pal*, edited by R. C. Palit (Calcutta, Banerjea & Co.),—*Partners*, by E. Werner (Remington),—*The London Journal*, Vol. LXXV. (G. Vickers),—*Poems*, by A. Carruthers (Simpkin),—*Hereafter*, by A. F. Heaton (Provost),—*The Life of a Love*, by N. M. Sedarté (The Author),—and *Atlas*, by C. L. Moore (Philadelphia, Potter).

DR. PUSEY.

BY the death of Dr. Pusey not only does the University of Oxford lose its most familiar figure, but a remarkable factor has disappeared from English life. Born in 1800, the son of the Hon. Philip Bouverie, brother of the first Earl of Radnor, who assumed the name of Pusey by royal licence, he began to display while still very young those qualities of indefatigable study and literary productiveness which marked the whole of his long life almost till within a few days of his decease. He entered at Christ Church, whence he graduated in the first class in classics in 1822; but even before that date he had made his appearance as an author, issuing in 1820 the first part of a work which was the fruit of a visit to Germany, whither he had gone to prosecute his Hebrew studies. He named it 'An Historical Inquiry into the Probable Causes of the Rational Character lately predominant in the Theology of Germany.' Ten years later he added a supplementary part. The subject was more significant than the public he addressed at all comprehended at the time, and the choice of it, when entirely unfamiliar to the educated classes in England, is no slight testimony to the keenness of his insight into the class of questions which habitually interested him. He became a Fellow of Oriel in 1824, the year after Cardinal Newman's election, and remained a member of that college till his appointment in 1828 to the Regius Professorship of Hebrew, which brought him back to his original society, inasmuch as a canonry of Christ Church is attached to the chair. In that post he continued for the fifty-three years which have since elapsed, and though it can scarcely be claimed for him that he took rank with the great Semitic scholars of our times, yet he certainly did not in any degree lower the prestige of his professorship during his tenure. In truth, the remarkable advances made in Hebrew studies of late years are due to a small group of men who, with the exception of Gesenius, were his own juniors, and at the time of his appointment it would have been difficult to find a more competent man in England.

But his chair has always had a theological side, and it was to theology, not to philology, that his temperament inclined, so that his relation to the world of scholarship must be viewed from that standpoint. And it is to his labours on the complex ecclesiastical problems which the era of the Reform Bill brought up for solution by a generation to which the very terminology employed was a dead language, that his real prominence is due. He might have been a Semitic Bentley or Porson, and have remained as unknown to the bulk of his fellow countrymen as those great scholars are; but it is his share in the remarkable religious upheaval of 1833, generally called the Tractarian or the Oxford movement, and described by its admirers as the Catholic revival, which has made him a foremost personality for half a century past, and his name a household word wherever the English language is spoken. Though he was not one of the original projectors of that movement, and was rather drawn into it by circumstances than a spontaneous recruit, yet he was the first person enjoying any position of social and university importance who publicly lent it his support by word and pen; and it was almost undoubtedly his influence which kept it within the channel of the Established Church when the tendency seemed to be altogether to absorption in the Roman obedience. Hence, though he was all his life a recluse scholar and student, with no turn for publicity or for organization, so that he was never in the technical sense a party leader, the popular instinct which conferred his name, rather than that of Newman, despite the more powerful intellect and the more commanding influence of the latter at Oxford, upon the school to which they both belonged, was true and prophetic. From 1836, when he began to take a direct share in furthering the aims of the 'Tracts for the Times,' down to the very month in which he died, his life was wholly given to the two causes he had at heart: the maintenance of that condition of things in the University which he considered most favourable to religion, and the revival in the Church of England of the Stuart divinity.

He was a hard hitter in controversy, and despite a style which was generally diffuse, and not unseldom obscure, he contrived to make his meaning sufficiently clear to all who cared for the questions he discussed, and was a troublesome antagonist to encounter, so that at various times in his life he incurred much hostility, which took active shape in 1843 in his suspension for some years from the right of preaching before the University: a step, however, which rather increased his influence in the country, already powerful, not only from the rapid spread of the opinions he advocated, but from the acknowledged gentleness and devoutness of his private character, and the bountiful use he made of his income. For nearly forty years past his life was spent in virtual retirement, and it was only the continual flow of books, pamphlets, and letters from his pen that kept the public aware of his existence. Most of these writings were merely occasional, and intended to serve a temporary purpose; but they did serve it, each in its turn; while some of his more important publications are of a permanent character, such as his 'Lectures on Daniel the Prophet' and his 'Commentary on the Minor Prophets.' Though his diligence was indefatigable, and continued unabated till within a few days of his death, when he was still preparing his Hebrew lectures for next term, yet his health was feeble, and only great vitality underlying his weakness enabled him to rally again and again from dangerous illness. The death of his son, a couple of years ago, was a severe shock, and must have contributed not a little to the fatal result of his last attack. He had long outlived any personal hostility which his polemical attitude had attracted, and has passed away, not only regretted by an inner circle of deeply attached friends and by a wider body of doctrinal sympathizers, but recognized by all as one who played a remarkable part in the spiritual movements of our time, and who must always stand forward as a conspicuous form in ecclesiastical history.

THE 'YH KING.'

Oxford, Sept. 11, 1882.

I HOPE you will allow me to offer in your columns some remarks on the communication from M. Terrien de Lacouperie in your issue of last Saturday about the 'Yî King.'

He had said, in a letter to you of January 21st, that the translation of the 'Yî' on which he and his friend Prof. Douglas were engaged, leaving entirely aside the explanations and commentaries attributed to King Wăn, the duke of Châu (Wăn's son), Confucius, and others, dealt only with the oldest part of the book. Whom he intended by "the others" I do not know; but in the preface to my translation, published a few months ago as one of "The Sacred Books of the East," I said that if we take away the portions attributed to King Wăn, the duke of Châu, and Confucius, we take away the whole 'Yî.'

The fact is that the portions assigned to the king and his son constitute "the oldest portion of the work." All the rest of it is made up of so many "wings" or appendixes, with which they had nothing to do, and the composition of which is commonly, though incorrectly, ascribed to Confucius. I have kept them apart in my translation as "the text and the appendixes," following therein the example of the imperial edition of the classic which appeared in 1715.

M. Terrien de Lacouperie, however, will still have it that "King Wăn wrote the first wing and his son the second." If he had read and been able to understand what Sze-mâ Ch'ien says on the subject, about B.C. 100, in his 'Life of Confucius' (p. 12), or the note of Liû Hin appended, within the first decade of the first century B.C., to his 'Catalogue of MSS. or Works on the "Yî" in the Books of the Earliest Han Dynasty,' he would have seen that these two wings, and all the others mentioned, are assigned to Confucius. No native writers, no competent foreign scholars, have ever ascribed them to King Wăn and his son.

M. Terrien de Lacouperie does not admit that the evidence for the composition of the text, or "oldest portion of the 'Yî,'" by those personages, is sufficient. It appears, however, that he now does credit Wăn with "the addition of many divining words and a rearrangement under each heading of the various meanings and sentences, so as to match as often as possible with the comparative suggestions attributed by him to the individual lines of the hexagrams." The meaning of all this cumbrous statement after "divining words" is beyond my comprehension. The "comparative suggestions" in the individual lines were not the work of the king. Many of them could not have been written till after his death. Perhaps not one of them was so. They have always been understood to be the work of his son, to whom, indeed, they are

XUM

expressly assigned in the Chinese text of the 'Tso Chwăn,' under B.C. 540.

But we are able, it is said, to check the modifications introduced by Wăn into the headings of the chapters, because we have in the 'Tso Chwăn' quotations of the text of the 'Yî King' as it existed previously to his editorial work. The records of the 'Tso Chwăn,' however, commence with B.C. 722, more than 400 years after the date assigned for the completion of King Wăn's labours on the 'Yî.' Its quotations of the classic, moreover, are generally—always, I believe—according to the present or Wăn's text.

Of course M. Terrien de Lacouperie does not like my interpretation of the text nor the style of my translation, and he says that a very great number of meanings have been "made up for the occasion and forced upon the characters"—a charge which I must meet with an explicit denial. To substantiate it he gives one example of "the making up": "When we find, for instance, the word *tien*, 'heaven,' translated by 'shaving,' without the slightest note or explanation, it cannot be admitted that an interpretation with such licences is a *bonâ fide* version."

The translation of *thien*, thus adduced, occurs in the explanation of the third line of the thirty-eighth hexagram. When I came to it I saw at once that it could not have its usual meaning of "heaven," and concluded that it must have somehow taken the place of another character. The context required that there should be instead of it a character signifying some infliction of pain or punishment. Looking into the Chinese commentaries, I found *thien* described as here meaning "the punishment of shaving the head," and in one case (Khung Ying-tâ) that of "cutting or piercing the forehead." I found also the suggestion of another character as the proper reading. I turned then to the Khang-hsî dictionary, and there, with a special reference to this same passage, was *thien* defined as "the punishment of *khwăn*," and that *khwăn*, again, is explained as "shaving the hair = a punishment inflicted on criminals of the royal house, instead of another more severe." Finally, I looked into the translations of P. Regis and Canon M'Clatchie, finding in the one "Illius hominis capillos radit," and in the other, "The men shave their heads." The case of *thien* being as I have thus stated it to be, only his hasty ignorance could make my critic charge me with making up a meaning for it for the occasion, and further, giving "shaving" simply as that meaning, and not "shaving the head." Let one such meaning be proved against me, and I retire at once from the field.

I must not trespass further on your space. I do not profess to know Accadian or "the writing borrowed by the Chinese Bak families," but, though ignorant of those subjects, I do profess a knowledge of Chinese and ability to translate Chinese writings. When M. Terrien de Lacouperie and his co-worker have published their translation of the 'Yî,' it will receive my best attention. I have been content, while exercising my own judgment on the object of Wăn and his son, to determine the meaning of the characters and sentences of the text by following in the line of the students of it from Confucius and others still earlier to the present time. I venture to look forward to the general acceptance of my views by Chinese scholars.

JAMES LEGGE.

RAINSBOROUGH.

WITH regard to the spelling of the name "Rainsborough," I beg to adduce a piece of evidence hitherto unknown. In Robinson's 'Merchant Taylors' School Register,' just issued, we find the admission, in May, 1644, of "Edward *Rainesbury*, third son of William, *naval captain*, b. at Wapping, in the par. of Stepney, 3 Mar. 1633" (p. 160).

This William (though not identified by Mr. Robinson) was none other than the Cromwellian admiral; and as the entry is in the handwriting of Dugard, that most pedantically accurate of dominies, we may learn what weight to attach to the assertion that "none of the family ever deviated from the Rainborowe spelling." No phonetic spelling could turn Rainborowe into Rainesbury. The important point, however, is that the father is unequivocally recognized as *a seaman by profession*, though, like Jauréguiberry, for instance, in the Franco-German war, he served on shore when there was no work for him at sea. The fleet was entrusted to him in 1647 as a member of the extreme party; and when his ships, a few months later, rose for the king and constitution, the Government were compelled to turn their admiral into a colonel, every trustworthy officer available being needed in the emergency. The Royalists might well "smile" at the thought of the redoubtable admiral, whose signal discomfiture was so fresh in their memory, and who doubtless bestrode his steed as only a sailor could.

THE AUTHOR.

*** Our correspondent has made a mistake in his identification of William, father of Edward Rainesbury, with the person whom he strangely designates a "Cromwellian admiral." The Christian name of the man who served against Colchester was Thomas. This is capable of the most absolute proof. The letter which he wrote to the Speaker of the House of Commons when a portion of the fleet revolted is preserved among the Tanner manuscripts in the Bodleian Library. It is dated "May the 27th, 1648," and is signed "Tho. Rainborowe." There are other letters of his in the same collection with identical signatures. His father William and his grandmother Martha call themselves Rainborowe in their wills. It does not seem by any means certain that William Rainesbury, the naval captain, was of this family, but it may have been so. Thomas had a brother William, who at one time served in the army as a major. This person was a justice of the peace for Middlesex. He was discharged from that office in 1650. It is not improbable that he may have been a naval captain in 1644.

LOLO AND VEI CHARACTERS.

85, Kennington Road, Sept. 18, 1882.

I BEG you to let me say a few words in reply to the extraordinary communication in your last issue (*Athenæum*, No. 2864) from Dr. Hyde Clarke on twenty-six correspondences of characters between two far remote writings—the Lolos of South-Western China and the Vey of Western Africa. I only wish to point out that they are mere fancies, without any truth whatever. First, these twenty-six correspondences are selected from the 480 different words written phonetically (with an alphabet) of the two Lolo MSS. hitherto published, and about 350 syllabic signs of the Vey syllabary. Secondly, for the sake of the comparison, the characters are to be turned every way, and single characters and compounds are compared together. For instance, the first Lolo sign, which is a compound of three letters and reads *tien*, is compared by Dr. Hyde Clarke to a Vey simple character reading *ho*. Thirdly, the application of any principle of palæography would explode at once the fancy of these correspondences; but as we have evidence that the Vey syllabary is an invention of the present century, it is unnecessary to waste time on the question.

Dr. S. W. Koelle, in 1849, had from Doalu Bukere the statement that on a certain day, fifteen years before, he had himself written down the Vey syllabary according to a dream the previous night, and that afterwards he had the help of friends to increase the number of signs.

Dr. Hyde Clarke rejects altogether this statement, which is more than a tradition, and he classes the Vey as an old syllabary, because, looking at it with the eyes of his creative imagination and not through his scientific magnifying glasses, he freely fancies similarities with all sorts of ancient writings. Here I may remark that the loose manner, in contempt of any scientific method, in which his comparisons are established enables him to find out correspondences between writings entirely disconnected and without any relation whatever. To pick up shapes of characters and turn them one by one on any side in order to make them match with others, and to neglect altogether their phonetic value, is not a sound process to show a real connexion. Comparative study of writings is a task more serious and more difficult than that. I agree with Dr. Hyde Clarke that the statement of Doalu Bukere is rather unsatisfactory; unless supported it would be more prudent to feel some doubt. But it happens that we can check it by the information obtained on the spot by Mr. H. C. Creswick ('Syllabic Characters of Vey Negroes,' *Trans. Ethnol. Soc.*, 1867, N.S., vol. vi. pp. 260–263, and plate), of which Dr. Hyde Clarke seems to be unaware; and we may consider it proved that the Vey syllabary is a recent invention. Doalu Bukere wanted to attribute to himself alone the merit of it, or perhaps he was really one of the inventors. Mr. H. C. Creswick, who resided several years in the country, says plainly: "Certain it is that old men now living, with whom I have conversed, remember the time of its creation.....The history of the foundation of the symbols, as well as some records of wars, &c., of about twenty-five years ago, are preserved in Vey writing." The same traveller tells how the symbols were begun about 1815, at the town and trading station of Mando, in the midst of the Vey country, near Lake Bisama, by two youths, who wanted to avoid talking, to communicate between themselves about a regular system of theft and plundering they were carrying on. "So these ingenious youths went on elaborating until they had a regular system of conveying intelligence by means of symbols, which in process of time was still further developed into the present 'book,' 'enlarged and revised' by many subsequent persons" (*l.c.*). So much for the Vey syllabary, its supposed high antiquity and widespread affinities.

As to the Lolo writing of South-Western China, it is quite another thing (see my paper 'On a Lolo MS. written on Satin,' 1882, Trübner). It is alphabetic and derived from the Eastern *grundschrift*, which, side by side with a Western writing of Semitic origin, has been used for the framing of those splendid monuments of Brahmanic phonetic lore, the South Indian or Indo-Pali and the North Indian or Bactro-Pali alphabets.

Is it necessary to add that I disagree entirely with Dr. Hyde Clarke as to the connexions and similarities he finds between several of the other old writings he quotes? The reason is that I work with a method and principles of criticism different from his in comparative graphology and palæography.

TERRIEN DE LACOUPERIE.

THE COMING PUBLISHING SEASON.

MESSRS. MACMILLAN & Co.'s announcements include the 'Life of Frederick Denison Maurice,' by his son Major Maurice, R.A.,—the 'Life of Professor Clerk Maxwell,' with a selection from his correspondence and occasional writings, and a sketch of his contributions to science, by Prof. Lewis Campbell and Mr. William Garnett,—a life of Handel, by W. S. Rockstro,—a study on Spinoza, by Dr. James Martineau,—a record and a study of Dante Gabriel Rossetti, by William Sharp,—and translations of Düntzer's lives of Goethe and Schiller. Among works of imagination will appear 'A Little Pilgrim,' reprinted from *Macmillan's Magazine*,—'Fortune's Fool,' by Julian Hawthorne,—'Mr. Isaacs: a Tale of Modern India,' by F. Marion

Crawford,—'Mrs. Lorimer: a Novel,' by Lucas Malet,—and 'Shandon Bells,' by William Black. New volumes of poems are promised by Mr. Alfred Austin and Mr. Frederick Myers. Reprints of standard works include a new edition of Emerson's works, in six volumes, Globe 8vo. (uniform with the Eversley edition of Kingsley's novels), with an introduction by Mr. John Morley,—a new edition of Lamb's 'Essays of Elia,' with introduction and notes by the Rev. Alfred Ainger,—and a new edition of Milton's 'Poetical Works,' in three volumes, fcap. 8vo., with introduction, notes, and memoir by Prof. Masson. In the "English Men of Letters" series will appear 'Sterne,' by Mr. H. D. Traill; 'Macaulay,' by Mr. J. Cotter Morison; and 'Sheridan,' by Mrs. Oliphant,—in the "English Citizen" series 'The State and the Land,' by Mr. Frederick Pollock. The same publishers announce for autumn publication Sir James F. Stephen's long-promised 'General View and History of the Criminal Law,' which will occupy three octavo volumes; and, by the same author, 'A Digest of the Law of Criminal Procedure,' to supplement the well-known 'Digest of Criminal Law,'—two volumes of papers on early English history and topography, by the late Dr. Guest, edited by Canon Stubbs and Mr. Freeman,—and 'Investigations in Currency and Finance,' by the late Prof. Stanley Jevons. Messrs. Macmillan & Co. will issue the following illustrated and children's books before Christmas:—'Rosy,' by the author of 'Carrots,' with illustrations by Mr. Walter Crane,—'When Papa comes Home,' by the author of 'When I was a Little Girl,' with illustrations by Mr. W. J. Hennessy,—'Mrs. Gander's Story,' with illustrations,—'Paladin and Saracen: Stories from Ariosto,' by Mr. H. C. Hollway-Calthrop, with illustrations by Mrs. Arthur Lemon,—and a new edition of Mr. Lewis Carroll's 'Phantasmagoria,' with illustrations by Mr. W. B. Frost. Of general educational works the following will be published by Messrs. Macmillan & Co. within the next three or four months:—'A Synthetic French Grammar for Public Schools,' by Mr. G. E. Fasnacht,—in the series of "Foreign School Classics," edited by Mr. Fasnacht, Goethe's 'Götz von Berlichingen,' edited by Mr. H. A. Bull; Schiller's 'Maid of Orleans,' edited by Mr. Joseph Gostwick; 'Select Prose Works of Heine,' edited by Mr. C. Colbeck; and 'Select Ballads of Uhland,' edited by Mr. Fasnacht,—'The Functional Analysis of the English Sentence,' by the Rev. W. G. Wrightson,—'The Arithmetic of Electric Lighting,' by Mr. R. E. Day,—and a series of illustrated reading books, compiled by Mr. A. F. Murison. The following classical works are promised by the same publishers:—Mr. W. G. Rutherford's edition of Babrius, already described in these columns,—Prof. Sayce's edition of the first three books of Herodotus,—and an edition of the 'Annals' of Tacitus, by Prof. G. O. Holbrooke. In the "Classical Series" will appear an edition of the last four books of Homer's 'Odyssey,' by Mr. S. G. Hamilton; a school edition of the 'Satires' of Horace, by Prof. Arthur Palmer; a school edition of the 'Medea' of Euripides, by Mr. A. W. Verrall; and a similar edition of the fourth book of Thucydides, by the Rev. C. E. Graves. The following translations will appear:—A prose version of Homer's 'Iliad,' by Messrs. Walter Leaf, Andrew Lang, and Ernest Myers,—the 'Politics' of Aristotle, by Mr. J. E. C. Welldon,—and Books XXI.-XXV. of Livy, by Messrs. A. J. Church and W. J. Brodribb.

Messrs. George Bell & Sons' forthcoming publications are:—'History of Wood Engraving in America,' by W. J. Linton,—Boswell's 'Life of Johnson,' an edition founded on that of J. W. Croker, by the Rev. Alex. Napier,—'Dictionary of Corrupted Words,' by the Rev. A. S. Palmer,—Grimm's 'Teutonic Mythology,' translated by J. S. Stallybrass,—'Principles of Gothic Ecclesiastical Architecture,' by M. H. Bloxam,—'How to Decorate,' by M. E. James,—'Arthur Hugh Clough: a Monograph,' by Samuel Waddington,—'The Gospel of St. Matthew,' by the Rev. M. F. Sadler,—'Hector,' by Flora Shaw,—a new volume of the "Aldine Poets," 'Henry Vaughan,' with memoir by the Rev. H. F. Lyte,—and new editions of the following: Dr. Guest's 'History of English Rhythms,' revised by Prof. W. W. Skeat,—'Plain Introduction to the Criticism of the New Testament,' by F. H. Scrivener,—Conington's 'Vergil,' Vol. III., revised by Prof. Nettleship,—'Papers on Preaching,' by Rev. G. J. Davies,—and Marryat's 'Masterman Ready.'

Messrs. Bentley & Son announce 'A Memoir of Lord Hatherley,' by the Rev. Prebendary Stephens,—'The Retrospect of a Long Life,' by Mr. S. C. Hall,—'Personal Reminiscences of Lord Stratford de Redclyffe and the Crimean War,' by the author of 'Frontier Lands of the Christian and the Turk,'—'In the Land of Misfortune,' by Lady Florence Dixie,—'Old Coaching Days,' by Stanley Harris ("An Old Stager"),—'In the Land of Schamyl,' by Clive Phillipps-Wolley,—'In the Black Forest,' by Charles W. Wood,—'Brighter Britain: Life in Northern New Zealand,' by W. Delisle Hay,—'The Memoirs of Prince Metternich, 1835-1848,' Vol. VI., edited by his son, Prince Richard Metternich, and M. A. de Klinkowström,—'Dainty Dishes,'—'Four Plays,' by A. W. Dubourg,—'Notes upon some of Shakespeare's Plays,' by Frances Anne (Fanny) Kemble,—'The Court of the Tuileries, of the Restoration, and of Louis Philippe,' by Lady Jackson,—the sixth and concluding volume of Dr. Abbott's translation of Duncker's 'History of Antiquity,'—Vol. I. of Duncker's 'History of Greece,' translated by S. F. Alleyne,—some new novels, viz., 'Wrought Out,' by Charles Quentin; 'Mrs. Raven's Temptation,' by the author of 'Dr. Hardy's Marriage'; 'Mary St. John,' by Miss R. N. Carey; 'Eve Lester,' by Mrs. Diehl; 'Unspotted from the World,' by Mrs. G. W. Godfrey; and 'The Admiral's Ward,' by Mrs. Alexander,—new editions of McCausland's 'Scripture Confirmed,' of 'Memoirs of the Duchess of Abrantes,' and of Rev. F. Arnold's 'Turning Points in Life,'—an enlarged edition of Bishop Thirlwall's 'Letters to a Friend,'—an edition in one volume of Serjeant Ballantine's 'Experiences,'—and a large-paper edition (to be called the Steventon edition) of Jane Austen's novels.

Messrs. Hurst & Blackett have in the press a new work by Mr. J. Fitzgerald Molloy, entitled 'Court Life Below Stairs; or, London under the First Georges, 1714-1760,' in two volumes. They will publish during October a new novel by William Westall, entitled 'Red Ryvington,' in three volumes, and 'A Golden Bar,' by the author of 'Christina North,' &c., also in three volumes.

Messrs. Williams & Norgate will publish during the coming season 'Buddha: his Life and his Doctrine,' by Prof. Oldenberg, of Berlin, and the fifth and last volume of the same author's edition of the 'Vinaya Pitakam' in Pali,—a 'Pali Handbook,' by Dr. O. Frankfurter, containing a grammar, Pali texts, and a glossary,—a volume of 'Essays on Spinoza,' by Profs. Land, Van Vloten, Kuno Fischer, and M. Ernest Renan, edited by Prof. Knight, of St. Andrews,—Prof. Pfleiderer's 'Philosophy of Religion,' translated by the Rev. Alexander Stewart, of Dundee,—a third volume of 'Old Northern Runic Monuments of Scandinavia,' by Prof. Stephens, of Copenhagen,—'English Lectures on Northern Mythology,' by the same author,—and a 'Memoir, with Illustrations, of the Old Scandinavian Crosses in the Churchyard of Gosforth in Cumberland,' by Dr. Parker, of Gosforth.

Messrs. Blackie & Son will publish the following books for the young:—'Under Drake's Flag' and 'Facing Death: a Tale of the Coal Mines,' by G. A. Henty,—'In the King's Name; or, the Cruise of the Kestrel,' and 'Nat the Naturalist,' by G. Manville Fenn,—'Stories of Old Renown,' by Ascot R. Hope,—'Dora' and 'Fairy Fancy,' by Mrs. R. H. Read,—'Brother and Sister,' by Elizabeth J. Lysaght,—'Adventures of Mrs. Wishing-to-be,' by Alice Corkran,—'New Light through Old Windows: Stories illustrating Fables of Æsop,' by Gregson Gow,—and 'Florence Godfrey's Faith' and 'Garnered Sheaves,' by Mrs. E. R. Pitman.

Messrs. Dean & Son's list includes 'The Gallant Deeds of our Heroes of the Victoria Cross: a Complete Record from 1851 to 1882,' by Lieut.-Col. Knollys and Major Elliott; and the following illustrated books:—'Memorandum Book and Birthday Diary,' with comic designs by Charles Harrison, 'Ever and a Day,' 'How Doo!' 'The Light of the Nursery,' 'Sunny Hours and Pretty Flowers,' 'The Children's Kettledrum,' and 'Dottie's Pets'; and a number of new toy books.

Messrs. W. P. Nimmo & Co., of Edinburgh, announce 'Caledonia described by Scott, Burns, and Ramsay,' with illustrations by John MacWhirter, engraved by R. Paterson,—'The Safe Compass and How It Points,' by the Rev. Richard Newton, D.D.,—and a new edition of 'The Little Folk's Birthday Book.'

Messrs. T. & T. Clark, of Edinburgh, will publish early next month the second issue of their "Foreign Theological Library" for this year, viz., Martensen's 'Social Ethics' and Weiss's 'New Testament Theology,' Vol. I.,—also Meyer's commentary on Hebrews (one volume) and James and John (one volume). The Meyer series will then be complete in twenty volumes. The following are also preparing for publication:—'Final Causes,' by M. P. Janet, second edition,—Uhlhorn's 'Charity in the Primitive Church,'—'The Doctrine of the Holy Spirit,' by Prof. Smeaton, D.D. (Cunningham Lectures),—and Hefele's 'History of Church Councils,' Vol. III. (to the Council of Chalcedon). Of the "Bible-Class Handbook" series three more volumes are in the press:—'Genesis,' by Marcus Dods, D.D.; 'Romans,' by Principal Brown, D.D.; and 'The Reformation,' by Prof. Lindsay, D.D.

The Society for Promoting Christian Knowledge announce 'Celtic Britain,' by Prof. Rhys,—'The Church in Roman Gaul,' by the Rev. R. T. Smith, Canon of St. Patrick's, Dublin,—'John Hus,' by the Rev. A. H. Wratislaw,—'Judæa and her Rulers,' by M. Bramston,—in the series of "Heroes of Science," 'Botanists, Zoologists, and Geologists,' by Prof. P. M. Duncan, and 'Astronomers,' by E. J. C. Morton, B.A.,—two "Diocesan Histories," viz., 'Oxford,' by the Rev. E. Marshall, and 'York,' by the Rev. Canon Ornsby,—'Lesser Lights,' second series, by the Rev. Francis Bourdillon,—'Addresses to Candidates for Confirmation,' by the Rev. E. L. Cutts,—'A Devotional Life of our Lord,' by the Rev. E. L. Cutts,—'Lectures on the Historical and Dogmatical Position of the Church of England,' by the Rev. W. Baker, D.D.,—'Talks on Tithes: Why pay Them?' by Farmers Hopgood, Cornfield, and Stockwell, edited by the author of 'The Englishman's Brief,' &c.,—'Guesses at Purpose in Nature, with Especial Reference to Plants,' by W. Powell James,—'The Natural Theology of Natural Beauty,' by the Rev. R. St. John Tyrwhitt,—four volumes of a series called "Church Readers,"—'Be Kind to your Old Age: a Village Discussion of the Post Office Aids to Thrift,'—'The Good Ship Barbara,' by S. W. Sadler, R.N.,—'Isabeau's Hero' and 'Adé,' by Esmé Stuart,—'Una Crichton,'—'Alone in Crowds,' by Annette Lyster,—'Fairy Tales for Every Day,' by Harriet L. Childe-Pemberton,—'Old-Fashioned Fairy Tales' and 'Brothers of Pity, and other Tales of Beasts and Men,' by Mrs. Ewing,—'A Baker's Dozen,' by L. H. Apaque,—'The Professor's Daughter,' by A. Eubule-Evans,—'Sketches of our Life at Sarawak,' by

XUM

Harriette McDougall,—'A Brave Fight,' the story of Master William Lee, inventor, by the Rev. E. N. Hoare,—'Out of the Shadows' and 'With Swallow's Wings,' by Crona Temple,—'Rudolph's Dilemma,' by A. H. Engelbach,—'Tender and True,' by Florence Wilford,—'Under the Blue Flag: a Story of Monmouth's Rebellion,' by Mary E. Palgrave,—'A Dream of Rubens' and 'One of the Old School,' by Austin Clare,—'Asaph Wood,' by Phœbe Allen,—'Beechwood,' by Mary Davison,—'The Church Farm,' 'Born a Soldier,' 'The Dreadful Cousin,' and 'Ruth Allen's Foundling,' by S. M. Sitwell,—'Harriet's Mistakes: a Story for Servants,'—'Little Will,' by Helen Shipton,—'Miss Jean,' by M. E. Hayes,—'A Runaway,' by Mrs. J. A. Owen,—'A Wonderful Goldsmith (Benvenuto Cellini),' and 'Drowsy Dell,' by F. S. Potter,—'Ella's Mistake,' by Laura M. Lane,—'Fast Friends; or, David and Jonathan,'—'The Great Cranberry Quarrel,' by Mrs. J. A. Owen,—'Grumble,' by Mrs. Thomas Erskine,—'Maud Kinglake's Collect,'—'The Price of a Lark,' by Alice Lang,—'Princess Opportunity and the Lady Remorse,' by C. M. Phillimore,—'Sally Tramp,'—'Widow Tanner's Cactus,'—'A High Look,'—'Golden Flowers,' by F. Harrison,—'Jenny's Offering,'—'Soldiers of a Great King: an Advent Story of the Waldenses,'—'Young Six-Foot, and What became of Him,' by Mrs. Charles Garnett,—'Fritz; or, the Young Schiller,' adapted from the German of Franz Hoffmann,—'Light in the Gloaming,'—and 'Trust Me,' by N. D'Anvers.

Literary Gossip.

Mr. Elliot Stock will publish almost immediately a volume of 'Recollections of Rossetti,' by Mr. Hall Caine, who was Rossetti's daily associate during the last year of his life, and whose acquaintance with him extended over a longer period. For the preparation of this volume Mr. Caine has had the facilities afforded by a great number of letters written to him by Rossetti on purely literary subjects: letters which deal with Shakspeare's sonnets, with many early writers, with Wordsworth, Coleridge, Keats, Shelley, Blake, Chatterton, and later and contemporary poets. Mr. Caine has prefaced these by a rapid account of Rossetti's career, and affixed to them a number of personal reminiscences.

Messrs. Cassell & Co. write:—

"The orders which have been received for Canon Farrar's new work, 'The Early Days of Christianity,' having considerably exceeded the number printed for the first edition, it has been deemed advisable to postpone the delivery of the work from the 22nd inst. to the 2nd of October, so that there may be on the day of publication an adequate supply to meet all demands."

We understand that Sir Richard Temple contributes to the October number of the *Contemporary Review* a paper entitled 'Principles of British Policy in Egypt'; while Mr. Sheldon Amos reviews Mr. Seymour Keay's pamphlet, 'Spoiling the Egyptians,' and Mr. M. G. Mulhall treats of 'Egyptian Finance.' Among the other papers in the number will be 'Clôture for the House of Commons,' by Mr. G. Baden-Powell.

A sixpenny reprint of Mr. Henry George's work entitled 'Progress and Poverty' has now been issued. We believe that the elaborate review of that work which appeared in the *Times* last week was from the pen of Mr. Fraser Rae.

Mr. Edward Walford, who, in conjunction with Mr. Walter Thornbury, wrote 'Old and New London,' has been engaged in the preparation of a companion work, entitled 'Greater London.' It will be published by Messrs. Cassell & Co. next month in serial form.

Messrs. Griffith & Farran have in the press 'A Scamper through America in 1882,' by Mr. T. S. Hudson, a well-known shipowner of West Hartlepool.

'The Last Christmas Eve,' a story by Mr. Richard Dowling, will be the title of Tinsleys' Christmas annual, which is to be published at the end of October. Mr. Harry Furniss will supply the illustrations.

'Cosmo Gordon,' a new novel in three volumes, by Mrs. Leith Adams, will shortly be published by Messrs. Chapman & Hall. It will appear in America and Australia at the same time as in London. A serial from the same pen, called 'Geoffrey Stirling,' will commence in *All the Year Round* for the 30th inst.

'Talbot's Folly,' a novel in three volumes, by Mr. W. B. Guinee, will shortly be published by Messrs. Tinsley. A feature of the work will be the lighter aspect of politics in Parliament and in the field of Irish agitation.

Miss Braddon's next issue of the *Mistletoe Bough* will consist of one complete story written by herself. It will be illustrated by Mr. Henry French.

Mr. Charles Fleet is preparing a second volume of his 'Glimpses of our Ancestors in Sussex.' It will be published shortly by Messrs. Farncombe & Co., of Lewes.

The Cambridge Philological Society intends to publish its *Proceedings* terminally, for the benefit of the limited number of scholars who take an interest in the doings of learned societies. The publishers are Messrs. Trübner & Co.

An article by Dr. James Croll, F.R.S., entitled 'Evolution in Relation to Force: a New Argument for Theism,' written before his recent illness, will shortly appear in one of the quarterlies.

Messrs. J. C. Nimmo & Bain announce as to be ready on the 1st of October five new volumes of their "Old English Romance Series," viz., 'The Arabian Nights' Entertainments,' with etchings by Lalauze, and a volume containing 'Vathek' and 'Rasselas.'

Mr. Ridgway has in the press a work by Baron de Malortie entitled 'Egypt: Native Rulers and Foreign Blunders.'

Messrs. John Walker & Co. have in the press a work entitled 'Scottish Loch Scenery,' by Mr. T. A. Croal, illustrated with coloured plates. The same firm announce a 'Guide to China Painting for Amateurs,' translated from the German; also the remaining books in their "School of Art Series of Geometry."

Mr. Algernon Clarke, formerly Secretary of the Central Chamber of Agriculture, has just become editor of *Bell's Weekly Messenger*.

A new critical and satirical penny weekly paper, called the *Look-out*, is about to be started in Sheffield.

The experiment which has been made by some of the branch free libraries in Manchester of opening evening reading-rooms for boys has been very successful. Works of fiction of a healthy tone are perused with avidity by the youthful readers. The cheap serial sensational literature is carefully excluded. Considerably more than a hundred boys may frequently be seen on Sunday evenings engaged in reading at some of these rooms.

Dr. P. J. Popoff, of New York, writing in the *Critic* of the 9th inst., shows to what extent American authors are read in Russia. Longfellow is the most popular of American poets there; and Fenimore Cooper's tales are more widely read than any other novels of foreign origin. Emerson is known and highly respected; but the poets Poe, Bryant, Lowell, Whitman, Joaquin Miller, and Whittier still wait for a translator. Bret Harte's and Mark Twain's works are done into Russian as soon as they appear. Among educated Russians, Dr. Popoff declares, it would be difficult to find one who had not read 'Uncle Tom's Cabin.'

Prof. Vambéry's new work on the origin of the Hungarians will come out in a few days simultaneously in Hungarian and in German. Ethnologists have hitherto classified the Hungarians amongst the Finnish-Ugrian branch of the Ural-Altaic race, but Prof. Vambéry, declaring this theory, based mainly upon philological evidence, to be quite untenable, proves the Turko-Tartar origin of the Magyars.

The Russian author D. L. Mordovtzef has set out for Turkey in Asia with the intention of exploring Mount Ararat.

The cost of the new university about to be established at Tomsk is definitively estimated at 1,220,000 roubles. The requisite buildings will, it is considered, be completed by the year 1885.

The recall from exile of Khairi Bey, the Turkish political poet, was announced by us last month (*Athenæum*, No. 2861). His brethren here may learn with dismay that the next sign of imperial favour has been his restoration to his post in the Customs Office at Constantinople.

The Japanese Government have resolved upon establishing public libraries in every provincial capital throughout the empire. It is stated that the Government have decided to discontinue subsidizing newspapers, because the plan has proved useless as a means of suppressing Liberalism. One or two of the Japan papers have in consequence suspended publication.

On the 16th inst. three hundred Brahman ladies, representing the most influential families in Poona and its neighbourhood, held a meeting for the purpose of presenting a petition to the Education Commission on the subject of the difficulties in the way of female education in India. The meeting was eloquently addressed by the Mahratta lady Rahabbai Sanskrita, who stated that ninety-nine out of one hundred educated men in India are opposed to female education. The municipality of Poona have since offered to become responsible for girls' as well as boys' schools.

In order to encourage authorship in the language of the Assam valley, the Chief Commissioner of Assam offers to give rewards for the production in that language of useful works in any branch of science or literature, provided they are of approved style and design.

With the object of encouraging the establishment of paper mills in Bombay, the Government of India have recently published a report on the water power available for driving machinery in that presidency, and they have offered exceptional advantages to any firm willing to establish such mills and capable of supplying paper for the public service as good and cheap as that now imported.

A Correspondent writes from Heidelberg:—

"Prof. Uhlig is engaged, in conjunction with Prof. Merx, in publishing the short grammatical compendium of Dionysius Thrax, printed hitherto in a very incomplete form in Fabricius's 'Bibliotheca Græca' and in Bekker's 'Anecdota.' With the aid of a number of MSS. of old scholiasts and an Armenian translation of the fifth century, it has been possible to restore the Greek text to the form which it had in the Byzantine schools of that early period. Prof. Uhlig has, moreover, employed for the constitution of the text quotations from the most ancient Latin grammarians, all of whom are entirely dependent on the work of Dionysius. Finally, Prof. Merx found in the British Museum, and is about to publish, a Syriac translation of the same book, made in the early part of the sixth century. From these important publications it will become apparent that all our grammatical theories down to the present day are based upon Dionysius Thrax, who, in the form of a catechism, first systematized the logical and grammatical investigations of the Stoics."

SCIENCE

Report on the Scientific Results of the Voyage of H.M.S. Challenger: Zoology. Vol. IV. (Published by Order of Her Majesty's Government.)

The present is the first volume of this work which has appeared since the lamented death of Sir Wyville Thomson. After that event the management of the work was placed by the Government in the hands of the Royal Society, who appointed a committee for the purpose, and the editing is now being continued by Mr. John Murray, under the superintendence of that committee. Mr. Murray, one of the naturalists of the Challenger expedition, acted as assistant to Sir Wyville Thomson after its return, and it is no secret that for the last year or two, during which Sir Wyville's health was seriously impaired, the major part of the editorial duties devolved on him. He thus practically merely continues work with which he is already perfectly familiar.

Most important in the present volume is the list printed at its commencement of the monographs by various authors which are now in hand and which are to compose the succeeding volumes of the work. About twenty-five monographs have as yet been issued, including those contained in the present fourth volume. Nineteen more are announced to appear during the present financial year; about thirty-five more are to follow in subsequent years; and besides these there will be a volume comprising a narrative of the voyage, by Staff Commander Tizard, R.N., Prof. H. N. Moseley, Mr. J. Y. Buchanan, and the editor, who will further add a concluding part with an index. Some few groups are still unallotted to experts, and these will entail the addition of two or three further monographs. On the whole, it is expected that the entire work will be composed of more than thirty volumes.

The present handsome volume falls short in no respect of the perfection in the execution of the plates and general get-up attained in those preceding. It comprises three monographs. The first is on the anatomy of the petrels collected during the voyage, by Mr. W. A. Forbes, Prosector to the Zoological Society. The late Prof. Garrod was to have undertaken this section of the work, but his investigations were cut short by his death when he had only completed the examination of one form, the curious diving petrel (*Pelecanoides*), so familiarly known to all readers of Mr. Darwin's 'Journal.' The unfinished manuscript on this subject left by Prof. Garrod has already been published in the memorial volume of his collected papers. Mr. Forbes deals with his subject in a thoroughly comprehensive and most masterly manner. He has supplemented the Challenger series of petrels wherever necessary from other sources, and has thus been able to study the anatomy of seventy-four specimens, representative of thirty-one species and twenty-two genera. We can only briefly touch on his results. In all text-books the albatrosses are stated to be without the hallux or hind toes. Dr. Kidder first pointed out the existence of a rudimentary hallux in the sooty albatross in his account of the birds of Kerguelen's Land. In this form a minute claw is present externally, as well as two minute bony ossicles under the skin representing the toe joints. In the other albatrosses the author finds a single ossicle representing the hallux, although the claw is, of course, absent. In the diving petrel there is no trace of such an ossicle. The general result of the author's work is that Garrod's division of the order *Tubinares* into two main families—the *Oceanitidæ*, or the genus *Oceanites* and its allies, on the one hand, and the *Procellaridæ* proper, such as the true stormy petrel, puffins, Cape pigeons, prions, diving petrel, and albatrosses, on the other—is shown to be correct by all items of anatomy, muscular, visceral, and osteological. The *Oceanitidæ* are most curiously like the true stormy petrels of the genus *Procellaria* in general appearance, colouring, and size, and had been confounded with them by all ornithologists before Garrod's discovery. *Pelecanoides*, as might be expected, exhibits some very marked peculiarities in its anatomy, and might with good reason be placed in a separate sub-family; but there can be little doubt that it sprang from the general stock of the *Procellarinæ* after the ancestor of the *Procellaria* group had acquired its main characters.

Mr. Forbes cannot agree with Prof. Huxley and others as to the alliance of the *Tubinares* with the gulls. Anatomical structure generally, with the exception of the one fact of the schizognathous character of the palate (a matter of secondary importance), seems to negative such a connexion, and, besides, the character of the plumage and condition of the young birds, and the number, shape, and coloration of the eggs are totally dissimilar in the two groups. He inclines to the belief that, as suggested by Garrod, the group is related to the herons, and should be placed amongst Garrod's *Ciconiiformes*.

The second memoir of the volume is by Prof. Haeckel, and is entitled 'Report on the Deep-Sea Medusæ dredged by H.M.S. Challenger.' It was published last year in the original German as part of the author's large work entitled 'Monographie der Medusen'; but curiously enough this fact is nowhere mentioned in the present volume, either by the editor in the preface or by the author. It is probably taken for granted that every one likely to study the monograph is certain to be aware of the fact of its publication elsewhere; but although that may be the case now, at some future time it may be of importance to readers to learn that the same treatise is to be found elsewhere in the German language, and that in matter of priority it dates from an earlier period than that of its publication in English. At all events, reference to the original publication should at least have been given in a foot-note. With the exception of the omission of two paragraphs from the preface and the placing of a general discussion on the organization of the *Medusæ* before instead of after the description of the species, the English version corresponds in all essential particulars with the German.

The memoir commences with a general account of the organization of the *Medusæ*, a most valuable exposition of the subject (illustrated by excellent diagrammatic woodcuts), which is already well known to naturalists. It is unfortunate that Prof. Haeckel maintains his views once formed resolutely, even when they are proved to be in direct variance with facts, as in the case of his proposition that the *Hydromedusæ* are "essentially and thoroughly distinguished" from the *Scyphomedusæ* in that their generative elements are always derived from the ectoderm, which he still puts forward categorically and without excuse or comment, although it has been shown by numerous competent observers that in many *Hydromedusæ* they are developed, as in the *Scyphomedusæ*, from the endoderm. In the systematic part of the memoir eighteen species of *Medusæ* are described, nine of which are *Hydromedusæ* and nine *Scyphomedusæ*. A good many of these were known from other collections than that of the Challenger expedition, and were identified only as fragments amongst the Challenger material. Of others no specimens exist except those obtained by the Challenger, and in most cases such specimens are single only. It is a matter of regret that the author does not state in every case whether more than one specimen was obtained. Most of the *Medusæ* described are of special morphological interest, and amongst these may be mentioned the two representatives of the family *Ephyridæ*, *Nauphanta* and *Atolla*, which are very ancient survivors of an otherwise extinct ancestral group of *Discomedusæ*, connecting this order with the *Cubomedusæ* and *Peromedusæ*. More important still, perhaps, is *Tesserantha connectens*, which is "one of the simplest and oldest medusa forms of that important family the *Tesseridæ*," which are to be regarded as the general ancestral group of all *Scyphomedusæ*. It need not be said that Prof. Haeckel has done his work with extreme thoroughness. By means of the Challenger specimens, supplemented

where possible by additional material obtained elsewhere, he has investigated most completely the anatomy of all the species he describes, and figured all the details in thirty-two magnificent plates, together with figures of all the forms represented as in life. In thus restoring these forms from the study of the preserved specimens he has, of course, experienced very serious trouble, and he confesses that some of the figures may not be quite correct; but no one else has so thorough a knowledge of the *Medusæ* or has had so much practice in interpreting preserved specimens, and the errors are probably of little importance; whilst representations of the shrivelled and contracted spirit specimens would have been valueless.

There is one matter concerning which we must protest, and that is the form in which the statements as to the depths at which the *Medusæ* were obtained are expressed. We read numerous statements such as that the specimen "was taken at a depth of 1,100 fathoms"; "taken from a depth of 1,975 fathoms"; "dredged from a depth of 1,250 fathoms." Now all these depths are of course entirely uncertain. The *Medusæ* may have been caught by the net either in going down or coming up at any intermediate depth between that mentioned and the surface, and any categorical statement that such and such a specimen was caught at any particular depth should not have been permitted by the editor to stand in an official report such as the present. It is not fair to the members of the expedition, who appear thus committed to a statement which is misleading. It is especially extraordinary that Prof. Haeckel should take upon himself to put forward such statements after confessing in his preface that these depths "must be considered more or less approximate." There is no doubt that certain *Medusæ* descend, at least at certain times in the year, to great depths. The late Prof. Agassiz appears to have been the first to notice this in the case of *Ptychogena lactea*, and very possibly some *Medusæ* live always at the bottom of the deep ocean water; but the matter is at present still one of conjecture, and has not been absolutely proved in any one instance; and therefore it would have been far more correct if the author had merely in the present instances stated the depth to which the net was sent down on the occasions when the *Medusæ* were caught, and at the termination of each description of a species had discussed the reasons for and against its being, in his opinion, an inhabitant of deep water.

In several instances the same species of *Medusæ* caught by the Challenger in a net which had been down to great depths have been obtained by other collectors elsewhere more abundantly. Thus, for example, a fragment only of *Ptychogena pinnulata* was found by the Challenger naturalists in a net which had been down to 1,450 fathoms off Halifax. Several specimens of this same medusa were obtained by a Danish captain between England and Ireland, and on these Prof. Haeckel's observations as to the structure were made; but most unfortunately he does not give the depth at which they were taken. It is probable they came from the surface. Yet the fragment from Halifax, stated to be "found at a depth of 1,250 fathoms," seems to carry the day. Why *Drymonema victoria* should be termed a deep-sea species it is difficult to conceive. The species is described "from four large specimens found *on the coast* of Dalmatia." "A small fragment of a medusa which I found in a bottle of the Challenger collection *appeared to be identical* with these." The net from which the contents of this bottle had come had been down to 600 fathoms, and the fragment might have come from any depth less than 600 fathoms. Yet although the four specimens were caught at the surface, the *D. victoria* is denoted as "the Mediterranean deep-sea species." This is the statement on one page, whilst two pages further on we read, "Further research must prove whether this remarkable Cyaneid be really a deep-sea medusa or not." The editor in his preface justly points out that the name given to Prof. Haeckel's memoir may be open to question, some of the species described being certainly from the surface.

The third memoir of the volume is by Dr. Hjalmar Theel, of the University of Upsala, on the *Holothuroidea* or sea-cucumbers, the present instalment, part i., dealing only with the new order which the author at first named *Elasmopoda*, but for which he now adopts the term *Elasipoda*. He formed this order, which is intermediate in structure between the *Pedata* and *Apoda*, to receive certain curious species of holothurians dredged by the Swedish expedition to the Yenisei in 1875, and by the Norwegian dredging expeditions in 1876 and 1878. When the Challenger collection came to be examined about sixty new species of this group, belonging to various new genera, were found amongst it. These holothurians are of the most grotesque shapes; some rounded like hedgehogs in shape, with curious curved horns projecting from their backs; some with long pointed processes all over their bodies; others like huge slugs, with one long conical projection reaching out backwards from near the hinder extremity; some with stiff tests composed of most beautiful perforated calcareous plates; others soft and gelatinous. All these are described and figured in the present memoir. Nearly all occur in deep water, only one species having been found in a less depth than 100 fathoms. They abound all over the floor of the ocean, and the number of species and individuals is greatly reduced shorewards; twenty-six species occur at a greater depth than 2,000 fathoms, and one was taken from 2,900 fathoms. This species, *Oneirophanta mutabilis*, is also the one which has the widest geographical distribution, ranging, like most deep-sea forms, all over the world. Dr. Theel's work is in every way to be commended, being based on most careful anatomical investigation, to the valuable results of which many plates are devoted.

ASTRONOMICAL NOTES.

Two comets were discovered last week. One of these is announced by M. Cruls, of the Observatory at Rio de Janeiro, who discovered it on the morning of the 12th inst. in R.A. $9^h\ 48^m$, N.P.D. 92° 1′. He says that it is visible to the naked eye, and is probably the returned comet of 1812, which (as mentioned in the *Athenæum* of August 12th) was shortly expected; this, however, is doubtful. The other comet was discovered by Mr. Barnard, presumably at Nashville, Tennessee, U.S., on the 10th inst., and was seen at the observatory of Harvard College, Cambridge, U.S., on the 14th in the place R.A. $7^h\ 19^m$, N.P.D. 73° 56′. It is described as "circular, 2′ in diameter, with some central condensation, and of the tenth magnitude."

According to a telegram received by the Brazilian Submarine Telegraph Company from their Madeira superintendent, a comet was detected by Capt. Markham, of H.M.S. Triumph, on the 12th inst., which is probably the same as that discovered the same day by M. Cruls at Rio, although it is difficult to reconcile the places as cabled. Mr. Common, of Ealing, observed a bright comet on Sunday morning last, which he thinks is most likely the same. It was then very near the sun, at noon only about 13′ south of the sun's limb (the place being R.A. $11^h\ 34^m$, N.P.D. 88° 17′), and it had a tail about 4′ in length. Next day Mr. Lohse observed this comet at Lord Crawford's Observatory, Dun Echt. The place, at 18^m before noon on the 18th inst., was R.A. $11^h\ 31^m$, N.P.D. 88° 36′. "The spectrum of the nucleus," he says, "is continuous, with many bright lines, of which D is by far the brightest; all the bright lines are displaced towards the red by about one-eighth of the interval of the D lines."

Another small planet (No. 230) was discovered by Dr. de Ball at Bothkamp on the 3rd inst. This is the tenth planetary discovery of the present year.

We regret to announce the death of Dr. Émile Plantamour, Professor of Astronomy at Geneva, and director of the observatory there, which took place on the 7th inst. The deceased professor was born at Geneva on the 24th of May, 1815, and succeeded the late Prof. Gautier there (whose pupil he had formerly been) shortly after completing his studies and taking his degree at Königsberg in 1839. From that time the observations, both astronomical and magnetical, made at Geneva have continued to be under his superintendence. He has also been the author of many papers on special astronomical subjects in the *Memoirs* of the Society of Physics and Natural History at Geneva, the *Astronomische Nachrichten*, and other scientific publications. He took part in the expedition to Spain to watch the total eclipse of the sun on the 18th of July, 1860, and observed it at Castellon-de-la-Plana, on the road from Valencia to Barcelona, noticing several phenomena of great interest before and during totality, which are carefully reported, with engravings of the drawings, in the exhaustive work by Mr. Ranyard on total solar eclipses, forming the forty-first volume (commonly called the "eclipse volume") of the *Memoirs* of the Royal Astronomical Society.

Science Gossip.

Messrs. Macmillan's scientific publications for the coming season will include 'A Text-Book of Geology,' by Prof. Archibald Geikie; 'The Chemistry of the Sun,' by Mr. J. Norman Lockyer; 'A Text-Book of Pathological Anatomy,' by Dr. Ernst Ziegler, of Zurich, translated and edited by Mr. Donald MacAlister; a volume on 'Preventive Medicine,' by Dr. B. W. Richardson; 'A Treatise on Applied Mechanics,' by Prof. J. H. Cotterill; and new editions of Sir William Thomson's 'Papers on Electrostatics and Magnetism,' of Mr. Routh's 'Dynamics of the System of Rigid Bodies,' of Dr. Michael Foster's 'Text-Book of Physiology,' and of the 'Elementary Lessons in Practical Embryology,' by the same author and the late Mr. F. M. Balfour.

Messrs. George Bell & Sons will publish four volumes of a series of "Technological Handbooks," edited by H. Trueman Wood, viz., 'Iron and Steel,' by Prof. A. K. Huntington; 'Cotton Manufacture,' by R. Marsden, of Manchester; 'Telegraphs and Telephones,' by

W. H. Preece, F.R.S.; and 'Glass Manufacture,' by H. Chance, H. Powell, and H. J. Harris. They also announce a new edition of Besant's 'Hydromechanics.'

MR. WERDERMANN, whose electrical discoveries have attracted much notice, has just patented a new incandescent lamp. The peculiarity of this lamp consists in the fact that the vacuum, indispensable in all other such lamps, is dispensed with. Mr. Werdermann employs silicium in place of carbon, and he has succeeded in procuring from it better results than if carbon were employed.

THE Drapers' Company have offered 300*l.* per annum for five years towards the establishment of a technical school in connexion with University College, Nottingham, with a grant for the first year of 200*l.* for purchasing apparatus, &c.

DURING the winter Mr. F. J. Lloyd, F.C.S., of the Royal Agricultural Society of England, will give a course of lectures at King's College, London, on agriculture. The first lecture will be delivered on October 12th. This will, we believe, be the first time that agriculture has been lectured upon at the college.

MR. WILSON LLOYD FOX has, on the occasion of the celebration of the year of jubilee of the Royal Cornwall Polytechnic Society, produced an 'Historical Synopsis,' in which he records the work annually done since 1833. We are pleased to draw attention to this volume, as showing the value of a local society founded by a lady—Miss FOX—in aiding the advances of science and art.

MR. COLQUHOUN delivered a lecture on the 6th inst. at Simla on his recent expedition from Canton to Burma. The first portion of his journey was on the Canton river, and the second portion through Yunnan. On the river the expedition was somewhat dangerous, owing to pirates and the hostility of the neighbouring tribes towards foreigners. The ruins of numerous cities, giving indications of former wealth and importance, were seen. Through the influence of the Chinese mandarins Mr. Colquhoun was prevented from crossing through the Shan States to Burma. He believes that there is a feasible trade route through South-Eastern Burma.

THE American Museum of Natural History in New York has received from Mr. Morris K. Jessup the necessary funds for making a full collection of the 420 varieties of trees which grow in the United States. Upwards of 375 of these specimens have already been received.

MR. EDWARD ORTON publishes in the *American Journal of Science* for September a paper 'On a Source of the Bituminous Matter in the Devonian and Sub-Carboniferous Black Shales of Ohio.' He says, "In examining with a microscope the fragments of this black shale, I found many of them covered and filled with translucent discs, ranging from 1-100th to 1-200th of an inch in their largest diameters.....The discs have a decidedly resinous appearance, but they yield but slowly, if at all, to ordinary solvents." This is interesting, agreeing as it does with the descriptions given by Prof. Williamson of the lycopodiaceous spores in English coal.

THE Government Astronomer at Victoria sends us his usual monthly records for June and July of the observations in meteorology, terrestrial magnetism, &c., taken at the Melbourne Observatory.

M. JOSEPH LIOUVILLE died in Paris on the 7th inst. at the age of seventy-six years. In 1862 he was appointed a member of the Bureaux des Longitudes. He was for many years editor of the mathematical journal generally known as *Le Journal de M. Liouville.*

M. LOUIS CHEESMAN published in *Wiedemann's Annalen*, Vol. XV., 1882, a paper 'On the Effect of Mechanical Hardening on the Magnetic Properties of Steel and Iron,' which has been translated in the *American Journal of Science* for September. The conclusions arrived at are of great interest at the present time, showing that both mechanical and heat hardening bring about changes in steel and iron, which for the most part affect their magnetic properties similarly.

M. S. KALISCHER has published the results of some interesting experiments on the molecular condition of various metals. The foils of most metals can be rendered crystalline under the influence of heat, and, at the same time, their electric conductivity increased. Zinc foil becomes crystalline at the temperature of 150° C., tin and cadmium at temperatures ranging from 200° to 280° C. Similar results are also produced on most metals by electrolysis.

THE observatories of St. Petersburg and Pulkova have been connected by telegraphic wire, for the purpose of ascertaining their exact longitudes. As the apparatus is of the best and the greatest care has been exercised in arranging it, the most accurate results are anticipated from its use.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

Les Amateurs de l'Ancienne France.—Le Surintendant Foucquet. Par E. Bonnaffé. Illustrated. (Librairie de 'L'Art.')

NICHOLAS FOUCQUET, the great plundermaster of France under Mazarin, as he was called, loved letters and men of letters, pictures and painters, poets, beautiful women, choice tapestries and books, antique sculptures, and all the luxuries and all the elegancies which unlimited wealth could supply. "Amoureux de gloire et de grandeur, 'le plus magnifique et le plus curieux homme de son temps,' séduisant, politique, rompu des affaires, il a le coup d'œil, la passion, la puissance et la fortune, tous les dons qui font l'amateur de haute taille." He inherited from his father a taste for medals which would have rejoiced the heart of Mr. J. C. Robinson. That father was hardly less renowned for probity than for his library. But Nicholas so far outstripped him in fortune and taste that his "palaces of art" at Vaux-le-Vicomte and St. Mandé exceeded in taste and splendours the wonders of Wolsey's Hampton Court, approached those of Arundel House, and excelled those of Buckingham House, where the princely duke, Foucquet's contemporary, collected many rarities. Foucquet's library of 27,000 volumes was a stupendous collection for those days, and not unworthy of Mazarin himself. It included some of the choicest books the world then knew.

Among the marvels of St. Mandé were two great Egyptian sarcophagi, one in white marble (alabaster, like the Belzoni sarcophagus?), the other in black basalt, which had been discovered in 1632 in a pyramid of the province of Said. These then little studied remains, the first of their kind which came to France, are now prominent objects in the Louvre. Foucquet set up at Maincy a tapestry factory, exactly as the Dame Hélène de Hangest had established a factory for Henri II. ware at Oiron, and he used it entirely for his own service. Here were produced hangings so sumptuous and fine, that when he came to complete ruin in September, 1661, Louis XIV. himself, as a chief creditor, secured the goods before they could be sold by auction. Foucquet's workmen were transferred, and formed the nucleus of the "hands" of the Gobelins looms. Foucquet's gardeners, at whose head was no less a person than Le Nôtre, passed to the service of the king and created the *jardins* of Versailles. Their master had cultivated flowers with the eager passion of a Dutch amateur of the last century, and gathered roots in Holland and Italy. In Foucquet's employment was Molière himself, with a pension or retaining fee; and La Fontaine as laureate shared the riches of the minister, and was loud in his praises and those of Vaux-le-Vicomte. Poussin modelled for Foucquet the beautiful *terme* 'La Libéralité,' which is now at Versailles. Puget acted as his agent, and bought marbles for him in Italy. Le Brun decorated the *plafonds* of St. Mandé in a characteristic manner, which for a time was the admiration of the world. The great house at St. Mandé was built in four years.

Le Brun painted the fine and pathetic portrait of his patron which is engraved in M. Bonnaffé's book, and shows a handsome, thoughtful, not ungentle visage, of an extremely sensuous and refined type, at once astute, dignified, and melancholy. Not satisfied with the art of Poussin, then going, as he said, to decay—a criticism the remains prove to be correct—Foucquet employed the best substitute in the person of Michel Aungier, who produced for the gallery at St. Mandé thirteen statues of life size, representing the gods of Olympus, after the best antique models. When Vaux was completely finished, Mdlle. de Scudéry lavished praises on it. Silvestre, Perelle, Marot, and Aveline, capable artists of the time, made engravings of the house from the inside and from the outside, with its gardens and fountains. The architect was the then fashionable Le Vau. Several secondary artists of note worked under the direction of Le Brun, who also furnished cartoons which the Flemish *tapissiers* of Maincy carried out in silk, wool, and gold thread. These wonders of the loom represented 'Les Chasses de Méléagre' and 'L'Histoire de Constantin.' They ar still, we believe, in the Garde Meuble.

When the crash came, and Foucquet was arrested, September 5th, 1661, at Nantes, the authorities, on behalf of his creditors, seized the contents of his palaces, and inventories were drawn up which supplied to M. Bonnaffé great abundance of curious information as to the wealth and state of the *surintendant*. The archives of the Oise include these documents, with the estimates of the value of the several articles, among which were "un lit de brocart fond d'argent avec les siéges, estimé 5,600 livres," and "un lit en velours vert en broderie fort riche avec tous les siéges, 14,000 livres." Another green velvet bed was valued at 4,400 livres. Fourteen Persian and Chinese carpets, "la plupart à fonds d'or," were among the valuables. Among the hangings were eight pieces of the 'Fable de Vulcain,' priced at 11,789 livres, and described as "Fabrique de Mortlake"—that is, of English manufacture, produced doubtless under the direction of Sir Francis Crane and Nicholas Cleyne, before Charles II.

XUM

abandoned the factory which had been established, *c.* 1619, on the site of Dr. Dee's laboratory.

The sale of all these things began in 1665 and terminated in September, 1666. The king bought books largely as well as statues, the 'Manne' of Poussin, now in the Louvre, and numerous fine pieces of rock crystal mounted in gold and enamel, which are now also in the Louvre, in the Galerie d'Apollon. One of the remarkable pieces of sculpture, an antique Antinous in bronze, M. Bonnaffé says was concealed by an old servant in a cellar, and ultimately restored to the heirs of Foucquet, who sold it to the Prince Eugene in 1717. It remained with the rich collections of that distinguished amateur, who specially loved portraits and had a large number of them, until it was resold to the Prince Lichtenstein, from whose hands it passed to those of Frederick II. of Prussia. It is now at Sans Souci. Probably the biggest, if not the greatest, purchase of Foucquet was Belle-Isle, which he bought in 1658; this estate remained the property of his wife, and was erected into a marquisate for his son. Madame Foucquet, notwithstanding the great losses attending the dispersion of her acquisitions, retained a vast property; she was able to repurchase from the *surintendant's* creditors the Vice-comté de Melun, with the estate of Vaux-le-Vicomte and other considerable properties. The price was 1,250,000 livres. The estate passed to the Duc de Praslin by purchase, and remained to his heirs till 1875. The house exists in perfect preservation, but some of its interior portions have suffered by injudicious treatment. M. Sommier, the present proprietor, has taken steps to restore it. The *plafonds* of Le Brun and certain pieces of statuary remain in their original positions. Thus, while Stowe and Hamilton Palace have been despoiled, and while Fonthill, Strawberry Hill, Canons, and many other creations of rich collectors have wholly or nearly disappeared, the great house of Foucquet still stands. It is stripped of the vast number of items recorded in the catalogues of the sale which M. Bonnaffé has reprinted in forty quarto pages of small close type. Madame Foucquet, when her husband was, in 1680, released by death from his long imprisonment at Pignerol, retired to one of the exterior pavilions of the Val-de-Grâce, where she lived, *pieuse et solitaire*, until 1716. She furnished this place with some small remains of the splendours of Vaux and St. Mandé—a bed or two, twenty chairs, a sofa, and so on. The two sarcophagi have a strange history of many changes before they reached the Louvre. It is too long to relate here (see pp. 56–8 of M. Bonnaffé's text). On their inscriptions being deciphered they were found to pertain, one to Hor-Kheb, the other to Ank-neer, unknown persons who lived under the twenty-sixth Egyptian dynasty.

The book is the first of a series intended to be at once popular, readable, elegantly printed, and correct, with ample learning in the *pièces justificatives*, *e.g.*, the above-named catalogues, appended. If the other examples equal this one we shall welcome them all.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXX.—CHILDWALL HALL, NEAR LIVERPOOL.

One of the most important and attractive of the many gatherings of modern pictures in the district round Liverpool is that belonging to Mr. Brocklebank at Childwall Hall, which he has kindly allowed us to describe. A well-known work by Mr. Millais forms a conspicuous feature of it. This picture is called 'The Wolf's Den,' because it represents the artist's children when little "playing at wolves," and gambolling on the floor of a large, handsomely furnished room, and before a piano and screen. A boy, who is wrapped in a brown skin lined with red, crouches low, thrusts forward his head from under the mantle, and displays his hands like mimic claws, while growling in keeping with the character he has assumed. A pretty, chubby, younger lad plays the part of second wolf, his golden tresses and innocent face being oddly at variance with his *rôle*, and creeps below the skirt of his brother's robe. On the other side of the composition a lovely little girl, clad in rich light blue, her bright pale-brown hair flowing on the ground, lies trifling with a bouquet of brilliantly coloured flowers. A third boy, whose face is full of character and energy, and thoroughly English, crouches under a yellowish-brown skin and growls with terrific emphasis at his playmates. The illumination and breadth of effect and colour of this picture and the energy of the characterization give an interest to a design which at its best can hardly be accepted as worthy of occupying more than the play hours of Mr. Millais. The beauty of the children is worthy of the best art of the painter who rivals even Rubens, Velazquez, and Reynolds, the masters of childhood in art. The picture itself, although exhibited about twenty years since, remains, like most of Mr. Millais's very simply painted works, not only without a crack or flaw, but in a completely brilliant condition of tone and tint.

Among many noteworthy pictures is a landscape by Callcott, showing, with unwonted warmth, solidity, and pure silveriness, a stream in the front, with a vista of small roughly built cottages. On a height are the ruins of a small castle; there is a feathery ash in the middle distance. It is a picture reminiscent of Turner when submitting to the semi-classic inspiration of Claude. The fine sober greyness and the wealth of sapphire tints, red, blue, and verdurous, intimate that the artist has also tried to reproduce the colour and tone of Turner. So far superior to the level of Callcott is this picture that we have no doubt many observers would, if not warned, accept it as a very good, if not excellent Turner, of his middle period. Fine greenish-grey and pearly tones abound in the picture and impart a charm to it, while possessing great beauty of their own. That clear definition of the sentiment intended to be conveyed by the general treatment, which Turner never failed to impart, is emphatically displayed here. The commonplace character of the figures of a boy and his dog—the latter entering the water—marks the inferiority of Callcott's powers of design, and mars the conception of this very good picture. Two fine pictures by Linnell deserve the warmest praise and careful study. One of them represents a large earth-cutting, and is called 'Gravel Pits.' It is all glowing with sunlight and the richest tones and colour, while above the edge of the hollow a long cloud trails its length of dazzling white across the vast panorama of the view. Many workmen are digging and carrying gravel. The hill and hollow, not less than the cumuli, are powerfully, carefully, and boldly modelled. The other Linnell contrasts with its neighbour in subject and treatment not less than in sentiment and design. It represents a dusty road in high and fully coloured daylight, with sheep trudging on their way to fresh pastures. The sky, like all the skies of Linnell, is monumental in its dignified expressiveness and sumptuousness of tone and tint; its rich blue is saturated with, but not at all obscured by, silvery vapours, which add luminosity to its depths of azure, and gain rather than lose clearness by means of the suffusion. The delicate hues of the cloud are nacreous in their pure brilliancy. Some white vapours cluster about an admirably placed, bold, and deep-toned bank of trees on a height, loiter there, and seem to be slowly drawn among the foliage. The distance is a glowing, heathery moorland.

Stanfield's picture of 'The Roman Bridge at Avignon' comprises the well-known broken structure, with its tower in the middle, overlooking the fractured arches and the calm and shining water, which is a mirror. It is a good, somewhat prosaic picture so far as sentiment goes, but, as often with the painter, a happy order of composition and careful alignment and grouping of the masses have imparted a touch of classic dignity and simplicity. The foreground is a little hard, but the general illumination is clear, the colouring unusually warm for Stanfield. As to the picture itself, see Charles Dickens's letter to Stanfield, August 24th, 1844. We descend the scale rapidly when we come to scenic pictures by D. Roberts. One of Roberts's most characteristic and happiest compositions is here in the picture of Baalbec, a conventional, if not mechanical production which is by no means devoid of effective features, and has superficially an attractive aspect which studious eyes reject. The disposition of the picture is very telling, because the artist cleverly placed his temple on a height, which is according to the wise Greek architectural practice, and, arranging the columns in a vista, cast the shadow of each shaft on the cella.

Great are the charms of the Turners of various dates and characters which illuminate the walls of Mr. Brocklebank's house. The most effective and attractive of the number is the famous 'Ehrenbreitstein,' where the full moon rises ere the sun has set, and shines with a weird and delicate splendour on the masses of earth vapours, which, while we look, seem to ascend yet higher above the rocky, rosy, and white sunlit cliff, a splendid mass of bewilderingly beautiful tints facing us. The blanched and hollow ruins of the gigantic fortress—a ghastly pile—stand out against the pallid azure of the sky. The vista of the river, a winding mystery of rocks and chasms, is blue, and exhibits the charms of varying and tender colour. The buildings of the town have been delineated with ineffable skill and delicacy; their subtle coloration seems to have been changed indefinitely by the ever-moving veils of mist and light and far projected shadows which float between us and them. The middle of the near portion of the view is occupied by a road (which is traversed by many figures—"fancy figures" they may be rightly called), a fountain, and some trees, which are fitter for a picture than a natural and faithful view. These are the artificial and factitious elements of a painting which is otherwise a superb and delicate specimen of landscape art, and not less poetical than true. The trees cast bar-like purplish shadows, the semi-opacity of which indicates that vapours charge the atmosphere, but do not surcharge it. The regular gradation of these shadows and their parallelism mark the road in equal spaces, and with exquisite fidelity emphasize its recession from the eye. In the mid distance on one side is a memorial pyramid in the centre of an open space, where troops are exercising and tents are massed. The strong points of this very remarkable transitional picture are the treatment of the sunlight, the contrasts of the moonlight and sunlight, and the exquisiteness of the shadows, the aërial vapours, and the finely graded tones. With all these charms, the witchery of which is irresistible, it is easy to see that in this picture Turner touched the boundary line between that

which is fine and true, and that which is showy and meretricious. A downward step seems to have been inevitable.

We see an earlier phase of Turner's art while studying the lovely, delicate, and solid picture called 'Somerhill,' which was at the Academy in 1810, and, being lent by Mr. Brocklebank, again but a few years ago. The subject, the rendering of a subtle effect of light and tone, is of the most modest, if not Quaker-like, order. The view gives a moderately large English mansion of stone standing near a mass of trees, and just below the summit of a grassy slope, rising gently from, or rather out of, a calm pool, the surface of which is tinted like tarnished silver, although it shines tenderly in light reflected from a glowing, rich, but not deep-tinted blue sky. The last, like the pool, seems all repose. Resembling Chaucer's "mede" that was all "enamellèd," the meadow is a masterpiece of pure grey and innumerable tints of olive-green and gold. Cattle appear on the slope; their long shadows are projected there. The keeping of the bright yet soft sky, the meadow and its comparatively low tones, and the darker and richer water, are one of Turner's great achievements.

Turner had abandoned this demure style of work when he produced the resplendent and emotional 'Blessing the Adriatic,' which hangs opposite the far finer and more reticent 'Somerhill.' In the former is a vista of the canal opening to the Rialto. Light sloping from our right projects the delicately toned shadows of numerous figures on the steps of palaces and from the black gondolas which crowd the scene in front. These shadows give a nacreous tint and are subtly merged with their red, grey, silver, and purple surroundings, dresses, reflections, and banners. A charm of which Canaletto had an inkling and Guardi something more than that has been wonderfully worked by Turner when depicting—much out of his inner consciousness, we suspect—the varied white—*i. e.*, tints of marble, alabaster, ivory, and silver—and the rose and grey of the richly moulded and sculptured fronts of the buildings looking on the water, and, in their long array, reflecting the light while they rise against the azure and vapour-flecked sky. Produced late in the third period of his art, 'Blessing the Adriatic' is at once a witching and a disappointing work of a master in his decline.

In another Turner we have a fresh manifestation of his genius. It is the 'Beacon Light, the Needles, Isle of Wight,' which delineates the red illumination proceeding from the summit of a pharos situated on the edge of a lofty white cliff, the foot of which is battered by furious surges of the deepest tones. A gap torn in the silvery fleece of clouds above the cliff permits the most pallid of moons to shed a flood of wan brilliancy on the turmoil of the sea, to mark with her lustre the foaming edges of the billows and by contrast to make the very firmament seem blackness itself. This little picture embodies a world of learning and skill, grand and startling poetry, and a new inspiration derived from nature, but not quite faithful or thoroughly natural. It is not dated.

A creditable picture is that which Mr. John Faed named 'In Time of War,' and dated 1876. An elderly woman with a baby on her knees is seated by a bedside and appears to be thinking of her absent husband; two elder children sleep in the bed, a kitten is at their pillow; a dog, watchful and alert, is at the matron's feet. 'Queen Margaret addressing the Scottish Parliament' is the title of another production of the able and honest painter we have named. It comprises many figures assembled at a castle gate and clad in dresses of state. The execution of both these works is hard and over-defined, but it is searching and faithful to nature and the canons of art. The designs have been thoughtfully made and conscientiously carried out according to the probabilities of the subjects the artist chose with exemplary appreciation of his own powers. Another picture by the same represents what appears to be Goldsmith seated at a table, having left off writing in order to teach his dog to beg. We are not quite certain of the subject of this work, because its position on the walls is not favourable to examination. It presents, however, evidence of clear painting and good sound workmanship, and a well-considered general disposition.

It is pleasant to meet again one of Wilkie's best pictures, the beautiful, refined, well-designed, silvery toned, and thoroughly careful 'Letter of Introduction,' which Mr. Brocklebank a few years ago lent to the Royal Academicians for re-exhibition at Burlington House. It is better known through the fine line engraving, which represents it perfectly, than by its proper merits. The painting of the large Japanese or Chinese jar on the floor, near the figure of the bearer of the letter, is one of Wilkie's happiest achievements. The old gentleman, who, sitting at his escritoire, deliberately opens the missive while carefully studying the looks and attitude of his simple and yet dignified guest, is a fine portrait of Caleb Whitefoord, a once well-known amateur *littérateur* and poetaster, who was mentioned by Boswell, Johnson, and other note-takers of his day. The face and action of this figure were designed with exquisite sense of character and very delicate humour. The standing figure is hardly inferior to the sitting one, and both were painted with delightful softness, breadth, precision, and delicacy of touch, embodying what seem to us to have been Wilkie's purest ideas of colour. As a picture *per se* 'The Letter of Introduction' reproduces the greatest beauties of the art of Ostade and Teniers, with the golden warmth and softness of De Hooghe and the refinement of the moderns. Readers of Wilkie's 'Diary' will remember how affectionately the painter lingered over this gem. Near the Wilkie is the excellent, but hard and mechanical picture which Mr. T. Webster not unfortunately called 'Cottage Life,' a domestic idyl of the simplest elements and mild though careful characterization. Mr. Frith's very respectable rendering of the subject of 'Widow Wadman and my Uncle Toby in the Sentry Box' does not happily remind us of Leslie's picture of a similar subject at South Kensington, but it deserves honourable mention on account of the lady's vigorous flirtation.

By John Phillip is a clever and effective study, or rather sketch, of a buxom country girl with corn on her shoulder, called 'A Gleaner.' 'La Bomba,' by the same artist, is a much more important work. It represents a large, effectively dressed and showy Spanish woman in pink and white, with a black mantilla, seated and pouring wine in a long red stream from a jar to a glass, and thus intending to benefit a splendidly attired matador, whose silver-laced jacket and wide grey sombrero contrast well with the attire of his companion and admirer. Notwithstanding the *soupçon* of the theatre which pervades the design and expressions of these figures, and the utter insignificance of the subject (technical as well as illustrative), the picture has a charm in the *élan* of its execution, the vivid and harmonious colouring it displays, and its wealth of tone. Between John Phillip's art and that of Mr. Thomas Faed there is much in common. It is, therefore, well to bracket with 'La Bomba' of the former painter an excellent work the latter produced in 1857 and called 'The First Break in the Family.' This picture was at the Academy soon after its completion, and must be well known to those who saw it in Trafalgar Square as well as to those who possess the very good mezzotint which reproduces all but its capital colouring. It is, nevertheless, not one of Mr. Faed's best pieces of colour. The subject is the assembling of a Lowland Scotch family at a cottage door and their emotions while witnessing the departure of the coach which bears a dear relation away from view. The zest with which Mr. Faed depicts the sluttish accessories of such a cottage has not failed him in this picture, which comprises as much picturesque nastiness as suffices for the truth and is capitally painted. The artist, always bent on studies of breaking hearts, has been lugubrious to his heart's content in these figures.

One of the best of Collins's pictures is here, being a coast scene, 'Little Ventnor,' dated 1845. It represents a silvery-grey and yellow stretch of sands as seen from rather lofty cliffs of earth and sward, with little foliage, and looking on to the sea, as in Collins's favourite Cromer. A boy, the perfect type of Collins's ruddy urchins, has climbed to the summit of the cliff in front and just now turns to help a comrade in the same path, which is a perilous one. Near this group a third boy capers for joy and shouts heartily. The never-failing red cap of Collins adorns the head of the first-named urchin and is contrasted with the painter's almost inevitable black dog, who appears at the side of his master, and is one of the key-notes of the picture. The sea, retreating far, has left a wide space of sand, the tints of which serve as intermediaries to the red cap, black dog, purple cloud shadows, and white reflections of the sea, which is dashed by bars of light. The primitive motives and treatment of these simple, natural, and pictorial elements charmed most observers, who in Collins's time had not enough taste to appreciate the nobler mode and mood of Turner, or the severe and sedate poetry of Cotman. More commonplace in their motives than Collins's, and yet not unworthy to be reckoned with Huysman or Ruysdael in respect to execution, are some capital specimens of Nasmyth's naïve manner, or rather mannerisms, which enrich the rooms of Childwall Hall. Nasmyth chose a subject such as Wynants affected, and painted it with a Huysman-like touch, when he delineated the 'Landscape, Scene in Sussex,' before us which has a pond in front. In another 'Landscape,' with a *soupçon* of Hobbema as to its materials and of Wynants in its treatment, Nasmyth depicted with exceptional solidity and care a white road running past a cottage and receding into the picture. The effect is sunny and faithful to nature, but the sky, being too opaque, is the poorest portion of the work. Creswick's 'Barnard Castle' is one of that artist's most cheerful and agreeable productions; its pleasing and simple inspiration does not move us deeply, but the whole is graceful and almost too serene. The dark towers, whose grey surfaces catch but faint reflections of the eastern sky, rise high against the clear twilight, in which, without a star to guide, the thin crescent of a golden new moon appears. The calm and dark yet bright Tees spreads between us and the fortress, and hardly seems to move until it slides over the weir-like ledge of rock from which it plunges, turning white as it falls.

One of Mr. Hook's early pictures, a figure composition, has considerable interest for us. It represents the arming of Bayard; an armourer fixes a spur on the chevalier's heel, while two fair and richly clad ladies attend their champion going to the war. In spite of some thinness and slightness of handling, and theatrical if graceful feeling, there is much that is attractive in this work. It owes this to a bright, pleasing, and slightly showy order of colouring and gay local tints. In composition it hardly excels Cattermole's best efforts, and otherwise bears close resemblance to the productions of that very clever painter of romantic *genre* subjects. Another picture of the same class is more successful as well as more famous, and has purer aims. It is Egg's renowned illustration of Thackeray's best novel, and is entitled 'Esmond returned from the War.' It was at the Academy many years ago, and is doubtless the artist's best work,

the most characteristic outcome of that change in his mode of painting which was fallaciously ascribed to the influence of Pre-Raphaelitism. The Bayard of Queen Anne's days kneels before his hard and meretricious mistress, the beautiful and *insouciante* Beatrix, while she waves over his shoulder the symbol of his noble quixoticism, and does so with something that is almost sardonic in its mockery—a mockery which, in mocking, mocks its very self with pain. The face and figure of Beatrix are among the best examples of modern design of this order. We doubt if Thackeray meant his heroine to have so grand an air, so noble a presence, as Egg bestowed on his Beatrix. Of course, the picture gains by the painter's finer conception of the subject. On the other hand, the figure of Esmond and still more that of the old woman looking on are decidedly inferior to the images the novelist evoked in our minds. It may be worth while to notice that C. Landseer's 'Battle of Langside' is at Childwall Hall.

Among a choice collection of water-colour drawings, of which our limits forbid detailed notices, are eight beautiful Turners: these are 'Bothwell Castle,' 'St. Giles's, Edinburgh,' 'The Grassmarket,' 'Linlithgow,' 'Edinburgh,' 'Hawthornden,' 'Creighton Castle,' and 'Tantallon Castle.' The last was engraved in 'The Annual,' and is a jewel of Turner's golden period. Most of the other seven, if not all, have been engraved. Every one of them is of first-rate quality and represents a fine stage of the master's art. In the same room is Mr. B. Foster's careful and solid 'Lancaster Castle,' which is one of his best works.

The next paper of this series will describe Mr. F. Leyland's collection of pictures by Velazquez, Rembrandt, and other old masters, and modern works by MM. E. Burne Jones, Windus ("Burd Ellen"), F. M. Brown, and Legros. These examples are in Liverpool and at Woolton Hall.

'HOPES AND FEARS FOR ART.'

THE reviewer in last Saturday's *Athenæum* of Mr. Morris's 'Hopes and Fears for Art' says there is no proof that handicraftsmen were ever capable, as Mr. Morris contends, of inventing such buildings as, to take your reviewer's example, the church of St. Sophia. Architecture is beyond me; but I may be permitted to state my experience that in Bombay, and I presume everywhere else in India, buildings of true architectural character are constantly constructed by native craftsmen without any direction but that of the instinct which comes of the practice of generations. In this way an exquisite little mosque was built up day by day under my own eyes in Bombay by the ordinary stone craftsmen of the Presidency, without any superintendence or any plan except what they traced from time to time, in consultation among themselves, on the ground as their work advanced. These consultations generally took place after the day's task was done, in the short twilight of the East, and apparently by way of recreation before going home. The few designs, chiefly of decorative details, which they drew on the ground were only for the purpose of making some point in consultation clearer, and the next morning they went on with the building without any reference to them; and so it grew up as by enchantment.

As for the inventive faculty of these nameless craftsmen, they are capable of inventing a new architectural style, *pro re natâ*, as they work, owing to their instinct for adapting construction and decoration to the purpose any building they are on is intended to serve. They never blunder any more than the bees. If they were told to build a Christian church, and were not bothered with a design, but were simply told that the ground plan must be like a cross, that the altar must be at the east end and the great door at the west, with a high tower beside it for the bells, they would build it in no Hindu style, but in quite a new intuitive style, which would probably look very Byzantine or Russian. Let the experiment only once be tried and it will be the beginning of the end of Public Works Department, Royal Engineers' College, and church building in India. I know plans are used by native builders, but I never saw one save in the hands of the *maestri* of the Public Works Department.

GEORGE BIRDWOOD.

*** Our correspondent's interesting letter seems hardly to touch the question, which does not refer to carrying on types of building, of which, as with the adaptation and still more the repetition of modes of decorating, "handicraftsmen" are unquestionably capable. These operations are surely not architectural, but of the bees, bee-like. Style is one thing, manner another.

'BARTOLOZZI AND HIS WORKS.'

Ye Leadenhalle Presse, Sept. 18, 1882.

THE ingenuity of your reviewer in attempting to shift the explanation of an incorrect statement on to other shoulders than his own can hardly be sufficiently applauded. Mr. Reid may or may not choose to express an opinion; but whether or no, Bartolozzi's transcripts from Guercino cannot be, as your critic would have us believe, "elaborate line engravings," and I reaffirm most positively that they were effected with the etching-point (your reviewer says "needle," a term used by amateurs—and critics—whereas with the professional engraver this tool is always an etching-*point*). Let me suggest to your reviewer, as a simple test, an examination with a magnifying glass of the dots on the flesh in these very beautiful and freely treated etchings, and he will see that they are almost circular (●), and therefore produced by the etching-point, whereas had a graver been used they would have appeared of a triangular shape (▲). A magnifying glass ought also to reveal to your critic that, presumably for economy of labour, Bartolozzi transferred the entire design to the etching-ground, sketched it out with the point, and bit in the free sketch in the usual way, afterwards finishing with the graver. Your critic is right in describing the question at issue between us as "a very simple matter," and, being so simple, he ought not to have any difficulty in proving his case.

ANDREW W. TUER.

*** We really cannot discuss these elementary matters. If Mr. Tuer will take our advice and consult some competent authority, he will cease to accuse us of mistakes, and perhaps acquire a better comprehension of the very simple points of technique that at present perplex him. If his assertions were well founded, the typical engravings in "pure line" would have to be called etchings; for instance, Strange's 'King Charles in his Robes,' nearly half of which is etching.

Fine-Art Gossip.

MESSRS. MACMILLAN & Co. will publish shortly 'Lectures on Art,' delivered in support of the Society for the Protection of Ancient Buildings, by Mr. Reginald Stuart Poole, Prof. W. B. Richmond, Mr. E. J. Poynter, R.A., Mr. J. T. Micklethwaite, and Mr. William Morris; and 'Lectures on Art and the Formation of Taste,' by Miss Lucy Crane, with illustrations by Mr. Walter Crane.

A CORRESPONDENT writes:—"The recent purchase of the 'H. B.' caricatures cannot, I think, include all the 917 sketches which were published, as on June 21st, 1877, Messrs. Christie announced for sale at their rooms 500 of the designs, the catalogue of sale saying that these were 'all that were preserved.' The sale, however, did not take place, all the lots being withdrawn."

MESSRS. FIELD & TUER, of Leadenhall Street, will soon publish a translation, by Mr. Louis Fagan, of a work by Signor Marco Minghetti, the title being 'The Masters of Raffaelle.'

THE society for the study of costume, which we mentioned some weeks ago, proposes to publish drawings from contemporary sculpture, paintings, illuminations, &c, accuracy being guaranteed by experts whose signatures will be attached. The hon. secretary is Mr. E. W. Godwin, 7, Great College Street, Westminster.

MR. LAURIE, of Edinburgh, has just finished an etched portrait of the late Dean Stanley, which is to be immediately published by the Artistic Stationery Co. (Limited), of London.

A CORRESPONDENT writes:—"M. Maspero arrived in Paris on the 1st of the present month, having quitted Cairo on July 11th, consequent on his recall by the French Minister of Public Instruction, the Egyptian Prefect of Police having informed him that he could not be responsible for his safety, and the Minister of War having removed the soldiers, the crew of his vessel, and his inspectors of excavations. He was informed by some person in high position under Arabi that, in case of defeat, the chiefs of the movement contemplated the destruction of the museum, theatre, and tombs of the Mamelukes. At the time of his departure he had already arranged the greater part of the museum."

IT is stated in a French newspaper that an interesting discovery has been made at Hyères. An Adoration of the Shepherds, in chiaroscuro, has been found on a panel in a tailor's shop. The panel, one mètre wide by seventy centimètres high, bears an anagram which, it appears, some people are sanguine enough to believe to be that of Leonardo da Vinci.

THE forthcoming part of the *Journal of the British Archæological Association* will contain, among others, the following papers: 'Ancient Ecclesiastical Stained Glass,' by Mr. W. H. Cope; 'On a Bronze Sword, &c., found at Henley-on-Thames,' by Dr. J. Stevens; 'The Tonsure Plate in use in St. Paul's Cathedral,' by Rev. W. S. Simpson, D.D.; 'Romano-British Mosaic Pavements,' by Mr. T. Morgan, F.S.A.; and 'The Original Camden Roll of Arms,' by Mr. J. Greenstreet.

IT is our duty to record the death, in his forty-seventh year, of Mr. W. B. C. Fyfe, a Scottish artist of some repute resident in London, who joined the greater number on the 15th inst. He was born at Dundee, and, after severe struggles, attained skill to paint numerous landscapes, portraits, and *genre* subjects in a manner which attracted popular applause.

MUSIC

THE WEEK.

THE HEREFORD FESTIVAL.

THE programme of Thursday morning, the 14th inst., was even more lengthy than that of Wednesday, but the audience was the smallest of the week, proving conclusively that mere quantity is not in itself attractive. The sparseness of the attendance may be attributed as much to the absence of Madame Albani as to the fact that the larger works presented were unfamiliar to the local public, who, moreover, could scarcely be blamed for any lack of interest in Dr. Garrett's cantata 'The Shunammite' and Molique's oratorio 'Abraham.' The first is the work of an excellent church musician, who has written some irreproachable services and anthems, but who has yet to win a reputation in larger and more varied forms of composition. It is not surprising that the influence of the Church is strongly perceptible in 'The Shunammite.' The Biblical

story admits of a style of treatment at least as dramatic as that adopted by Mendelssohn in the episode of the widow and her son in 'Elijah,' but Dr. Garrett has preferred to break up the story by the insertion of one or more reflective pieces at every opportunity. Thus, after the first page of the narrator's recitative, we have a chorus, "Be not forgetful to entertain strangers," and this kind of sermonizing is maintained to the end. It may be that the composer distrusted his powers in anything save the didactic style; but the necessary consequence is that the cantata gives the impression of a string of cathedral anthems, soundly written, eminently decorous, but too slightly varied for the maintenance of interest during an hour and a half. Naturally Dr. Garrett's musicianship is displayed to most advantage in the choruses, of which the best are "Children are an heritage" and the concluding number of the first part, "The voice of joy," the former being noteworthy for some clever contrapuntal writing. The solos are uniformly dull, being for the most part in cathedral style, with a slight dash of Mendelssohn. The last-named feeling is, indeed, mildly perceptible throughout the work, save in one brief chorus, "Death is come up," where Dr. Garrett has momentarily thrown off his chains and written with independence of feeling and expression. It cannot be said that the performance of 'The Shunammite' under the direction of its composer was, on the whole, satisfactory. When a mutual understanding prevailed between the conductor and his forces all went well, but the straggling entries were numerous, the band and chorus evidently not grasping Dr. Garrett's intentions with regard to the *tempi* of some of the movements. This faultiness in attack may be partly attributed to the unusual significance attached by the composer to certain musical expressions. Thus he terms a movement of 144 crotchets to the minute *andante con moto*, and writes *maestoso* where *allegro agitato* would certainly be more appropriate.

Beethoven's Mass in C followed 'The Shunammite,' Mr. Langdon Colborne resuming the *bâton*. It is in no carping spirit, but simply as a matter of duty, that we are again compelled to speak disparagingly of the performance. The conductor's strange fancy for beating four in a bar where two would be more suitable led to the adoption of such a slow pace in the "Quoniam tu solus" and the closing of the "Credo" that the effect of the music was completely spoilt. The lovely "Benedictus" also suffered from the dragging of the *tempo*.

Thirteen years have elapsed since the death of Bernard Molique, and during that period his oratorio 'Abraham' has slumbered on the bookshelves of musicians, a fate very much at variance with the opinions expressed on its merits when it was produced at the Norwich Festival of 1860. This neglect is far from being conclusive evidence of the weakness of the work. Many instances might be given of compositions written in advance of their time, and therefore doomed to temporary failure, though destined eventually to obtain a place among the masterpieces of the art. But 'Abraham' was received with a consensus of approval, and its subsequent neglect must therefore be traced to other causes, which, indeed, are not far to seek. Molique as a composer commenced under the influence of Spohr, who was the idol of the time; but the Spohr fever declined and Mendelssohn became the public favourite. Twenty years ago Mendelssohn was the only modern composer who was recognized as a master in this country, and as 'Abraham' reflects his style throughout it is not surprising that it was found to the taste alike of critics and the public. Times have changed, and works displaying no inventiveness will meet with but lukewarm appreciation, however clever they may be as examples of a particular "school" of composition. It may be that we are now erring in the opposite direction, and that composers who have not the divine gift of genius are impelled to cloak their poverty of thought with the mantle of extravagance and ugliness. However that may be, it is certain that the best copies of the style of a master will enjoy but little favour when the absorbing influence of that master has diminished, and hence we cannot affect surprise at the fate of 'Abraham,' nor consider it likely that that fate will be reversed by the revival at Hereford. We are far from saying that Molique's oratorio is not worthy of an occasional performance; but as it is not likely to attract the public in large numbers it is questionable whether the time devoted to it on this occasion might not have been employed to better purpose. Curtailments had to be made, and it was perhaps inevitable that some of the best written choruses should be omitted. Of those which were given we must single out "Great is our Lord" as an admirable example of constructive ability, containing fugal writing that, for breadth and dignity, would be worthy of any master of this branch of art. A melodious quartet, "Go in peace," and a delicious trio, "Let all those rejoice," accompanied only by the horns, may also be named as reflecting Molique's refined style and elegance of manner. Throughout there are a polish and a classic purity in the musicianship which are not always to be found in the works of more gifted composers; it is inspiration alone that is wanting, and without this every other quality is of little avail. The performance of 'Abraham' was one of the best of the week, and reflected credit upon all concerned. The principal vocalists sang in a manner worthy of their reputation, but their efforts do not call for detailed remark.

The evening concert was wholly miscellaneous, and as the programme contained no novelty criticism upon it may be confined within the narrowest limits. The overtures to 'Die Zauberflöte' and 'Oberon' were performed, and Mr. James Taylor, of Oxford, an excellent pianist, took the solo part in Beethoven's Choral Fantasia. He was warmly and deservedly applauded, and the splendid part-singing of the Bradford choir was also highly appreciated. But it was obvious that the crowded audience was chiefly interested in the vocal performances of the leading artists, who were all received with the greatest enthusiasm.

A bare record of the fact that the 'Messiah' was performed on Friday morning is all that is necessary. The festival was brought to a conclusion in the evening by a chamber concert in the Shire Hall, the programme including Beethoven's Quartet in G, Op. 18, No. 2, Mendelssohn's unfinished in E, and Haydn's in G, Op. 77, No. 1. The performers were Messrs. Carrodus, Val. Nicholson, Blagrove, and Ould.

As the attendance reached 5,852, against 5,646 in 1879, it cannot be said that the festival of the three choirs is losing ground, at any rate in Hereford. If the promoters of the institution are satisfied with things as they are, they can afford to ignore the many suggestions made for its improvement. But at the same time we are convinced they will receive in a friendly spirit the advice of those whose only motive is the advancement of musical art in this country. The question of the conductorship is an exceedingly delicate one, and it would perhaps be unreasonable to look for an alteration of the system now employed; but it is not too much to ask that the gentlemen who for the time being quit the organ loft to wield the *bâton* should make themselves acquainted with the proper *tempi* and expression of the works they are called upon to direct, and so avoid shocking the sensibilities of musicians who happen to be present. The charm of oratorio in our grand old cathedrals is so peculiar and unique that it is a pity to injure the effect by neglecting to take such measures as we have indicated. With regard to the larger matter of the selection of the programmes, we observe such traces of timidity and vacillation in the policy at present adopted, that we must needs inquire, in the words of Elijah, "How long halt ye between two opinions?" supplementing them by asking whether the festival exists for charity alone, or for art and charity in combination. If the former, it is obvious that only the most familiar and highly esteemed works should be selected, the secular concerts consisting for the most part of songs interpreted by the finest available artists. Such a scheme would neither be lofty in itself nor interesting to the outside world; but it would be useful, intelligible, and unassailable in a logical sense. It seems evident, however, that higher views of the matter are taken than this, else we should not have had Mrs. Meadows White's 'Ode to the Passions,' Dr. Garrett's 'Shunammite,' and Molique's 'Abraham' in last week's programme. The point to be contended for, then, is that care should be taken to select works likely to command general interest. It may safely be said that two of the three compositions named merited the indifference with which they were received. One important new work by an eminent composer, either English or foreign, and one important revival would give a national significance to the festival, and do no harm to the exchequer if properly managed. The short attendances on Tuesday evening and Thursday morning last week were not due to the fact that the programmes contained novelties on those occasions. They were to be accounted for by the absence of the most attractive vocalists at the time they were most needed; and comparisons between the drawing powers of the 'Messiah' and 'Elijah' on the one hand and unfamiliar works on the other cannot, therefore, justly be made.

Musical Gossip.

MISS ELLA LEMMENS, a daughter of Madame Lemmens Sherrington, has recently made her *début* at the Covent Garden Promenade Concerts. The voice of the young artist is not yet fully developed, but it approaches the mezzo-soprano in quality though not in power. On Wednesday evening Miss Lemmens sang Handel's "Let the bright seraphim" with some success. The programme on the same occasion included Mendelssohn's 'Scotch' Symphony and his Serenade and Allegro Giojoso, played by Madame H. Brett.

IT is announced that Liszt has written a new mass, which is to be performed at the end of next month at the Royal Chapel of Vienna.

THE full programme of the Bristol Musical Festival, which takes place between the 17th and the 20th of October, has just been issued. The principal soloists engaged are Madame Albani, Miss Anna Williams, Mesdames Patey and Trebelli, and Messrs. Edward Lloyd, Joseph Maas, Harper Kearton, Robert Hilton, Montague Worlock, and Santley. Herr Straus will lead the orchestra, Mr. George Riseley will preside at the organ, and Mr. Charles Halle will conduct. Of the programme, the most important items of which are Beethoven's Mass in D, Gounod's 'Redemption,' and Mr. A. C. Mackenzie's new cantata 'Jason,' we shall take another opportunity of speaking in detail.

THE prospectus for the coming season of the Brixton Choral and Orchestral Society has also been issued. Four concerts are to be given at the Gresham Hall, Brixton, under the direction of Mr. William Lemare. The principal works announced are Handel's 'Jephtha,' Mr. Henry Gadsby's cantata 'The Lord of the Isles,' Mr. E. Prout's cantata 'Alfred,' and Mendelssohn's 'St. Paul.' A new feature of the society is the regular co-operation of the orchestra at all its concerts, whereas hitherto the works performed have been chiefly accompanied on the piano or organ.

THE Borough of Hackney Choral Association has issued its prospectus for the present season. Four concerts will, as usual, be given at Shoreditch Town Hall, under the direction of Mr. E. Prout. The principal works announced for performance are Cherubini's Mass in D minor, Mozart's music to 'King Thamos' (for the first time in England), Gade's 'Christmas Eve,' Mendelssohn's 42nd Psalm, Brahms's 'Song of Destiny,' and Schumann's 'Paradise and the Peri.' A specially interesting feature of the season will be the programme of the last concert of the series, which will be selected entirely from the works of living English composers, thus giving a general view of the present state of musical art in this country.

THE death is announced, on September 10th, at Paris, of M. Edmond Membrée, aged sixty-two, a musical composer of some distinction.

HERR CARL KLINDWORTH, the distinguished pianist and editor, who has for many years resided in Moscow, has accepted a professorship at Kullak's Academy of Music in Berlin.

THE monument erected by the town of Catania to Bellini is to be inaugurated on the 27th inst. The composer is represented at the piano, holding in his left hand a roll of music, and striking a chord with his right. On the faces of the pedestal are four figures taken from Bellini's most popular operas, 'Norma,' 'La Sonnambula,' 'I Puritani,' and 'Il Pirata.'

THE important improvements in the construction of wind instruments, especially flutes, which were discovered by the late Theobald Böhm, of Munich, are universally recognized by musicians, but an exact knowledge of the nature of his inventions is much less common. We are glad, therefore, to call attention to the publication by Messrs. Rudall, Carte & Co. of Böhm's 'Essay on the Construction of Flutes,' which he wrote in 1847, but which has till now remained in manuscript. It is edited by Mr. Walter Broadwood, with the addition of correspondence and other documents, and will be found most valuable not only to flute players, but to all students of acoustics, especially to those who take an interest in orchestral instruments.

DRAMA

THE WEEK.

IMPERIAL.—Farewell Performances of Mrs. Langtry: Revival of Tom Taylor's Comedy 'An Unequal Match.'

WITH some added experience and with what promises to become in time a method, Mrs. Langtry has reappeared in London. Postponing for a week the more serious portion of her experiment, the assumption of Rosalind in 'As You Like It,' she has played for the first six nights of her engagement Hester Grazebrook in Tom Taylor's comedy 'An Unequal Match.' No difficulty is offered by this character to an actress who has won acceptance as Miss Hardcastle. Repeated performances in the country have, moreover, given Mrs. Langtry complete familiarity with the *rôle*, to the not very exacting requirements of which she is altogether fitted. Her representation accordingly, though faulty in some respects, has genuine interest. With a species of coquetry to which men are naturally indulgent, she disregards the obvious intention of Tom Taylor that she shall show us in the opening acts a rustic beauty not wholly free from a suspicion of vulgarity. It is better—so runs feminine logic—that the design of an author should be inadequately developed than that the lustre of those natural gifts which are Mrs. Langtry's stock-in-trade should for one moment be impaired. In cases like the present, when men, contemplating the joyous, graceful, and impulsive movements of the rustic maiden, are disposed to wish her "a wave o' the sea," that she might ever

> Do
> Nothing but that; move still, still so,
> And own no other function,

forgiveness is readily accorded. Yet the performance has no right to rank as interpretation. Much improvement of style is visible in Mrs. Langtry's performance, and her quietude and repose of manner are remarkable in one who has had so little experience. So long as she confines herself to the expression of the lighter aspects of character her success is marked. It is only when she tries to charge her performance with feeling or passion that the novice stands revealed. A gasp, a sudden pressure of the hand to the heart, and a silent collapse when she obtains what appear proofs of her husband's falsehood would be far more effective than the scream of Mrs. Langtry, which, indeed, is not effective at all. Mrs. Langtry errs, with almost all actresses, in coming in from a tramp across the meadows without a sign of disorder, except letting down her hair in the fashion of Rapunzel, instead of allowing one stray lock, caught in passing by the trees, to escape, or showing the whole tied up in one slight and hasty knot. Matters such as these are worthy of the attention of an actress, even though the public is prepared to condone everything and accept each of her whims.

The question, What claim has Mrs. Langtry to rank as an actress? is frequently asked, and the controversy concerning her merits has become acrimonious. In a country in which, as in France, the best available talent is trained from an early age to the service of the stage, and a supply of competent actresses is maintained, the title of actress might be refused the clever, graceful, and attractive woman who has shown her power to do on the boards what she has been in the habit of doing in private life. When, however, as in England, the stage is recruited from those who possess neither grammatical nor social education—when no school exists that can eradicate vices of style or supply information or knowledge—a woman like Mrs. Langtry takes from the outset a position humiliatingly near the top of the profession she has joined. The company by which Mrs. Langtry is supported is fairly strong. Mr. Grahame plays quietly and effectively as Arncliffe, the husband of the heroine, and Mr. Taylor is comic as Blenkinsop. Miss Pattison shows happily the aristocratic *morgue* of Mrs. Montressor, and Miss Kate Hodson is vivacious as Bessie Hebblethwaite. The entertainment was received with marked favour by audiences that lighted up as it has not previously been lighted up the somewhat dingy interior of the Imperial Theatre.

Dramatic Gossip.

WHAT chance of success might have been possessed by Miss Forrester's dramatic adaptation of Whyte Melville's novel of 'Black, but Comely,' produced on Saturday afternoon last at the Gaiety, was removed in consequence of the assumption by Miss Forrester of the character of Jane Lee. A novice in acting, Miss Forrester failed to assign the heroine of the story any recognizable attribute beyond swarthiness.

So strong a resemblance do burlesque dramas bear among themselves, the change that has been made in the Gaiety programme by the presentation of Mr. Reece's 'Little Robin Hood' might well escape the attention of all except the juvenile supporters of burlesque. A new piece with the title indicated has, however, been produced.

MRS. BERNARD BEERE and Mr. Kelly have played during the past week at the Standard in Messrs. Hardy and Carr's drama, 'Far from the Madding Crowd.'

'TÊTE DE LINOTTE' is the title of a three-act comedy produced at the Vaudeville, the responsibility for which is assigned M. Théodore Barrière. In truth, however, the author of 'Les Filles de Marbre' has been assisted in this latest work by the author of 'Les Dominos Roses.' To M. Gondinet may be ascribed the greater portion of the dialogue, which is sparkling.

A PERFORMANCE of 'Othello' was recently given at the Gaiety Theatre, Bombay, by the native students of the Elphinstone College. The performance, which showed careful study, was warmly approved by the audience.

THE Armenians in Turkey, having established a dramatic theatre, have now started a lyric company, which performs where there are colonies of Armenians. It was lately detained in Constantinople to perform during the Ramadan for the entertainment of the Turks. Generally speaking, the Armenian dramatic companies perform also in Turkish, and they have assisted in building up the Turkish drama. Perhaps they will give a similar stimulus to a Turkish lyric theatre.

LITERATURE

English Men of Letters.—Swift. By Leslie Stephen. (Macmillan & Co.)

Mr. Leslie Stephen has written so much which repays perusal that any new work from his pen is certain of a welcome. It is, perhaps, because we expected too much that we are somewhat disappointed with his work on Swift, which cannot be classed along with that on Johnson contributed to this series of "English Men of Letters." It is not easy, we admit, to supply a biography of Swift which will satisfy his critics or admirers. If John Forster had been spared to finish his elaborate biography, even he might have failed to satisfy expectations. The difficulty with regard to Swift consists in the threefold aspect in which he must be considered. He was a politician, a satirist, and a man of letters. As a politician he pleases those persons the most who are biassed in favour of the party which he finally joined, and for which he worked with extraordinary zeal and ability. Sir Walter Scott's liking for Swift was largely due to the fact that Swift ended as a Tory of the Tories. Macaulay allowed his intense sympathy with the Whigs to influence his judgment upon the writer whom he denounced as an "apostate politician" and a "ribald priest." If Swift had adhered to Godolphin instead of becoming the supporter and friend of Harley, it is probable that Macaulay would have forgiven him his ribaldry and a good deal else. Mr. Stephen does not care very much about Swift's politics, whilst making it clear that Swift preferred the side in politics from which he expected and obtained preferment in the Church. In truth, his consuming ambition was to be made a bishop, and if he had been raised to the episcopal bench, his next desire would have been to obtain the primacy. If the Whigs had been ardent upholders of the Church and had advanced him in his clerical profession, there might have been no more enthusiastic Whig than himself.

It is as a satirist that Swift displays a power almost unique in our literature. This was at once his forte and his failing. Never was his natural bent manifested to greater advantage than when he was turning some person into ridicule or rendering a cause contemptible. The virtue of universal charity was one which he could not practise if he would. He was not only a good hater of any one who had offended him, but a hater of human nature itself. In his eyes the whole world was out of joint, and he gloried in emphasizing the fact. His misanthropy was far more intense and genuine than that of Byron. The latter was ready and willing on occasion to love his neighbour's wife, whereas Swift had no more love to spare for his neighbour's wife than for any other person. Much has been written about his charity to the poor; but it is not improbable that he never gave any money to the needy with greater pleasure than when he felt that the recipient would be the worse for the benefaction.

Mr. Stephen discusses Swift's so-called love affairs in detail. He is unduly disposed, we think, to palliate Swift's conduct to Stella and Vanessa. There can be no reasonable doubt that the latter fell a victim to Swift's cruelty as surely as if he had stabbed her to death with a knife. Mr. Stephen holds that Vanessa's death is less surprising because her younger sister and both of her brothers died before her, and because she was in failing health. But the fact that she was delicate ought to have rendered Swift the more considerate and anxious to spare her any shock which might prove fatal. In all the writing concerning Swift's relation to the ladies whom he treated with reprehensible harshness far too much is made of his supposed constitutional incapacity for wedlock. The matter is one about which any hypothesis is permissible, because little has been determined with certainty. That many women, of whom Lady Burlington was not one, were passionately devoted to him seems quite clear; that he professed a dislike for matrimony is equally certain. He writes that "matrimony has many children: repentance, discord, poverty, jealousy, sickness, spleen, loathing." But other men who have written as strongly against the married state have been both husbands and fathers. That Swift should have married Stella and refused to live with her is eccentric, but not unprecedented. Godwin preferred to live in a separate house from his wife, yet this merely proved that his notions on that subject were different from those of other men. That Swift declared himself averse from marriage and acted strangely when he did marry does not prove, as has been hastily assumed, that he was constitutionally unfitted for marrying. Mr. Stephen inclines to the opinion that Swift did not marry before he became Dean of St. Patrick's because he was too poor, and that when he was independent in means he was in too precarious health to live with a wife. He allows that the matter does not admit of decided settlement one way or another, and he leaves his readers to adopt whatever theory they please. The less readers trouble themselves about theorizing on the subject the more sensible they will show themselves. What is of far more consequence is the judgment to be passed upon Swift's conduct in view of ascertained facts. The facts are these. He made Stella's acquaintance and was beloved by her. She regarded him as her future husband, and in his journal to her he lavished upon her all the tender phrases which the language contains. If he were insincere, this meant no more than the words of endearment often spoken to a favourite horse or dog, and the interpretation we put upon his conduct is that he did regard Stella as a sort of pet animal. Whilst engaged in an ardent epistolary correspondence with her he entered into a similar relationship with Vanessa. She believed him as much in earnest as herself, and she considered him pledged to marry her. To please Stella he went through the ceremony of marriage and allowed her to resume her mode of life as if nothing had been changed, whilst when Vanessa called upon him to make her his wife, she learnt that he was the husband of Stella. In consequence of this Vanessa died of a broken heart. After lingering for many years in broken health, Stella died also. Swift indulged in great lamentation when he learnt that she was nigh unto death, but he was in equal distraction lest she should die at the Deanery. He mourned her death in passionate terms. He put a lock of her hair in his desk, and wrote upon the envelope containing it, "Only a woman's hair." This phrase is not commonly supposed to express loving tenderness. It is difficult to associate with Swift, who was selfish to the core, any sentiment of genuine affection. His favourite motto was "Vive la bagatelle." It is impossible to find any evidence of true love on his part for either of the women who died loving him. Yet Mr. Stephen thinks

> "that any one who judges Swift fairly will read in these four words the most intense utterance of tender affection, and of pathetic yearning for the irrevocable past strangely blended with a bitterness springing not from remorse, but indignation at the cruel tragi-comedy of life."

In order to judge Swift with fairness we must not think of him as the political partisan and clerical place-hunter or the man at whose hands sensitive women suffered deeply, but as a master of English. To him in this aspect Mr. Stephen has scarcely given adequate attention, and it is in this aspect chiefly that he merits not only attention but admiration. He always wrote well except when he wrote what he styled poetry. If the remark attributed to Dryden be authentic, that Swift would never be a poet, then Dryden, who was a second-class poet, but an incomparable critic, gave proof of his discernment. Some of Swift's verses are amusing. When he tagged rhymes to amuse a friend he displayed his skill and did no harm; but when he published his verses and called them poems, he demonstrated that the spirit of poesy did not inspire him. In his rhymes, as in his prose, he constantly offends against decency, yet his ideas as expressed in rhyme are even fouler and more loathsome than those embodied in his prose. It would be well for his fame if some of his verses could be suppressed. They produce in the mind the same sensation as a disgusting drug does in the mouth. The drug, though nauseating, may act as a remedy, whereas Swift's verses sicken without any counteracting benefit. He defined a nice man to be one with nasty ideas. He made no pretence to being nice in his ways, yet no one who did could surpass him in nastiness. Other writers indulge in topics which had better be ignored. There is much coarseness in Smollett, yet he offends less than Swift does. Swift seemed to delight in

XUM

what disgusts other men, and to wallow in the mire because he loved it.

It is as a writer of homely and effective prose that Swift is conspicuous amongst the so-called wits of Queen Anne's reign. He had none of the finikin grace of Addison or the airy humour of Steele; he was not a spinner of epigrams like Pope, nor could he rival Bolingbroke in turning out polished sentences; yet he surpassed all his contemporaries in conveying in vigorous and correct English the original ideas of which his mind was full. The letters of Junius and of Peter Plymley are quite as good reading as those of the Drapier, yet Swift had a triumph which was denied to the author of 'Junius' and to Sydney Smith. Though arguing in favour of a policy which was absurd, and though giving vent to statements which were ludicrously false, he succeeded in coercing the Administration of his day to rescind a measure which they deemed politic. Few men have used their pens with greater effect than Swift, and few have used them with less advantage to their fellows. The issue of Wood's halfpence was used by Swift merely as a pretext for scourging the Whigs. Nevertheless, the triumph was a tribute to the power of Swift's pen.

It is unnecessary to say anything in praise of the 'Tale of a Tub' or of 'Gulliver's Travels.' Both are as familiar as household words. Mr. Stephen seems to think that Swift was a good Churchman notwithstanding the 'Tale of a Tub.' Swift protested that he did not write it with the intention of turning religion into ridicule, and that he was concerned only with satirizing its mistaken professors. That Swift was a strong Churchman by profession is unquestionable. He wished to make a living, and his desire was to get a good one in the Church. For all religious bodies save the Church of England he avowed supreme contempt. He regarded Roman Catholics as fools and Presbyterians as knaves. It is probable that he was a sceptic at heart, and that he recoiled from the consequences of his convictions. The visitors to his house did not know that he read prayers to his servants. They thought him a thorough man of the world. The truth appears to be that he feared the devil more than he loved God.

'Gulliver's Travels' is the book by which Swift is best known and by which he will be the longest remembered. It is one of the few fictions which the schoolboy reads with delight and the philosopher with surprise; in which the story is interesting irrespective of the meaning, and the meaning deserves attention irrespective of the story. Mr. Stephen's remarks on this work are acute and just. He omits to make any reference to Cyrano de Bergerac's 'Journey to the Moon,' the only book from which Swift can be supposed to have taken a hint. Amongst writings of Swift to which Mr. Stephen does not do full justice we must place his correspondence. He was a consummate letter writer; a more charming correspondent and a more imperious and touchy associate never existed. A good selection from his letters would make a most readable volume. It would not be difficult to compress within moderate compass all the writings of Swift which are worth preserving and which entitle him to the rank of an English classic. His fame would be greater and the appreciation of his merits would be less alloyed were it possible to annihilate much that he wrote and to cast into oblivion many events in his life.

Thirty-eight Years in India, from Juganath to the Himalaya Mountains. By William Tayler, late Commissioner of Patna. Vol. II. (Allen & Co.)

In his preface to the present volume Mr. Tayler tells us that some even of his friends have expressed disappointment that in his first volume he did not enter upon sundry subjects of general importance which they thought he might have been competent to discuss. He goes on to say:—

"To prevent further misunderstanding, therefore, I would wish to point out that, with the desire to make my work what it professes to be, I have abstained from entering upon any subject, however important or sensational, in which *avros* [*sic*] or *ego* is not, at least to some extent, concerned."

There is in this statement a naïve assumption of exceptional personal importance which is at once amusing and irritating; and the assumption is carried throughout the entire book. Indeed much of what Mr. Tayler has now written is explainable only on the supposition that the work was written for private circulation. He can scarcely expect that such trivial details as the shape of his friend's nightcap, the marriage of his wife's maid-servant, or the sugar plums and compliments which Lady This or Lord That bestowed on his grandchildren will have any interest for readers outside his own immediate circle. But we should have forgiven Mr. Tayler's puerilities if he had fulfilled the expectation which we reasonably entertained, that when he came to speak of the Mutiny, in which, for good or for evil, he took no unimportant part, he would have much of interest to relate. With a strange perversity, however, the author, who hitherto conveyed the impression that he was ransacking his memory and his notebooks for material wherewith to fill his pages, is almost completely silent as to those matters upon which he could speak with most authority and with the greatest likelihood of attracting attention. He was the most important official in the great province of Behar when the Mutiny broke out, and it is admitted even by his opponents that his knowledge of the people was extensive; he had been intimate with the arch-rebel Kooer Singh; he was near at hand at Patna while Boyle, Wake, and Colvin were making their gallant stand in the little house at Arrah; and he was the friend, and to a certain extent the adviser, of Vincent Eyre. In spite of all this the Mutiny is dismissed in about twenty discursive pages; of the siege of Arrah all we are told is that "the officials of Arrah took refuge in a house, where the mutineers, aided by the celebrated landowner Kooer Singh, besieged them"; and, strangest of all, when we come to the famous arrest of the Wahabees, Mr. Tayler merely remarks:—

"The particulars of these proceedings, including the important but semi-comical scene accompanying the arrest of the fanatics, are described in detail in the *Patna Crisis*, but are too long to be here inserted."

The fact is that when Mr. Tayler comes to the events of 1857 the memory of his own wrongs, real or fancied, renders it impossible for him to speak of anything else; and when we expect to hear something of the origin and early developments of the discontent that lay at the root of the Mutiny, we are treated instead to page after page of angry recrimination, which, whether justifiable or not, is scarcely pleasant or profitable reading. We have always felt much commiseration for Mr. Tayler as one whom the Indian Mutiny—that splendid opportunity for the making of a great name—left high and dry on the bleak strand of official degradation and disgrace. But we confess that his latest effort at self-vindication has fallen far short of convincing us that he was altogether right and his opponents altogether wrong. Clever, zealous, energetic public servant he undoubtedly was, with strong views and earnest desires; but no impartial reader of these pages can fail to see that their author is one of those who through life regard their own views as infallible, their own desires as rights, and all opposition as dictated by the malice of personal enemies.

It is not within our province, nor would our space permit us, to hold up the balance between Mr. Tayler and his quondam chief Sir Frederick Halliday. It is but just, however, to point out one or two matters in which, to our thinking, Mr. Tayler has been guilty of some unfairness towards his opponent. In the years 1879 and 1880 memorials from Mr. Tayler to the Secretary of State for India were presented to Parliament, and early in the former year a member of the House of Commons gave notice of his intention to bring Mr. Tayler's case before the House. But though the notice necessarily implied an imputation against the character of a distinguished public servant, it was never formally brought forward. Furthermore, in 1879 Sir Frederick Halliday's defence of his own action in removing Mr. Tayler from the Commissionership of Patna was published as a Parliamentary paper. But to this defence Mr. Tayler does not even allude in his present volume. He now lays most stress on the fact that the Wahabees, whom he was accused of having arrested unjustly in 1857, were afterwards shown to be traitors; but he does not try to combat Sir F. Halliday's statement that the accusation of treason brought against the only one of them who was ever found guilty had reference to matters "in no way connected with the events of 1857, and belonging to occurrences which took place many hundred miles from Patna."

But we turn gladly from these painful matters to the brighter and more interesting side of Mr. Tayler's book. In the opening chapters he gives a clever and at times very amusing picture of the difficulties, dangers, and pleasant adventures often encountered by a civilian of his day whose duty compelled him to wander about the country. The later chapters are chiefly interesting as giving an account of the new views which, when he had left the service and become a law agent, he obtained of the familiar things around him. "Wonderful," he says,

"are the revelations that the new light presents to the astonished gaze of the disrobed official; where all appeared before to be appropriate decorum and well-ordered justice he sees every-

thing vitiated by secret and unholy interference."

Notwithstanding that the greater portion of the present volume is saddened by the recital of the author's grievances, it is not devoid of signs of that light-heartedness which characterizes him. The irrepressible Indian crow is still a delight to him, and the charades and theatricals which he organized and the flirtations and other incidents attending them are described with the zest of a schoolboy thoroughly enjoying his holiday.

Dunster and its Lords, 1066–1881. By H. C. Maxwell Lyte, M.A. (Printed for Private Circulation.)

THIS is so thorough and honest a book that those who care only for the glamour of romance or for light and gossiping narrative might be inclined, after admiring the work of the printer, artist, and binder, to set aside the reading until a more convenient season. Not that the volume is wanting in pleasant anecdote and even imaginative incident; but these are so buried in the general relation, which laudably aims at the severest historic exactness, that the reader has to search to find them out. We say "search" advisedly, for there is neither table of contents nor index, nor are there even headings to the chapters, one or all of which aids should be considered as necessary to the use of an exhaustive topographical and biographical record as a map to a book of African travel. The omission is almost fatal to the value of the work, for it is too great a demand upon the reader's patience to expect him to unravel the various lines of research from their entanglement with descriptions of architecture, funeral monuments and brasses, armorial bearings and seals, copies of original deeds, and the numberless other items that make up the unsparing account of a well-studied subject of its kind. If the public should be favoured with the book (for there are at present only two hundred copies prepared for private circulation) it may be hoped that an index will be included, with which hope we cease complaint.

For picturesque charm Dunster might have satisfied the eye of Dr. Syntax himself. A grand church, or rather two churches in one, a many-gabled octagonal market-house, and a fine old hostelry begin the vista of a long and irregular street, terminating in a wooded height on which stands a noble and ancient castle, the gleaming sea and green hills of Minehead being just beyond, though hardly visible except from the castle park. The mildness and fertility of the place, the climate of which is tempered by the soft breezes from the Bristol Channel, may be argued from the fact that down to the second half of the fourteenth century vines were there cultivated, and that at the present day a lemon tree may be seen in full fruitage out of doors. The tithe of the vineyards, with much else, was acquired by the Benedictine monks of St. Peter's, Bath, in connexion with the grant by William de Mohun of the advowson of the church of St. George's, Dunster, to their abbey, the charter of which was confirmed by William Rufus and Archbishop Anselm, a copy being here given. Like most of the great feudal castle builders, the early lords of Dunster were also great church builders, or at least great ecclesiastical benefactors, though it happens that the neighbouring Cistercian abbey in the Vale of Cleeve owes to another family its foundation, and has only lately been added to the estate of Dunster Castle. Seeing that the extensive remains of this monastery are now part of the demesne of Mr. George Fownes Luttrell, who has dealt so carefully with them, it may be regretted that Mr. Lyte has not included the subject of St. Mary's, Cleeve, within the range of his researches; but let us hope that he will yet undertake its consideration. Dunster Castle divides its associations between the Mohuns and the Luttrells, the former having held the lordship during three centuries and a half from the Conquest, when it passed by purchase to the latter family. Mr. G. F. Luttrell, a descendant of Lady Elizabeth Luttrell, who bought from Lady Joan de Mohun the right of succession, still holds the original receipt for 3,333*l.* 6*s.* 8*d.*, for which sum the great barony of Dunster, including the manor of Minehead and the hundred of Carhampton, in 1374 was alienated. The Mohuns derived their surname from the village of Moyon, near St. Lo, in Normandy, and it was William de Moyon who, as one of the Conqueror's well-rewarded heroes, succeeded to the land of Aluric, named Torr, the natural eminence on which stands the castle. "It was formerly worth 5*s.*, but now 15*s.*," says Domesday. Even the larger sum does not seem to our ears excessive for so splendidly situated a hill, 200 feet in height and covering ten acres, but the value of land has now perhaps as much increased as that of money has diminished. William was granted sixty-eight manors, of which fifty-five were in Somerset, Dunster being constituted *caput honoris*, or head of the honour, though Mr. G. T. Clark, the distinguished authority on baronial architecture, who contributes the introductory paper to this volume, is at a loss to define the difference between a barony and an honour. Of the De Mohuns who successively inherited the barony the biographical particulars are not in general of striking importance, though some curious and interesting incidents are related. As we have hinted, they were great allies of the Church, their principal work being the foundation of the Cistercian abbey of Newenham, on the borders of Devonshire and Somerset. This was founded in 1250 by the second Reginald de Mohun, who at first sight might seem to have been an early Blue Ribbon man, for he forbade the brewing of strong beer (*cervisia præponi*) in Dunster; but that he had hardly attained to so bright a pattern may be assumed from his having demanded a tribute from the townsmen of a tun of wine on condition that he should not exact more than sixpence fine for any offence except an attack on a member of the castle household. Of the last days of this Reginald a touching representation is given on the authority of a monk of Newenham, who seems to have been as much a poet as a mere matter-of-fact biographer. We cannot quote the whole of his narrative, but there is one touch of imagination worthy of William Blake, which, indeed, reminds us of that visionary genius's remarkable idealization of the spiritual body and the natural body in Blair's 'Grave,' only that the monk's picture is more truly beautiful. Reginald's confessor, a Franciscan friar, who had been summoned to the bedside of the dying knight, after administering ghostly consolation,

"returned to his own chamber, and during a short slumber dreamed that he was present in the aforesaid Cistercian monastery, and beheld a venerable person attired in white conducting a boy, more radiant than the sun and vested in a robe brighter than crystal, from the baptismal font towards the altar. On inquiry whose beautiful child this was, the person answered, 'This is the soul of the venerable Reginald de Mohun.'"

We are not, therefore, surprised that he made a peaceful end, and that after he had received the sacrament and extreme unction, while the priests and clerks were praying around him and commending the departing spirit, he without a groan or apparent agony, as they were reciting the words, "All ye saints, pray for him," fell asleep in the Lord. In his time the oldest parts of the existing castle, namely, the entrance gateway, the series of projecting semicircular towers, and the thick wall that connects them, are believed to have been built. The characteristic transformation of the building into a stately Elizabethan residence was the work of George Luttrell, between the years 1589 and 1620. In 1869 the Elizabethan house was greatly enlarged; but even now the castle is but a splendid fragment, for the keep was destroyed and the curtain lowered after the surrender to the Parliamentary forces under Blake. Of the siege of the fortress at that time there are, of course, full details.

Hardly less interesting than the castle is the church, which is a well-known and singularly perfect example of the few remaining parish churches in which the laity worshipped under the same roof with the regulars, but in complete separation. At the close of the fifteenth century, a dispute having arisen between the monks and the parishioners about the rights and emoluments of the vicar, the Abbot of Glastonbury, with one of the justices of the realm and a doctor of the canon law, was chosen to arbitrate between the parties concerned, Sir Hugh Luttrell appearing as representative of the lay folk, who were for the most part his own tenants. The award was delivered in April, 1498, it being then decreed that the parishioners should erect a new chancel for their vicar at the eastern part of the nave, while the monks were to retain possession of the ancient chancel in the manner in which they had been accustomed to hold it since the grant of the church to the Abbot of Bath, who thereto had at once erected a prioral cell. The architectural expression of this decision has been so enduring that the Benedictine brothers might at this day resume their former relations with the parishioners, and again on the thirteen principal feasts unite, according to agreement, in solemn procession with the secular clergy, to pass at such times "down the middle of the old chancel, and so into the nave through a door on the north side of the parochial chancel." And to prevent disputes the old rule might also be followed. "First were to go the cross-bearer of the monks and the cross-bearer of the parishioners, then the vicar and his

XUM

clerks, then the prior and his brethren, and lastly the body of the parishioners," the monks finally returning to their chancel and the seculars to theirs. The cowled brethren would, however, find themselves without a local habitation, for the priory buildings, except a few remains on the north side of the church, have been destroyed.

So conscientious and painstaking a book as the present would be, with an index, worthy to range with Bishop Kennett's 'Parochial Antiquities,' which is almost the highest praise that can be given.

The Indian Balharà and the Arabian Intercourse with India in the Ninth and Following Centuries. By Edward Thomas, F.R.S.

THIS is a disquisition which the patriarch of Indian numismatists has attached to Sir Arthur Phayre's paper on the coins of Arakan in the *International Numismata Orientalia*.

Some of these coins, dating from the first quarter of the seventeenth century, bear on the obverse the titles of the king in Burmese, on the reverse obscurer titles in Persian and Nagari. Among the latter Mr. Thomas finds in two cases Valá-ritja, and this has suggested to him the identity of this title with that famous one of the Balharà, described by Mohammedan writers of the ninth and tenth centuries as the greatest king of India. Mr. Thomas says:—

"The identification of this designation has hitherto largely exercised the ingenuity of modern commentators; but under the sanction of the parallel term here employed, it may be reduced, with all simplicity, to the vernacular Barà-Ráí, *i. e.*, great king."

We hardly find absolute conviction in this interpretation, but more substantial are the comments of Mr. Thomas on the true position of the potentate called Balharà by those old Arab writers. The chief authority for the title is that curious collection of notices regarding India and China which was first made known and translated by the Abbé Eusebius Renaudot in 1718. The original was afterwards long lost sight of. Men of a certain bent of mind are always ready to suggest forgery. Such have been found to declare in turn the book of Marco Polo, the Christian inscription of Singanfu, and the 'Travels' of Hwen T'sang to have been cunning or even clumsy forgeries; and Renaudot did not escape the insinuation that he had invented the notices which he professed to translate. But the MS., which had in fact belonged to the library of Colbert, was in 1764 rediscovered by the illustrious Deguignes in the Arabic collection of the Paris Library. In 1811 M. Langlès saw the original through the press, but the sheets remained unpublished till 1845, when the book was issued by the late M. Reinaud, with a new translation and notes, under the title of 'Relation des Voyages faits par les Arabes et les Persans,' &c. The work consists of two parts. The first of these lacks the commencement, and has neither name of compiler nor proper title, though some owner has prefixed a factitious introduction with the irrelevant title of "Chain of Chronicles" (*Silsilat-al-Tawárikh*). The second part bears the more appropriate title of "Notices regarding Chín and Hind," and a declaration of authorship on the part of Abu-Zaid al-Hassan of Síráf. The approximate date of this second part is deduced from a statement of Mas'údí's, of his having made acquaintance at Bassora in the year 303 (A.D. 916) with a certain Abu-Zaid-Mohammed, who seems (notwithstanding the partial difference of name) to have been the author in question. From the preface of this writer we learn that the date of the first part was A.H. 237 (A.D. 851), but he does not state who wrote that part. And it is odd that Reinaud and every one who quotes that part, including Mr. Thomas, insist on giving the author the name of "the Merchant Suleiman." Thus Reinaud's preface says of Abu-Zaid: "Il déclare que son seul objet a été de modifier et de compléter le récit du marchand Soleyman"; whilst in fact there is not a single word about the "marchand Soleyman," but only about "the author of this book." The work is evidently a *compilation* of notes, partly from the experiences of the writer, speaking in the first person, partly from those of other people, among whom the Merchant Suleiman is once, and only once, quoted. In fact, whoever wrote the book, Suleiman is the one person whom we may confidently assert not to have done so.

Both parts are of great interest, because they speak of a time of habitual intercourse and navigation, which, as regards the further East, was soon after either interrupted or ceased to find its way into literature. From the time of Ptolemy's authorities to that of these notices the maritime tradition is substantially unbroken; but after this the tradition vanishes, and we have only thenceforward for a long time, regarding the navigation to China, such vague stuff as that in the 'Geography' of Edrísi or in the 'Travels' of Rabbi Benjamin, until we come to the great revival of free communication during the brief era of Mongol rule in China.

Information regarding this earlier period is found chiefly in the 'Relation'; in the work of Mas'údí, whose work was completed A.D. 943, and who evidently had access to the preceding work or its sources; and in the earlier work of Ibn Khordádbah (*c.* 850–880). The geographical matter in these books as regards India and China falls under two heads, viz., the detail of Indian kingdoms and the description of the course of navigation to China. The statements on the latter subject are derived from ships' courses, and, however perplexed by the uncertainties of Arabic writing, represent facts of some precision. The description of Indian kingdoms is of much less value, and between the vagueness of the statements and the uncertainty of the readings there is very little to be made out, as after much time wasted we can testify.

Balharà or Balah-rá, we are told, was the dynastic title of the greatest of Indian princes, whose supremacy was generally recognized. His capital, according to Istakhri, followed by Mas'údí, was Mankír. Of other chief princes, one with whom the Balharà was often at war was the king of Al-Jurz, Al-Juzr, or, as Mr. Thomas elects to read, Al-Jauz. Beside him was the king of *Ṭ*afak, *Ṭ*áfan, or *Ṭ*áfir, whose country was of no great extent; its women were the whitest and most beautiful in India. Contiguous more or less to these three was a kingdom which extended to the sea, called Ruhmi, Rahma, or Rahman. The king thereof had 50,000 elephants; fine muslins were produced in it, besides gold and silver; the rhinoceros was in its forests. Inland from these regions was Al-Káshbín; the people, white and handsome, inhabited both mountain and plain. Then, returning to the sea, we have on the coast a king (or kingdom) Al-*K*airanj, possessing ambergris and ivory; after which comes a variety of kingdoms, the indications of which carry us nearer and nearer to China. The geographer Istakhri, who shows no knowledge of India beyond Sind and its immediate borders, says that the territory from Kambáya to *S*aimur (*i.e.*, Chaul, immediately south of Bombay) was subject to the Balharà; and since the days of Wilford it has been generally assumed that the Balah-rá is to be identified with the dynasty of Ballabhi in Guzerat. In this Tod, Lassen, Elliot, and the French translators of Mas'údí seem to have agreed. Reinaud has so far dissented as to interpret Balharà as Málwa-ráí, "king of Malwa." Out of these identifications has grown, in the comments of Reinaud and Lassen especially, who have distributed the other kingdoms about Western India, as notable a mass of trifling as learned men ever put together. The identification with Ballabhi, be it said, is inconsistent with the fact that this dynasty of kings had long ceased to exist. Mankír, the capital of the Balharà according to Istakhri and Mas'údí, is identified, though its real situation is far other, with the Μινάγαρα of Ptolemy; Jurz or Juzr becomes, because of the slight resemblance of name, identified with Guzerat, insomuch that the French translators of Mas'údí do not even give their readers a choice, for Juzr is "translated" *tout bonnement* as Guzerat, just as one might (lawfully) translate Livorno by Leghorn. Because of Ibn Batúta's praise of the Mahratta women, M. Reinaud will have *Ṭ*áfan to be in the Deccan—nay, he goes so far as to localize it in "the present province of Aurangábád"; whilst Lassen, not to be outdone in precision, prefers to put it in "Baglana" (wherever that may be), "to which country the Mahrattas were then still restricted." Ibn Batúta certainly does not say that the Mahratta women were white, the very last attribute they could claim! On the other hand, Mas'údí associates *Ṭ*áfan with Kashmír and Kandahár (*i.e.*, Gandhárá, the Peshàwar country) as one of the regions in which the sources of the Mahrán or Indus lie.

One of the indications which have no doubt helped to mislead commentators is the description of the Balharà's empire as "commencing on the sea coast at the place where is the territory of Kumkam, *on the tongue of land which extends to China.*" Kumkam has been assumed to be the Concan or low country of the Bombay coast, in entire disregard of the intimation in italics. What the name stands for we cannot say, but apparently for some region adjoining and beyond the mouths of the Ganges. The position of the Kamalangka of Hwen T'sang would suit, whatever that name may indicate.

Mr. Thomas is surely right in pointing out that the chief kingdoms mentioned lay in Gangetic, and not in Western, India, and his explanation of Mankír as the well-known city of Monghyr may be said to carry conviction. But we cannot go further with

him in his detailed suggestions. The most learned comments will not convert ignorant and loose reports into accurate knowledge any more than the application of the most correct algebraical formulæ will extract true altitudes from loose barometrical observations. We will only suggest as possible that Káshbín is some muddle of Kashmír; that Ruhmi or Rahman may be connected with Ramaníya, which is one of the Buddhisto-classical names of Pegu and the adjoining coasts, found in the Ceylonese books, and still used in the State documents of Burma (perhaps the same as the Yamana-dvípa of Hwen T'sang); and that Al-*K*airanj may be identical with the Kadranj which we meet with in the same works as the name of one of the regions on the sea route to China, in or near Siam. The fact that the one name is written in Arabic with *K* and the other with K need not, we believe, be held as materially against this suggestion when outlandish names occurring in a compilation from various sources are in question. Even the familiar name of Kashmír is written by Mas'údí with the *K*.

The most interesting and tangible circumstance that we know in connexion with this confused old Arabic detail about India is the fact (illustrating vividly the great expanse of the Mohammedan power and the vast field over which its agents circulated) that by some of these agents the name of the Indian sovereign the Balharà was conferred on a town near Palermo, famous now, and ever since King Roger built there one of the most magnificent churches in the world, as Monreale. At least this seems deducible from what Amari says. See 'Storia de' Musulmani di Sicilia' (1858), ii. 34, and 300. Perhaps he is joking; "de fonte leporum Surgit Amari aliquid?" But anyhow we can vouch from personal knowledge that in the city of Palermo there is still a market-place which bears the name of Piazza Ballarò, and this, the same historian tells us, was in Saracen times known as the Súk-Balharà. The Sicilian chronicler Fazelli (1558) calls it "Segeballarath," which makes one half disposed to speculate whether Ballarat in Australia also may have borne any reference to the "golden joys" of the Balharà! "The bricks are alive at this day to testify of it, therefore deny it not."

Turning from the hazy Indian geography of these old Arabs, it seems to us that we have a subject more capable of intelligent elucidation in their notices of the sea route to China which are to be found in the same works, and in the comparison of these with the Roteiro indicated in the 'Periplus' and in Ptolemy. But this would require a separate disquisition.

Plutarch's Morals: Theosophical Essays. Translated by C. W. King, M.A. (Bell & Sons.)

THE fame of Plutarch's 'Lives' has thrown his numerous minor works, the so-called 'Moralia,' into undeserved oblivion. Shakspeare has ensured the immortality of the former, but the latter have furnished no themes for holy poets and are hidden in long night, *illacrimabiles ignotique*. Bishop Amyot, whose French version of the 'Lives' was used by North, and Philemon Holland, a contemporary of North's and "the translator-general of his age," both published voluminous translations of the 'Moralia,' but in vain. There are very few libraries now of which Pope might say:—

De Lyra there a dreadful front extends,
And here the groaning shelves Philemon bends.

Plutarch's original Greek is considered deleterious to the prose compositions of the classical student, and, if we read the 'Lives' sometimes, we do so in North's slovenly translation, and we do not read the 'Moralia' at all. Mr. King, it appears, turned to them to find material for a work which he once designed, and which, we may conjecture, would perhaps have treated of the influence of various Oriental creeds on later Greek religion and philosophy. He abandoned, of course, like a true Cambridge man and fellow of his college, the large original enterprise, but he publishes now a translation, made several years ago, of six essays, selected as specially theosophic from the vast heterogeneous collection which goes by the name of the 'Moralia.' We may thank him, if not for a very elegant translation, at least for a very interesting book and a few short but striking notes. His volume includes the treatises on 'Isis and Osiris,' 'The Cessation of Oracles,' 'The Pythian Responses,' 'The E at Delphi,' 'The Face in the Moon,' and 'On Superstition.' Most of these are in the form of reported dialogues, and contain many digressions, suggested by the subjects of discourse. Thus the treatise on 'Isis and Osiris' contains, besides a full account of the mythology of those deities, a series of rationalistic explanations, one of which is quite in the modern manner. 'The Cessation of Oracles,' which is especially interesting as giving an account of the temple at Delphi, treats at great length of the nature of dæmons, whose death is supposed to have produced the prevalent lack of inspiration. The mysterious E at Delphi, a symbol on a votive tablet attributed to Pittacus, is interpreted to stand for 5, and leads to a discussion on sacred numbers, such as 3, 5, and 7. Mr. King, however, identifies it as an Indian cast-mark, and derives the anchor of Apollo's signet from the same source. These remarks sufficiently show the nature of Plutarch's subjects and the opportunities which they afford Mr. King for interesting notes. The value of Plutarch's evidence as to the religious customs and beliefs of Greek and Oriental nations is very great, but his theosophy is brought into contempt by his frequent guesses at etymology (*e.g.*, Osiris from ὅσιος and ἱερός, and πάντα from πέντε). The essays teem with quotations from the poets and references to the philosophers, especially Plato; but on these passages Mr. King does not attempt to offer any assistance. His chief literary comments in the notes refer to the writings of the Emperor Julian.

It should be added that the present volume is illustrated with a few interesting drawings of antique gems, on which Mr. King is so celebrated an authority. In this connexion one note of his is worth citing. Plutarch says that the Egyptian priests call Egypt, which has a very black soil, "Chemia," and apply the same name to the pupil of the eye. On this Mr. King writes, "Is this the long-sought-for root of 'cameo'? The *niccolo* was distinguished by the Romans as 'Ægyptilla,' and compared by them to the eye."

NOVELS OF THE WEEK.

The Brandreths. By the Right Hon. A. J. B. Beresford Hope, M.P. 3 vols. (Hurst & Blackett.)

Valentina: a Sketch. By E. C. Price. 2 vols. (Chatto & Windus.)

Upton-on-Thames. By Thomas A. Pinkerton. 2 vols. (Chapman & Hall.)

Scenes from the Ghetto. Translated from the German of Leopold Kompert. (Remington & Co.)

AFTER the success of 'Strictly Tied Up,' and having the examples of Thackeray and Mr. Trollope before him, Mr. Beresford Hope had some justification for continuing in a second book the history of the principal characters of his former novel. The plan has, however, its disadvantages. Readers of 'Strictly Tied Up' will doubtless be pleased to hear more of the people whom the author drew with so much ability, but those who in 'The Brandreths' meet with Mr. Beresford Hope as a novelist for the first time will find themselves mystified by the numerous allusions to what has gone before. 'The Brandreths' is a pleasant book to read, but it is not a good novel. It is an unusual treat to the reader of novels to find himself in the company of a man of the world who is also a man of wide knowledge and culture, and one who possesses the power of writing with ease and with point. Mr. Beresford Hope's pictures of society, his analyses of character, and even his disquisitions on politics, Comtism, and the Holy Roman Empire, are all excellent in their way; but more than these things is required in a novel. In 'The Brandreths' there is hardly any story or any study of the effect of action and events upon character. The story, such as it is, tells how Sir Eustace after the death of his wife succeeded, with the help of his friends, in resisting the wiles of a widowed duchess; and it must be confessed that the result is to show Sir Eustace as a much weaker and less estimable character than he appeared to be during his married life. The charm of the book is in the delicate and appreciative description of that earlier period, and of the effect which the memory of it had upon him. When the duchess comes upon the scene the story begins afresh, and an excessive number of chapters is devoted to an elaborate portrait of her. Mr. Beresford Hope's boldest and most unsuccessful experiment is the introduction of four-and-twenty pages of verse, which makes one think of Jaques's "Nay, then, God be wi' you, an you talk in blank verse." The political sketches and allusions are made with a good deal of humour, and those who read between the lines will be amused by many transparently disguised references to contemporary characters and events.

'Valentina' is a graceful, cheerful, fairly clever sketch of character, which may be read with a definite intention to be interested in the story. The heroine is a wayward girl, not happily situated in the way of guardianship or early training, who is guilty of many indiscretions, and who is constantly proving the truth of the adage

XUM

that evil is wrought by want of thought far more than want of heart. She plays rather fast and loose with the hearts of her friends, not having much herself. As her brother-in-law says of her, she is a madcap who has never been trained. "Everybody wants breaking in—some more, some less—she decidedly more." However, she falls into pretty good hands, and they break her in; not cruelly, for that would have broken her altogether, but naturally and gradually, and by allowing her better self to develope. One indeed—her second husband—tries to manage her in the other fashion, somewhat as he would have tried to tame a horse or a dog, but he fails egregiously. The latter stage of the story is told with noteworthy skill, and nothing could be better or more delicate than the passages between the unhappy Valentina and the mother of the man who has loved her purely and unrequited from the beginning. As for the conclusion of Valentina's history, it must be learnt from the author's own words. She tells it with more than ordinary taste and feeling, and her narrative will be sure to commend itself on this account to readers who may be disposed to find fault with it in at least one important particular.

Mr. Pinkerton apparently delights in taking for his subject the more or less vulgar realities of life, and in extracting from them the humour with which he sees them to be charged. His characters are almost without exception decidedly vulgar; he presents them to us in their most vulgar aspects; he dissects and describes them with minuteness, and generally speaking with accuracy, sufficient to show that he has deliberately chosen to study humanity from this point of view. The work is honest, however one may be inclined to differ from the author as to its pleasantness or value. The advantage of drawing such pictures as abound in 'Upton-on-Thames'—pictures toned throughout with pretentiousness, insincerity, and sordid motives—is probably all the greater because they seem to be drawn with an eye to exact reproduction rather than to artistic effect of a more original kind. There is doubtless a use in transferring to the canvas objects which are in themselves uninviting. The result may serve for example and warning, though it is certain that a more general gratification is afforded by the artist who cunningly groups and combines in addition to simply copying. Mr. Pinkerton does not care to make pleasing combinations; or, if he attempts to do so now and then, his readers will scarcely be able to appreciate this rare interruption to the strain of vulgar acts and words which he chronicles with so much fidelity. The mother who remembers with pride how a tipsy young scamp of a lord used to lie on the grass at her daughter's feet, "although she was only fifteen"; the husband of this worthy dame, who took another glass of his own sherry *because* his guest declined it—such are the touches which Mr. Pinkerton crowds into his picture with the courage and zeal of a Balzac, though not with his genius. There is much ability displayed in the employment of this method, but unfortunately too little in the relief of the highly coloured central figures. The artist's mannerism is so strong that he cannot throw it off when he wants to do so. His good lord and his worthiest hero are not half so true to life as the coarse attorney's family.

It is astonishing that it should have taken more than thirty years for the great fame of Leopold Kompert as a writer of Jewish stories to penetrate into this country. Until an article upon him appeared in *Fraser's Magazine* last year by Miss Zimmern, followed this year by one in the *Fortnightly* from the pen of Mr. Sutherland Edwards, he was practically unknown to English readers. Yet he is one of the most remarkable and artistic authors contemporary Germany can boast. An ardent though enlightened Jew, his tales deal almost exclusively with the oppressed life led until quite recently by his co-religionists in the Ghettos of Austria; but his power does not depend alone upon the peculiar character of his themes. Their great and ever abiding merit is that they deal with features of human life of lasting interest, to which only a new and curious adjunct is given by their Jewish colouring. The anonymous translator of 'Scenes from the Ghetto' has presented the English public with but four stories from among the number written by Kompert. Among them is one of his finest and most subtle, 'The Children of the Randar,' a very adumbration of the history of modern Israel, prefiguring the mental revolution that is at hand for these sectarians. Indeed throughout all Kompert's stories it is the last flicker of a dying religion—a religion that modern conditions have made impossible—which we encounter, and he paints with the hand of one who knows the painful but inevitable wrench that must take place. The translation is fair, though all the perfume and much of the *naïveté* of the original narrative have been lost. Here again, as in the stories of K. E. Franzos, a great factor of artistic power has vanished in the impossibility of rendering the peculiar jargon spoken by the Hebrew Germans, which not only marks them at once as a class apart, but also contains many pithy and comprehensive idioms. There are some careless and confusing printers' errors in the volume.

SCHOOL-BOOKS.

P. Vergili Maronis Opera. With an Introduction and Notes by T. L. Papillon, M.A. (Oxford, Clarendon Press.)—The commentary before us, conveniently printed in a separate volume from the text, aims at being intermediate in length between those of Prof. Conington and Dr. Kennedy, and is intended for the use of college tutors, and also, we suppose, for a high-class school edition. We observe ample evidence of taste and of accurate scholarship, but there are few indications of original power. Perhaps it lay beyond Mr. Papillon's scope to improve upon popular English editions, though Virgil abounds in passages upon which the last word of criticism has not yet been said. With regard to the 'Æneid,' it is surprising to find no mention of Henry's 'Æneidea,' which is now published as far as the end of the seventh book. In scores if not hundreds of passages Henry has pointed out and corrected the errors of Conington, Wagner, and others whom Mr. Papillon follows. For example, on 'Æn.' i. 5 Henry annihilates the idea that *dum* with imperfect conjunctive introduces the idea of purpose by citing Tibull. ii. 3, 19, Livy xxiv. 40, Sall. 'Bell. Cat.,' 7. He is particularly alive to the delicacies of accurate translation, rejecting, for example, with ample proof of its faultiness, the rendering "rich in poverty" (so Papillon) of *parvo potentem* ('Æn.' vi. 844); and proving that *florentes aere* (vii. 804) is not "gleaming in steel"; that *ponto refuso* ('Georg.' ii. 163) means "the overflowing, inundating, wide-spreading sea"; that *tellus extrema refuso oceano* means "the most distant land in the wide-spreading ocean"; and so on in numberless cases. Worse than all this, Henry shows that the foundation of our recent English texts, the critical edition of Ribbeck, is but shifting sand. The fact is that it is now absurd to edit Virgil without availing oneself of Henry's researches, which are unfortunately set forth with much unnecessary diffuseness. Mr. Papillon has happily cleared his text of Ribbeck's orthographical vagaries and has rejected several of his infelicitous attempts at emendation. The essay in the introduction on the life and poems of Virgil is good, but the treatment of the poet's style is rather too much in the manner of a magazine paper, and some obscure language is quoted on p. lxi from Cardinal Newman and Mr. Myers. What is meant by "fusing together the expressed and the suggested emotion"? Henry's indication of the countless instances in which Virgil gives a theme closely followed by a variation is worth a whole library of the fashionable literary criticism. Notwithstanding the depth of our discontent, we feel bound to say that the edition of Virgil's works before us is the best yet published for the purposes of busy teachers or "cramming" students.

Euripides: Helena. Edited, with Introduction, Notes, and Critical Appendix, for Upper and Middle Forms, by C. S. Jerram, M.A. (Oxford, Clarendon Press.)—This edition of an unfamiliar play will amply maintain, if it does not increase, Mr. Jerram's reputation as a scholar and a judicious compiler of school classical books. The text is as satisfactory as the condition of the original MS. will allow. The introduction gives a clear and concise account of the play and some good critical remarks; but we must demur to the remark—apparently based on one of Prof. Mahaffy's suggestions—that the result of the final interposition of a *Deus ex machinâ* might "be to produce an increased scepticism, 'religious if not moral.'" When the Dioskoroi appear at the close of this play the principal personages are practically safe (v. 1622), and all the deities *do* is to save a prophetess from her brother's rage. This is scarcely a "violent solution of difficulties," of which "a natural solution" was "difficult, if not impossible." Mr. Jerram's notes are, as usual, thoroughly serviceable. It is, perhaps, a pity that he does not refer to Madvig's 'Greek Grammar' and to Goodwin's 'Greek Moods and Tenses.' We regard it as a mistake to say that *οὐ* is to be mentally supplied before *μὴ* (v. 438), *οὐκ ἀπαλλάξει δόμων καὶ μὴ..... παρέξεις.* The *οὐκ* applies to both clauses, and the strong negative *μὴ* is natural in the antithetical clause of a double question introduced by *οὐ*. Even without *οὐ*, *μὴ* is found with the indicative in interrogations. A note on the particles *οὔ τί που* (v. 95) would have been welcome; but such omissions are laudably rare. In short, we seldom have so little to find fault with in a publication of the kind.

Xenophon: Anabasis, I. Edited for the Use of Schools by A. S. Walpole, M.A., with Notes, Vocabulary, and Illustrations. (Macmillan & Co.)—Great pains have evidently been bestowed on the compilation of this little volume, which provides a maximum of help for beginners in the style in which a good scholar can treat even the most elementary work. The text is an improvement on that of previous English editions.

Euripidis Hecuba. A Revised Text, with Notes and Introduction by Rev. J. Bond, M.A., and A. S. Walpole, M.A. (Macmillan & Co.)—There is much to commend in this little edition of the 'Hecuba,' especially the grammatical index; but the tone of superiority adopted in the preface led us to expect a closer approach to perfection than has been effected. There cer-

tainly ought to be a note on the construction of vv. 802–805, and the force of sundry particles which are not commented on should have been given—*e.g.*, δή (v. 203), ἄρ' (v. 231). We notice one or two absurd misprints. However, the notes will be found useful, and the text is carefully edited.

A Short Treatise on the Greek Particles and their Combinations according to Attic Usage. By F. A. Paley, M.A. (Cambridge, Deighton, Bell & Co.)—Editors of small grammars generally pass so lightly over the Greek particles that a separate essay on them of modest proportions will be found very welcome. Prof. Paley's intimate knowledge of the Greek tragedians gives him special facilities for the production of such a work, and his illustrations are plentiful and well chosen. It is a little old-fashioned and unscientific to explain μὴ οὐ, οὐ μή by ellipse, and we observe the same error as to οὐ.....καὶ μὴ which we have noticed above. It should be pointed out that καὶ δῆτα indicates irony or astonishment, and καί τοι καί and οὔ τί που should be noticed. Prof. Paley seems guilelessly ignorant of the aberrations of teachers and editors as to καὶ and δέ. However, the treatise does not profess to be exhaustive, and it is sufficiently suggestive to evoke imitations on a more comprehensive scale. The classification of the uses of δ' οὖν is particularly good. It is quite refreshing to come across a thoroughly original piece of classical work after so much wearisome converse with the ever-increasing tribe of edition-mongers.

The So-called Subjunctive. By Gavin Hamilton. (Edinburgh, Thin.)—Everybody will agree with Mr. Hamilton that doctors differ seriously in their diagnosis of the subjunctive mood, but few will accept his solution of the problems involved. His notion is *imprimis* that the subjunctive, "the mood of moods," expresses the first cause or the final cause as the case may be, and he regards the cause as more important than the effect or the means. Here everything at once turns on the meaning of "important." Living is in the abstract more important than eating, but if one is starving it is more important to ask for food than to mention life. From a linguistic point of view the direct part of an answer to a question is more important than causal, final, temporal, concessive, conditional additions to the simple answer. "Whenever ships start" (*subjunctive*) "the weather is not very stormy" (*indicative*) seems to be a crucial test of the utter unsoundness of this first portion of Mr. Hamilton's theory, which he endeavours to prove by the very unscientific method of selecting favourable cases. Our excuse for treating so very crude and ignorant an essay seriously is that Prof. Lewis Campbell, unless he be grossly belied, has given the theory some encouragement, expressing no doubt that it "is very efficient in impressing the uses of the subjunctive on your pupils' minds." If this is not insincere, Prof. Lewis Campbell is bound either to defend this theory or to defend the employment of manifestly unsound theories in education. One word more. We are told that "legit qui civicam coronam cepissent" is a subjunctive clause because such crowning was extraordinary (Liv. xxiii. 23); but just above we have "legit qui curulem magistratum cepissent," such magistracies being no more peculiar or extraordinary than the lesser magistracies. Mr. Hamilton had better learn grammar on an ordinary system before he attempts to explain it by new hypotheses.

OUR LIBRARY TABLE.

THE idea of Mr. E. J. Ensor's *Chronological Chart Synchronistically and Ethnographically Arranged* (Stanford) was suggested to him by a chart in Bagster's 'Comprehensive Bible.' The original of Mr. Ensor's work is "upwards of fifty feet in length by fifty-four inches in width. Perpendicular lines at the distance from each other of one inch mark every ten years from the creation of Adam to the present time." The compiler was at work upon the chart for seventeen years. He has now published a portion of it on a reduced scale. It is still too large for general use, while the type is in some parts decidedly too small.

MR. CHARLES MACKESON'S *Church Congress Handbook* for 1882 (Bemrose) has just arrived. It will be of service to those who attend the meeting next week at Derby. The handbook is drawn up in the same form as that of last year, when the Congress met at Newcastle. Besides the official details, the book contains a chapter on the Derby churches, some notes on the vicinity, and biographical sketches of the speakers at the Congress.

MESSRS. DULAU & Co. send us a specimen page of the first volume of a folio edition of the works of St. Thomas Aquinas, published at Rome under the authority of the Pope.

MM. HENRI GAIDOZ AND PAUL SÉBILLOT have extracted from the fifth volume of the *Revue Celtique*, and reprinted for private circulation, their exhaustive *Bibliographie des Traditions et de la Littérature Populaire de la Bretagne.* Some idea of the richness of Breton popular literature may be derived from the fact that its bibliography extends to sixty-one octavo pages, of which about sixteen are devoted to MSS. One of the largest manuscript collections of songs was acquired by the Bibliothèque Nationale in 1878. During its previous peregrinations some of its contents were abstracted. The missing portions appear to have consisted of songs casting discredit upon the morality of the Breton clergy of the sixteenth, seventeenth, and eighteenth centuries. Three pages of the bibliography are devoted to the well-known 'Barzas-Breiz' of Viscount Hersart de la Villemarqué. The word which was printed as *Barzas* in the first edition was subsequently changed to *Barzaz.* The bibliographers in recording this alteration observe that "as the word does not exist in Breton, but was created by M. de la Villemarqué, no one can dispute its author's right to modify its orthography."

WE have on our table *The Home Life of Henry W. Longfellow*, by B. R. Tucker-Macchetta (Low),—*Charlemagne*, by the Rev. E. L. Cutts (S.P.C.K.),—*Mitslav*, by the late Right Rev. R. Milman, Bishop of Calcutta (S.P.C.K.),—*An Impromptu Ascent of Mont Blanc*, by W. H. Le Mesurier (Stock),—*Claimants to Royalty*, by J. H. Ingram (Bogue),—*The Coming Democracy*, by G. Harwood (Macmillan),—*Unknown to History*, by C. M. Yonge, 2 vols. (Macmillan),—*Irish Pleasantry and Fun, with Tales of W. Carleton and S. Lover* (Dublin, Gill & Son),—*Letters to my Son Herbert* (Tinsley Brothers),—*The State and the Church*, by the Hon. A. Elliot, M.P. (Macmillan),—*The Reformation of the Church of England*, Vol. II., by the Rev. J. H. Blunt, M.A. (Rivingtons),—*Sermons on Special Occasions*, by Dean Stanley (Murray),—*The Revised Version of the First Three Gospels*, by F. C. Cook, M.A. (Murray),—*The English Revisers' Greek Text*, by G. W. Samson (Trübner),—*The New Testament Scriptures*, by the Rev. C. Herbert, D.D. (Frowde),—*The Present Religious Crisis*, by A. Blauvelt (New York, Putnam),—*Friedrich Taubmann*, by F. W. Ebeling (Leipzig, Lehmann),—*Der Pessimismus und die Sittenlehre*, by H. Sommer (Nutt),—*Danelag*, by J. C. H. R. Steenstrup (Copenhagen, Klein),—*Essai sur la Valeur Phonétique de l'Alphabet Latin*, by M. Schweisthal (Paris, Leroux),—*Lenz's Der Waldbruder*, by Dr. Max von Waldberg (Berlin, Kühl),—and *Das Evangelium von Jesu in seinen Verhältnissen zu Buddha-Sage und Buddha-Lehre*, by R. Seydel (Leipzig, Breitkopf & Härtel). Among New Editions we have *Stronbuy*, by the Author of 'Tobersnorey' (Edinburgh, Macniven & Wallace),—*My Home in the Shires*, by Rosa M. Kettle (Ward & Lock),—*A Manual of the Principles of Government*, by H. S. Tremenheere, C.B. (Kegan Paul),—*A Treatise on Mathematics*, by F. Campin, C.E. (Lockwood),—*Military Examinations: Mathematical Examination Papers, with Answers*, by W. F. Austin (Stanford),—*The Social Law of Labor*, by W. B. Weeden (Boston, U.S., Roberts),—*Gl' Imitatori stranieri di Jacopo Sannazaro*, translated by F. Torraca (Rome, Loescher),—and *The Great Apostacy of the Last Sixteen Centuries*, by the Rev. F. du Sautoy (Nisbet). Also the following Pamphlets: *Wealth: Definitions by Ruskin and Mill Compared* (Glasgow, Wilson & M'Cormick),—*Religion of Humanity*, by R. Congreve (Kegan Paul),—*Faith or Unfaith*, by an Earnest Layman (Provost),—*A Census of Religions*, by the Right Hon. J. G. Hubbard, M.P. (Longmans),—*The Conduct of England to Ireland*, by G. Smith (Macmillan),—"*Freedom of Land*" *and What it Implies*, by A. Underhill (Butterworth),—*Letters on Highway Legislation*, by the Rev. E. Higgins (Ridgway),—*Wilkes and Liberty*, by B. Carlill (Hull, 'Eastern Morning News' Company),—and *Notes on Free Libraries and Books*, by J. Hallam (Toronto, Globe Printing Company).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Beet's (J. A.) Commentary on St. Paul's Epistle to the Corinthians, cr. 8vo. 10/6 cl.
Davidson's (S.) The Doctrine of Last Things, 12mo. 3/6 cl.
Dawson's (G.) Sermons: Three Books of God, Nature, History, and Scripture, ed. by G. St. Clair, cr. 8vo. 6/ cl.
Thoms's (J. A.) Complete Concordance to the Revised Version of the New Testament, 8vo. 6/ cl.

Law.

Indermaur's (J.) Concise Practical Treatise on the Law of Bills of Sale, 1878 and 1882, cr. 8vo. 5/6 cl.

Poetry.

Chronicles of Christopher Columbus, a Poem in Twelve Cantos, by M. D. C., cr. 8vo. 7/6 cl.
Hewitt's (J. A.) Summer Songs, and other Poems, cr. 8vo. 7/6
Lang's (A.) Helen of Troy, cr. 8vo. 8/6 cl.
Scott's (Sir W.) The Lady of the Lake, illus. roy. 8vo. 16/ cl.
Sladen's (D. B. W.) Frithjof and Ingebjorg, and other Poems, cr. 8vo. 5/ cl.
Warlow's (J.) Faith, its Pleasures, Trials, and Victories, and other Poems, 4to. 21/ cl.

Philosophy.

Barlow's (J. W.) The Ultimatum of Pessimism, an Ethical Study, 8vo. 6/ cl.
Martineau's (J.) A Study of Spinoza, cr. 8vo. 6/ cl.

History and Biography.

American Men of Letters: Henry D. Thoreau, by F. B. Sanborn, 12mo. 2/6 cl.
English Men of Letters: Sterne, by H. D. Traill, 2/6 cl.
Haussonville's (Vicomte de) The Salon of Madame Necker, trans. by H. M. Trollope, 2 vols. cr. 8vo. 18/ cl.

Philology.

Bennett's (G. L.) Second Latin Reading Book, 12mo. 2/6 cl.

Science.

Esmarch's (F.) First Aid to the Injured, translated by the Princess Christian, 12mo. 2/ cl.
Euclid, Books 1 and 2, edited by C. L. Dodgson, cr. 8vo. 2/
Hill's (J. W.) Principles and Practice of Bovine Medicine and Surgery, 8vo. 36/ cl.
Nicholson's (H. A.) Synopsis of the Classification of the Animal Kingdom, 8vo. 6/ cl.
Piper's (T. W.) Complete Course of Arithmetical Examples and Exercises, cr. 8vo. 3/6 cl.
Reeves's (H. A.) Human Morphology, a Treatise on Practical and Applied Anatomy, Vol. 1, 8vo. 25/ cl.

General Literature.

Auerbach's (B.) Two Stories, cr. 8vo. 3/6 cl.
Besant's (W.) All Sorts and Conditions of Men, an Impossible Story, 3 vols. 8vo. 31/6 cl.
Elfin Land, designed by Walter Saberlee, Poems by J. Pollard, oblong 4to. 7/6 bds.
Fly-a-way Fairies and Baby Blossoms, illus. 4to. 6/ bds.
Gebhait's (E.) Roman Cameos and Florentine Mosaics, a Series of Studies, translated and edited by Jeaffreson, 10/6
Good Old Story of Cinderella, retold in Rhyme by Lieut.-Col. Seccombe, illustrated, 4to. 6/ cl.
Hamley's (Major-Gen. W. G.) Traseaden Hall, new ed. 6/ cl.
Hardwick's (C.) Some Ancient Battlefields in Lancashire, and their Historical, Legendary, and Æsthetic Associations, 6/
Holland's (F. M.) Stories from Robert Browning, with Introduction by Mrs. Sutherland Orr, 12mo. 4/6 cl.
Hope's (Right Hon. A. J. B. Beresford) The Brandreths, 3 vols. cr. 8vo. 31/6 cl.
Kingston's (W. H. G.) James Braithwaite, the Supercargo, cr. 8vo. 5/ cl.
Little Dot and her Friends, and other Stories, illus., 4to. 4/ cl.
Macaulay's (J.) Sea Pictures drawn with Pen and Pencil, 8/.
Picturesque Scotland in Lay and Legend, Song and Story, roy. 8vo. 6/ cl.
Shaw's (F. L.) Hector, a Story for Young People, illus., 5/ cl.
Till the Goal be Reached, by J. McL., 2/6 cl.
Willett's (E.) Around the House, Rhymes, illus., 4to. 6/ bds.

SONNETS FROM THE CHANNEL.

THE LIGHTHOUSE GIRL.

AMID the Channel's wiles and fell decoys,
Where "Casket Beacons" watch this siren sea,
A girl was reared who knew nor grass nor tree,
Nor scent of flowers at dawn, yet had high joys—
These living lawns whose verdure never cloys!
At last she sailed to yon wild Alderney,
But withered there. "The bustling world," said she,
"Is all too full of trouble and of noise."

With winds for sponsors and the sea for nurse,
The storm-bird staggers in an islet's span;
So the loud seas her natal rocks disperse
Seemed soft 'mid murmurs of a lonely clan,
And every creature shapes its universe:
Each owns a world, be it bird or beast or man.

LEAH CARRÉ.*

HER lover's boat must pass the Eperquerie,
And Leah prayed, for her young ears were dinned
With sea-sobs warning of the awakened wind
That shook the troubled sun's red canopy.
Even as she prayed the storm's high jubilee
Laughed round a sail all sallow and weather-thinned,
And clutched a mast that tottered, cracked, and leaned,
And then two swimmers fought a white wild sea.

"My winds are louder, child, than sighs of thine,"
Great Nature saith: "thy sea-boy waged no strife
With Malice, Envy, Slander's poisoned knife;
But strove with me, the Queen, the old strife divine:—
The wrestle of the gods i' the morn of Life
Was his; then peace beneath the all-conquering brine!"

THEODORE WATTS.

* The beautiful girl of Serk who, on the eve of her marriage with Ernest Drillot, lost her lover, who was drowned with his father, John Drillot, off the Eperquerie (as supposed), September 2nd, 1882.

'MERCHANT TAYLORS' SCHOOL REGISTER.'

West Hackney Rectory, Sept. 26, 1882.

IN the kindly notice of my book which appeared in your columns last week, the reviewer justly observes that up to 1700 the distinguished laymen in the lists of the school are out of all proportion in number to the distinguished ecclesiastics. No doubt the cause for this is to be found in the fact that the clerical profession has always been more open than any other, and that its records have been better kept.

I should like, however, to supplement the list given by your reviewer with the following names: Thomas Lodge, an Elizabethan satirical writer of some repute; Matthew Gwinne, first Professor of Physic in Gresham College and a dramatist; Sir Edwin Sandys, the traveller; Sir James Whitelocke, Justice of the King's Bench; William Sherard, the botanist; and Sir John Cook, Dean of the Arches.

Merchant Taylors' School does not claim to have *educated* Titus Oates. He was in the school only a few months (as also were Peter Heylyn, Joshua Barnes, and other men of better mark), but his name necessarily appears in my book, as it is, as far as possible, a transcript of the registers.

CHARLES J. ROBINSON.

THE 'QUARTERLY REVIEW' ON SWIFT.

E.P.'s remarks on my notice of the *Quarterly* article on Swift are so courteous that I almost regret that I cannot acknowledge myself mistaken in "all the supposed errors" which I mentioned—errors, however, which, as I stated, are unimportant. 1. The *Quarterly* reviewer was correct in stating that Swift could read any chapter in the Bible at three years of age. I was misled by Hawkesworth, whose error was repeated by Scott. Swift seems to have made several alterations in this passage of his diary. First he wrote "two years"; this was altered to "almost three years," and subsequently to "three years" (Forster's 'Swift,' 1875, p. 25). 2. It is beyond a doubt that the 'Rape of the Lock' in its present form was not published till 1714, and Pope could not have been busy with the second edition in 1713. As I previously stated, a sketch of the poem was contributed to Lintot's Miscellany of 1712; but the finished work, which was published in 1714, cannot accurately be said to be "the second edition" of the delightful fragment which had appeared two years earlier. The passage quoted by E. P. from Pope's letter to Caryll merely confirms my statement. 3. I said that in 1713 Pope "probably had not set to work in earnest with his translation of the Iliad." This assertion seems fully justified by a letter from Pope to Caryll dated December 15th (1713), in which, speaking of the translation of the Iliad, he writes, "As to the task itself I am *about* to undertake, I confess I begin to tremble at it" (Elwin's 'Pope,' vol. vi. p. 199). 4. I agree with E. P.'s abstract proposition that an uncouth youth may develope into a striking and impressive-looking man, but the *Quarterly* reviewer's description of Swift in middle age seems inconsistent with the idea that his youth could have been unprepossessing or uncouth, nor, as far as I know, is there any contemporary authority for such an assertion. I think that I can enlighten E. P. as to the evidence relied upon by the *Quarterly* reviewer for his accounts of Swift's personal appearance. The flattering description of the Dean as he appears in the portrait by Jervas (not "Jervis," as spelt in the *Quarterly Review*) is taken almost literally from Forster (1875, pp. 226–7), and I cannot help suspecting that it is from a passage in Macaulay's brilliant but inaccurate essay on Sir William Temple that the word "uncouth" has been applied to Swift's youthful appearance. F. G.

THE GRAMMAR OF DIONYSIUS THRAX.

Tettenhall, near Wolverhampton, Sept. 25, 1882.

I AM glad to learn (*ante*, p. 405, col. 1) that it is contemplated to publish the grammar of Dionysius Thrax in a more complete form than in Fabricius's 'Bibliotheca Græca,' vol. vii., where it breaks off after the chapter on the conjunction with the note, "Hactenus Dionysii Thracis grammatica. Sequuntur ibi plura de prosodia, sed quæ a juniore addita esse testatur Porphyrius."

I fancy it is not generally known that this text was reprinted by M. Cirbied in 'Mémoires et Dissertations sur les Antiquités Nationales et Étrangères publiés par la Société Royale des Antiquaires de France' (1824, tome vi. pp. 1–97). M. Cirbied has added an Armenian translation extending over the portions which are wanting in Fabricius, and founded on two manuscripts of the Bibliothèque du Roi, viz., No. 124 (pp. 24, 12mo.) and No. 127 (pp. 388, 12mo.). The whole is accompanied by an excellent translation in French and some useful notes on certain peculiarities of the Armenian language. In MS. 127 (pp. 1–41) is contained the grammar itself; pp. 42–378 are occupied by copious extracts from some twelve Armenian commentators, arranged in thirty chapters by John Ezengatzy. I hope that the new edition of Dionysius Thrax will not ignore these important aids.

G. A. SCHRUMPF.

P.S.—I am afraid the word "catechism" as used by your Heidelberg correspondent is misleading.

THE 'YH KING.'

Sept. 25, 1882.

WITH your permission I will reply as briefly as possible to Dr. Legge's letter in your last issue. My previous statements remain, and I can only refer your readers to my previous letters in these columns, January 21st and the 9th inst. Dr. Legge only argues on three matters of detail, which I think I can easily dispose of.

He reiterates his mistaken statement that if we take away from the 'Yh King' the portions attributed to King Wen, his son, and Confucius, we take away the whole 'Yh.' This would be true only if the oldest part of the book, the *text*, had been written by King Wen and his son, which is not the case, as the attribution to them rests only on two quotations, the meaning of which Dr. Legge has mistaken. My co-worker, Prof. Douglas, has shown in another place that they do not bear that meaning at all.

The reasons why I see in the first and second appendices (those which begin by "*Tw'an* says" and "*Siang* says") the work of King Wen and his son are too numerous to give in detail here. Dr. Legge has adopted the later transfer of the appellations *Tw'an* and *Siang* to the 450 rows of characters which compose the whole text, and has forgotten that the 'Tw'an' and 'Siang' wings mentioned by Se-ma Tsien and Liu-Hin are the first and second appendices. Otherwise we might well ask, If the whole are wings, where is the body, which was a text and not only the hexagrams? If the 'Tw'an' and 'Siang' are not the sentences which begin by "*Tw'an* says," "*Siang* says," what are these? They are certainly distinct from the seven or eight rows of characters which are under the hexagrams and their six lines. They are neither one nor the other of the other wings enumerated by Se-ma Tsien and Liu-Hin. According to their statements, the wings had been *put in order* by Confucius (not *written*, as Dr. Legge supposes them to say). Se-ma Tsien in speaking of the work of Confucius uses the word *sü*—the same word as in *Sü-Kwa*, which Dr. Legge translates by "the orderly sequence of the hexagrams" (*kwas*). The Chinese Herodotus says: "Kung-tze put in order the 'Tw'an,' the 'Hi,' the 'Siang,' the 'Shwoh Kwa,' and the 'Wen-Yen.'" And Liu-Hin, rather differently, completes this by saying: "Kung-she formed with the 'Tw'an,' the 'Siang,' the 'Hi-tze,' the 'Wen-Yen,' the 'Sü-Kwa,' ten supplementary books." As I have printed elsewhere in Chinese these texts and those concerning the

pretended authorship of the text by Wen Wang and Chöu Kung, and as these texts do not bear the sense which has been afterwards supposed to be found in them, I shall only refer the reader to my forthcoming paper on 'The Oldest Book of the Chinese,' sect. ii. Now, as I have already said, the appendices or wings are indifferent to me, and I only want to distinguish them from the text.

As to the 'Tso Chuen,' the proofs of my statement (which are in the same paper, sect. vii.) would require an elaborate explanation which would trespass too much on your space, and I must be content to say that we can follow in that work the gradual introduction of the 'Yh' of Chöu into the various states of China, previously to which the quotations (from the older 'Yh' as it was before the editorial work of Wen Wang) often differ from the modern text.

Dr. Legge gives a more personal direction than I did to my criticism on the meanings purposely made up for the 'Yh King.' This I regret, but I cannot help it, as he has reproduced these meanings in his interpretation, selecting amongst the innumerable suggestions of commentators such renderings as would best suit the line he has followed, and he has not thought it necessary to relieve himself from responsibility by foot-notes, always required in such cases, and especially in publishing an interpretation without text. I have not said that he has introduced made-up meanings which have not been suggested by one or other of the Chinese commentators. But there is a gap between a suggestion of an uncritical native commentator and a scientific proof. The great danger in a version of the 'Yh'—a danger which Dr. Legge has not avoided—is to translate the book by the book itself; I mean, to translate the characters by the meanings made up for the special cases which are supposed to occur in the 'Yh.' This is the principle of interpretation by guessing at the meaning—a principle which may be good amongst the utterly uncritical Chinese scholars, but which cannot be considered of any value for European science.

I do not intend to follow Dr. Legge in his rather personal remarks on my statement about *t'ien*, "heaven," translated by himself as meaning "shaving the head." This statement was made in a few words, as I did not think it necessary to give there any explanation, quoting only one instance out of about 250 of similar licences. I was perfectly aware of the attempts at interpretation made by some commentators as well as in K'ang-Hi's dictionary, and the quotations given by Dr. Legge fully justify my statement. The only authority quoted by K'ang-Hi's dictionary is this same disputed passage of the 'Yh'; and the 'Tze-Wei,' the 'Ching-tze Tung,' and the 'King-tsih-chuen Ku' cannot quote any other proof. Dr. Legge tells us how this meaning has been made up when he writes: "The context required that there should be instead of it [*t'ien*] a character signifying some infliction of pain or punishment." In this way arise so many contrived and forced interpretations: they are required by the context! But this implies the understanding of this context, which cannot be understood as a continuous sentence! The explanation which we want is not the meaning of *kwan*, but why *t'ien* should be read so; and, again, why it should be by preference assimilated to this word, and not assimilated instead to *tsien*, "pierced," or to *san*, "shaving the whiskers," which have been proposed by commentators. The causes of these different attempts at interpretation are most likely to be found in a phonetic fact. The commentators being unable to make out *t'ien*, "heaven," with the supposed meaning of the context, have tried to read this word phonetically, and according to the temporary homonymy of his native dialect each has suggested a corresponding name of a punishment inflicted on the head or the face, and every one of these suggestions has been accepted by a number of followers. The selection is an arbitrary one, and each of these meanings attributed to *t'ien* is a made-up one, which has no other proof or support than this one passage of the 'Yh King,' which does not require such a licence. The ordinary meaning, "heaven," is perfectly appropriate, as will be seen in my version. It is, however, on this simple instance that Dr. Legge is prepared to stand or fall.

With your permission I will quote at random one example of a line of the 'Yh' in Dr. Legge's translation and in my version. It is the fourth line of the twenty-second chapter. Dr. Legge translates: "(The line) shows one looking as if adorned, but only in white. As if (mounted on) a white horse, and furnished with wings (he seeks union with the subject of the first line), while (the intervening third pursues), not as a robber, but intent on a matrimonial alliance" (see "Sacred Books of the East," vol. xvi. p. 104). My version: "*Pi* (is the) same as white, as white horse's ornaments, as a square basket, to plunder, to do mischief, conjugal union." (All these meanings are proper to the character *pi*, and were afterwards, when necessary, specialized at the reform of writing by the addition of determinatives.) So twelve Chinese characters are rendered by twenty-one in my version and by forty-six in Dr. Legge's translation. Really is not this asking too much from the confidence of readers who are not Sinologists?

I am afraid that Dr. Legge could repeat to-day the following lines he wrote ten years ago: "So far as I have attained hitherto in the study of the 'Yh King' and the ancient divination of the Chinese, I have failed to understand their principles—if there be any principles in them." (See "Chinese Classics," vol. v. proleg., p. 143.) Let me, however, express the hope that the seven years spent by Dr. Legge in his unsuccessful translation of the mysterious classic will not be lost altogether, as they will prove unmistakably that this book cannot be understood on the Chinese principles. The fact that two thousand Chinese scholars have in vain worked upon it speaks for itself; and as by following *the Chinese line* they have produced so complete a failure, such senseless and ridiculous interpretations, but one thing results, namely, that the Chinese line is not the one to follow. The attempts on a part or the whole book of P. Premare, P. Couplet, P. Visdelou, P. Regis, Dr. Otto Piper, Herr Adolf Helfferich, Canon M'Clatchie, M. P. L. F. Philastre, P. Zottoli, and Dr. Legge are from the European side a not less important warning.

TERRIEN DE LACOUPERIE.

*** We cannot insert any more letters on this subject.

THE COMING PUBLISHING SEASON.

MESSRS. KEGAN PAUL, TRENCH & Co.'s announcements include 'Reminiscences of Court and Diplomatic Life,' by Lady Bloomfield,—'The Life and Times of St. Anselm,' by Martin Rule,—'Life of Antonio Rosmini-Serbati,' by G. S. Macwalter,—'Diaries and Letters of Philip Henry' (father of the commentator), by M. H. Lee,—'The Duke of Berwick, Marshal of France,' by Col. Townshend,—'John Duncan, Weaver and Botanist,' by William Jolly,—'Free Trade Speeches of the Hon. C. P. Villiers,'—'Demerara Papers,' by Everard F. im Thurn,—'Notes of a Visit to Russia in 1840-41,' by the late William Palmer, selected and arranged by Cardinal Newman,—'The Elements of Military Administration,' by Capt. Buxton,—and a new edition of Miss Ellice Hopkins's 'Work amongst Working Men.' In philosophy and theology their list includes:—'Nature and Thought, an Introduction to a Natural Philosophy,' by St. George Mivart,—'The Greek Philosophers,' by A. W. Benn,—'The Origin of Ideas,' translated from the 'Nuovo Saggio' of Antonio Rosmini-Serbati,—'Notes on Evolution and Christianity,' by J. F. Yorke,—'The Evolution of Christianity,'—'Unconscious Testimony; or, the Silent Witness of the Hebrew to the Truth of Historical Scriptures,' by C. F. Hutton,—'A Synopsis of Moral and Ascetical Theology,' arranged by the late Rev. James Skinner,—'The Chair of St. Peter,' by John Nicholas Murphy,—'Many Voices,' extracts from religious writers from the first to the sixteenth century,—'Romanism, Protestantism, Anglicanism: a Layman's View of some Questions of the Day,' by Oxoniensis,—'A Critical Commentary on the Revised Version of the New Testament,' by the Rev. W. A. Osborne,—a volume of sermons by the Rev. J. H. Thom, of Liverpool,—and a volume by the late H. T. Adamson on 'The Millennium.' The new volumes of "The Parchment Library" will be 'The Christian Year'; 'Gay's Fables,' edited by Mr. Austin Dobson; a selection of Shelley's letters, by Mr. Richard Garnett; Mr. Mark Pattison's annotated edition of Milton's sonnets; the earlier poems of Mr. Tennyson; and 'French Lyrics,' selected and arranged by Mr. Saintsbury. To these may be added the first volume of a new series, to be produced in a similar style, but on larger paper; this introductory volume is to consist of a selection from the writings of living English poets. In poetry are announced:—'River Songs and other Poems,' by Arthur Dillon,—'Birds and Babies,' by Mrs. Coxhead,—'The Garden of Fragrance,' a complete translation of the 'Bostán' of Sádi, from the Persian by Dr. G. S. Davie,—'David Rizzio and other Tragedies,' by the author of 'Ginevra,' &c.,—Lessing's 'Nathan the Wise,' translated by Eustace K. Corbett,—and 'Hymni Usitati Latine Redditi,' by Mr. Justice Lawson. In the "Pulpit Commentary" series will appear two volumes on St. Mark's Gospel, edited by Dean Bickersteth; and 'Jeremiah,' by the Rev. T. K. Cheyne. In the "International Scientific Series" will be published translations of Ribot's 'Diseases of Memory' and of N. Joly's work on 'Man before Metals'; Robert H. Scott's 'Elementary Meteorology'; and Prof. Sheldon Amos's 'Science of Politics.'

Messrs. W. H. Allen & Co.'s list includes 'The Founders of the Indian Empire: Vol. I. Lord Clive,' and 'The Decisive Battles of India,' by Col. Malleson,—'Imagery of Indian Days,' by J. W. Sherer, C.S.I.,—'Wanderings in Baluchistan,' by General Sir C. M. McGregor, C.S.I.,—'The English in India,' from the French of E. D. Valbezen,—'Diplomatic Study of the Crimean War,' translated from the original as published by the Russian Foreign Office,—'Queer People,' from the Swedish of Leah, by Albert Alberg,—'The Jesuits,' translated from the German of Theodor Grussinger,—'Franz Liszt, Artist and Man,' by L. Ramann, translated from the German,—'Under Orders,' a novel by the author of 'The Invasion of India from Central Asia,'—'Accented Five-figure Logarithms,' arranged and accented by Lowis D'A. Jackson,—'Gujarat and the Gujaratis,' by Behrámjí M. Malabárí,—'The Romantic Land of Hind,' by Il Mus-Annif (Capt. C. F. Mackenzie),—'Flotsam and Jetsam: Wreckage and Spun Yarn,' by T. G. Bowles, Master Mariner,—'The Orders of Chivalry,' compiled by Major J. H. Lawrence-Archer,—'Life in India,' by Major the Hon. Charles Dutton,—'Reminiscences of an Indian Official,' by General Sir Orfeur Cavenagh, K.C.S.I.,—'Misterton; or, Through Shadow to Sunlight,' by Unus,—'An Improved Principle of Single-Entry Book-keeping,' by D. Sherriff,—'Ernest Madement: a Tale of Wiltshire,' by Major R. D. Gibney,—'The Military History of the Madras Engineers and Pioneers,' Vol. II., compiled by Major H. M. Vibart,—Heine's 'Book of Songs,' translated into English verse,—'Hunting Sketches,' by R. Finch Mason,—'My Recollections of the Afghan Campaign,' by Dr. J. Duke,—'Memoirs of the late 64th (2nd Staffordshire) Regiment,' by H. G. Purdon,—

'The Spas of Europe,' by Dr. H. J. Hardwicke,—and 'A History of London Goldsmiths and Plate-Workers,' by William Chaffers.

Messrs. Trübner & Co. announce for publication in the autumn: 'Emerson at Home and Abroad' and 'Travels in South Kensington, with Notes on Decorative Art and Architecture in England,' by M. D. Conway,—'The Bhagavadgîta,' translated from the Sanskrit by J. Davies,—'The Philosophy of the Upanishads,' by A. E. Gough,—'Manava-Dharma-Castra,' translated by A. C. Burnell,—'Udânavarga, the Northern Buddhist Version of the Dhammapada,' translated from the Tibetan by W. W. Rockhill,—'The Vazir of Lankuran,' a Persian play, text, translation, notes, and glossary by W. H. D. Haggard and Guy Le Strange,—'Report on the Buddhist Cave Temples and their Inscriptions,' by J. Burgess, LL.D.,—'A Guide to Modern Greek,' by E. M. Geldart,—'Contested Etymologies in the Dictionary of the Rev. W. W. Skeat,' by Hensleigh Wedgwood,—and 'On Mr. Spencer's Unification of Knowledge,' by Malcolm Guthrie. Messrs. Trubner & Co. have also the following works in preparation:—A translation of Hartmann's 'Philosophy of the Unconscious,' by W. C. Coupland,—Schopenhauer's 'World as Will and Idea,' translated by Messrs. Haldane and Kemp,—'The Modern Languages of Africa,' by R. N. Cust,—'An English-Persian Dictionary,' by Prof. Palmer,—'Kalila wa Dimnah,' Syriac text, with introduction and notes by Prof. W. Wright, of Cambridge,—the third volume of Mr. Fausböll's edition of the 'Jataka,' with its commentary, in Pali,—the 'Majjhimanikâyo,' the Pali text of one of the principal books of the Buddhist canon, edited by V. Trenckner,—a second edition of the late Thomas Wright's Anglo-Saxon and Old English Vocabularies, with index by Prof. R. Wülcker, of Leipzig,—W. F. Poole's 'Index to Periodical Literature,'—also simplified grammars of the following languages:—Albanian, by Wassa Effendi, edited by Sir Patrick Colquhoun; Assyrian, by Prof. Sayce; Basque, by W. van Eys; Danish, by Miss Otté; Modern Greek, by E. M. Geldart; Hungarian, by J. Singer, of Buda-Pesth; Malagasy, by Dr. Parker, of Antananarivo; Modern Persian, by A. Finn, of Teheran; Polish, by W. R. Morfill; Roumanian, by M. Torceanu, of Bucharest; Sinhalese, by B. Gunasekara and H. C. R. Bell; Swedish, by Miss Otté; and Turkish, by J. W. Redhouse.

Messrs. Rivington have nearly ready 'Lectures and other Theological Essays,' by the late Dr. J. B. Mozley,—a translation, with a preface by Canon Liddon, of Antonio Rosmini's 'The Five Wounds of the Church,'—the Rev. P. G. Medd's Bampton Lectures for 1882,—'Thoughts upon the Liturgical Gospels for Sundays,' by Dean Goulburn,—a continuation of 'Practical Reflections on Every Verse of the Holy Gospels,' containing Acts to Revelation,—'Selections from the Writings of Canon Liddon,'—'The Witness of the Passion,' by Canon Knox Little,—'Meditations, Poems, &c., for Invalids,' edited by the Rev. M. F. Sadler,—Vol. III. of the Bishop of Lincoln's 'Church History,' bringing the history down to the Council of Chalcedon, A.D. 451,—a series of miniature volumes of selections from various authors, by Mrs. Sidney Lear, entitled 'Sunrise,' 'Noon,' and 'Sunset,'—'Early Influences,' with a preface by Mrs. Gladstone,—an abridged edition of the 'Life of Bishop Gray of Capetown,'—a large-type edition in one volume of Mrs. Sidney Lear's 'Precious Stones,'—and other new editions.

Messrs. Ward, Lock & Co.'s list includes the following:—'Popular Scientific Recreations,' translated from the French of Gaston Tissandier,—'Land, Sea, and Sky,' translated from the German of Dr. Kerman, J. Klein, and Dr. Thomé,—'Household Medicine,' edited by George Black,—'Epochs and Episodes of History,'—'Holy Thoughts on Holy Things,' selected by the Rev. E. Davies, D.D.,—'The Thrift Book: a Cyclopædia of Cottage Management and Domestic Economy,'—Vol. I. of 'The Illustrated History of the World for the English People,'—Vol. I. of 'Amateur Work Illustrated,' edited by the author of 'Every Man His Own Mechanic,'—Vol. II. of 'The Universal Instructor,'—'Art Needlework,'—'Cradle Songs of many Nations,'—'Sugar Plums' ("The Children's Picture Annual," 1882),—'The Bible Student's Handbook,'—'The Temperance Daily Text Book,' compiled by Dr. J. W. Kirton,—Kirton's 'School and Temperance Dialogues' and 'Popular Dialogues,'—'The Handbook of Plain and Fancy Needlework,'—'Good Plain Cookery,' by Mary Hooper,—'Common-sense Clothing,' by Edith A. Barnett,—'Our Servants,' by Mrs. Eliot James,—and new editions of Tom Hood's Works, in eleven volumes; Wordsworth's Poetical Works, in six volumes; Rollin's 'Ancient History'; Hallam's 'Literature of Europe'; and D'Israeli's 'Curiosities of Literature.'

Messrs. De La Rue & Co.'s illustrated publications will be: 'Monthly Maxims,' by Robert Dudley,—'The May-Pole,' with music,—and a new translation of 'Rumpelstiltskin.'

Messrs. Wells Gardner, Darton & Co. announce: 'The Churchman's Almanac for Eight Centuries,' by the Rev. W. Allen Whitworth,—'Pictures from the Poets' and 'More Outline Pictures for the Little Ones to Colour,' by T. Pym,—'One of a Covey,' by the authors of 'Honor Bright,' &c.; and 'Left Till Called For,' by the same authors,—the "Prize" Bible,—'Out of the Way,' a temperance tale, by Helen L. Taylor,—'My Favourite Story Book,'—'A Week spent in a Glass-Pond,' by Mrs. Ewing,—and 'The Offices and Litany,' by the Rev. Evan Daniel.

Mr. John Hodges's new books will be: Vol. II. of 'Lights and Shadows of Every-day Life,' containing six Christmas stories, edited by Agnes Stewart,—'Advice to the Young,' translated and adapted from Arvisenet by W. B. Caparn,—and the following novels in "The Soho Library": 'Reuben Wilkins, Farmer and Parson,' by the author of 'Mr. Gray and his Neighbours'; 'Life in an Unknown Land; or, Five Years with the Jesuits'; 'Michael de la Pole'; and 'The Step-daughter's Dowry,' by Agnes Stewart.

Messrs. George Waterston & Sons have in the press 'Details from Italian Buildings, chiefly Renaissance,' from drawings to scale made from the originals by John Kinross,—and 'Three Blind Mice, with Mewsic and Words from an Early Edition,' illustrated by Charles A. Doyle.

Messrs. Macniven & Wallace, of Edinburgh, expect to publish during the winter the following new volumes of "The Household Library of Exposition":—'The Galilean Gospel,' by Prof. A. B. Bruce, D.D.; 'Ecclesiastes,' by the Rev. J. Parker, D.D.; 'The Lamb of God,' by the Rev. W. R. Nicoll; and 'The Temptation of Christ,' by the Rev. G. S. Barrett. The same publishers also announce a new series of volumes, to be entitled "Evangelical Classics." The first volume will be on Leighton, edited by the Rev. W. Blair, D.D., to be followed by 'Bunyan,' by the Rev. W. Howie Wylie.

Literary Gossip.

Mr. Swinburne's 'Tristram of Lyonesse' has passed into a second edition, which will appear in about a fortnight.

Messrs. Longman & Co. are about to publish an important work by the late Sir William Stirling-Maxwell on the life of Don John of Austria. Attracted to this subject while occupied with the preparation of his 'Cloister Life of Charles V.,' the author bestowed upon it almost incredible pains for nearly thirty years. The MS., which was recast and rewritten more than once, was privately printed, and further corrections and additions were afterwards made. To illustrate the work he got together a collection of portraits, engravings of statues, gems, ships, weapons, and alphabets, which may be regarded as unique. The whole of this great collection will be used in the illustration of the large-paper edition, which will be issued in two volumes folio, and of which only one hundred and fifteen copies will be printed. Another edition will be published subsequently in the usual library form, at a price which may render the work accessible to readers generally.

Messrs. Kegan Paul, Trench & Co. will publish early in October a collected edition of the poetical works of Mr. Lewis Morris. The edition, which will be at a considerable reduction in price, will be in three volumes, obtainable separately, 'The Epic of Hades' being the second volume of the series.

Mr. Loftie, who has been engaged for some years past upon a history of London, has just brought his task to a conclusion. Part of the work is already in print and will be published during the ensuing season by Mr. Stanford. The first volume will deal with the City only. Mr. Loftie is the first to make use of the records printed by the late Mr. Riley, and to weave them into a continuous narrative of the origin and growth of the municipality. In the second volume the history of Westminster will be given.

The first part of Mr. Anthony Trollope's new novel 'The Land Leaguers,' having reference to Irish life of the present time, will appear in *Life* on November 15th.

A second edition of Mr. Alexander Ireland's 'Memoir of Emerson' will shortly be published by Messrs. Simpkin, Marshall & Co. The volume will contain much new matter, including an *éloge* by Dr. Oliver Wendell Holmes, and will be enriched by three autotype portraits of Emerson.

A Correspondent writes:—

"Some members of my family have discovered a box containing letters to, and MSS. by, Thomas Wedgwood, the friend of Coleridge and Godwin. We should be grateful if any one who has MS. or information tending to throw light on the history of Thomas Wedgwood (a person who excited some attention among his contemporaries) would entrust it to us. Mr. Arthur Wedgwood (34, York Street, Portman Square) will take charge of and faithfully return whatever may be entrusted to him."

The system adopted by retail booksellers of selling new books at less than the published price is by no means a novelty. When the first impression of the forty-eight volume edition of the Waverley Novels was in course of publication, about fifty years ago, at 5*s.* per volume, copies were sold to the public at 3*s.* 10*d.* each by a bookseller in the neighbourhood of the Bank of England. His name, we believe, was Owen.

Mr. S. Waddington's critical and biographical study of Arthur Hugh Clough, which will be published by Messrs. G. Bell & Sons about the end of October, will contain extracts from various papers throwing light on Clough's life and work by Mr. M. Arnold, the late Dean of Westminster, Charles Kingsley, Mr. R. H. Hutton, Mr. F. T. Palgrave, Dean Church, Prof. Masson, Mr. W. M. Rossetti, Mr. T. Arnold, Mr. William Allingham, Mr. T. Hughes, Prof.

XUM

Sellar, Mr. C. E. Norton, Mr. J. A. Symonds, and others.

Messrs. Eyre & Spottiswoode are about to publish a companion volume to 'The Teacher's Bible.' It is to be called 'The Teacher's Prayer Book.' Dr. Alfred Barry is the editor.

Messrs. Hodder & Stoughton will issue in October a popular edition of Mr. G. Barnett Smith's 'Life of Mr. Bright.'

The new edition of Mr. Cheyne's 'The Prophecies of Isaiah' will shortly be completed by the issue of the second volume. The commentary has been revised, and many additions of some interest have been made, chiefly in the "Critical Notes" and "Last Words." Account has been taken in this volume of Dr. Robertson Smith's recent work, 'The Prophets of Israel.' The author's critical and theological position remains unaltered. Messrs. Kegan Paul, Trench & Co. are the publishers.

The cheap edition of Mr. Thayer's book, 'From Log Cabin to White House,' consisting of 10,000 copies, has been entirely taken up by the trade, and another 10,000 will be issued from the press immediately.

Messrs. Tinsley Brothers will publish next week a new edition, in three volumes, of 'Proper Pride.'

A 'History of the Printing Trade Charities' will be published in October by Messrs. W. H. Allen & Co. It is the work of Mr. J. S. Hodson, secretary to the Printers' Pension Corporation.

'Winners in Life's Race; or, the Great Backbone Family,' will be the title of a new work by Miss Arabella B. Buckley, which is shortly to be issued by Mr. Stanford. The book will in some measure form a sequel to Miss Buckley's previous volume, 'Life and her Children,' which treated only of the invertebrates.

Messrs. Remington have in preparation a new edition of Mr. Barlow's 'A Life's Love.' It will contain a selection of sonnets from several of Mr. Barlow's former volumes and also some new poems.

Mr. William Kermode will issue next week, through Messrs. Trübner, a work on Natal.

Messrs. Field & Tuer will publish immediately 'Glass in the Old World,' by Miss M. A. Wallace Dunlop.

The October number of the *Antiquary* will contain 'Extracts from the Gild Book of the Barber-Surgeons of York,' by Mr. J. T. Bent, and 'The Preston Gild,' by Mr. G. L. Gomme.

Aunt Judy's Magazine will in future be published by Messrs. Bemrose & Sons.

The catalogue of the fourth portion of the Sunderland Library is now ready. The ten days' sale will begin on November 6th.

Our readers will be surprised to hear that the popular Lancashire book known as Roby's 'Traditions of Lancashire' was not written by Mr. Roby. He employed the late Mr. Jerdan, of the *Literary Gazette*, to do it or get it done. Crofton Croker wrote one or two of the stories, the main part of the book being, we believe, Mr. Jerdan's own work.

Mr. William Charles Bonaparte Wyse, of the Manor of St. John's, Waterford, younger son of the late Sir Thomas Wyse and the Princess Letitia Bonaparte, has just been appointed an Officer of the Order of the Crown of Roumania by his Majesty King Charles in recognition of his Filibre reputation.

The London Society for the Extension of University Teaching will open its seventh session in October. Lectures will be delivered at twenty-one centres.

The fourth session of the Aristotelian Society will open on October 9th with an address by the president, Mr. Shadworth H. Hodgson.

The sixtieth session of the Birkbeck Literary and Scientific Institution will commence on Monday next.

Mr. William Paterson, of Edinburgh, has in preparation a new edition of Shakspeare, to be published in eight large post octavo volumes, the first and second volumes to be ready in November. The impression will be limited to 775 copies, each of which will be numbered. The text will be printed verbatim from the folio of 1623, the spelling and punctuation of which will be adhered to. A number of etchings from the designs of M. Pille, which are now being prepared in Paris, will be given.

The Lowell Institute has invited Prof. Max Müller to deliver a course of lectures on the science of language at Boston in 1883.

M. Maspero was to leave Paris on Sunday to return to his duties at the Museum of Boulaq.

It is said that the family of P. J. Proudhon have recently discovered a manuscript of his bearing the title 'Le Césarisme et l'Histoire.' They propose to publish it.

Negotiations for international copyright between France and Germany, which have been going on for some time, are approaching a satisfactory conclusion. It is not intended to conclude a copyright convention between the two countries. The design is to arrive at an agreement for uniform legislation in each country, so as to determine the rights of French authors in Germany and of German authors in France. It is proposed that the term of copyright should extend over the author's lifetime and for thirty years after his death.

Dr. Sanders's supplement to his great 'Wörterbuch der Deutschen Sprache' is rapidly approaching completion. Only a few parts more have to appear, and Germany will possess, for the first time, a dictionary which for excellence and practical usefulness will hold its own even when the gigantic 'Wörterbuch' founded by the brothers Grimm is completed. The same author's 'Wörterbuch der Hauptschwierigkeiten der Deutschen Sprache,' which ought to be in the hands of every advanced student of German, has just appeared in a thirteenth enlarged edition.

A new Education Bill for India is to be the result of the labours of the Indian Education Commission. The report of the Commission will be sent in to Government next spring, and the new Bill will be considered by the Legislative Council when at Simla.

Messrs. Hansard's Monthly List of Parliamentary Papers for August contains 51 Reports and Papers, 22 Bills, and 44 Papers by Command. Under the first head will be found a Return of the French Tariff; the Finance Accounts of the United Kingdom for 1881–1882; the Report and Evidence of the Select Committee on Railways (Rates and Fares); the Report of the Conservators of the River Thames for the Year 1881; and the translation of a Report as to Oyster Culture in France. The Papers by Command comprise a Return of Accidents on Railways during January, February, and March, 1882 (with plans); the Twenty-ninth Annual Report of the Science and Art Department; the Twenty-eighth Report of the Postmaster-General; the Twenty-fifth Report of the Inland Revenue Commissioners; and Reports by Mr. West on the Pittsburg Coal-fields and Iron Industry, and on the Extension of the Railway System in the United States.

We record the death of Mr. Evelyn Philip Shirley, F.S.A. He was best known as the author of the 'Noble and Gentle Men of England,' 'Stemmata Shirleiana,' and the 'History of the County of Monaghan.'

SCIENCE

Mathematical and Physical Papers. By Sir William Thomson. Collected from different Scientific Periodicals from May, 1841, to the Present Time. Vol. I. (Cambridge, University Press.)

This volume is a fitting sequel to the collection of electrical and magnetic papers by the same distinguished author published a few years since, and will be welcomed by a large circle of scientific readers, to whom the original scattered fragments are for the most part only known at second hand, by numerous allusions which show them to have been important materials in the building up of the science of the present day. The papers are reproduced verbatim as they appeared, with the dates stated, and with here and there a more recent comment distinguished by brackets. They are arranged in chronological order, except that papers on the same subjects are brought together. The table of contents includes not only the papers actually contained in this volume, but also those which were contained in the 'Papers on Electricity and Magnetism' so far as the period 1841–1853 is concerned. It forms a complete list of all the author's papers of that period. The earliest of these show by the dates affixed, but not by any internal evidence, that they were produced at an age usually associated with the upper forms of schools, and it is interesting to see that the first five of them relate to a subject which in maturer years has received a large amount of the author's attention, namely, Fourier's series and their application to the flow of heat in conductors. These are followed in the present volume by some papers relating to solid geometry.

A paper of date 1847, 'On a Mechanical Representation of Electric, Magnetic, and Galvanic Forces,' contains, in small compass, a clear demonstration of the exact analogy which exists between certain definite states of distortion, in an incompressible elastic solid, and the forces due respectively to electro-static attraction, magnetic attraction, and electro-magnetic attraction. The investigation of this analogy was suggested

by Faraday's views as to the nature of these forces, and is completely consistent with them; Faraday having rejected the notion of force acting at a distance from its source without affecting the intervening medium, and having maintained that all cases of apparent "action at a distance" were really cases—just as much as pulling at a string or propagating an undulation—of the transmission of a forced condition through the intervening medium.

The papers which will probably be examined with most attention are those which relate to the 'Dynamical Theory of Heat.' The earliest of these was read to the Royal Society of Edinburgh in January, 1849, and consists of an exposition of Carnot's theory, followed up by a comparison of the efficiency actually attained in some of the best steam engines with the best results attainable according to this theory. The doctrine of mutual transformation of heat and mechanical energy was not at this time established. Carnot adopted as his fundamental axiom a proposition inconsistent with it—a proposition implying that a steam engine gives out as much heat as it takes in. Carnot, however, himself hints at the doubtfulness of this assumption, and our author, with similar caution, says:—

"The fundamental axiom adopted by Carnot may be considered as still the most probable basis for an investigation of the motive power of heat; although this, and with it every other branch of the theory of heat, may ultimately require to be reconstructed upon another foundation when our experimental data are more complete. On this understanding, and to avoid a repetition of doubts, I shall refer to Carnot's fundamental principle in all that follows as if its truth were thoroughly established."

In his next paper to the Royal Society of Edinburgh on this subject, of date March, 1851, his attitude is no longer doubtful, and he accepts the doctrine of the mutual convertibility of mechanical work and heat as firmly established. The opening paragraph describes Sir Humphry Davy's proof of the non-materiality of heat by his experiment of melting two pieces of ice by rubbing them together, and a foot-note to the third paragraph quotes Joule's announcement that he had "obtained one degree of heat per lb. of water from a mechanical force capable of raising 770 lb. to the height of one foot," this announcement having been made in August, 1843. The experiments of Mayer on the friction of fluids are also quoted, and respecting his priority as a discoverer the following remark is made:—

"Considering it as thus established, that heat is not a substance, but a dynamical form of mechanical effect, we perceive that there must be an equivalence between mechanical work and heat, as between cause and effect. The first published statement of this principle appears to be in Mayer's 'Bemerkungen über die Kräfte der unbelebten Natur,' which contains some correct views regarding the mutual convertibility of heat and mechanical effect, along with a false analogy between the approach of a weight to the earth and a diminution of the volume of a continuous substance, on which an attempt is founded to find numerically the mechanical equivalent of a given quantity of heat."

Many references occur in subsequent papers to "Mayer's hypothesis," which is substantially the same as the "false analogy" here alleged, and investigations are given of the nearness of its approach to the truth. The hypothesis is that when a gas is compressed its gain of sensible heat is the exact equivalent of the mechanical work done in compressing it. This hypothesis is very nearly true. Its departures from accuracy are about as great as those which are known to exist in the case of "Boyle's law," and evidence is given in some of the papers that the departures of different gases from Boyle's law are proportional (in a broad sense) to their departures from Mayer's hypothesis.

A great deal of discussion occurs respecting the explanation of the well-known fact that steam escaping from the safety valve of a high-pressure boiler does not scald the hand; and the discussion wears a somewhat paradoxical aspect, for the author sets himself to explain, not the low temperature of the steam, as an ordinary mortal would do, but its high temperature; for he says if it were cooled by escaping it would scald, inasmuch as some of it would condense into drops of hot water, and the reason of its not scalding must be that in some way or other it becomes superheated, and thus remains dry. Very elaborate experiments were conducted by the author in conjunction with Dr. Joule to throw light on this point. They consisted chiefly in forcing air and other gases through porous plugs, and observing the amount of heat imparted to the gases by this treatment. Preliminary experiments were made by forcing air through a single aperture.

"Two effects were anticipated, one of heat arising from the *vis viva* of air in rapid motion, the other of cold arising from dilatation of the gas and the consequent conversion of heat into mechanical effect. The latter was exhibited by placing the bulb of a very small thermometer close to a small orifice through which dry atmospheric air, confined under a pressure of eight atmospheres, was permitted to escape. In this case the thermometer was depressed 13° C. below the temperature of the bath. The former effect was exhibited by causing the stream of air as it issued from the orifice to pass in a very narrow stream between the bulb of the thermometer and a piece of gutta-percha tube in which the latter was enclosed. In this experiment, with a pressure of eight atmospheres, an elevation of temperature equal to 23° C. was observed. The same phenomenon was even more strikingly exhibited by pinching the rushing stream with the finger and thumb, the heat resulting therefrom being insupportable."

This and other experiments led to the inference

"that a body round which air is flowing rapidly acquires a higher temperature than the average temperature of the air close to it all round. The explanation of this conclusion probably is, that the surface of contact between the air and the solid is the locality of the most intense frictional generation of heat that takes place, and that consequently a stratum of air round the body has a higher average temperature than the air further off; but whatever the explanation may be, it appears certainly demonstrated that the air does not give its own temperature even to a tube through which it flows, or to a wire or thermometer bulb completely surrounded by it. .....Accordingly, although it has been a practice in general undoubtingly followed, to whirl a thermometer through the air for the purpose of finding the atmospheric temperature, we have tried and found, with thermometers of different sizes and variously shaped bulbs, whirled through the air at the end of a string, with velocities of from 80 to 120 feet per second, temperatures always higher than when the thermometers are whirled in exactly the same circumstances at smaller velocities. By alternately whirling the same thermometers for half a minute or so, fast, and then for a similar time slow, we have found differences of temperature sometimes little if at all short of a Fahrenheit degree. By whirling a thermo-electric junction alternately fast and slow, the same phenomenon is most satisfactorily and strikingly exhibited by a galvanometer."

Among other important novelties in these papers is the proposal of the now well-known "absolute scale of temperature," the word "absolute" being used to denote independence of the particular selection of any one thermometric substance or combination of substances for apportioning the degrees of the scale. The absolute scale is based upon Carnot's theory as corrected in accordance with our knowledge of the equivalence of heat and mechanical effect, and is defined by the following statement:—

"If a physical system be subjected to cycles of perfectly reversible operations, and be not allowed to take in or to emit heat except in localities at two fixed temperatures, these temperatures are proportional to the whole quantities of heat taken in or emitted at them respectively during a complete cycle of the operations."

If the difference between the ordinary freezing point and boiling point of water be divided into 100 degrees, this scale makes the freezing point 273° and the boiling point 373°, and is nearly in accordance with those other definitions which make the temperature of a gas proportional to its volume at constant pressure, or to its pressure at constant volume.

Another subject the history of which can be traced in these papers is the convection of heat in some cases by positive and in others by negative electric currents. A paper from the *Proceedings* of the Royal Society of Edinburgh (December, 1851) announces the theoretical conclusion (see p. 319 of this volume)

"that an electric current produces different thermal effects, according as it passes from hot to cold, or from cold to hot, in the same metal."

And at p. 460 is a paper from the *Proceedings* of the Royal Society (May, 1854) where the reasoning is somewhat more fully given, together with an outline of the prolonged experimental investigation which at last confirmed it in an unexpected manner. Three solutions had been foreseen as possible, and of these the one which had been thought the most improbable turned out to be the true one.

Looking back from our present standpoint, it seems strange that communications of so much importance should have been relegated to *Proceedings* and not published in the *Transactions* of the two societies in question. The volume contains no index, but in other respects is convenient for reference. Occasional interpolations show the author's present views upon the doubtful points discussed.

GEOGRAPHICAL NOTES.

We have received from Mr. Stanford maps of Egypt, of the Nile Delta with plans of Port Said, Ismailia, Suez, and Cairo, and a large-scale map of the seat of military operations in Lower Egypt; and from Messrs. G. W. Bacon & Co. a Bird's-Eye View of Egypt, looking west from the Suez Canal. Though the rapidity of events

has already taken away a good deal of the interest of these maps, they may still be useful in reading the detailed despatches which are beginning to arrive.

Mr. T. Ruddiman Johnston's *School Map of Africa* (Edinburgh), on a scale of 125 miles to the inch, may be very fairly described as a slightly amended copy of the three-sheet map of Africa in Stieler's 'Hand Atlas.' The amendments, however, only extend to a few points in Southern Africa, and are far less in extent than we have a right to expect. Thus far Mr. Johnston can hardly be blamed, for the map which he took for his guide is acknowledged to be a good one. We blame him, however, for a very injudicious selection of names, and for the introduction of errors not to be found in his original. As an instance of the former we may refer to the indication of the late King Munza's residence and the omission of the well-known tribe of the Monbuttu, of which he was chief. As to errors, we can point out the altitude of Kilimanjaro, which is given as 20,000 feet, when in reality it only amounts to 18,681 feet; the incorrect delimitation of the British colonies on the Gold Coast; and the drainage of Lake Leopold into Lake Tanganyika.

Mr. Stanley has by this time probably arrived at Brussels. In the mean time it does not appear as if it was the intention of the International African Association to give up the work on the Congo which has been carried on so indefatigably by Mr. Stanley during five years, for quite recently Dr. Allard and M. Haneuse, of the corps of Engineers, have left for Africa. The Akassa, a vessel despatched by the Compagnie Belge de Commerce Africain to the Congo, is stated to be doing a good trade.

The African Committee of the Lisbon Geographical Society has sanctioned Senhor Machado's scheme for sending a geographical and geological expedition into the province of Mozambique. The committee insists more especially upon the desirability of showing the Portuguese flag on Lake Nyassa, which was discovered by the Portuguese, and ought to be formally declared to be part of the Portuguese possessions in Africa.

M. Pierre François Coquereau, of Bordeaux, is organizing an expedition for the scientific exploration and commercial and industrial development of Futa-Jalon in Senegambia. It is proposed to establish a French colony or factory at Timbo, the capital.

Reference is made in the report of M. Lessar's survey to the previous visit to Merv of a Russian caravan. As no particulars of this visit have yet appeared, it may be interesting to state that the caravan of the merchant Gospodin Koushin was the first to enter Merv, in February of the present year. Two Russian officers, Lieuts. Alikhanoff and Sokoloff, accompanied it.

Petermann's *Mittheilungen* for September contains two maps of high interest, both accompanied by valuable articles. The first of these maps illustrates Dr. Emin Bey's explorations in the countries of the Madi and Shuli, to the east of the Upper Nile; the other, by Dr. M. Staub, is entitled "A Phænological Map of Hungary," and embodies a vast amount of research. It is designed to exhibit the period of flowering throughout the country, Arva-Váralja, a village in the Carpathians, 1 800 ft. above the level of the sea, being adopted as the point of comparison. It thus appears that the flowering takes place at Kesckement, in the centre of the plain of Hungary, forty-three days earlier than at Arva-Váralja, and one day earlier than at Fiume on the Adriatic. Among the other papers in this number we may mention E. Nagel's account of a trip to the gold-fields of Matabili Land in 1876. He travelled in the company of Mr. Charles W. Clarke and Mr. C. J. Nelson.

The *Deutsche Geographische Blaetter* of the Bremen Geographical Society publishes further reports by Dr. Arthur Krause on excursions from Chilkoot; an interesting paper by Dr. Möbius, on the influence which food exercises upon the geographical distribution and the migration of animals; and a description by Count Waldburg-Zeil of the voyage of the Louise to the Yenisei in 1881.

The Spanish Consul-General at Alexandria wishes it to be known that M. Jean Victor Abargues, known as Commander Abargues de Sosten, has no longer any right to call himself a representative of the "Spanish African Association." Our readers will remember that this gentleman travelled for some time in Abyssinia, where he appears to have meddled in politics.

Students of Dante will be interested in the essay on the 'Cosmografia della Divina Commedia,' by Signori G. G. Vaccheri and C. Bertacchi, of which an abstract appears in the last number of Cora's *Cosmos*. The same periodical contains a continuation of Signor Luigi Hugues's able history of Antarctic Polar expeditions.

ASTRONOMICAL NOTES.

THE comet seen by Mr. Common close to the sun on Sunday, the 17th inst., was noticed by M. Thollon at Nice the next day, and described as follows:—"Très brillante vue à midi 18 Septembre à 3 degrés ouest du soleil, noyau spectre continu très brillant et très étendu vers violet, chevelure et noyau donnant raies sodium extrêmement brillantes, très nettement dédoublées et caractérisées, paraissant déplacées vers le rouge." It is supposed that this is the same comet as was discovered by M. Cruls at Rio de Janeiro on the 12th inst., but no elements, we believe, have as yet been determined.

A set of elements and an ephemeris of the comet discovered by Mr. Barnard at Nashville, Tennessee, on the 10th inst. have been computed by Herr Zelbr, of the Vienna Observatory. According to him it will reach its perihelion on the 13th of November, at the distance from the sun of 0·95 in terms of the earth's mean distance. Its distance from us is now a little greater than that of the sun, but it will diminish until it is somewhat less than the sun's distance, and then increase after October 19th. The comet's approximate places for Berlin midnight on the three dates mentioned below are as follows:—

Date.	R.A. h. m. s.	N.P.D. ° ′
Sept. 29	7 51 11	88 44
Oct. 3	8 1 53	94 19
„ 7	8 13 57	100 44

The first European observation of this comet appears to have been made at Kiel on the night of the 16th inst.

It does not appear that either of the comets recently discovered is the periodical comet of 1812, for the return of which we shall probably have to wait until some time next year.

Since the above was written, announcements have been received by the Astronomer-Royal from Vienna and from Paris that a fine comet was seen at the former place on the 24th inst. (right ascension 11 hours, south declination 3 degrees), and at the latter two days later (at 10 degrees altitude, bearing north, 60 degrees east). We presume that they both refer to the same comet as that seen by Mr. Common on the 17th; but a few days will decide this and some other questions connected with our visitant.

The next course of Gresham Lectures on Astronomy will be delivered on the evenings of October 17th, 18th, 19th, and 20th, at 6 o'clock, by the lecturer, the Rev. E. Ledger, at Gresham College, Basinghall Street. The subject will be 'The Astronomy of the past Twelve Months.' We understand that Mr. Ledger has in the press a volume of his lectures delivered during the last two years, which will shortly be published under the title of 'The Sun, its Planets, and their Satellites.'

Another small planet was discovered by Dr. J. Palisa at Vienna on the 10th inst. This, which reckons as No. 231 in a general list, is the thirty-eighth discovered by Dr. Palisa. (In our "Astronomical Notes" for September 9th, p. 341, "thirty-six" should be *thirty-seven*.)

The 'Companion' to the 'British Almanac' for 1883 will contain, amongst other articles, one by Mr. Lynn on Halley's comet, with an addendum on periodical comets generally.

ANTHROPOLOGICAL NOTES.

DR. TOPINARD is proceeding in his *Revue* with the analysis of the facts preserved in Broca's registers. The article for the present quarter relates to the measurement of cranial capacity, founded on about one thousand observations, from which the following averages are deduced: Neolithic, male 1,560, female 1,410; modern Europe, male 1,560, female 1,375; yellow races, male 1,510, female 1,385; African negro, male 1,405, female 1,250; black of Oceania, male 1,460, female 1,295. The opportunity is taken of urging the necessity of obtaining these measurements upon uniform and exactly defined principles. Dr. Arbo discusses in the same journal the dimensions of a skull found in a stone tomb at Svelrik, in Norway—the first discovery of the kind in that country—and finds a close resemblance in it to the skulls of a late stone age found at Sorengen, in Denmark, and, indeed, to those of the modern Danes.

M. Vanderkindere, president of the Society of Anthropology of Brussels, has published the results of 608,698 observations of the colour of eyes and hair of children in the primary and communal schools of Belgium, according to locality, with maps. Age and sex are also distinguished in the returns, which were made in 1878.

MEETINGS FOR THE ENSUING WEEK.

MON. Education, 7½.—'The Moral Element in Intellectual Education,' Mr. J. Ward.
WED. Entomological, 7.

Science Gossip.

THE first volume of Messrs. Cassell & Co.'s series of technological manuals, edited by Prof. Ayrton, F.R.S., and Dr. Wormell, will be ready early in October. It will be entitled 'Cutting Tools worked by Hand and Machine,' by Prof. Robert H. Smith.

MESSRS. PALMER & HOWE, of Manchester, have in the press a new practical work on dyeing by Mr. David Smith.

MR. F. S. MITCHELL, of Clitheroe, who has for some years devoted attention to the ornithology of Lancashire, has issued a circular in which he solicits information respecting the birds of Lancashire, of which he is engaged in compiling a list that he is desirous of making as complete as possible.

MR. DAVID DALE, a director of the North-Eastern Railway, will open the Electrical Exhibition at Darlington on the 3rd of October. The North-Eastern Railway have arranged that facilities shall be afforded for making trials on carriages in actual work of couplings made by electrical arrangements.

MESSRS. ALEXANDER AND M'COSH, of the firm of William Baird & Co., have successfully solved the problem of extracting the ammonia and tar from the gases escaping from the top of the blast furnaces, without any interference with the smelting process or any increase of cost. The Gartsherrie firm are now erecting the necessary apparatus at their works in Ayrshire and in Lanarkshire. Messrs. Pease & Co. have applied a similar process to their coke ovens; and by a third process, introduced from Germany, it appears all the sulphur may be recovered, which will be a great additional economy.

FOLLOWING the example set by Sir Ashley Eden, the Lieutenant-Governor of Bengal offers for competition two scholarships of 200*l.* each annually, to be held for two and a half years at the Royal Agricultural College at Cirencester. Grants will also be made in aid of the expenses

of the scholars in coming to and returning from England.

THE Government of India have recently issued a resolution on the measures to be adopted for the systematic observation of earthquake shocks. The subject was suggested by the Royal Society of Great Britain in 1877, and a scheme was then formed and discussed, but was eventually abandoned owing to circumstances which prevented the Society from co-operating. The Government of India have now sanctioned a grant of 2,000 rupees for the purchase of the necessary instruments and the erection of observatory sheds at most of the first and second class meteorological stations in Bengal and Northern India.

TIDAL observations in India continue to make progress. The number of ports for which tide tables will next year be available will be eighteen in all, including four new ones, False Point, Dublat (towards the mouth of the Hooghly), Elephant Point, and Amherst. These tables and the excellent published surveys of the Indian coasts are much valued as aids to navigation by the mercantile community and navigators in general.

THE French Government have voted 90,000 fr. towards the expenses of the International Conference of Electricians, which is to begin in Paris on the 15th of October. A special conference will then be held to consult on the rights of property in submarine cables and on the means to be adopted for their protection.

M. DE CHARDONNET brought before the Académie des Sciences at the Séance of the 4th inst. his 'Experimental Study of the Reflection of Actinic Rays,' especially with reference to the influence of specular polish. These truly original and very important experiments have revealed the following laws. All surfaces reflect in variable proportions each of the spectral radiations, but we cannot obtain the pure colours by reflection. The reflecting power of a liquid is independent of the substances held in solution. Specular polish augments the total quantity of reflected rays, while the relative intensity of the different regions of the spectrum depends upon the substance employed.

M. GOPPELSROEDER, of Mulhouse, produces some remarkable results with aniline dyes under the influence of electricity. He impregnates paper with an aqueous solution of an aniline salt, a chloro-hydrate giving the best result. This sheet is placed on a metal plate which is connected with one of the poles of an electrical battery; another metal plate, engraved with the design in relief, is laid over the paper and connected with the other pole; decomposition is thus effected by the current, and a perfect copy of the design in black is obtained.

MR. HENNESSY on the 11th inst. read a paper before the Académie des Sciences, 'On the Mean Temperature of the Northern and Southern Hemispheres of the Earth.' M. Henel considers the southern hemisphere, with its greater mass of water, to have the higher mean temperature, or about 15°·4 C. Mr. Hennessy believes that the idea of a superiority of temperature must be given up, the mean of both hemispheres being 15°·2 C.

MESSRS. VON SCHENK BROTHERS, of Heidelberg, have made a series of very satisfactory trials with the new binding material "tripolith," which is composed of sulphate of lime (gypsum), coke powder, and precipitated oxide of iron. The tensile test, after long exposure to the atmosphere, compared with the strength of lime and cement, was increased 100 per cent., and the power of resisting compression was exceedingly great.

THE excavations for a lock on a canal which is being made near Mons, in Belgium, have brought to light the bed of an ancient river, in which have been found bones of mammoths and other animals. Some Roman coins, pottery, and glass have also been discovered near Nimy.

THE Hungarian Prof. Blumendiert has published an important and exhaustive monograph on the ethnology of the Philippine Islands.

IN papers recently read before the Cincinnati Association of Forestry and the California Academy of Sciences, Dr. R. E. C. Stearns has proposed that systematic observations of the annual rings in felled timber should be made along the Pacific coast. Taking the widest rings to correspond with the years of maximum rainfall, he considers it possible in this way to obtain a retrospective rain record which may afford valuable help in determining how far rainy years recur in cycles.

THE University of Tokio sends us No. 7 of the *Memoirs* of the Science Department. This is devoted to a 'Report on the Meteorology of Tokio for the Year 2540' (1880), by T. C. Mendenhall, Ph.D., Professor of Experimental Physics in Tokio Daigaku. The report for the year 1879 was the first of this series, and in it the location of the observatory is given, and the various instruments used are described. The observations have been continued, notwithstanding many serious difficulties, with zeal and great caution, thus furnishing a very important record of the meteorological phenomena of a most interesting locality. One new feature has a place in this volume. Fires are so frequent in the city of Tokio that the average age of a house is seven years; that is to say, the whole city is burnt every seven years. "During last winter the number of houses burnt were,—1880, December 30th, 2,200; 1881, January 26th, 15,500; February 11th, 7,100, and on the 21st, 1,400." This sad condition of things has claimed the attention of the University, and Prof. Yamagawa has devoted much time and attention to an investigation of the cause and course of these fires, and to their classification in reference to atmospheric movement. The professor furnishes a report giving the more important results, with charts illustrating the conclusions reached.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXXI.—GALLERIES IN AND NEAR LIVERPOOL.

MR. FREDERICK LEYLAND possesses a considerable proportion of the masterpieces of the most intellectual and cultivated branch of the modern English school. In addition to these he has a comparatively small number of ancient Italian, Spanish, and Low Country pictures. Some of these hang in the office of the owner in the city of Liverpool itself, for, like many patrons of old Italian and Low Country masters, Mr. Leyland, while at work in his office, delights in the company of pictures. He keeps at Woolton Hall, which is but a few miles from Liverpool, a similar gathering, the more important of the modern group of which are by Mr. E. Burne Jones. Here also are the ancient examples already referred to. They are due to Velazquez, Tintoret, Giorgione, Coello, Marco Basaiti, Rembrandt, and Wynants. In Mr. Leyland's London house, besides other superb specimens of ancient and modern art, are some of the splendid painted poems by Dante G. Rossetti, several of which—for instance, the 'Proserpina'—we described when they were executed, and in each case at some length. Following the geographical arrangement already adopted for this series of papers, we defer our remarks on the owner's London collection, and proceed for the present with the works he has gathered in and near Liverpool. Before the works in the London collection are described in "The Private Collections of England" we hope to see Rossetti's pictures in the Royal Academy exhibition of the approaching winter. We have to thank Mr. Leyland for permission to comment on these works, the selection of which attests his taste and refined judgment. Some of the examples in Liverpool are not very well placed as regards the light; those at Woolton Hall are nearly all perfectly illuminated and happily displayed on the walls of large rooms.

In 1856 there appeared as No. 122 at the Royal Academy a picture by Mr. W. L. Windus illustrating the beautiful and sorrowful ballad 'Burd Helen,' which nearly every good judge was content to class with the 'Ecce Ancilla Domini!' of Mr. Rossetti, Mr. Millais's 'Huguenot,' Mr. Hughes's most exquisite 'April Love,' and the sad 'Last of England' by Mr. Ford Madox Brown. Each of these is a masterpiece, and yet, except the last, the production of a man who at that time had but just passed out of the stage of youth. Of the painters the most powerful has but lately gone from amongst us, leaving laurels the world itself must gather, and which he who earned them contemned, although he only too earnestly regarded that applause he shrank from claiming. When the world knows all he had to say it will be time to appraise the value of the 'Ecce Ancilla Domini!' which was the first fruits of his genius and is one of his best poems, whether we consider those he produced with the brush or with the pen. Mr. Windus — one of the most original painters of our time, a poet in painting worthy to be grouped with the above-named men and with the author of the ballad of 'Burd Helen' himself—lives still, but lives retired, having left this picture as his one real gift to the world. Mr. Millais's career has been long and brilliant, yet he has not entirely remained true to the heart-moving mood of the 'Huguenot.' Mr. Hughes's 'April Love' remains his best work in its proper line, and has been followed by several pure and beautiful pictures, noteworthy among which is the lovely 'Annunciation' we saw in a collection near Newcastle-on-Tyne. Mr. F. M. Brown, having produced many noble pictures, including the 'Last of England,' 'Elijah and the Widow's Son,' and that 'Entombment' to a fine version of which we shall presently refer, is now at work on the frescoes in the Town Hall at Manchester, a noble opportunity by which posterity will profit.

Mr. Windus has done little beyond the picture of 'Burd Helen' and one or two more works which whether they are incomplete or inferior matters little here. They include 'Too Late,' R.A. 1859, 900; 'Cranmer and Katherine Howard,' 'Touchstone,' and 'Marten before Claverhouse.' The last three were at Suffolk Street. 'Too Late' was at Leeds in 1868, and, like 'Burd Helen,' belonged to Mr. John Miller, of Liverpool. 'Burd Helen' deserves to be made widely known by means of a good engraving or a vigorous and delicate etching. In the *National Magazine*, and published about the time of the exhibition of the picture, is a cleverly drawn woodcut which gives a good idea of its design and ably suggests its motive. An enterprising publisher might find admirers enough to reward the issuing of such a print of the picture as Mr. Windus and Mr. Leyland might approve. Let us hope soon to see such a thing. Meanwhile, it will be enough to say that 'Burd Helen' is what it has become the fashion to call a study in white, its echoes and allies. The scene is the edge of a moor; the foreground is formed of stones which many suns and frosts have so blanched and split into flakes that the lichens and mosses have failed to clothe with their pallid tints the banks of the ford where Lord Henry and his heavily laden mistress have arrived. The flakes of stone seem to clatter under the tall white horse's hoofs, from before one of which a shining film of water rises as the creature, unchecked by the rider, steps on his way. The path, dashed with ruddy earth, is marked in white stones on the strip of barren moorland, which, dark brown, green,

and purple, rises a little to meet the horizon where the grey sky signifies impending rain and formless vapours drift as if the wind urged them slowly after the travellers. The grey light casts no shadows, but its wanness makes the stream shine more brightly than the dark sky might be expected to allow, and affords gigantic reflections of the knight, the lady, and the steed. Each of the figures is white and diversely tinted in itself, from stone colour and pearly hues to grey, and their mass fuses the ghostly pallors of the sky with the rocky bed of the stream and sheen of the water itself. Lord Henry wears a white satin coat and hose, the very surface of which reflects light from the sky and river; the richness of the figure is enhanced by the red cap he wears and its trailing dark feather, the ruddy lining of his crupper, and the ferruginous earth at his feet. Pearly white are the tunic and hose of the lady; the horse is ashy and bluish grey. Fair "Burd Helen" steps lightly, yet wearily and warily, on the sharp-edged flakes of stone, her right hand on the saddle of the hardest-hearted lover that ever rode away; her hair is blown backwards from her face, and she pants because her heart labours, her load is heavy, and the way is long. Her left hand presses close to her side, and she turns brave eyes upwards with an appeal preluding the demand if he will see her swim. Erect in the saddle, and but slightly bending his head to look down upon his mistress, Lord Henry's form is marked against the sky; a faint smile dawns in his eyes and his lips part. He trifles, or seems to trifle, with his glove, an action adopted to hide love's triumph in the man's heart. Such is the design of one of the most pathetic of modern romantic pictures, a work which conveys all the tenderness, all the cruelty, all the fidelity, all the beauty and energy of the wonderful ballad it illustrates. We doubt if the ballad-maker realized the whole of the charm to which Mr. Windus has given form, wealth of sentiment, and force of motion. If the poet saw no more than we think he did, Mr. Windus had the first sight of a tragedy as pathetic and as original as the 'Huguenot,' 'April Love,' and 'The Last of England.'

Such examples of pictorial art owe nothing to literature; in them the artists are poets who have given form, colour, and substance to poems in that universal language all men read. We have selected them as modern examples of a not too numerous class of romantic painted poems, and do not, of course, intend to disparage works of categories other than the romantic, among which it might suffice to name several pictures by Rossetti, Mr. Millais, and some fine inventors not of the Pre-Raphaelite cycle.

Our next example selected from the collection of Mr. Leyland is a small, but very highly finished and entirely autographic, version of Mr. F. M. Brown's noble picture of 'The Entombment of Christ.' This dignified and, if the term be allowed, old-masterly work was originally designed for stained glass, and has been more than once repeated with important distinguishing variations. Without the least defect of movement and passionate expression, it shows a composition the simplicity of which is monumental and severe, while the action is dramatic and so compressed as to be epical. In these respects the work is almost sculpturesque, in the sense that the greater compositions of Giotto are sculpturesque. The colour is as grave and beautiful as the other elements of the design; the whole is nobly reticent and yet sumptuous, exuberant with life and wealthy in poetry. It ought to ensure for the artist the highest public recognition of his genius; it is one of the productions which have led to his present employment at Manchester, a distinction which, however honourable on the parts of the corporation of that city and the painter, ought to have been supplemental to even larger honours and wider employment. In France Mr. Brown would have been chosen a Member of the Institute on account of this work, to say nothing of 'Elijah and the Widow's Son,' 'Christ washing Peter's Feet,' and half a dozen other masterpieces. There must be something wrong somewhere when an artist who made his mark so long ago as the Westminster Hall exhibitions of cartoons and paintings remains, so far as the nation and the art corporations are concerned, unrecognized and unknown. It is said that the Society of British Artists was not unwilling to enrol the painter of 'The Entombment,' and that, before it became "Royal," the Society of Painters in Water Colours would have placed him among its honorary members, or, had he worked chiefly in that body's peculiar vehicle, have made him a full member. The picture before us comprises the rough-hewn entry of the rock tomb, into the interior of which three of the holy company bear the corpse of the Saviour with the feet foremost, relaxed, and before the *rigor mortis* has set in. It is swathed in a sheet, so that it rests easily between their hands, and the warm white of the sheet forms a high note in the colour and chiaroscuro, extending far across the picture and dividing the darker and richer tints of the other figures. John, Joseph of Arimathea, and Nicodemus sustain the sheet and stoop slightly before they enter the tomb; they move solemnly onwards in the act of turning to the entry, and are closely attended by the weeping women of the Holy Family, Mary Altera, and the Magdalen. The last is kneeling at the side of her companions in an attitude of passionate grief, which contrasts pathetically with the still sorrowfulness of her neighbours.

Very grave, if not sad, and deeply poetic is 'The Rehearsal.' It is one of the most important and powerful among the romantic class of Mr. Legros's productions, and, so far as regards conveying the impression that pathetic music floats in and fills the air about us, it is worthy to be classed with the renowned 'Maître Wolfram' of M. le Mud. The latter instance we take to be the crowning modern picture of a comparatively small and rare class, which, so far as we can at the moment recollect, began to exist when Raphael designed 'St. Cecilia.' Designs in which this special motive exists in a subordinate position were, of course, not unknown before Raphael's time; not one, however, in which it is supreme is, we think, older than his great painting. An organist sits before the spectator of Mr. Legros's work, with several young Burgundian peasant women behind him. His fingers are on the keys of the instrument, and his pupils seem to be waiting for the cadence with which their voices are to join the music. Sweet and sedate, their faces are serious but not sorrowful, and smiles are habitual on their lips because the women are habitually happy. One of them holds a book, which focuses the high notes of the chiaroscuro; the lower notes of the same class occur in the variously subdued keys of their white caps and the warm and solid yet luminous carnations. The women's dresses are of differing blacks, varied in tone and depth by the influence of the light which reveals them to us. Full of poetic pathos as these faces are, the chief appeal of the design is conveyed by the countenance of the player, whose saturnine face is uplifted in a serious, perfectly unaffected way, while, with his eyes fixed in abstraction, he listens to the notes which his hand, pressing the keys, prolongs and modulates. A boy, a church acolyte, too young to be subject to musical or pathetic impressions, steadily, if not stolidly, listens with his fancies far adrift; he supplies a contrast to the emotions of his neighbours, while his ruddy cap and cape afford chromatic contrasts in the scheme of warm and sad tints which characterizes the picture. The background is of a solemn dull-grey stone architecture, the local tints and tones of which are of great value, but the constructional members of the building are too thin and their execution is too flat and poor to be worthy of the other parts of the work. Mr. Legros has thus lost the advantage which he might have secured by means of solemn architectural accessories.

Another work of this painter demands distinct description. It is one of his most famous paintings, and is known as 'Le Maître de Chapelle.' A musical party are assembled in the chamber of an accomplished instrumentalist, and they "make music" for themselves. One of the company looks over his friends' shoulders and with opened lips pours out the full volume of his song. Another, in a blue cape and white robes, sits apart and steadily bends his eyes on the pages of a book. The attention which distinguishes the actions and looks of the men is so deep and strongly marked that we seem to be among the players and to become sensible of the charm of their occupation, which, with all its cheerful activity, is grave enough to suit the gathering of evening shadows in the room, forming masses of rich light and darkness. The local colours are brown, olive, and sober red, with spaces of grey. The ruddiness of the external light of evening suffuses the chamber; the serene and glowing effect of the sky, visible through the casement, is enhanced rather than obscured by the broad stone mullions and rectangular lattices which divide the window; the glass is evidently old, its local tints are grey and green, and these are backed by the greener masses of a scanty curtain. The motive of 'Le Maître de Chapelle' is quite different from that of 'The Rehearsal.' We see in each the working of a characteristic mood of mind which is diverse in its applications, and, although uniformly earnest and serious, by no means constantly sad. It would be a very curious exercise to bring these pictures of musical subjects face to face with some of the fine Dutch interiors where the inmates are performing on instruments and singing. Palamedesz Palamedes, Gonzales Coques (see the superb 'Musical Party' in the Brunswick Gallery), and others produced fine things of this class, in which we do not include the performances of single musicians, ladies taking lessons and practising at spinets, clavecins, and virginals, or labouring with the bows of violoncellos. The latter, whatever they exhibit of art, seldom have any musical inspiration.

The most important serial or cyclical group by Mr. E. Burne Jones is in Mr. Leyland's possession, and consists of six canvases in all. We describe them *seriatim* as they hang, with one or two more pictures by Mr. Jones, in the morning room at Woolton Hall. The more important are much better seen in their permanent home than when, a few years since, they were shown in the Grosvenor Gallery Exhibition.

'Day' shows a slender youth in the act of opening a door so as to admit the splendour of morning on the world. The portal opens on a terrace from which we see a harbour spread out below, with grey towers and forts and many ships sailing out and in, or far off taking their way over the sea. The torch in Day's right hand emits flames which, like the "flambeaux of the sun," spread over the head of the figure; white cloudlets float round his limbs and touch his feet, but hide nothing of his form. The carnations of the torch-bearer are like pale ivory in which rosy tinges gather force and become plainer every moment. The texture of the flesh has been rendered with tenderness and loving care for beauty. A gem of morbidezza was thus secured, which it would be very hard indeed to excel. The surface is something like that of ancient alabaster, which, in spite of golden and ruddy sub-hues, is quite pure and white, neither blanched nor pallid. There is repose in the attitude which enhances the grace of the action; the softness and elegant contours of the features are delightfully pure in form and choice in style and type. Sweetness without languor pervades the expression, and the eyes are gentle and yet full of meaning. The lovely youth is in

the act of singing in a low voice the verse which is inscribed on a *cartellino* affixed to the threshold of the portal. The verse is conceived in a vein, and was written in a measure, appropriate to the sweetness of the motive of the picture, its soft and luxurious but not voluptuous colour, the exceeding elegance of the figure, its tender carnations, and the flushed roses of its illumination. These verses, as well as those we quote below, were written by Mr. William Morris for the painter, and have not before been printed. The torch-bearer chants :—

I am Day, I bring again
Life and Glory, Love and Pain;
Awake, arise! From Death to Death
Through me the World's tale quickeneth.

The solemnity of what may be called the suggetsion of the minatory spirit of antiquity, as developed in the peculiar mood of the Italian Renaissance, a mood which pervades nearly every work of our artist, is fully expressed in this picture, which is no pretty and delicate toy, but an outcome of serious and poetic thought. It would be hard to illustrate the working of this peculiar inspiration in an account of a picture which, except in the air, action, and attitude of the figure, exhibits little to represent that mood which gives life to it. The same remark applies to the under-mentioned examples of the group to which 'Day' belongs.

The companion picture to the above is called 'Night,' and shows a single female figure retreating from the world, with the door of a portal closing behind her, yet remaining sufficiently open for the moment to reveal an ocean of dark-blue water with subsiding billows, the crests of which are touched by pallid moonlight, which indicates their multitudinousness without defining their forms. The firmament, which is seen through the same opening, is of the darkest turquoise, sprinkled with stars. The figure rises dark against it. The ample robes of Night are of two blues, differentiated by their tones and solidity rather than by their proper tints. Daylight lingers in the foreground only to mark dimly the lines of the draperies of the Genius of Obscurity, but the shadows define sharply the folds of her mantle and isolate the upper portion of the figure from its surroundings. The torch Night bears is reversed, and so nearly extinguished that only a sullen lustre glows from it. The face looks towards the earth, the eyelids droop, and the carnations have faded with the departure of the sun. A gust of wind has lifted the dense masses of black hair and shifted them on her shoulders. The sentiment conveyed by these arrangements of tone and local and general colours is solemnly pathetic and impressive, and it is, apart from the verses on the *cartellino*, happily expressed by the painter's art. The verses are :—

I am Night, and bring again
Hope of Pleasure, rest from Pain,
Thoughts unsaid; Trust, Life, and Death,
My truthful silence quickeneth.

In a third picture, the first of a new series, Spring is represented by a damsel in fresh green robes of the simplest character and form, distinguished by her white and rosy carnations, and seeming to be moving before a golden curtain suspended from a rod. Above the upper edge of the curtain ruddy and white apple blossoms are observable as if in brilliant sunlight. The graceful and elegant figure stands in a meadow jewelled with flowers. She looks tenderly and modestly at the spectator, and, in a sweet, pure voice, seems to say :—

Spring am I, too soft of heart
Much to speak ere I depart;
Ask the Summer-tide to prove
The abundance of my love.

It is proper to the sentiment of this painting that the figure is displayed in the clearest illumination, which suffuses the air and casts shadows without density where even the reflections are radiant. The harmony of the light and the tints is perfect. The local colours are charming in their freshness. Apart from these attractions 'Spring' is, in our opinion, the least admirable member of the group to which it belongs.

In the second member of this group 'Summer' is delineated in the form of a nymph of pale golden and sub-olive hue, who stands nearly erect at the edge of a bright water, and seems about to let slip from her shoulders the last fold of a semi-diaphanous garment of white tissue, through which her warm flesh is partly visible. Her serene and thoughtful features are much shaded by her bronze-hued tresses. At her side a green curtain extends before a thicket of apple trees and a trellis laden with roses. Her bare feet are placed on a green slab of veined marble, the margin of a pool of lovely colour enriched by blue flowers issuing from its depths and floating on its surface. The voice of Summer says :—

Summer looked for am I,
Much shall change or ere I die;
Prythee take it not amiss
Tho' I weary thee with bliss.

Tender voluptuousness and sweet amorousness pervade the air, attitude, and expression of the siren. Her luxury and ripened beauty are in keeping with the sentiment of the subject and the *abandon* of the verses. The very light about the figure is golden-warm, and suffused with the rose. Passion has attenuated the once exuberant but still fine contours of the nymph. As Spring is the maidenhood, so Summer is the marriage time, Autumn the wifehood, and Winter the widowhood of the year.

'Autumn,' the third member of the group of painted allegories, is a lady of graver character than her sisters, standing before us and clad in a robe of deep crimson, the colour of the vintage season, lined with blue, the tint of the declining year. The ripening of the season is indicated by the ruddiness of the apple in her hand, and the departure of the months appears in her action of pacing slowly and unwillingly towards her successor Winter, the subject of the next picture. The hand of Autumn should be "ever at her lips, bidding adieu." But, although yearning for liberty appeals to us in her eyes, she has not yet turned away, and still lingers before a curtain of red much paler than her draperies. From behind the veil issue into sight full-fruited branches of an apple tree. As Spring stands in a flowery meadow, and Summer is placed on the rich green marble margin of a pool suffused with light and decked with little filmy and shining lines, the edges of pure ripples, so Autumn stands on a base of rosy stone by slowly flowing, somewhat darkly-tinted water, where many blooming white lilies float amid chalice-like green leaves. Her rhymed utterance has a cadence of decline, and is thus written on a *cartellino* :—

Saddest Autumn here I stand,
Worn of heart, and weak of hand,
Nought but rest seems good to me,
Speak the word that sets me free!

The speaker's meek face has a sorrowful expression; the eyes are clear and dark; her rounded figure has passed maturity, and in gaining dignity has lost its amorous charm.

'Winter,' the last of the seasons, is a widow veiled in a white robe, over which is a long black mantle lined with rich fur. She stands against a pale golden-yellow curtain; in one hand she holds a richly bound volume, the other she stretches out above the fire which burns at her side. She looks earnestly at the book, and declaims from its pages :—

I am Winter, that doth keep
Longing safe amidst of sleep;
Who shall say if I am dead
What should be remembered?

Another of Mr. E. Burne Jones's works in Mr. Leyland's collection represents the reunion of Cupid and Psyche. The latter is seated on the earth near the banks of the immemorial river, over which the ancient boatman approaches from the distant high and rocky shore. Cupid, wearing a red robe, his ruddy wings extended before him in a beautiful action, stoops over his mistress and lifts her from the ground. She has sunk exhausted and depressed; her eyes remain glazed, although the god is near. The dawning of joy and the recurrence of memory while she looks at him, as well as the parting of the love-lorn dream, are admirably expressed in this beautiful face and figure. From a precious casket of blue stone at her side issues a pallid and lambent flame. The depth of Mr. Jones's sympathetic studies in the lore of the Italian Renaissance was never more effectually attested than in this work. As the masters of that period were pleased to understand the latest of the antique legends—their interpretation was very little like the original—so he has been moved to continue the reading, and to add ardours to its glow. This is, we believe, the picture which startled some members of the Society of Painters in Water Colours, and evoked remarks which led to the artist's resignation.

Mr. E. Burne Jones was still an Associate of the Society when, many years ago, he contributed to one of its gatherings the splendid classic romance which illuminates the wall of Mr. Leyland's morning room at Woolton, and is called 'Circe and the Panthers.' It is a picture placed landscape-way, representing the interior of the witch's chamber while she is preparing the banquet for the companions of Ulysses. A long, low opening in the wall of stone gives a view over the ocean and golden cliffs. We see the black hulls of the many-oared galleys, surmounted by "full-bosomed" sails, hastening to their fate athwart the bars of blue and green water. Circe, a dark and beautiful woman, wears a saffron robe with a gold inner tint. It fits her figure loosely enough to show its contours while hiding its carnations. She stands near one end of a long table loaded with viands and drinking vessels. She turns her lithe body to the right and from an ominous phial pours a black sirup into the huge, boldly embossed gold vase of wine which is placed at her side for the benefit of the new-comers. Her deadly black panthers bow and cringe before the knees of the enchantress. Their blackness makes impressive "colour" with the blueness of the iron throne which Circe has quitted in order to drug the urn, as well as with the warm tint of her garment and the brightness of the table cover and its splendid burden. This is one of the most carefully executed pictures of the artist, and, although not, perhaps, one of those he now values highest among his works, it is undoubtedly one which rewarded his unusual pains with new powers to express his meaning and develope his technical skill. Obvious shortcomings in the draughtsmanship, or rather in the drawing *per se*, of more than one of the members of both the series we have named, need not trouble the critic who values poetic art more than any single technical accomplishment. In drawing only is there any defect in the 'Seasons' and 'Day' and 'Night.'

Postponing for this occasion notices of the ancient works of art at Woolton Hall, we conclude here with the fine Scandinavian romance Mr. Sandys delineated and named 'The Walkyrie.' It comprises the figure of a fierce and stately woman who walks alone on an upland amongst weeds and flowers, undeveloped fern-fronds, and long arms of brambles. A skull is near her feet. A river and a fortress are seen below. Ravens perched on a pine bough whisper in the ear of the mistress of fate the names of those who are to perish in the next combat. Mr. Sandys's poetic insight into the motives of many of the subjects he has affected has been vigorously asserted, and the still and tragic energy of the legend never had better or fitter exposition than in this fine design. A certain metal-like surface and excess of hardness in the textures—defects too frequent in the painter's works—are hardly, if at all, recognizable in this noble instance.

XUM

Fine-Art Gossip.

ROOM XIV. in the National Gallery, which has been closed for cleaning and repairs, was opened to the public on Monday last. All the pictures but the large Tintoret, 'Christ washing the Disciples' Feet,' the Signorelli, Mantegna's 'Seasons,' and El Greco's so-called 'Portrait of L. Cornaro, Doge of Venice,' bought from the Hamilton Collection, have been on view in the large Italian Room. The Steenwyck, of beautiful quality and fine preservation, to which we have already alluded, will soon doubtless be placed in its proper position with the Dutch masterpieces in Room XII. The 'Family Portraits' (821), by Gonzales Coques, and 'The Hay Harvest' (837), by Lingelbach, from the Peel Collection, have been away during some weeks. An esteemed correspondent calls attention to the cracked state of the surface of Stothard's 'Nymphs binding Cupid.' Stothard's works are, unfortunately, but too liable to defects of this order. Some of the faces in this example are in a bad way.

THE Worcestershire Exhibition of Fine Arts, &c., which Mr. Scharf has described in these columns, will, it is said, be closed on the 17th of October.

WE have accidentally omitted to record the death of Mr. Joseph Pettitt, a landscape painter of Birmingham, a member of the Society of Artists of that place and of the Society of British Artists. This event occurred on the 16th inst. at Balsall Heath, near Birmingham.

AT the Fine Art and Industrial Exhibition which is to be opened in Manchester on the 20th of October there will be oil paintings, water-colour drawings, furniture, examples of decorative art, and tapestry. The Earl of Wilton is the president.

THE erection of the models of the equestrian group destined to surmount the Arc de Triomphe, Paris, is making rapid progress. It is the work of M. Falguière, who, if the effect is satisfactory, will doubtless be called upon to execute his design in bronze, and thus complete the great national monument.

A CATALOGUE of the Collection Timbal, recently added to the Louvre, has been published. A catalogue of the pictures in the same museum, much condensed, and describing the works seriatim, room by room, is now sold at the doors.

THE Prix de Numismatique (Veuve Duchalais) has been awarded by the French Institute to Mr. Stanley Lane Poole for his catalogue of Oriental coins in seven volumes.

THE ashes of David the painter, interred on the 7th of January, 1826, in the cemetery at Brussels, have been removed to their new resting-place near that city.

THE last vestiges of old Bordeaux are fast disappearing. The making of the new road called Le Cours d'Alsace-Lorraine has caused the destruction of many houses of the thirteenth and fourteenth centuries.

A CONSIDERABLE number of Roman antiquities have been discovered during excavations recently made at Mayence, including a Mercury in bronze, and the blade of a dagger of iron inlaid with silver.

THE exhibition of pictures to be opened in the gallery of M. Georges Petit, Rue de Sèze, Paris, on the 20th of December next, and closed on the 30th of January following, will comprise several works by MM. Bastien-Lepage and Van Beers.

THE publishing house of Giacomo Aguelli at Milan is about to issue a work called 'Le Glorie dell' Arte Lombarda,' by Luigi Malvezzi.

THE Fine Art Exhibition at Simla opens to-day.

THE following is an example of German æsthetic criticism of sculpture. Prof. Michelet, of Berlin, proposed the other day in a paper read before the Wissenschaftlicher Kunstverein a new theory of the date and artistic meaning of the Vatican Apollo Belvedere. He maintained that it was a work of Roman times, and that it was meant to represent the triumph of the Roman people over the conquered nations. The god regards the world rather with contempt than anger. The weapon rests in one hand because the conquest is complete, and the military cloak hangs half thrown off on his shoulder and arm. But yet the god steps forward, for the Roman Empire ever advances. The other hand rests on an olive tree, because Augustus shut the doors of the temple of Janus. The diadem which adorns the god the professor considered the strongest indication of the truth of his interpretation. The emperors permitted themselves to be worshipped in Rome under the form and attribute of divinity. The battle of Actium was, according to popular belief, won by the aid of Apollo. What more likely then than that Augustus should have himself represented in the form of Apollo as conqueror of the world, and adorned with the royal diadem?

MUSIC

The Life and Works of the Chevalier Noverre. Edited by Charles Edwin Noverre. (Jarrold & Sons.)

A PROMINENT figure during one of the most interesting periods in the history of the operatic stage, the name of Jean Georges Noverre may yet be unknown to many musicians of the present day, as the branch of art to which he exclusively devoted his life flourished in its perfection for but a short time. Perhaps more than any other man Noverre strove to impart dignity and consistency to the ballet, in which glaring anachronisms of costume and accessories, together with absurdities of every description, had prevailed since the primary introduction of this form of entertainment on the modern stage. But the assertion sometimes made, that he invented the *ballet d'action*, is wholly incorrect, as the Duchesse du Maine, in the time of Louis XIV., composed a ballet on the subject of 'Les Horaces,' in which songs and dialogue were wholly dispensed with, and her example was quickly followed on the stage of the Académie Royale itself. Neither was he alone in protesting against the monstrosity of Greek or Assyrian heroes appearing in the costume of Versailles courtiers. Mdlle. Sallé, a celebrated *danseuse* in the early part of the eighteenth century, succeeded in bringing about some reforms, which, however, were not fully maintained after her time. Born in 1727, it was not until he was forty-eight years old that Noverre obtained a post he had long coveted, that of *Maître des Ballets en chef* in Paris. Meanwhile, however, he had won much distinction at Lyons, Würtemberg, Vienna, and Milan. At the invitation of Garrick he visited London in 1755, bringing with him a company of a hundred performers. A grand spectacle, 'The Chinese Festival,' was produced at Drury Lane, but the bad blood then existing between England and France proved destructive to the success of the entertainment. Tumults prevailed in the house for several nights, and at last, fearing his own life was in danger, Garrick gave up the attempt, and the "Shakspeare of the Dance," as he had named Noverre, returned to France in discomfiture. But the impression made upon him by Garrick's histrionic genius was profound, and bore fruit in his subsequent productions for the stage, in which he sought to depict by merely pantomimic action the most intense tragic passion. The present volume gives the full *scenarii* of some of his most elaborate "tragi-pantomime ballets," of which perhaps 'The Danaides' is the most striking, or, as we should say, sensational, in a horrible and realistic sense. Noverre's Parisian appointment in 1775 was due to the invitation of Marie Antoinette, formerly his pupil in Vienna. His arrival in the French capital occurred just subsequent to the outbreak of the Gluck-Piccini war, and his name appears as *collaborateur* in some of Glück's operas, though his sympathies seem to have been on the other side. Some amusing details are given of this celebrated dispute and also of the mutiny of the operatic artists and entire *personnel* of the establishment in 1779—an event which seems to have caused far more excitement and dismay at court than the political misfortunes at that time crowding upon the nation. But the most interesting portion of the book, at least to musicians, is that in which Mozart's name appears. This great composer, as is well known, endeavoured to gain a footing in Paris in 1778. Noverre interested himself in the gifted German, and Mozart writes to his father, "I am to write an entire opera in two acts. Noverre, with whom I dine as often as I please, managed this, and, indeed, suggested the idea." The matter, however, fell through, and all that Mozart did was to compose fourteen numbers of one of Noverre's ballets, 'Les Petits Riens.' Some criticisms of the argument of this piece are extant, including one by Grimm, but not one word is said with regard to the music, which, indeed, was not considered a matter of any importance in this kind of entertainment. Mozart's score disappeared for nearly a century, but in 1873 it was discovered by M. Nuittier in the library of the Grand Opéra, and it is here printed entire, that is to say, in a pianoforte transcription by M. Renaud de Vilbac. The numbers are variously scored, from the simple quartet up to the full orchestra as far as trumpets and drums. Several of the movements are of little or no importance, but some bear the true Mozartean impress, especially No. 8, Entrée de Cupidon; No. 9, Courante; No. 12, Gavotte Sentimentale; and No. 14, Gigue Finale.

At the outbreak of the Revolution Noverre came to London and produced some of his best pieces at the King's Theatre. Soon afterwards his health failed, and he retired to St. Germain en Laye, where he died in 1809. Editions of his literary works appeared at Lyons 1760, Vienna 1767, London 1782, Paris 1783, Amsterdam 1787, Copenhagen and St. Petersburg 1803, and finally at Paris 1807. M. C. E. Noverre's life of his ancestor is a finely printed, handsome quarto volume.

Musical Gossip.

THE prospectus of the twenty-seventh series of the Crystal Palace Saturday Concerts has just been issued. The principal features of interest announced are the production of an early symphony by Haydn, 'Le Midi,' with two violins and violoncello concertante;

Mozart's Concertante Symphony for violin and viola; Schubert's Symphony in E, No. 7, which Mr. J. F. Barnett will complete from the composer's sketch; Raff's Sixth Symphony; a MS. symphony (No. 4) by Mr. T. Wingham; Mr. C. V. Stanford's Serenade in G, and Mr. Hubert Parry's Symphony in the same key, both of which were produced at the recent Birmingham Festival; Brahms's Second Pianoforte Concerto; selections from Gade's 'Summer Day in the Country,' Mancinelli's 'Cleopatra,' and Bizet's 'L'Arlesienne'; a symphonic poem, 'Visegrad,' by Smetana; and Legends by Dvorák. The most important announcements of the prospectus, however, are the performance of Gounod's 'Redemption' in November, and the production during next Lent of Berlioz's colossal 'Messe des Morts.' Mr. Manns will continue to hold the post of conductor. The first concert will be given on the 14th prox. The prospectus is, as will be seen, most attractive, and the scheme will certainly compare favourably with that of last season.

A PERFORMANCE of the 'Messiah' will be given, under the direction of Mr. W. G. Cusins, at St. James's Hall on Saturday, December 16th, with Madame Albani, Madame Patey, Mr. Maas, and Mr. Santley as principal vocalists.

MR. A. C. MACKENZIE has completed for Mr. Carl Rosa an opera, 'Colomba,' the libretto of which has been written by Dr. F. Hueffer. Mr. Rosa intends to produce it next Easter.

MR. STEPHEN S. STRATTON gave the first of his present series of chamber concerts at the Masonic Hall, Birmingham, last Monday. The programme included Mr. Villiers Stanford's Pianoforte Quartet in F, Gade's Sonata in D minor for piano and violin, Haydn's Quartet in G, Op. 64, No. 4, and pianoforte solos by Bach and Chopin.

THE prospectus of the Stratford Musical Festival, which is to be held in the spring, has just been issued. It is practically a series of public musical competitions, in which Messrs. Brinley Richards, J. F. H. Read, and W. G. McNaught are the judges. Mr. J. S. Curwen is the originator and honorary director of the scheme.

MR. J. SPENCER CURWEN has published a pamphlet, entitled 'Musical Notes in Paris,' giving an account of the results of a fortnight's visit by himself to the principal schools of the French metropolis, undertaken with a view of comparing French with English methods of teaching singing. His conclusions are on the whole very favourable, and his pamphlet contains much that will be found interesting to teachers of class singing.

THE current number of *Le Ménestrel* gives a description of an electrical time-beater, invented by M. Paul Samuel, by which the conductor of an opera can give the time to a band or chorus placed behind the scenes. The apparatus consists of three small key-boards, placed at the left hand of the conductor, by which he can beat respectively two, three, or four in the bar; these key-boards are in electric communication with a small white wand behind the scenes, which gives the beats to the performers exactly as the conductor himself would do. The instrument has been recently tried at the theatre of Ghent, and is said to have been completely successful.

DRAMA

THE WEEK.

IMPERIAL.—Farewell Representations of Mrs. Langtry: 'As You Like It.'

THE second experiment made by Mrs. Langtry during the engagement she has just concluded at the Imperial is more successful, as well as more interesting, than the first. Such gifts only as had previously been revealed were manifested in her Hester Grazebrook. Her Rosalind, on the contrary, discloses her possession of qualities which previously seemed out of her reach. Personal beauty remains, of course, the chief recommendation. Not easy is it to overestimate the value of this gift in the presentation of those charming and ineffable abstractions of Shakspeare in which every class of mind can find its ideal. To look Miranda, Viola, Beatrice, Rosalind, is from the first to set the mind of the spectator in the right key. All that is then necessary to success is to avoid disturbing the melody. This Mrs. Langtry is able to do, and the result is a Rosalind which has a good chance of enduring popularity. It is more than merely acceptable. Mastery of tenderness is distinctly shown. When, with caressing speech and "most petitionary vehemence," Rosalind draws from Celia the assurance that Orlando is in the forest, and with a prettiness of language akin to that which draws on her lover the sneer of Jaques, that he has been "acquainted with goldsmiths' wives, and conned them out of rings," declares, hearing he is "furnished like a hunter," "O, ominous! he comes to kill my heart," the delivery and the accompanying gesture were alike admirable. In the delicious banter of Orlando Mrs. Langtry was heard and seen to no less advantage. Much of what is best in her rendering may be ascribed to competent tuition. The chief qualifications for the task essayed seem to consist in the *aplomb* with which a singularly arduous experiment is undertaken and the manner in which a difficult lesson is conned. There is, however, something beyond this. It is difficult to resist the conviction that some of the manifestations of tenderness and rapture which most pleased the audience sprang from the actress's own mind and were taught her by no master. Earnest and deep emotion is not as yet within Mrs. Langtry's reach. Tenderness, however, is, and when this important and indispensable grace comes to heighten the effect of natural gifts wholly exceptional, a result that cannot possibly be regarded as commonplace is obtained. Shortcomings of method and of interpretation present themselves. The art to conceal art is not there, and the gestures are often studied. A too quick delivery mars the effect of certain passages, and the full meaning of others had evidently not presented itself to the speaker. The faults which are most obtrusive are such, however, as can easily be remedied, and there seems no reason why in the end an undisputed triumph should not be obtained. That Mrs. Langtry is not Rosalind, that her art is immature, and that without the gift of beauty, which her keenest opponents do not contest, she would not have found her way to the stage, may all be true. How many statesmen would have won fame and reputation without a species of introduction to politics analogous to Mrs. Langtry's introduction to the stage? During many years we have seen no *débutante* of equal promise, and few representatives of Rosalind with less to unlearn. One lesson which all exponents of Rosalind have yet to be taught it seems worth while now to offer. Bidden by Celia to "hem" away the burs in her heart, Rosalind answers, "I would try, if I could cry 'hem' and have him." This is a mere play on the similarity of sound between "hem" and "him," and the speech should be delivered with a slight accent on the words "cry" and "have." This is a small point, but in dealing with Shakspeare no point is insignificant.

Very weak and incompetent was the support afforded Mrs. Langtry. It may be doubted whether in recent years the play has been more inadequately cast. Mr. Taylor's Touchstone and Miss Kate Hodson's Audrey were good. Miss Kate Pattison was acceptable as Celia, and Miss Rosa Kenney was Phebe. The general performance was, however, deplorable. It seems scarcely conceivable, but the word "convertites" was pronounced in four syllables, "con-ver-tĭ-tes," and in the beautiful lines

> Or if thou hast not sat as I do now,
> Wearing thy hearer in thy mistress' praise,
> Thou hast not loved,

the word "mistress'" was delivered "mistress's." Were these things not deplorable for the state of affairs they reveal they would be ludicrous.

Dramatic Gossip.

IF it is true, as is stated, that America, in anticipation of the arrival of Mrs. Langtry, has taken from Messrs. Downey, the photographers, 25,000 portraits of this clever lady, there seems every reason to anticipate a development of the Langtry fever at least equal to that which has been known in this country.

BEFORE his departure with his company in July, 1883, for New York, Mr. Irving will, it is announced, appear in London in all the pieces of his travelling repertory. 'Hamlet,' 'The Merchant of Venice,' 'Much Ado about Nothing,' and a fourth Shakspearean play not yet selected, 'The Lyons Mail,' 'Charles I.,' 'Louis XI.,' 'Richelieu,' 'The Belle's Stratagem,' and 'The Bells' are among the pieces to be revived. No great chance accordingly exists of seeing the revivals promised in Mr. Irving's recent speeches or the novelties known to be in his possession.

A FOUR-ACT drama by Mr. Henry Pettitt, first produced three years ago at the Grecian Theatre, and entitled 'The Black Flag; or, Escaped from Portland,' has been revived at Sadler's Wells.

BY producing 'Les Corbeaux,' a four-act comedy of M. Becque, the Comédie Française for the first time allies itself with the naturalist school in literature. A sketch of manners more unpleasing, it may even be said more revolting, than 'Les Corbeaux' has seldom or never been put upon the stage. Again and again the disgust of the public was manifested. A superb interpretation seems, however, to have saved the play, and the scandal it has caused is believed to be a guarantee for its future success.

'ROTTEN ROW,' a three-act comedy by M. Félix Portland, produced at the Odéon, is drawn apparently from Balzac's 'Modeste Mignon.' As the scene, however, is transferred to London and as the characters are English, opportunity is afforded for a striking display of the ignorance concerning things English which even to this day prevails in France. M. Coppée's one-act comedy 'Le Trésor' has been revived at this house, and serves for the *débuts* of M. Raphael Duflos and Mdlle. Petit, by whom prizes were carried off at the latest competition at the Conservatoire.

'HÉLOÏSE PARANQUET,' by MM. A. Durantin and A. Dumas, has been revived at the Gymnase. Mdlle. Léonide Leblanc plays the heroine.

TO CORRESPONDENTS.—H. C.—W. M. T.—A. H.—A. W. H.—F.—received.

LITERATURE

Helen of Troy. By A. Lang. (Bell & Sons.)

The studies Mr. Lang is pursuing in connexion with his translations of Homer have resulted in the publication of an original poem on the subject of Helen of Troy. English poets from the days of Marlowe to those of Landor have constituted themselves apologists for the wife of Menelaus. Of all, however, who have come forward in her behalf Mr. Lang is the doughtiest champion and most uncompromising advocate. On the strength of a disputed line in the Iliad he has presented Helen as blameless in conduct, an unsullied and a reluctant victim of Aphrodite. The line in question occurs in the second book, in the speech of Nestor to the assembled leaders:—

τίσασθαι δ' Ἑλένης ὀρμήματά τε στοναχάς τε,

and is rendered by Mr. Gladstone "Avenged the longings and sorrows of Helen." Pope's opinion is, of course, of little value. He, however, translates the line in a similar spirit:—

Till Helen's woes at full revenged appear;

and Cowper gives it:—

Take sweet revenge for Helen's pangs of heart.

Chapman, on the contrary, accepts the more current rendering of the passage, that the woes to be avenged are those to be endured by Greeks for Helen's sake, and speaks of

The rape
Of Helen wreaking, and our sighs enforc'd for her escape.

Without going further into the question or taking into account the views founded upon this line by the "separatists," it may be conceded that sufficient divergence of opinion exists to justify a modern writer in accepting whatever rendering commends itself to his convenience or his taste. That the line, however translated, warrants so complete a vindication of Helen as Mr. Lang has attempted, or that any other passages in the Iliad or the Odyssey present her in a light so favourable as that in which her latest apologist chooses to regard her, we hesitate to concede. The abstract right of a poet to exhibit his heroine in any light whatever it is not worth while to contest. Helen, however, is so essentially a Homeric creation that it is scarcely expedient to show her other than she appears in the Homeric poems. That supine acquiescence in the fiat of the gods which Helen, after her first stormy outbreak against Aphrodite, displays, belongs to a period later than that of Homer. That Helen in the Iliad feels herself aggrieved by the action of Aphrodite appears from her sneer against the goddess when, after his defeat by Menelaus, Paris is conveyed in her arms back to Troy. In Chapman's version the tirade of Helen is as follows (bk. iii. 417–24):—

Unhappy Deity!
Why lov'st thou still in these deceits to wrap my phantasy?
Or whither yet, of all the towns given to their lust beside,
In Phrygia, or Mæonia, com'st thou to be my guide,
If there (of divers languag'd men) thou hast, as here in Troy,
Some other friend to be my shame, since here thy latest joy
By Menelaus now subdu'd, by him shall I be borne
Home to his court, and end my life in triumphs of his scorn?

This outbreak may, perhaps, be ascribed to contempt for the lover disgraced in combat and the feeling of home sickness begotten of the sight of the Greeks. Mr. Lang, however, represents Helen, while still in the house of Menelaus, as using to Aphrodite language of even stronger condemnation, and as only yielding to the suit of Paris when her senses are steeped in an oblivion such as was produced by the nepenthes given her in Egypt by "the wife of Thone." Prevision of the experiment to which she is to be subjected rouses Helen to the employment of such terms as the ears of Aphrodite, accustomed to worship and prayer, cannot often have heard:—

Then Helen ceased from unavailing prayer,
And rose and faced the Goddess steadily,
Till even the laughter-loving lady fair
Half shrank before the anger of her eye,
And Helen cried with an exceeding cry,
"Why does Zeus live, if we indeed must be
No more than sullen spoils of destiny,
And slaves of an adulteress like thee?

"What wilt thou with me, mistress of all woe?
Say, wilt thou bear me to another land
Where thou hast other lovers? Rise and go
Where dark the pine trees upon Ida stand,
For there did one unloose thy girdle band;
Or seek the forest where Adonis bled,
Or wander, wander on the yellow sand,
Where thy first lover strew'd thy bridal bed.

"Ah, thy first lover! who is first or last
Of men and gods, unnumber'd and unnamed?
Lover by lover in the race is pass'd,
Lover by lover, outcast and ashamed.
Oh, thou of many names, and evil famed!
What wilt thou with me? What must I endure
Whose soul, for all thy craft, is never tamed?
Whose heart, for all thy wiles, is ever pure?

"Behold, my heart is purer than the plume
Upon the stainless pinions of the swan,
And thou wilt smirch and stain it with the fume
Of all thy hateful lusts Idalian.
My name shall be a hissing that a man
Shall smile to speak, and women curse and hate,
And on my little child shall come a ban,
And all my lofty home be desolate."

All the beauty and melody of these stanzas fails to reconcile us to the change of motive involved in presenting Helen as wholly innocent. So far, moreover, as regards the moral responsibility of Helen, it should be remarked that it is only in the Odyssey that any attempt is made to shift the moral blame from Helen on to some god. In this fact is, of course, supplied a chief argument of those who regard the Iliad and the Odyssey as of different date. In the Iliad Helen is neither moral nor immoral. No question of immorality approaches her. This instance, for which abundant parallels can be supplied, signifies no more than that Helen came into poetry from mythology. Mythology was to some extent a statement of the phenomena of the universe, and as such had no connexion of any kind with morals. When these phenomena came to be regarded as existences, and some remembrance of the mythological origin of the existence still clung to them, the question of morals as applicable to their actions remained in abeyance. It was not till the personality of the god, demigod, &c., became quite separated in the minds of men from the phenomenon the personality once embodied that the notion of applying the rules of morality to conduct came in. When, accordingly, any kind of morality is predicated of any mythological personage, it is a sign that the mythological character has disappeared and that the work is of a comparatively late time. Such rudimentary morality, then, as is assigned to Helen in the Odyssey, when compared with the absence from the Iliad of any notion whatever of morality, is an argument for the Odyssey being later in date.

Memory in Mr. Lang's poem first returns to Helen when from Corythus she receives the message of Œnone. So soon as the "birchen scroll" comes into her hands,

Even as she read, by Aphrodite's will
The cloud roll'd back from Helen's memory:
She saw the city of the rifted hill,
Fair Lacedaemon, 'neath her mountain high;
She knew the swift Eurotas running by
To mix his sacred waters with the sea,
And from the garden close she heard the cry
Of her beloved child, Hermione.

Then instantly the horror of her shame
Fell on her, and she saw the coming years;
Famine, and fire, and plague, and all men's blame,
The wounds of warriors and the women's fears;
And through her heart her sorrow smote like spears,
And in her soul she knew the utmost smart
Of wives left lonely, sires bereaved, the tears
Of maidens desolate, of loves that part.

She drain'd the dregs out of the cup of hate;
The bitterness of sorrow, shame, and scorn;
Where'er the tongues of mortals curse their fate,
She saw herself an outcast and forlorn;
And hating sore the day that she was born,
Down in the dust she cast her golden head,
There with rent raiment and fair tresses torn,
At feet of Corythus she lay for dead.

What caprice induced Aphrodite to undo all she had before done in thus restoring consciousness to Helen is not clear. The whole conception of the character of Helen fails, indeed, to commend itself to us. This question apart, the treatment of the subject is all that can be desired. The melody and grace of the versification may be judged from the extracts supplied.

The poem opens with the arrival of Paris in Lacedæmon. So much of his early life as is given Paris himself narrates to Menelaus and to Helen. The adventures that befall the fugitives during their homeward journey, the courteous reception of Helen by Priam, and the festivities that attend their arrival in Troy are briefly told. Then follows a short and stirring record of the siege of Troy and the death of Sarpedon, Patroclus, Hector, Memnon, and Achilles, and lastly of Paris himself, narrated in musical and delightful verse. In the sixth book the sack of Troy is presented. Helen, who once more forgets her past life, is conveyed by Aphrodite to the bed of Menelaus.

Seeing him, she speaks to him as though he had just returned from the chase in Lacedæmon, and demands,

My lord, how hath thy hunting sped?
Methinks that I have slept a weary while!

Not at all disposed to pass the required act of oblivion is the injured husband. After taking counsel with his peers Menelaus calls upon the Greeks to stone Helen. Overcome by her marvellous beauty, however, the warriors drop the shards and flints they have seized for the purpose of slaying her, and Menelaus draws his sword to take her life. At this point Aphrodite again interferes.

Then fell the point that never bloodless fell
When spear bit harness in the battle din,

and Helen is once more pardoned and once more wooed. After watching peacefully

The counted years of mortal life go by,

husband and wife are transferred to Elysium.

The reunion of Menelaus and Helen in Lacedæmon is, of course, taken from the Odyssey. How they became reconciled is not told by Homer, but is explained by Walter Savage Landor in his 'Menelaus and Helen at Troy.' The purpose of the Greeks to stone Helen, and their relenting at the sight of her beauty, Mr. Lang derives from a statement attributed to Stesichorus. With the suggestion in Homer that previous to her reconciliation with Menelaus she had married Deiphobus, and by mimicking the voices of the wives of the heroes almost "tempted them to leave their ambush in the wooden horse," Mr. Lang deals only in a note. In his very interesting appendix Mr. Lang makes no reference to the union of Helen and Achilles in the Island of Achilles mentioned by Philostratus—a fiction of which a living writer, Dr. Sebastian Evans, has made happy use in a poem called 'Achilles' Island'; nor does he allude to the passage in the 'Life of Apollonius of Tyana' (iii. 20) of the same author, in which what was a general opinion finds expression—that Helen was "a woman who, it is thought, was raped not unwillingly." According to Philostratus (*ib.* iv. 16), Apollonius had conversed with Achilles, by whom he had been told that Helen after her rape by Paris was really in Egypt in the house of Proteus, and, in spite of what Homer says, never was in Troy at all. Bayle's estimate of Helen is as unfavourable as that of Mr. Gladstone and Mr. Lang is the reverse. After speaking of the war of Troy, Bayle says:—

"Paris aiant perdu la vie la derniere année de cette guerre, son frere Deïphobus remplit sa place auprès d'Helene. Les Grecs le massacrérent vilainement la nuit que Troie fut prise: ils furent en cela favorisez par Helene autant qu'ils eussent pu le souhaiter. Menelas se comporta en bon homme, il se reconcilia sans beaucoup de peine avec sa femme, & la ramena chez lui fort humainement. Après qu'il fut mort elle fut contrainte de prendre la fuite, & de se retirer dans l'Ile de Rhodes, où elle périt malheureusement; car on la pendit à un arbre. Les déréglements ignominieux de sa vie n'empêchérent pas qu'on ne lui rendit les honneurs divins après sa mort, & qu'on ne lui attribuât des miracles."—*Dictionnaire Historique*, troisième édition, art. "Helene," p. 1407.

Mr. Lang's volume is likely to be a favourite with lovers of narrative verse. It is sustained in sweetness and in power, and its versification is happy throughout. Instances of delicate and dainty workmanship may be advanced, and the whole is charged with Greek feeling. Especially happy is the concluding half of the following stanza. Helen is, of course, the "she" indicated:—

In no wise found she comfort; to abide
In Ilios was to dwell with shame and fear,
And if unto the Argive host she hied,
Then should she die by him that was most dear.
And still the days dragg'd on with bitter cheer,
Till even the great Gods had little joy,
So fast their children fell beneath the spear,
Below the windy battlements of Troy.

As the most important original work he has yet attempted in verse this volume cannot fail to bring Mr. Lang augmented reputation.

Kritischer Commentar zu den Psalmen. Nebst Text und Uebersetzung von H. Graetz. (Breslau, Schottländer.)

The eminent historian of the Jewish nation has now transferred his whole attention to the exegesis of the Old Testament. After his commentaries on Canticles and Ecclesiastes, in both of which he showed great originality, he gives us the first part of his commentary on the Psalms, which comprises the first sixty of them. His German translation of them appeared some time ago, and was noticed in the *Athenæum*. In his present volume he gives the Hebrew Massoretic text, along with the German translation, for the convenience of students, and in the commentary justifies his translation. A preface, as we should naturally expect, precedes the commentary. In this he treats of the character and importance of the Psalms, of their classification and their authors, of the period of their composition, of their poetical form and style, of the divine use of them, of their musical accompaniments, of their titles and order, of the state of their text, and finally of the early translations. Space does not allow us to enter into details on these remarkable chapters of the preface, where nothing is omitted, and all is said in as few words as possible. According to Dr. Graetz, the Psalms are in general of a national religious character, and are divided into five books, so as to correspond with the five books of Moses, while the 147 or 150 chapters into which they are further subdivided stand in relation to the Sabbatic sections of the Pentateuch, which varied with the calendar from 147 to 150. David is not the author of any Psalm, not even of the eighteenth, though there are some composed by descendants of David, which lament the loss of David's kingdom. Most of them, however, are by Levites, some of whom style themselves "poor" or "humble," as if they were Ebionites.

As to the date of the composition of the Psalms, Dr. Graetz divides them into pre-exilic, exilic, post-exilic, pre-Maccabean, Maccabean, and post-Maccabean, making them, in short, a literature of nearly eight centuries, from the time of David to the time of the queen Salome-Alexandra. The chapters on the divine use of the Psalms, on the musical instruments, and more especially on the state of the text, are full of new information, from the Talmud on the one hand and from the Massorah on the other, so that on account of these chapters alone Dr. Graetz's book is indispensable to Biblical scholars. It is rather discouraging to see, from the rules and examples quoted in full detail by Dr. Graetz, how carelessly copyists worked at their task of copying the sacred books. They committed errors through confusing sounds, through the graphic similarity between letters, through transposition of letters, through dittography and repetition of letters, through omission and addition of words and letters, and through wrongly separating the words. These causes are not due to Dr. Graetz's imagination, but are for the most part admitted by the early Jewish grammarians, and by some even of the Massorets. What a field for guesswork is left by these irregularities can be seen in the present commentary, where Dr. Graetz, resting partly upon early translations and partly on conjecture, suggests emendations and supplementary words which will horrify the orthodox reader and astonish the critic. But we think that both will have to admit in many cases that emendations are necessary and that our commentator has found in many instances the right ones. There can be no doubt, for instance, that the fifth and sixth words in Ps. iv. 3 (A.V. 2, "How long *will ye turn* my glory into shame?") must be read כבדי לב למה, which gives the better sense, "How long, you hardhearted, why will you love?" as in the LXX., ἕως πότε βαρυκάρδιοι, ἵνα τί. Every scholar must further see that the words נשקו בר (Ps. ii. 12), "Kiss the Son," can scarcely be the right reading, as is sufficiently proved by the LXX., which has δράξασθε παιδείας—words with which the Targum agrees. But Dr. Graetz's emendation, החזיקו במוסר (cf. Prov. iv. 13), we must hesitate to accept; the scribe could scarcely have made such alterations as would be necessary for the substitution of these two words. We think that בקשו might be looked for in the word נשקו. A third class of Dr. Graetz's emendations we shall simply discard as unnecessary and as being against the Hebrew idiom, such as, for instance, the reading of the first three words in Ps. viii. 6 (5), ותחסרהו טעם מאלהים, "Thou hast accorded him intelligence from God," in place of the correct sentence, "For thou hast made him a little lower than the angels." But Dr. Graetz says himself at the end of his preface, "If the result of all my interpretations does not always prove to be good, I am convinced that the method I have employed will be followed, and that it will help much towards the understanding of Scripture."

At the beginning of each Psalm Dr. Graetz gives introductory paragraphs on its contents, poetical form, and probable period of composition. Of course, in dealing with the last question there is left much matter for discussion. Let us take for example the first Psalm. Whilst Dr. Perowne is inclined to regard it as an introductory chapter to the book, the author of which is probably Solomon, who collected his father's poems, Dr. Graetz considers it a post-exilic composition, which refers to the beginning of the split between the observers of the Law and the Hellenistic Jews about 200 B.C. The recom-

mendation of meditating in the Law day and night (verse 2) can scarcely be Solomonic, as in that early age the Law was not yet accessible in general for meditation, even if it were already written. The word *Thorah*, "Law," is certainly of a much later date than that of Solomon. On the other hand, Dr. Graetz's argument that the words "ungodly" and "sinners" correspond with the expressions ἀσεβεῖς and ἄνομοι of the first book of the Maccabees is not of a character to convince us at once, for, as Dr. Perowne remarks, the same expressions occur frequently in the book of Proverbs, which is scarcely of so late a date. Dr. Graetz is in general more cautious in determining the dates of the various Psalms than in his emendations; in many cases he leaves the question open with the word "unbestimmbar." The great merits of his commentary, besides those already mentioned, are its briefness and the way in which it comes as soon as possible to the question at issue, without theological discussions or attacks on other commentators. In his preface he states that he has made use of nearly a hundred emendations proposed by M. Charles Bruston and of about two hundred and fifty more proposed by M. Dyserinck. It would have been advisable to indicate them in the places where use was made of them in order to avoid accusations of plagiarism, to which critics are in our days only too much inclined.

From Benguella to the Territory of Yacca: Description of a Journey into Central and West Africa. By H. Capello and R. Ivens. 2 vols. Maps and Illustrations. (Sampson Low & Co.)

Stung into action by the taunts of other nations, Portugal has of late made praiseworthy efforts to enlarge our knowledge and to develope the resources of her African possessions. Most prominent among the various enterprises started for that purpose is the expedition of which Capello, Ivens, and Serpa Pinto were members. The last named of this triad of explorers has already furnished the public with an account of his adventurous journey across the continent, the first of the kind ever performed by a native of Portugal, and now we are placed in possession of the narrative of the other members of the expedition. Their work is a joint one, in the strictest sense of the word, and the reader is left completely in the dark as to the share to be allotted to each of the explorers respectively. Even differences of opinion on such matters as the capacity of the black man for civilization are carefully kept in the background, and the authors have realized, at least outwardly, the aspiration of the German poet who dreamed of

> Zwei Seelen und ein Gedanke,
> Zwei Herzen und ein Schlag!

In September, 1877, the members of the expedition landed at Benguella, and they proceeded thence by a southern route to Bihe, where Serpa Pinto finally separated from them under circumstances fully set forth in the introduction to these volumes. His companions felt bound to carry out, as far as lay in their power, the instructions which had been given them by the home authorities, and they accordingly devoted the whole of their energies to the exploration of the river Cuango. In doing this they were fortunately able to make far larger additions to our geographical knowledge than did their late companion in his more sensational but far less fruitful journey across the continent. Before leaving Bihe for the north they visited a spot on the Upper Cuanzo, about twenty-five miles below the swamps in which the river rises; but once beyond the basin of the Cuanzo, and notwithstanding the rugged nature of the country and the pestilential climate of the lower grounds, they kept as near the Cuango as possible, and actually succeeded in tracing that river for a distance of 500 miles from its source to about lat. 6° 30′ S. In the course of this journey they visited Chiboko or Kioko, justly famed for its pottery; they spent a considerable time among the enterprising Ban-gala, and finally pushed through the territory of the Jinga into that of the Yakka. Their route throughout abounded in features of interest. It presented far more variety than a journey of similar extent across the great central plateaux would have afforded, and consequently greater scope for animated descriptions, of which the authors have not failed to avail themselves.

More especially interesting are their accounts of the native tribes. Almost at the very outset they were enabled to shed light upon the history of the Jagga, who ever since Battel came across these reputed man-eaters on the coast of the Atlantic have figured prominently in books on Africa. If we accept Ndumbo Tembo of Chiboko as an authority on a subject concerning his own ancestors, the word "jagga" is a title which was assumed by three daring hunters, the sons of Lukokesa of Lunda, who left their native country towards the close of the sixteenth century in consequence of some dispute, and founded three kingdoms on the banks of the Cuango, whence they extended their predatory excursions to the Portuguese settlements on the coast. These three kingdoms were Chiboko, Songo, and Kasanje, and they still exist. Of the bloody rites usual on the investiture of a Jagga the authors give us a harrowing account; but although human sacrifices take place on these occasions, and the incoming chief is required to eat of a horrid mess containing human flesh, anthropophagy, as usually understood, is not practised. It therefore needed no "secret association" to put down this habit, as alleged by Laszlo Magyar, whose "Pakasera" are simple hunters of the buffalo or *mpakasa*, known to the Portuguese as *empacaceiros*, and universally respected for their boldness.

With the country of the Jinga the authors entered upon what was virtually virgin ground, notwithstanding that this tribe figures largely in the history of Angola. The Jinga, we are told, call themselves Muko Ngola or Mona Ngola, and their king is a veritable autocrat whose power is not restrained by hereditary feudatories, as is the case in most of the other African kingdoms with which we are acquainted. The districts of this kingdom are only held for life, and they are bestowed upon whomsoever the king chooses, his choice being guided by the gifts bestowed upon him by the candidates who may offer themselves. The Jinga are very dark. The Hungo, who live next to them, are, however, of a mahogany colour, and they cut away two of their front teeth—a practice not observed to the south, though very frequent along the Congo and elsewhere. Of the Yakka the authors saw but little, for their exhausted resources made a journey to the king's residence impossible. The outlying tribe with whom they came into contact principally subsisted by fishing and hunting, as the keeping of cattle is a monopoly of the king. It was in this region that the authors discovered quite a congeries of small lakes embedded amongst the mountains; but they inquired in vain for a Lake Aquilunda, which De Barros was the first to introduce into the geography of Africa, and of which very detailed descriptions have been published by Cavazzi and others.

To the north of these lakes the authors came upon a region the physical difficulties of which they bravely faced, but which even energy and perseverance such as theirs were incapable of surmounting. They found themselves in a vast tract of uninhabited country, "shunned by man for more than one reason, whereof the absolute want of water is the chief."

> "What frightful solitudes they were! What sadness, which sunk into the soul, weighed upon the entire territory! The silence of the tomb reigned supreme upon those rocks and hollows, whose gloomy and naked aspect, made more terrible by the blinding light of the equatorial sun, seemed to bar all relief to the many ills under which we were sinking! No occasional scraps of green, no clouds to temper the intensity of the sky, offered any relief in the midst of that awful desert, where the silence was appalling, the immovability of every blade of burnt grass was insufferable, where the heat was suffocating, and where the valleys but echoed to the groans and laments of our exhausted crew!"

Broadly speaking, these explorations, so perseveringly carried on in the face of physical obstacles, show that the Cuango can never become a navigable highway, for it is cumbered with rocks and falls, the most considerable among which have been named by its discoverers in honour of Queen Louisa; and that, owing to the pestilential climate, its immediate vicinity is quite unsuited for the establishment of European factories. On the other hand, there exist on the highlands numerous localities where European colonies might reasonably be expected to flourish, and which, owing to their superior fertility, hold out great inducements to settlers. The rapidity with which vegetation springs up in these favoured regions the following story is intended to illustrate:

> "One of the aborigines assured us with the utmost seriousness that he had one day, during the rainy season, stuck his freshly cut staff into the mud in front of his hut, and stood at the door, spinning a long yarn to his relations, who sat round, and that before he had finished, lo! he found himself under the shade of a mighty tree, whose existence was totally unknown to him, but which he found on examination to be his staff, that had taken root, shot out branches, had become covered with leaves, and showed evidence of bursting into flower! That marvellous tree cost us a glass of *aguardente*, which we could not help bestowing on the story-teller for his invention."

If the undoubted resources of the country have not hitherto been rendered more productive, this is owing partly to the blighting influence of the slave trade in days now

happily past, and more especially to the apathy and ignorance, to use no harsher terms, of the Portuguese authorities. The authors are very outspoken on this subject. If we may believe them, their countrymen have a knack of always "selecting the very worst spots for a permanent station"; and as an instance they mention Ambaca, the home of the famous Ambaquistas. And yet this "miserable village of three houses and a dozen and a half of wigwams," whose European inhabitants are of "cadaverous aspect, their heads wrapped in linen and their legs full of ulcers," and where "every soul one meets is in mourning, as though death were so widespread that none can escape the exhibition of such emblems of woe,"—this uninviting place has been selected for the terminus of a railway. And if to this inaptitude be added the "cupidity and unjust imposition" of Portuguese officials, we need not wonder at the country around certain of the more notorious stations in the interior having become depopulated. As a matter of fact the authority of Portugal throughout the greater portion of the territory which is coloured on our maps as forming part of Angola or Benguella is only nominal. Even at Quillengues, which has a permanent garrison, the native chiefs "appear to enjoy, or at least to claim, a relative independence." One of these sable worthies, on being asked by the Portuguese *chefe* to come over to the "residence" to talk over some matter, declined the invitation, saying:—

"That it was the same distance from the residence to the enclosure as it was from the enclosure to his house, and that if the *chefe* doubted the fact he had better make the experiment."

Fortunately for the future of Portuguese Africa, the system to which the authors refer in such severe terms appears to be rapidly becoming a thing of the past. The home authorities are earnest in their efforts to develope the resources of the colonies, and in the case of Angola, at all events, they have already succeeded in securing the services of officials who are at once men of honour and capacity. But the sins of generations cannot be repaired in a day, and the present generation must not lose heart if its efforts do not bear fruit immediately.

The information on distant countries obtained from natives was generally of a vague and untrustworthy nature, and we are not yet prepared to believe in the existence of the Kutike, described as a race of dwarfs whose heads grow to such a size that when their owners fall they cannot get up again without assistance, or in the Luboko, who eat clay and burrow in the earth like moles. Far more interesting are the few notes obtained from Portuguese traders, and we sincerely hope that these rude but enterprising men will find an able historian among their countrymen. They are fast dying out, for the merchants on the coast no longer care about sending their goods into the interior, and Senhor Luciano Cordeiro, whose knowledge of Portuguese Africa is so extensive, would render a real service to geography if he were to present the public with a trustworthy abstract of the explorations of such men as Silva Porto, Ferreira, Brochado, and others. The fragments which have appeared in the 'Anães' have only whetted our appetite, and we long for more. The authors give a few details of a journey into Garanganja and Urua, performed in 1870 by one João Baptista Ferreira. Garanganja is clearly Katanga, the famous copper country—a conclusion justified by the name of the chief, Mshira, no less than by the vocabulary published in an appendix to the present work. The words of this vocabulary are Kinyamwezi, and we know through Cameron that Mshira, the chief of Katanga, is actually a native of Unyamwezi.

Of very great importance are the scientific observations and collections made by the authors. The animals and plants brought home by them are described by competent authorities in an appendix, which likewise contains a few vocabularies, but from which the magnetic observations to be found in the original have unfortunately been omitted. Numerous latitudes and longitudes were determined, and of these we wish to speak with all respect, although unable to accept them as "strictly correct." The chronometer (by Dent) may have been an excellent instrument, but even such a one is certain to change its rate in the course of a long journey through a difficult country. It is to be regretted that absolute methods were not more freely used. At Bihe the result obtained differs by eight miles from that given by Serpa Pinto, whilst at Malanje, where Buchner, Lux, and Wissmann observed, the difference is still greater, amounting to no less than fifteen miles.

The altitudes appear to have been carefully computed and are entitled to confidence. Of the maps, several to be found in the original have been omitted, whilst those given are published on a reduced scale. The illustrations are numerous and to the point. Many are from photographs, others from sketches by Lieut. Ivens, and if the engraving of some of them leaves much to be desired, this is more than compensated by their apparent trustworthiness.

Of the translation, by Dr. Alfred Elwes, we are able to speak in words of praise, one point excepted, viz., the employment of the article before the names of countries such as Bihe and Lunda. The Portuguese use the article, no doubt, but if Dr. Elwes will refer to his own excellent Portuguese grammar, he will find that it ought to be omitted in English.

Altogether this work of travel is a credit to its authors, and one which is entitled to a permanent place among books dealing with African geography.

Archæological Survey of India: Report of Tours in the Central Doab and Gorakhpur in 1874–75 *and* 1875–76. By A. C. L. Carlleyle. Vol. XII. (Calcutta, Government Printing Office.)

The Archæological Survey of Western India is eminently calculated to promote our understanding of the Indian monuments, but the Report published by Mr. A. C. L. Carlleyle, First Assistant to General A. Cunningham, concerning his tours in the Central Doab and the Gorakhpur district marks a departure which widely separates this work from the important and profoundly learned productions of men like Burgess, Bühler, and Fleet. In the volume before us—which, though printed in 1879, did not reach this country till last spring—Mr. Carlleyle treats mainly the question of the site of Kapilavastu, the native city of Gautama Buddha, and his method of treating it differs radically from the method heretofore followed in investigations of this nature. Mr. Carlleyle himself appears to be aware of this radical divergency, but is far from looking with any degree of diffidence on the plan he has sketched out for himself. "I am in the firm belief," he says (p. 140), "that a new era will yet dawn on the sciences of ethnology and philology"; and he is evidently conscious of being the man destined to usher in that era and, by discoveries altogether subversive of our supposed knowledge of these matters, "to astonish any sceptics of the old school who may read this Report" (p. 98).

Let us endeavour by the aid of Mr. Carlleyle's investigations briefly to trace out some of the chief characteristics of the new era which is to dawn on the sciences of ethnology and philology, and the most important vehicle of which consists in the intercomparison of languages. Not such an intercomparison, however, as was professed by the "sceptics of the old school," who held that it is unsafe to compare with one another words to all outward appearance similar, but separated by a wide space of time and locality, unless you can trace as far back as possible the history of each word within the language to which it belongs, and unless you have methodically and rigorously investigated the phonetic laws by which the forms of those words in the respective languages were regulated in their successive stages. Those sceptics went even so far in their attention to minutiæ as to see to the words in question being, if not printed with absolute correctness, at least tolerably recognizable. Thus, when such an "old sceptic" had to investigate how it is that in Burmese books Buddha's home is called the Thekka country, he did not at random compare the word Thekka with some similar Greek word, but bore in mind that the Burmese express the Indian *s* by *th* (writing and pronouncing *Thotâpatti* for the Pali *Sotâpatti*, *dvâdatha* for *dvâdasa*), and concluded that Thekka is identical with the Pali Sakka, the name of the race to which Buddha belonged. Mr. Carlleyle proceeds differently. The Thekka country (p. 142) reminds him of the Hindi word *thek*, "a support, a prop," of the Takka tribe in the Panjâb, and of the Greek word Τεσωσω (*sic*), "offspring." From the intercomparison of these words he draws the convincing inference that the Takkas were the true inhabitants of the Sakya country! Again, he takes *Sâkala*, the ancient capital of the Takka country, for a diminutive form of Saka, and thus the Sâkyas, or *Sâgalas*, or Takkas, to be "descendants or offshoots from the great Sâka race of Kurmmâvan." Any one who may wonder how the name of these Sakas, who have hitherto been looked upon as barbarians from Central Asia, could have any connexion with the Greek Τεσωσω will be glad to know that Mr. Carlleyle has promised to prove "in a separate treatise, devoted specially to the consideration of such ethnological questions" (p. 98), that the Sakas were really Aryans. It is to be hoped that he will also present us in that treatise with the corresponding Greek names of

Saka kings such as Ooerki and Ooemokadphises, possibly in the same dialect in which he has found his Τσωοω and the name "Thenòkratês" (p. 46), which he has somewhat hastily guessed at from the Θ of a crystal seal. No less characteristic of Mr. Carlleyle's new era are his lucubrations (pp. 112–24) concerning the word Bhuila, the modern name of the locality in which Kapilavastu is said to have formerly stood. The first syllable is *bhû*, "the earth," and *ila* is the Vedic deity Ilâ, probably connected with the Trojan Ilos and the Greek "*ilè*, a ball," and "*illô*, to roll," and traceable also in the Tibetan name of Kapilavastu, viz., L'has-bstan ("Sanskrit Ailasya-sthâna or Ilâyas-sthâna"). We think we can dispense with further selections from the rich philological stores of this book; the specimens given above amply suffice to raise a doubt whether Mr. Carlleyle, when he concludes his disquisitions with his favourite phrase *Quod erat demonstrandum*, has really in each case proved anything at all.

Mr. Carlleyle has not undertaken to bring together the notices contained in the sacred literature of the Buddhists concerning Kapilavastu. If he had done so he would have rendered a useful service. Thus the itinerary, in the last section of the 'Suttanipâta,' of the journey from Ujjayinî to Râjagṛiha by way of Kapilavastu, was well worth attention. We may also here note that his challenge (pp. 178, 187) of the correctness of a passage bearing on this identification in Prof. Beal's translation of Fa-hian is in every respect unjustifiable. Had he carried on his researches on a broader basis and with more sobriety, he would scarcely have fixed the site of Kapilavastu so near to Ayodhyâ as he does, viz., at a distance of about twenty miles.

Mr. Carlleyle has placed on the title-page of his book Prinsep's words, "What the learned would demand of us in India is to be quite certain of our data, to place the monumental record before them exactly as it now exists, and to interpret it faithfully and literally." We could wish that, instead of founding a new era of scientific research, the author had possessed sufficient self-denial and discretion to carry on to the best of his ability the work of the old era sketched out by Prinsep, and executed by him with such wonderful results.

The History of Scarbrough from the Earliest Date. By Joseph Brogden Baker. (Longmans & Co.)

Mr. Baker has produced a useful and amusing book, but he should not have called it a history of Scarborough. To write a history of an important borough, such as Scarborough has been and is, requires years of toil and qualifications of a kind of which we see few signs in Mr. Baker's pages. What he has done is in the main good, and we are therefore the more sorry that he did not determine to call his book by some more modest title, such as "Notes" or "Collections." Of the mediæval history of Scarborough he tells very little; yet had the necessary pains been taken, we cannot but believe that very much of interest might have been discovered in manuscript sources. With printed documents Mr. Baker deals fairly enough; he seems to have consulted almost all the books bearing on his subject, and to have used his materials fairly. There is not the slightest evidence that he desires to hide the sources of his knowledge, but his quotations are made in a manner so unworkmanlike that readers will often be puzzled how to verify them. The corporation records have, it would seem, been carefully examined, and we from time to time come across very interesting extracts from them, but we are too often left to make a guess at their dates. As an example of what we mean, we may mention that Mr. Baker gives a remarkable proclamation of the fair which was held from the feast of the Assumption until Michaelmas Day. The document is in verse and too long for quotation. Though the copy he has used is somewhat modernized, it seems to be an adaptation of an early original. As far as we can make out, Mr. Baker gives no date to this nor any account as to where it has come from. We say as far as we can make out, for he is so in the habit of introducing irrelevant matter, and treating of the same thing in various places, that it is well within the limits of probability that we have overlooked it. With regard to the old trade guilds of the borough he has been more fortunate. There seem to have been originally about twenty of these; now it appears that of the Joiners and Coopers is the only one remaining. The corporation records supply the "Bakers' Composicione" of the year 1615. This is printed at length, and is in several ways interesting. Though the Reformation had relieved the guild brethren of the duty of praying for the souls of members of their craft, it was still required when any member or the wife of any member of the guild died, that "the aldermen, burgesses, and rest of the sayde socyetie shall accompanye and carrye, or cause to be carryed, the sayde deceasede person in decent manner to the place of buriell." The secretary of the craft, who probably stood in the place of the chaplain of former days, was bound to make peace when possible between members; and until this official had tried and failed it was not permitted to any of the brethren to begin suits before the legal tribunals. The Reformation had probably little effect on the guilds in those cases where it did not destroy them altogether. The seventeenth regulation provides that baking is not to be done "uppon the Sabbathe daye" except licence be given by the bailiffs. This is, perhaps, a rule of post-Reformation date, but by no means is it certainly so, for from time to time in the Middle Ages strenuous endeavours were made to induce the people to keep Sunday strictly. In the very beginning of the thirteenth century Eustace, the Abbot of Flay, went up and down the country preaching to the people the duty of a rigorous observance of the Lord's day. It appears that grinding corn and baking bread on the Sunday were two of the evil customs which he denounced. Hoveden tells us in simple faith how his mission was confirmed by miracles. At Wakefield a mill working on a Sunday—the old soke mill we suppose—instead of flour poured forth blood; and at another place paste put into a very hot oven, *furnum calidissimum*, came out paste still. We should not, therefore, be surprised to learn, if earlier copies of this document should be discovered, that the Sabbath regulation, somewhat differently worded perhaps, is found there.

Though we have found it necessary to dwell on Mr. Baker's shortcomings as an historian, we are bound to say that the book will be most useful to Yorkshiremen. Deficient in orderly arrangement as it is, it contains a great gathering of facts relating to the last three centuries which will be of service not to the townsmen of Scarborough only, but to the inhabitants of the East Riding generally. We hope we shall not be considered to trespass upon the region of party politics if we direct attention to the map showing the footpaths in the neighbourhood of Scarborough. Landowners have in many counties a most pernicious habit of stopping up these old paths for their own private convenience or the supposed preservation of their game. We do not know whether these things happen in Yorkshire. If they do, it is well that the folk who go about on foot should have at hand an easy means of demonstrating their rights.

The Vinaya Pitakam. Edited by Dr. H. Oldenberg. Vols. III. and IV. (Williams & Norgate.)

The Sacred Books of the East.—Vol. XIII. *Vinaya Texts.* Translated from the Pâli by T. W. Rhys Davids and Hermann Oldenberg. Part I. (Oxford, Clarendon Press.)

Messrs. Williams & Norgate have issued the fourth volume of Dr. Oldenberg's *editio princeps* of the 'Vinayapiṭaka,' which contains the last part of the 'Suttavibhaṅga.' In this volume the learned editor has practically finished his task. The fifth book, which remains to be published, is simply a *résumé* and an index to the whole of this *pitaka*. We can, therefore, now congratulate Dr. Oldenberg on the important work which he has completed by publishing the 'Vinayapiṭaka.' It is here that we gain an insight into the working of a system which has influenced the history of Asia for centuries. The publication, moreover, is of the greatest importance, not only for the history of Buddhism, but also as giving an example of the very earliest recorded monastic institution of the world.

Dr. Oldenberg pointed out in the first volume of his edition, and we adverted to the fact in a previous notice (*Athen.*, No. 2703), that the 'Pâtimokkha,' a collection of precepts, forms the basis of the 'Suttavibhaṅga.' His new volumes bear out this statement. The text follows strictly the order of the 'Pâtimokkha,' commencing with the four deadly sins, the commission of which was punished by expulsion from the order. Then follow the faults which are punished by temporary expulsion from the priesthood. The next in order are the two undefined faults, which can only be punished on the evidence of a person of unblemished character. Fourth on the list stand the sins which may be atoned for by the restitution of any object presented to the community and appropriated by an individual member of that community. Then we have a long account of the sins requiring expiation, such as the use of abusive language, lying, slander, the sins which might be committed against the

vegetable world, the sins committed in reciting the scriptures at an improper time to the nuns, the sins regarding dress, the sins regarding intoxicating liquors, &c. The sins requiring confession, which follow next in order, relate to the partaking of food in the presence of nuns and to the collecting of food. With the rules for conduct and the seven ways in which questions have to be settled the 'Mahāvibhaṅga' closes.

The 'Bhikkhunīvibhaṅga,' which rests on the 'Bhikkhunīpātimokkha,' agrees of course in several instances with the 'Mahāvibhaṅga.' The variations which we find in the two texts are only such as follow naturally from the fact that one was intended for the guidance of the male, the other for the guidance of the female order. Hence in the 'Bhikkhunīvibhaṅga' we find a prohibition of the use of *rouge* and of bathing in perfumed water.

The different rules are connected by means of stories relating the occasion and the reason of the Buddha giving the particular rule. They show in a certain way the manner in which he used to teach. Such an elaborate account can, of course, not belong to the very earliest times of Buddhism. It presupposes a long development. However, all questions connected with Indian chronology cannot yet be satisfactorily solved. We may express the hope that Mr. Rhys Davids and Dr. Oldenberg will yet give us some dates in their translation of the 'Vinayapiṭaka,' drawn though they must necessarily be from internal evidence. In conclusion we have only to state that the editor, Dr. Oldenberg, has done his work in the same conscientious, modest, and painstaking way to which he has accustomed us in the long series of his publications.

In the arrangement adopted by Mr. Rhys Davids and Dr. Oldenberg of the southern Buddhist sacred writings three divisions are made, according to the matter of which they treat. These three divisions are respectively the 'Vinaya,' treating on the duties of the community or *saṅgha;* the 'Suttapiṭaka,' which relates the life and the teaching of the Buddha; and lastly the 'Abhidhamma,' which, as far as we have examined it, shows the doctrine and speculation of Buddhism. These three parts seem, therefore, in a certain way to indicate the threefold division of the well-known creed expressed in the words, "I take refuge in the Buddha, I take refuge in the law, I take refuge in the community,"—however, only in a very superficial way, inasmuch as none of the writings —with the exception, perhaps, of the 'Abhidhamma'—has kept strictly within its own range. In the 'Suttapiṭaka' we find prescriptions for the *saṅgha*, the proper place for which would have been in the 'Vinaya,' and *vice versâ*.

No series of sacred books would, of course, be complete without giving at least some of the leading books of Buddhism. We hail, therefore, with satisfaction the first complete instalment of two books of the 'Vinaya.' According to the well-known stanza in the 'Dīpavaṁsa,' these books were brought into their present shape in the time of Vaṭṭa Gāmani, who began to reign in 88 B.C. The materials, however, are older, and we may consider them as a faithful account of Buddha's own time and teaching.

Part I. of the 'Vinaya Texts' contains (1) the 'Pātimokkha' and (2) the 'Mahāvagga,' i.–iv. This selection requires, as far as the 'Pātimokkha' is concerned, some notice. The book itself is not to be found among the sacred writings. It is the office of confession for monks and nuns respectively. At a very early time we notice in India the custom of holding sacred two periods—the times of the full moon and of the new moon. This custom we find in the Vedic ceremonies of the *darçapūrnamāsa* and the *upavasatha* day, and it was handed down to the different orders which arose in the course of time in India. The Buddhists also adopted this custom, but confined themselves to meeting twice in each month at the *upavasatha* day. At these meetings the members of the order, male and female, used to confess to each other their sins, faults, or transgressions, and to take upon himself or herself the penance which the transgressor had thereby incurred. For these meetings a code was drawn up containing an enumeration of the sins. This was in all likelihood the so-called 'Pātimokkha.' Among the canonical writings the book in its separate form is, as we said before, not included. We find it, however, in the 'Suttavibhaṅga,' together with an ancient commentary on it. We must leave it to the student to read the details of the very interesting researches as we find them in Dr. Oldenberg's *editio princeps* and partly repeated in this translation.

The 'Pātimokkha' has been rendered in English before by Mr. Dickson, who also gave an edition of the text, and a Russian translation by Prof. Minayeff is also extant. Mr. Dickson only thought it necessary to translate the 'Bhikkhupātimokkha,' whilst Prof. Minayeff gives besides the translation of the 'Bhikkhupātimokkha' only extracts from the 'Bhikkhunīpātimokkha.' The present translators have confined themselves also to the first part. This is to be sincerely regretted as an account of the female order would have been of very great interest. As to the translation itself, it is certainly in many respects more trustworthy than that of Mr. Dickson; but we cannot on the other hand see an adequate reason for some of the changes which the present translators have introduced. We think, therefore, that not so much because the version of Mr. Dickson contained inaccuracies, but because of the intrinsic value of the book for the history of Buddhism, a translation was called for in the series of "Sacred Books of the East."

The offences are classed in this book under different headings with reference to the heinousness of the offence. Attacks have been made from a controversial point of view on the arrangement of these different offences, and one of these attacks by the Rev. S. Coles, in the *Journal* of the Ceylon Asiatic Society, 1867–1870, the present translators refute in a very spirited way. The reverend gentleman believed that because some of the crimes were called by different names, the code of morality was comparatively low. Mr. Rhys Davids and Dr. Oldenberg are, however, not slow to show that what were supposed to be flaws in the moral code of Buddhism are, in fact, flaws in the historical knowledge of Mr. Coles.

The second book included in the volume consists of four *khandhakas* (divisions) of the 'Mahāvagga.' The first *khandhaka* treats of the admission to the order of the *bhikkhus*. We can see here a gradual development from the simple formula when the Buddha himself ordained every new-comer to the time when the ordaining was part of the duty of the community. The second division treats of the 'Pātimokkha' and the recitation of it on the *uposatha* day. In the third we find the rules concerning the residence during the rainy season, the so-called *vassa;* and the last *khandhaka* included in this volume treats of the *pavarāna* ceremony, which takes place at the end of the rainy season. Prefixed to the first book we find an account of the life of the Buddha after his first attaining Buddhahood up to the time of the conversion of his two chief disciples. This account is extremely valuable, much as it may be interwoven with legends of only semi-historical character. It contains, as the translators say, the oldest version accessible to us now and most probably for ever of what the Buddhist fraternity deemed to be the history of their master's life in its most important period.

The different rules, interwoven with stories, appear to be of a semi-historical character and may be taken into account in the reconstruction of the history of India. Of these stories some are amusing, but they become tedious by constant repetition, which of course was necessary owing to the method in which the sacred writings have been handed down by tradition. The translators have wisely given only the beginning and the end of these repeated stories, leaving it to the reader to supply the central part, which is under these circumstances easily done. The translation is very valuable also on account of the numerous foot-notes, which give the reason for the rendering the translators have adopted. They candidly admit passages which they do not entirely understand. They follow generally Buddhaghosa's commentary, and we believe that in this they are right, much as we may quarrel with him on account of some of his explanations. We can only add that the translation is written in almost idiomatic English, which was sadly wanting in some of the volumes published formerly in the same series.

NOVELS OF THE WEEK.

All Sorts and Conditions of Men: an Impossible Story. By Walter Besant. 3 vols. (Chatto & Windus.)

Sweet Inisfail. By Richard Dowling. 3 vols. (Tinsley Brothers.)

A Modern Instance. By William D. Howells. 2 vols. (Edinburgh, Douglas.)

Gladys. By Tramio. 3 vols. (Tinsley Brothers.)

THE partnership of Mr. Besant with Mr. James Rice, conducted with brilliant success for ten years, was terminated by Mr. Rice's death last April. But for many months previously Mr. Rice had been too ill to write, and 'All Sorts and Conditions of Men' is the work of Mr. Besant alone. It is a work of striking originality in design—so much so that the author was told by some of his friends that the story was impossible. In deference to their opinion he has added the sub-title, "an Impossible Story." A girl at Newnham has inherited a great brewery and many streets of houses at

Whitechapel, a fortune worth several millions. Having a keen sense of responsibility and a determination to do something to better her own kind, she goes to live upon her property, and, under an assumed name, sets up a sort of co-operative dressmaking establishment at Stepney. Meanwhile there is a young man brought up as a gentleman, who learns from his guardian that his father was a sergeant in the army who had lived at Whitechapel. He chooses to go and settle, for a time at all events, among his own people. The hero and heroine meet at a boarding-house at Stepney Green, where the reader is introduced to the picturesque characters of the story. Among them are a claimant to a peerage, who has come with his wife from Canaan City, New Hampshire, to make out his case, a professor of conjuring, and a discoverer of "the primitive alphabet" from Australia. Mr. Besant has made many wanderings in "that great and marvellous unknown country which we call East London," and his studies bear the impress of nature. His vivacity and humour, which often rise to pathos and never sink to caricature, tinge the whole story, and make even his most serious passages delightful. There are, indeed, many serious passages in the book, and it is, perhaps, the greatest point in Mr. Besant's marked success that he has written a novel with a purpose and contrived to make it as lively and sparkling as any reasonable reader could wish. Two small mistakes in detail may be noted. It is odd that Mr. Besant should speak of Fleet Street as deserted between four and five o'clock in the morning—the time when it is, perhaps, busiest, choked with carts loading for the newspaper trains. Perhaps it is by a mere slip that he describes "a triangular district" as "consisting of an irregular four-sided figure—what Euclid beautifully calls a trapezium." As to whether the story is rightly called impossible or not, the question would introduce too long a discussion, which, after all, would probably end in a dispute about a word. It is, indeed, not likely that there should arise at Stepney a Palace of Delight with a ball-room for a thousand people, a concert hall, a theatre, and countless rooms for games of every sort, the whole place kept up not by charity, but by the people who use it themselves.

Mr. Dowling is nothing if not a concocter of plots, and in 'Sweet Inisfail' he carries his readers at once into a well-contrived mystery, which keeps their attention fully engaged to the end of the story. The tangle increases steadily as the narrative proceeds; there is no little ingenuity, and there is a vast display of elaboration in the ravelling and unravelling of the skein. The efforts of the author are devoted, indeed, not so much to the gradual elucidation of his puzzles as to the intensification of the effect produced by one abnormal situation after another on the mind of the bewildered reader. Twenty pages barely suffice for the description of a struggle between two desperate men. The struggle becomes a "conflict," and a second chapter is necessary to detail the "end of the conflict." Scores and scores of pages are filled with particulars of the deadly encounters of Mr. Dowling's villains and heroes; a dozen sensations follow each other in rapid succession, while "sweet Inisfail" has a comparatively insignificant part in the story. The scene is laid in Ireland, and the unsettled state of the country is supposed to account in some degree for the remarkable series of crimes on which the plot is made to hinge; but it must not be supposed that these crimes are in any sense agrarian. The wilds of any other land would furnish a locality for them almost as naturally as the wilds of Tipperary, and the author's chief concern has been with the play of human nature in unwonted predicaments rather than with historic facts or local colour. It cannot be denied that 'Sweet Inisfail' is a most exciting and readable romance; but Mr. Dowling's cleverness is in excess of his art, and his story may be fairly described as a melo-drama.

English novel-readers will probably be disposed to congratulate themselves on the fact that the late editor of the *Atlantic Monthly* has by his retirement given himself leisure to superintend the production of his works in this country. 'A Modern Instance' is before all things a study of character, the three more prominent personages being drawn with manifest care and deliberation, and the story, very interesting in itself, being skilfully subordinated to their development. Bartley Hubbard, the vain and unstable journalist, who marries a pure-minded but too demonstrative girl, more by her persistence than by his own, and who wrecks her life and his through the gradual deterioration of his moral sense, is really a powerful conception, unless, indeed, he is taken straight from the life. His steps downward, from the first passive misrepresentation of the truth to the meanness, the harshness, the brutality, and the final roguery and dishonesty of his conduct, are described in a manner which cannot fail to strike the discriminating reader, and which certainly indicates a very honest and conscientious style of workmanship. The character of his wife, an untutored, passionately loving girl, with her impulsive shows of tenderness, her unreasonable fits of jealousy, her interest in external things only as they affect her husband, and in domestic things mainly as they affect herself, is no less suggestive of a living model than that of Bartley Hubbard. It is not quite the same with the character of Ben Halleck, the friend of Bartley, who falls in love with Bartley's wife, and who struggles fitfully against his passion to the last. Here also the drawing is fine and striking; but we feel that we are in presence not so much of a copy from life as of another instance of the morbid, introspective, fastidiously intellectual type which has always found special favour in the eyes of American novelists. There is a family likeness, for example, between the Ben Halleck of Mr. Howells and the Ralph Touchett of Mr. Henry James—not the only point of similarity, by the way, in the methods of these two writers. Halleck's infatuation and his self-command, his desire and his renunciation, his self-indulgence and his chivalry, his sophistry and his overstrained scruples, belong to the literary stereotype of Transatlantic romance. The contrasts have rarely been better drawn than by Mr. Howells, but they have been drawn often before. It is in the relations of Bartley Hubbard and his wife Marcia, in the tale of their domestic shipwreck, and especially in the graduation of the husband's fall, that the author displays his most original work; and it is in this that he will show to the best advantage before his English readers. Mr. Howells has a light and artistic touch, in spite of the occasional flippancy and more than occasional inelegance of diction which he puts into the mouths of his various characters. His own style is neither flippant nor inelegant, and one cannot help wishing for less colloquialism in his dialogues, even at some sacrifice of verisimilitude in what is, after all, a careful picture of American life.

'Gladys' is described by the author as "a frivolous novel." The word "frivolous" has come to be used in every-day speech as the opposite of "serious," and in that sense probably the reader is intended to take it. In the dictionaries it is explained as "slight, trifling . . . . not worth notice"—a description which suits the book very well. The motto on the title-page is:—

> A little nonsense, now and then,
> Is relished by the wisest men.

That is perfectly true; and it is, perhaps, merely a matter of opinion whether three volumes contain a little or much.

AMERICAN BOOKS.

The war of 1812 was creditable to neither party, although the Americans distinguished themselves in several naval encounters. Much has been written on the subject, yet Mr. Theodore Roosevelt thinks that there is room and a call for his work entitled *The Naval War of 1812; or, the History of the United States Navy during the last War with Great Britain* (New York, G. P. Putnam's Sons). Mr. Roosevelt thinks that his country's navy then "stood at the highest pitch of its fame," and that a due appreciation of this might induce the Government of his country to pay greater attention to the navy now. Mr. Roosevelt seems to have taken great pains with his subject and to have carefully avoided the partisanship and partiality which detract from the English naval history by James and the American one by Fenimore Cooper. It is as difficult to discover any shortcoming on Mr. Roosevelt's part as it is to determine how much of his work possesses general interest. It has the great merit of being carefully composed and of containing authentic particulars of the subject treated in it.

Mr. Charles Henry Jones has written a *History of the Campaign for the Conquest of Canada in 1776, from the Death of Montgomery to the Retreat of the British Army under Sir Guy Carleton* (Philadelphia, Porter & Coates). As the campaign was one of the failures of the people who achieved their independence of this country, the less that is said and written about the mistake made in trying to subjugate Canada the better, we should think, for patriotic pride. The most curious thing about this book is that relating to "the retreat of the British army," to quote the words used on the title-page. It would appear as if these words had some connexion with the campaign in Canada, whereas they exclusively refer to the resolve of General Sir Guy Carleton not to attack the American works at Ticonderoga. Sir Guy reconnoitred the fort, found it strong and well manned, and sensibly decided to go into winter quarters. This is styled a victory at Ticonderoga and the retreat of the British army. The author has taken so much pains with his subject proper that we regret he should have had an imperfect sense of historical perspective. His countrymen in New England will hardly thank him for giving the chief credit to the Philadelphians as soldiers.

XUM

The best praise we can give him is that his work is well printed and carefully compiled.

We are indebted to the Hon. Adam Crooks, the Minister of Education in Ontario, for a copy of his *Report* for the years 1880 and 1881. The Report fills an octavo volume. It is full of minute details respecting all the educational institutions in the province. Not only does the Report deal with schools and their condition, it also supplies details of the position and progress of the mechanics' institutes which receive grants from the Government. The Report is alike comprehensive and informing.

Such a work as the *Boundary Disputes of Connecticut* (Trübner & Co.) is a monument on a small scale to the industry of its author, Mr. C. W. Bowen. The subject does not interest the general public on either side of the Atlantic, but the historian who shall rewrite the history of New England will find great assistance in this volume. It is a labour of love as well as an example of painstaking research. The execution of the work from a mechanical point of view is in keeping with its literary excellence. Whether so much pains on the part of the author and publishers will receive due recognition remains to be determined. We can emphatically say that both deserve praise for the care and skill which they have displayed.

BOOKS FOR THE YOUNG.

Princess Alethea. By Frances Mary Peard. With Illustrations. (Bell & Sons.)

Asaph Wood; or, Little by Little. By Phœbe Allen. (Society for Promoting Christian Knowledge.)

Harriet's Mistakes: a Story for Servants. (Same publishers.)

A Dream of Rubens. By Austin Clare. (Same publishers.)

Adé: a Story of German Life. By Esmé Stuart. (Same publishers.)

Facts and Phases of Animal Life, &c. By Vernon S. Morwood. (Hogg.)

The Phynodderree, and other Legends of the Isle of Man. By Edward Callow. (Dean & Son.)

James Braithwaite, the Supercargo. By W. H. G. Kingston. (Hodder & Stoughton.)

'Princess Alethea' is a pretty story of the type familiar to the readers of Miss Yonge. The plot is slight: it is the tale of two girls who, instinctively disliking each other at their first casual meeting, come together again in the characters of stepmother and stepdaughter, and through much misunderstanding attain at length to mutual trust and love. But the treatment is skilful. Alethea, the young stepdaughter, is a pretty study, with her royal ways, her earnest endeavours to do right, and her frequent failures through obstinacy and prejudice. Her kind care for the blind boy Dick nearly brings about a tragic ending to her happiness; but we are so sure that her father will recover from his wound that we are not much disconcerted by his accidents. There are pretty pictures, in words, of the Belgian capital, of English country scenes, and of English home life; and when we say that the illustrations are by the hand of Mr. J. D. Watson, our readers will know how much to expect from them.

The publications of the Society for Promoting Christian Knowledge are in many ways highly commendable, though their grotesque attempts to keep pace with the prevailing æstheticism are somewhat suggestive of Tottenham Court Road reproductions of artistic furniture. The exterior of the volumes is not admirable; the colours are, we suppose, correctly toned, but the design is stiff, commonplace, and inappropriate. The illustrations are truly appalling—ill drawn, badly engraved, and full of incongruities. "Ye Swan" as the sign of a Flemish inn is bad English of any period, and is, of course, Flemish of no period. There is no need for religious books to be artistic, but there is less need for any books to be wholly inartistic. With the tales themselves there is not much fault to find; three of them belong to the series of General Literature and Education, while the fourth, 'Harriet's Mistakes,' is published under the direction of the Tract Committee of the Society. The latter is a fairly good Sunday-school book of the well-known type. The would-be quaint style of the 'Dream of Rubens' is not very well sustained, and beyond the rather catchpenny association of names there is not very much local colouring about the lives of Peter, Paul, and Rubens. 'Adé' is more successful in the portraiture of German life. It is the tale of an unloved husband and a forsaken lover, of duty faithfully discharged and of virtue rewarded in the end. 'Asaph Wood,' though it belongs to the series of General Literature, has really more affinity with the type of 'Harriet's Mistakes.' Both are parochial stories, so to speak, unimpeachable in moral tone and not very remarkable for literary merit.

'Facts and Phases of Animal Life' is a very readable book, interesting and amusing, and, as it is meant to be, instructive. The illustrations will please young readers, but there is a bewildering lack of proportion about them.

'The Phynodderree,' an interesting collection of Manx legends, has been presented to the Queen and the Prince of Wales and graciously accepted by those illustrious personages. It is difficult to speak critically of a book which has received so high an *imprimatur*. The stories have a genuine ring about them, but are not skilfully told. The illustrations seem to be studied in the school of the 'Water Babies.'

Mr. Kingston's books for boys are too well known to need many words. 'James Braithwaite, the Supercargo,' is reprinted from a magazine and fully deserved a more permanent form. It will be welcome to boys as a pleasant memorial of an old and valued friend. A brief notice of the author is prefixed to the tale, and a letter which he wrote to his boy readers only three days before his death.

FRENCH LESSON BOOKS.

If the multitude of teachers, as of counsellors, may be taken for an assurance of safety, the study of the French language should be in no danger of flagging among the youth of England at present. It is to be presumed that we do not receive all the books which are published with the view of promoting that study; yet we have before us at this moment a baker's dozen of volumes of all sizes and descriptions, from the so-called *Oxford and Cambridge Grammar* (Hachette) of Messrs. Hunt and Wuillemin, in three octavo volumes, to a little work on *French Genders*, by Alexander Strouwelle, of the University of Bonn (Williams & Norgate). The indefatigable M. Eugène-Fasnacht contributes three—*The Organic Method of studying Languages*, as applied to French, and the second and third years of *Macmillan's Progressive French Reader* and *French Course* respectively. His publishers are, as it is seen, Messrs. Macmillan. From the same house we have M. Henri Bué's *First Steps in French Idioms* (these "firsts," "seconds," "thirds," &c., are a trifle bewildering; perhaps they have some mysterious relation to the "standards" and "stages" of the Education Code), while Messrs. Hachette put in an edition of Saintine's *Picciola* by M. Paul Baume, and *The Second* (there it is again!) *Book of French Composition* by M. A. Roulier. The National Society are responsible for *A Grammar of the French Language*, by the author of 'Mademoiselle Mori,' and Messrs. Simpkin & Marshall for M. de la Morinière's work on *French Prepositions and Idioms;* and from far-off Aberdeen comes *The Student's French Guide*, by J. Simon Clapasson (Alexander Murray). All these books seem to have been compiled with care and intelligence, though naturally they vary as regards utility. Thus an attempt to lay down any principles for the genders of French words such as would, to take one author's instance, be of use to the pupil in a huge examination-room, under strict surveillance, can only end in disappointment. Memory, applied to each separate case, and aided by some such expedient as that employed in Mr. Bellows's dictionary, where feminine words are printed in italics, is the only safeguard against false concords that can be trusted. Saintine's 'Picciola' is not, perhaps, very specially adapted for a school-book—at all events, not for the use of such classes as would require the somewhat elementary notes which M. Baume has appended to it. M. Eugène-Fasnacht's 'Progressive French Reader' is composed of passages judiciously selected from most of the best known French authors of the last two centuries. It would be as well in another edition to give their dates. The same teacher's 'French Course' is a blending of grammar and exercises somewhat after the fashion of Kerchever Arnold, with the addition of scraps of dialogue in French. (We note a rather perplexing statement in one of the sentences given to be rendered into French: "These girls have pledged *each other's* word never to allow themselves to be separated.") On a similar principle are M. Roulier's and M. Clapasson's books; the exercises rather predominating in the first, and the grammar in the second. In the latter, as in others of the books before us, we notice that attempts are made to teach what is right by pointing out possible mistakes, *exemplis vitiorum quœque notando*—a very sensible method. Thus "It would be incorrect to say *un homme de lapins*, because a man cannot be made of rabbits," serves to fix in the pupil's mind the right use of *à*. So M. de la Morinière points out that to say "*Une bague sur le doigt* would assimilate its position to a spot of ink lying on the surface of the skin." The last-named writer's 'Prepositions and Idioms,' however, no less than M. Bué's 'First Steps,' is an attempt to do what can only really be done by extended reading and the habit of *thinking* in French. It is hopeless to expect the pupil to learn by heart strings of idiomatic and proverbial phrases. Both in 'Prepositions and Idioms' and in M. Clapasson's book we have noted a good many small errors. "Many a mickle makes a muckle" is M. de la Morinière's version of a common proverb. We differ wholly from his view that practice should be preceded by theory in learning a language. It is much better that the learner should first have some familiarity with the practical use of the language; then the theory will come in as a useful *résumé* of the scattered facts which his practice has given him. M. Clapasson, when talking about genders in connexion with the Latin originals, should not have given *malheur* and *pleurs* in such company as to suggest their derivation from Latin words in *or*. On the next page it is not easy to see why *courbe, tangente, parallèle*, are given as exceptions to the masculinity of "parts of speech when taken substantively"; nor why *le bleu, le français*, are lumped with *le pourquoi* as examples of the rule. When he says that *à le* is never used, he might puzzle a beginner who had to render into French "I should like to see him." The suffix *-ième* is not from Latin *-issimus*. *Quelque* followed by *que* is a different word from *quelque*, "some," and the difference ought to have been marked more distinctly than by a mere statement of constructions. This is a fault which has been avoided by none of the grammars at present under consideration. Another little point which is a good test of accuracy in the compiling of a grammar is the treatment of the so-called "euphonic *t*" in the interrogative form of verbs. We do not find a single instance in which this has been properly explained. M. Eugène-Fasnacht appears (in his 'Organic Method') to pass it by without notice; Messrs. Hunt and Wuillemin are content to use the old term; while the author of 'Mademoiselle Mori' (whose book, by the way, might be studied with advantage by many ladies who write novels about French matters) only goes

part of the way when she says that in "old French" it was part of the verb. Messrs. Hunt and Wuillemin again, if they had consulted their Littré, would have found that the use of *mil* or *mille* in a date does not depend upon whether or not the Christian era is spoken of, but simply upon the number of thousands required. 1882 B.C. would want *mil*; 2882 A.D. will be expressed by *deux mille*, &c. Still, taking all things together, any one of the books which we have here been noticing may safely be put into the hands of a pupil, provided that he is also kept to a steady course of reading and encouraged to use his dictionary freely. It does not much matter what he reads, so long as it interests him. Even MM. Erckmann-Chatrian, to whose works, as we understand, some purists object on the ground of the Alsatian origin, write a good deal better French than an Englishman is likely to achieve—quite good enough, at any rate, to carry him, when he is master of it, through the length and breadth of France.

M. Belcour in his little book of *French Proverbs with English Equivalents* (Stanford) seems not to have been quite clear as to his object. The heading of his pages is "French proverbs translated," which is not quite the same thing as the title. Out of the vast number of French proverbs that exist he has not selected only those for which equivalent English proverbs could be found. "Farewell, baskets, the business is done," is, for instance, a translation of some sort of the proverb "Adieu, paniers, vendanges sont faites," but the English is not a proverb. "C'est une goute d'eau dans la mer" is rendered "It is a drop of water in the sea," instead of "a drop in the ocean." Boileau's line, which he himself calls "un trait de satire," "Un sot trouve toujours un plus sot qui l'admire," can hardly be called a proverb, and M. Belcour's English version of it is a mere translation. "Heureux commencement est la moitié de l'œuvre" is rendered "A good beginning is half the battle," instead of "Well begun is half done." A book which gives in a few words an explanation of proverbial sayings which are not obvious is more useful. M. Hilaire le Gai's 'Petite Encyclopédie des Proverbes Français' is a fair example of such a work. A selection from it or some other similar collection edited in English, with equivalent English proverbs added where it is possible to give them neatly and exactly, might be of service as an educational work.

OUR LIBRARY TABLE.

Hans C. Andersen og det Collinske Huus. By E. Collin. (Copenhagen, Reitzel.)—This book will be especially interesting to those who may chance to have read 'Mit Livs Eventyr' ('My Life's Romance'), written by Hans Andersen himself. The author of the stout volume before us is Edvard Collin, Councillor of State, whose father, Jonas Collin, like ...se of the same rank, had played a father's part ... Hans Andersen, the son of a very poor widow in Odense. The volume is chiefly made up of letters of the most intimate description from Andersen to the author, his father, and family, with all his hopes and aspirations and despairs about his works as they were each launched before the public. In early life Andersen had wished to be an actor, but when fifteen years old the directors of the royal theatre would only give him a place as a dancer, and wages scarce enough to provide him with shoes and stockings. He wrote a petition for help to his friends, and succeeded in getting together the moderate sum of seventy-three rigsdalers (8*l.* 2*s.* 3*d.*), which, however, did not last him long. Then his friends advised him to apply to the king, Frederic VII.; but the directors of the theatre strongly dissuaded the king from giving him occupation, as they deemed him quite unfit. Then it was that Jonas Collin stepped in and adopted him as his son. He put him to college at Slagelse, where he did remarkably well, and wrote constantly to his "dear benefactor," detailing everything that concerned him. The letters are often ill spelt—"stoer," for instance, instead of "stor"—but they are teeming with gratitude and filial affection. With them he often sent copies of the reports given by his masters in full, also accounts of his dress, expenses, and so forth, all of which must have been very gratifying to his adopted father. There are also in this volume letters to and from the chief Danish literary notabilities of this time, and an account of the Collin family, which gives an insight into the internal government of Copenhagen, the lottery direction, the building of the Royal Theatre and Thorwaldsen's Museum; also financial arrangements, fire brigades, harbour works, and other points not of universal interest. But the sketches and glimpses into the character of Hans Andersen make this work of great value. Here we see portrayed that excessively nervous temperament which he had. In every letter he alludes to his escape from some danger, real or imaginary. For instance, when only fifteen, he wrote an account of his first journey by carriage across the island of Zealand, which, he adds, "was not without danger, for the road went up and down hill several times." And throughout his letters he is for ever alluding to dangers of equal magnitude. Although of a healthy if not robust physique, Andersen never despatched a letter without alluding to some ailment from which he was suffering, until, says Herr E. Collin, it passed into quite a joke amongst his friends; but the most amusing feature which this nervousness produced in Hans Andersen was a perpetual fear of being buried alive, so that when he went to bed at night he always placed by his bedside a piece of paper on which was written, "I am only apparently dead."

Dr. Charles West has translated Dr. Baréty's little book on *Nice and its Climate* (Stanford), and added some remarks by himself and an appendix by Prof. Allman on the vegetation of the Riviera. To invalids the few pages in which hygienic rules are given for their guidance will be the most valuable. The author wisely does not pretend that the climate of Nice is materially different from that of neighbouring places on the coast. This is a distinguishing merit of the book, and should help to win for it the confidence which it deserves.

Mrs. Grain's *Birthday Gleanings* (Marcus Ward) is the best "birthday book" we have seen. She has assigned to each day the names of those eminent persons of whose birth it is the anniversary, and illustrated the character of one or more of those persons by quotations from the poets, giving the exact reference in each case. The names of the saints appear on their festival days. Every page is faced by a blank page in the usual way. An index completes the work, which is prettily bound in white cloth.

We have received Miss Kate Greenaway's little *Almanack for* 1883 (Routledge). It is as pretty as any of her books, but the frontispiece is unfortunate, showing conspicuously the artist's incorrect draughtsmanship.

We have on our table *Kant's Critique of Pure Reason*, by G. S. Morris (Chicago, Griggs),—*Hindu Mythology*, by W. J. Wilkins (Thacker),—*History of the Insane in the British Isles*, by Dr. D. H. Tuke (Kegan Paul),—*The Physiology and Pathology of the Blood*, by Dr. R. Norris (Smith & Elder),—*The Mythology of the Eddas*, by C. F. Keary (Longmans),—*Studies in Nidderdale*, by J. Lucas, F.G.S. (Stock),—*The Photographic Studios of Europe*, by H. B. Pritchard (Piper & Carter),—*A Treatise on the Transit Instrument*, by L. Clark (The Author),—*The Law of Kosmic Order*, by R. Brown, jun. (Longmans),—*Chronological Tables of Greek History*, by C. Peter, translated by G. Chawner, M.A. (Cambridge, University Press),—*Report on the Census of Berar*, 1881, by E. J. Kitts (Bombay, Education Society's Press),—*Report of the Sixth Census of the Colony of Queensland, taken in April*, 1881 (Brisbane, Beal),—*Bonnes Bouches* (Remington),—*The Art of Tea Blending* (Whittingham),—*Art Instruction in England*, by F. E. Hulme (Longmans),—*The Peak in Darien*, by Frances P. Cobbe (Williams & Norgate),—*Science without God*, by H. Didon, translated by Rosa Corder (Kegan Paul),—*Guide to Southampton*, by T. W. Shore (Southampton, Gutch & Cox),—*The Pictorial View of the World* (Bacon),—*The Danish Arctic Expedition proposed by A. Hovgaard* (Dulau),—*Occident and Orient*, Vol. I., by the author of 'The Vagabond Papers' (Melbourne, Robertson),—*Mrs. Mayburn's Twins*, by J. Habberton (Ward & Lock),—*The Camorristi*, by M. Galletti di Cadilhac (Remington),—*Songs of a Lost World*, by a New Hand (Allen & Co.),—*Schiller's Mary Stuart*, translated by L. White (Kegan Paul),—*Venta, and other Poems*, by the author of 'Pericula Urbis' (Nutt),—*Caedmon's Vision*, by S. C. J. Ingham (Kegan Paul),—*The Decay of Modern Preaching*, by J. P. Mahaffy (Macmillan),—*Life and Letters of St. Paul*, by A. Dewes, D.D. (Longmans),—*Our Lord's Life on Earth*, by the Rev. W. Hanna, D.D. (R.T.S.),—*Canons of the Second Council of Orange*, A.D. 529, by the Rev. F. H. Woods (Oxford, Thornton),—*An Account of the Torments which the French Protestants endure aboard the Galleys*, by J. Biron (Paris, Grassart),—*Die Flüsse Tirols*, by L. F. von Hohenbühel (Innsbruck, Wagner),—*Hall am Inn*, by L. F. von Hohenbühel (Innsbruck, Wagner),—*Danske og Norske Riger paa de Brittiske Oer*, Part II., by J. C. H. R. Streenstrup (Copenhagen, Klein),—and *Dietsche Beweging*, by Dr. K. Groth (Antwerp, Montagne). Among New Editions we have *Howitt's Visits to Remarkable Places* (Longmans),—*Hughes's Class-Book of Physical Geography*, edited by J. F. Williams (Philip),—*Matriculation Classics, Questions and Answers*, by Rev. J. R. Walters (Lewis),—*Altar Server's Ceremonial* (Pickering),—*The History of the Hebrew Nation and its Literature*, by S. Sharpe (Williams & Norgate),—and *Linear Associative Algebra*, by B. Peirce, LL.D. (New York, Nostrand). Also the following Pamphlets: *A Biographical Sketch of Edward Trelawny*, by R. Edgcumbe (Plymouth, Luke),—*Old England*, by H. Goodwin, D.D. (S.P.C.K.),—*Modern Dissent: What is It?* by W. Carey (Simpkin),—*Thoughts on Emigration*, by J. W. Bell (Leipzig, Matthes),—*The Irish Land Act*, 1881, *its Origin and its Working*, by E. T. Cook (Simpkin),—*Political Cookery*, by C. R. Panter (Simpkin),—and *The Opium Question Solved*, by Anglo-Indian (Partridge).

LEIBNITZ'S PLAN FOR AN EGYPTIAN EXPEDITION.

In connexion with the subject of the war in Egypt a recent article in the *Novoe Vremya* calls attention to a plan drawn up by Leibnitz for an Egyptian expedition, in which not only the general aspects and advantages of an invasion, but the defences of the country, the military and naval features of the enterprise, and its political and mercantile results, are treated of in detail.

The plan was drawn up with the object of being communicated to Louis XIV., and it was long thought that he as well as Napoleon were acquainted with it. It was first brought prominently before the European public in a pamphlet published in 1803. Subsequent research has shown, however, that Louis XIV. and Napoleon had never seen it. Particular stress is laid upon the importance of the Isthmus of Suez in connexion with the trade between Europe and India and between Africa and Asia. Moreover, the conquest of Egypt is characterized as infallibly securing the sovereignty of the Indies. "The subjection of Egypt," says Leibnitz, "makes the French king the leader of the nations of Christendom, and France the military school of Europe, the academy of genius, and the warehouse of merchandise borne to it across the ocean and over the Mediterranean."

The author of the project looked upon the French, too, in the light of propagators of Christianity and Christian civilization in the East, and as the destroyers of Islamism. Not alone by his picture of the material advantages to be gained, but by a spur of a more sentimental nature, does he seek to rouse the monarch to action when he appeals to him to wipe off the disgrace suffered by the French arms under his sainted predecessor on the throne, who is made to appear in sleep to Louis XIV. and address him with the lines of Virgil:—

> Exoriare aliquis nostris ex ossibus ultor,
> Et tandem oppressi miserere orientis et una
> Redde decus patriæ, pareque vocantibus astris.

EDUCATION IN HUNGARY.

I.

The Minister of Education in Hungary has authorized the issue of another official return (for 1879–80) giving the results of the late reforms and improvements in the public education. This document, though bristling with tables of figures, is of the highest interest to those who think about education, and reveals many curious and unexpected facts. But, like all Blue-Books, it raises more questions than it settles, and the reader longs in every chapter to ask for some light on topics obvious enough to Hungarians, but very obscure to the outside world. The introduction, in a brief historical sketch, shows the curious struggle which has lasted since the days of Maria Theresa between the "national" and "denominational" systems. We have, in fact, the circumstances of Ireland in this generation closely paralleled, with the religion reversed. The great Empress and Joseph II., legislating for a country with a Roman Catholic State religion, sought to take the schools out of the hands of the Church and bring them under the State; and as a large portion of the population were non-Catholic, it was ordered that where there was no non-Catholic school at hand, dissenting children should be invited to attend the State Catholic schools, with the special proviso that they were to have their faith in no way disturbed and be taught no Roman Catholic religion. This system, so like the national system in Ireland, broke down, owing to the opposition of the dissenting sects, especially the Protestants, who (like the Irish Catholics) insisted on mistrusting the State system. They kept up denominational schools of their own; and to this day the denominational system has defeated its opponent and is still the reigning system in Hungary, despite all the efforts of the State to spread non-religious, State-endowed, State-directed schools of a uniform plan through the country. In very poor districts, where the sects are unable to afford schools (p. 19), the State comes in and establishes its national school, thus taking advantage of the poverty of the people; but as regards the gymnasia, or higher schools, the triumph of denominationalism is striking (p. 77). It is a curious fact, and very unlike what happens in Ireland, that if a child is sent to a denominational school of a religion which it does not profess it is charged a *higher* fee; the complaint with us was that such children were taken in for nothing, or less than nothing, in the hope of converting them. There is an apparent difference between the two cases we are comparing, in that the Roman Catholic scholars are in Ireland the overwhelming majority, and that therefore the objections to the national schools founded by a Protestant State seemed stronger than the reverse case in Hungary, where the principal and successful objectors, the Lutherans and Calvinists, only afford about twenty-five per cent. of the school-going population. The answer to this difficulty is not given in the report, which nowhere tells us the faith of the local magnates, but classes them (p. 83) with peasants as "selbstständige Urproducenten" (what a title!) in contrast to the intellectual and trading classes. But I believe as a matter of fact the Hungarian nobility is chiefly Protestant; and this shows why an actually small minority has had so great a relative weight. Of course even the dominant religion took up this sectarian spirit, and we find a great number of monastic teachers employed in strictly Catholic schools, apart from the State schools. Of late years there seems to be a sort of compromise in what are called *inter-confessional* schools, managed as communal establishments. We are not informed in the Blue-Book of the principle of mixture, but may assume that while the various kinds of Protestants and various kinds of Greek churches mix, really repugnant confessions stand apart. The task of the Government to introduce some unity and system into such a country is indeed a Herculean one, and can only be effected, as it is now being attempted, by a wise and gradual extension of influence. The State system of pensions has been extended to the teachers of all recognized schools, and hence the State has acquired an indisputable right to State inspection, which now includes the enforcing of various general regulations. Perhaps the most important are the sanitary rules, which are framed with moderation and good sense. Religious difficulties appear to be settled by the recognition of all kinds of denominational schools. Another great difficulty, and one peculiar to Hungary, is that of the many mother tongues spoken through the country. Children are taught in seven different languages. Hence the difficulties of uniform school-books and inspection are enormous. The State has at last taken the step of making Hungarian compulsory, in fact the State language required in all schools, of whatever race or religion. It is of course much to be regretted that so out-of-the-way and difficult a language should be perpetuated as the common tongue of a great and rising nation, so that by-and-by learned men will be obliged, in addition to all their other studies, to master this Tartar language for the sake of good books written in it. But the only civilized language possible in Hungary would have been German, and, in addition to the strong anti-German spirit of the people, only a very small part of the population now understand it. It is at present only used or taught in 1,800 (out of 15,800) schools. So the introduction of Hungarian may have been really necessary. Yet we are to be much congratulated that in Ireland

the national system ignored Celtic, and thus tended strongly to the destruction of that equally out-of-the-way and troublesome language. I will reserve many interesting details for another week. Enough has been said to show that, whenever the reform of Irish education takes place, our Government is bound to inform itself carefully concerning the very similar history of the question in Hungary, and consider what has been there successful and what has failed.

J. P. Mahaffy.

THE COMING PUBLISHING SEASON.

Messrs. Griffin & Co.'s list is as follows:—'A Manual of Botany, Theoretical and Practical,' by Prof. McNab, M.D.,—'The Student's Mechanics: an Introduction to the Study of Motion and Force,' by Walter R. Browne, late Fellow of Trinity College, Cambridge,—'A Manual of Marine Engineering,' by A. E. Seaton, of the Royal Naval College, Greenwich,—'Poisons: their Effects and Detection,' by A. Wynter Blyth, M.R.C.S.,—'The Teeth: how to Preserve Them and Prevent their Decay,' by S. H. Linn, M.D.,—'The Story of the Bible,' by Charles Foster,—Schiller's 'Maid of Orleans,' translated by Lewis Filmore,—and some new editions.

Mr. Elliot Stock announces the following antiquarian works:—A fac-simile of the first edition of 'Robinson Crusoe,'—'The Civil War in Hampshire and the Siege of Basing House,' by the Rev. G. N. Godwin,—'The History of Lambeth Palace Library,' by S. W. Kershaw,—'Place-Names of the West Riding,' by the Rev. Nicholas Greenwell,—'The Woodcutters of the Netherlands,' by W. M. Conway,—'Kingsthorpiana; or, Researches in the Church Chest of Kingsthorpe,' by the Rev. J. H. Glover,—'Historic Notices of the Borough and County Town of Flint,' by Henry Taylor,—and 'The History of Old Dundee,' by Alexander Maxwell. The same house will also publish 'The New Medusa,' a volume of poems by Mr. Lee Hamilton,—and 'Verses of Varied Life,' by H. T. Mackenzie Bell.

Mr. T. Fisher Unwin will publish on November 1st an *édition de luxe* of Miss Helen Zimmern's stories retold from the 'Shah Nameh' of the Persian poet Firdusi, with etchings by Mr. Alma Tadema, R.A., and a prefatory poem by Mr. E. W. Gosse. Among other works in progress Mr. Unwin announces 'The Roman Students; or, On the Wings of the Morning,' a tale of the Renaissance, by the author of 'The Spanish Brothers,'—'Heroic Adventure,'—'Tales of Modern Oxford,' by the author of 'Modern Oxford,'—Poems and Hymns, by the Rev. G. T. Coster,—'Geographical Questions,' by R. H. Allpress,—'The Illustrated Poetry Book,'—'The Children's Bouquet of Verse and Hymn,'—'Dick's Holidays,'—'Ephemerides: a New Christmasse Annualle,' edited by Edward Walford,—and new editions of 'Modern Missions,' by Robert Young; 'Industrial Curiosities' and 'Labour and Victory,' by A. H. Japp, LL.D.; 'Wise Words and Loving Deeds,' by E. Conder Gray; and 'Footprints,' by Sarah Tytler.

Messrs. Masters & Co. will publish 'The Polity of the Christian Church of Early, Mediæval, and Modern Times,' by Alexius Aurelius Pelliccia, translated from the original Latin by the Rev. J. C. Bellett,—'Thoughts on Holiness,' by W. A. Copinger,—'A Commentary on the 119th Psalm,' by Dr. Littledale,—'The Diamond Ring,' by Mrs. Mitchell,—'Other People,' by Stella Austin,—and 'A Collection of Counsels for the Young,' from the French, by the translator of 'Gold Dust.'

Messrs. W. Collins, Sons & Co. have in the press:—'Hydrostatics,' by J. T. Bottomley, F.R.S.E.,—'Algebraical Examples for Lower Forms,' by E. Atkins,—the second volume of Collins's 'Mineralogy,' dealing with descriptive mineralogy,—'Book-keeping,' by J. McLean,—'Simple Stories from English History,' to meet the new requirements of the Education Department,—'Drink and Strong Drink,' a temperance reading book, by Dr. B. W. Richardson,—'Animal Physiology,' by Mrs. F. Fenwick Miller,—'History of Austria and Hungary,' by Dr. G. G. Zerffi,—and 'History of Norway, Sweden, and Denmark,' by Dr. J. N. Langley.

The Foreign Translation Committee of the Society for Promoting Christian Knowledge have in preparation an Ibo vocabulary and a Mendi grammar, for use in the neighbourhood of the river Niger,—the Book of Common Prayer in Turkish, Ojibwa, Hawaiian, Arabic, Kashmiri, and Japanese,—the New Testament in Susu (spoken in the Pongo mission),—a short Bible history in Persian,—the Litany in Boondei,—sermons by Bishop How in Urdu,—and several works in Maori.

Mr. Arrowsmith, of Bristol, announces a Christmas story, entitled 'Brown Eyes,' by May Crommelin, author of 'Queenie,' forming the second year's issue of *Arrowsmith's Annual*.

Literary Gossip.

The supply of copies of Canon Farrar's new work, 'The Early Days of Christianity,' is still insufficient to meet the demand. A new edition is announced for the 13th inst.

It is hoped that in the course of next year the late Prof. Green's scattered papers will be republished, together with a considerable amount of unprinted matter from his lectures and a short memoir. Any one who is in possession of MSS. by Prof. Green, or of letters which might be used for the memoir, is requested to communicate with Mrs. Green, 13, Banbury Road, Oxford.

The Rev. Dr. James Martineau is understood to be arranging materials for a work of an autobiographical character.

Mr. William Paterson, of Edinburgh, will publish at the end of this month 'Last Words of Thomas Carlyle on Trades Unions: Promoterism and the Signs of the Times.'

Mr. J. W. Ebsworth, than whom no one is better fitted for the task, has in preparation an elaborate edition of 'Hudibras.'

Messrs. Trübner & Co. announce a 'History of the Pacific States of North America,' in twenty-five volumes, by Mr. H. H. Bancroft. The first three volumes will be devoted to Central America; vols. iv.–xi. to Mexico. Vols. i. and iv. will be ready on the 20th inst. On that day the same publishers will issue 'The Commerce and Industries of the Pacific Coast of North America,' by Mr. J. S. Hittell.

'The Prolegomena to Ethics,' edited by Mr. A. C. Bradley, will probably be out by the beginning of January.

Mr. Gomme is engaged upon a work on 'The Early History of Municipal Institutions in England.' In a contribution to *Archæologia* some two or three years ago Mr. Gomme traced out many of the primitive land customs of the village community in the land customs of the municipalities, and he has now gathered together a great deal of evidence establishing the primitive village system in other branches of municipal institutions.

The Society for Promoting Christian Knowledge has in the press 'The Teacher's Prayer Book,' a work which was announced in the Society's Report some time ago. It consists of the Prayer Book with notes and comments by well-known specialists. The historical introduction is by Dr. Maclear, who also contributes the notes on the Morning and Evening Prayer and on the Thirty-nine Articles. The other contributors are Canon Bright, Prof. Lumby, Rev. R. Sinker, Rev. F. E. Warren, Rev. C. C. Mackarness, Rev. E. J. Boyce, and Rev. E. Wensley. The work is enriched by a full concordance to the Prayer Book, including the Psalter.

Messrs. Hurst & Blackett have in the press 'With the Connaught Rangers in Quarters, Camp, and on Leave,' by General E. H. Maxwell, C.B., author of 'Griffin Ahoy!' The same firm will publish during November 'I have Lived and Loved,' by Mrs. Forrester, and 'Exchange no Robbery,' by Miss M. Betham-Edwards, each in three volumes.

Miss Braddon's Christmas novel, written for the next issue of the *Mistletoe Bough*, will be called 'Flower and Weed.'

Mr. Joseph Hatton's new novel 'A Modern Ulysses' will be commenced in to-day's *Leeds Mercury*.

A novel called 'A Chelsea Householder,' announced by Messrs. Sampson Low & Co., is, we understand, by a new writer.

'Study and Stimulants' is the title of a work in preparation by Mr. A. Arthur Reade.

The Delegates of the Clarendon Press will issue in a few days Prof. Buchheim's annotated edition of Lessing's 'Nathan der Weise.' Besides fully commenting on the text, the editor aims at calling special attention to the artistic value of the poem.

Mr. Effingham Wilson has in the press a new edition, the thirteenth, of 'Fenn's Compendium of the English and Foreign Funds.' The book has been rewritten and enlarged by Mr. R. L. Nash.

Messrs. Reeves & Turner will shortly publish a new and original work upon the 'Law and Practice in Divorce Proceedings,' by Mr. W. J. Dixon. It is intended as a companion volume to the 'Law and Practice in Probate Proceedings' of the same author a second edition of which is now in the press.

Mr. William Brown, of Edinburgh, wil issue immediately reprints of 'Domestic Manners and Private Life of Sir Walter Scott,' by James Hogg, the Ettrick Shepherd, and the 'Norwegian Account of Haco's Expedition against Scotland,' which was originally printed in 1782. Two hundred and fifty copies of each of the books, which have long been out of print and scarce, will be printed on vellum paper.

Messrs. Abel Heywood & Son, of Manchester, have in the press a Lancashire story with the title of 'Acquitted though Guilty.' It will be dedicated to the Earl of Derby.

The article on Manchester in the forthcoming volume of the 'Encyclopædia Britannica' will be contributed by Mr. W. E. A. Axon, of that city.

The volume of the *Folk-lore Record* for this year is nearly ready. It will contain 'Mabinogion Studies,' by Mr. Alfred Nutt; 'Notes on Roumanian Folk-lore,' by Mrs. E. B. Mawer; 'Agricultural Folk-lore Notes,' by Lieut. R. C. Temple; 'Bibliography of Folk-lore' (part i.), by Mr. G. L. Gomme; some American Indian stories reprinted from the Geological Survey publications of the United States, besides other papers of more or less importance. To the first part of the monthly issue of the

XUM

Folk-lore Record, commencing on January 1st next, Prof. Sayce will contribute a note on 'Ancient Babylonian Folk-lore'; and the Rev. J. Sibree will probably commence some of his Malagasy folk-lore papers in the same number.

'The Farm in the Karoo,' a new story of colonial experience in South Africa, by Mrs. Carey Hobson, will be published immediately by Messrs. Juta, Heelis & Co.

Among other improvements which are about to be made at the National Library, Paris, it is hoped that the electric light may be successfully introduced.

Our Correspondent at Athens writes:—

"Some months ago I announced that some manuscripts had been sent from the Thessalian convents at Meteora to Athens, to be placed in the National Library. It was then said that the Greek Government intended sending a commission to the Thessalian convents, to collect the manuscripts which were kept there and bring them to Athens. This plan has just been carried into execution. Two professors of the University of Athens, Spyr. Phinticles and Archimandrite Kalogeras, were entrusted with this mission to Thessaly. They collected no fewer than 500 manuscripts in the large convent Tôn Megálon Pylôn on Mount Pindus. These were packed in eighteen boxes, and are soon to be sent to Athens. The National Library, where they will be deposited, will thus gain a considerable increase in its wealth of manuscripts, the number of which has hitherto not exceeded 500. The new manuscripts are written some on parchment, some on paper. There are said to be classical authors among them. In particular a fifteenth century manuscript is mentioned which contains two tragedies of Sophocles and two of Æschylus, with interlinear translation and marginal notes. Some of the manuscripts are said to be adorned with very beautiful miniatures. The delegates of the Government have unfortunately not succeeded in bringing the manuscripts from the Meteora convents to Athens. Both the monks and the inhabitants of the neighbouring hamlets Kalambaka and Castraki have protested against the removal; but as a law of the year 1834 especially requires the removal of all books and manuscripts found in the convents to the National Library, we may hope that the manuscripts from Meteora may also be sent to Athens. As soon as the Thessalian manuscripts arrive and are examined I shall send a special account of them."

Prof. S. Beal is to lecture at University College, Gower Street, on Tuesday and Thursday next. The subjects are: (1) 'The Chronology of Buddhism illustrated from Passages in the Chinese Version of the Tripiṭaka'; (2) 'The Effect produced on Later Buddhism by Foreign Trade with India.' The lectures will begin at three o'clock; admission free.

The opening meeting of the tenth session of the New Shakspere Society will be held on Friday next, at 8 p.m., at University College, Gower Street, and will be open to the public. Miss E. H. Hickey will read a paper on 'Julius Cæsar.'

In acknowledging the compliment of honorary membership paid him by the Pushkin Society, M. Tourguénief, whose health, we are glad to say, is greatly improved, wrote thus:—

"I thank you for the honour conferred upon me by the Society, with whose aims I fully sympathize. I hope to be in Petersburg this winter, and of course look forward to the pleasant duty of assisting at your meetings. I do not doubt that the success of your enterprise will be worthy of the great name which heads it."

A Correspondent writes:—

"The *Novoe Vremya*, in a long article headed 'The Legendary Russian Knight,' speaks in high terms of the recently published biography of the late General Skobelef by V. I. Nemirovich-Danchenko, the Russian war correspondent who saw so much of the general in the field. One of the anecdotes it cites is very remarkable and thoroughly Russian. At Plevna Skobelef lived in a small house, in which the Emperor Alexander II. expressed his wish to breakfast one morning on the occasion of a review. The breakfast took place, but the general was not invited to partake of it. After the meal, however, the Emperor asked him to show him over the house. This was done, and when the imperial guest and his host were alone together, the Emperor embraced Skobelef, saying 'Thanks, Skobelef! For all—for all your services—thanks!' and a second time kissed him. Skobelef felt all the more delighted with this honour inasmuch as it was conferred on him in the absence of his rivals. They already hated and envied him on account of his courage, his popularity, his independence, and above all his success. If they had witnessed the Emperor's act of grateful appreciation they would have hated 'the White General' all the more. M. Nemirovich-Danchenko attributes the general's untimely decease to the effect of one of the two contusions which he received at the time when, according to his own account, he was courting death at Plevna."

It is stated that Khan Enayat Ali Khan, brother of the ruling prince of Maher Kotla, is about to publish a history of his princely house down to its political relations with the British Government at the present day. He is also about to publish a translation into Urdu of Sir Garnet Wolseley's 'Soldier's Pocket-Book,' for the use of native soldiers of the imperial army and of the feudatory states.

SCIENCE

The History of a Lump of Coal. By Alexander Watt. (A. Johnston.)—The idea of this little book is good, and its full title will show that it embraces a very wide and a varied field. The title is 'The History of a Lump of Coal, from the Pit's Mouth to a Bonnet Ribbon.' This is to us objectionable—being, in the first place, too evidently constructed to catch the idle reader; and, in the second place, it does not faithfully represent the subject treated of. The history does not begin at the pit's mouth, but, very naturally, with the coal bed formed deep beneath the earth's surface, and it concludes with the manufacture of aniline dyes, which, as our author tells us, "are extensively employed in dyeing all kinds of silk and woollen fabrics and even cotton goods," and not confined especially to the bonnet ribbon. The author's acquaintance with chemistry has enabled him to render his descriptions of gas making and the treatment of the other coal products fairly instructive. But when in his first page he informs his readers in italics that coal is "*the fossil remains of trees and plants*," and in the third he explains that "a great deluge *must have occurred*" (the italics are again the author's), and that "the former vegetable growth of ages became converted into vast beds of petrified or fossilized organic matter which we now call coal," we feel compelled to express our wish that he had confined himself to explaining how "the brilliant hue of the fascinating bonnet ribbon is derived from that nasty, sticky, black, strong smelling, odious coal tar."

A Catalogue of the Collection of Birds formed by the late Hugh Edwin Strickland, F.R.S., &c. By Osbert Salvin, F.R.S. (Cambridge, University Press.)—A generation has passed away since the late Deputy Reader of Geology in the University of Oxford was suddenly snatched from an active and useful life at the early age of forty-two, and the majority of scientific workers at the present day will probably think of him as having been principally, if not entirely, a geologist. Like many others, however, who have subsequently done good work in various branches of science, it was as an ornithologist that Strickland made his first studies in natural history; and although in after years he to a certain extent relinquished this for other and less worn paths, yet his taste for collecting birds continued unto the last. The first specimen bears date August, 1822, and a considerable portion of the collection now catalogued was got together in 1853, the very year of his untimely death. On the labels of the specimens appear the names of such contributors as Andersson and Petherick, the African explorers; Blyth, Hodgson, and Jerdon, the pioneers of Indian ornithology; Baird; Boys; Brandt; and Gosse, the author of the 'Birds of Jamaica.' The entire collection, consisting of 6,006 skins, was presented to the University of Cambridge by his widow, Mrs. Strickland, in 1867, under certain conditions, Mr. O. Salvin being appointed curator. In the classification adopted in this catalogue Mr. Salvin has generally followed that of the 'Nomenclator Avium Neotropicalium,' published in 1873 by Mr. Sclater and himself, which is based upon the system of Huxley. The literary references are full and, what is of more importance, correct, some of those giving the history of the genera being of unusual value. Every specimen seems to have been catalogued, and the species recorded, including the addenda, amount to upwards of 3,120. Mr. Salvin may be congratulated on having brought to a successful close a task which must have involved a great deal of scientific labour and no small amount of drudgery.

Indian Meteorological Memoirs is the title of a volume produced under the direction of Mr. H. F. Blanford, F.R.S., being occasional discussions and compilations of meteorological data relating to India and the neighbouring countries. The volume contains six memoirs by Mr. H. F. Blanford; four by Mr. S. A. Hill, Meteorological Reporter of the North-Western Provinces and Oudh; one by Mr. J. Eliot, Meteorological Reporter for Bengal; and another by Mr. F. Chambers, Reporter for Western India. These memoirs are illustrated by thirty-three diagrammatic plates, which are of great interest and utility in explaining the meteorological phenomena treated of. This first volume of 'Indian Meteorological Memoirs,' consisting of 426 quarto pages, is in every respect a valuable contribution to meteorological science, and it gives much information as to the climates of the localities brought under observation. A mass of information is here gathered into a focus and placed in a permanent form, so that after a few more such records we may hope the Director or some other master mind may be enabled to establish the laws by which the great movements of the atmosphere over India are regulated, and thus advance our knowledge of the causes producing the climatic phenomena of an immense section of the globe.

The Chemistry of Saké Brewing. By R. W. Atkinson, B.Sc. (Tokio.)—This elaborate essay forms one of the memoirs issued by the scientific department of the University of Tokio. Its author held for several years the position of Professor of Analytical and Applied Chemistry in the University, and during his residence in the country had ample means of making an exhaustive examination of the Japanese method of brewing. It is true that papers on this subject have been published in the *Transactions* of the German Asiatic Society of Japan; but Prof. Atkinson's investigations have enabled him to explain with greater accuracy than had previously been possible the various chemical changes involved in the manufacture of saké. Notwith-

standing the fact that tea is the national beverage in Japan, the subject of brewing is one of no small importance to the State. During the year 1880 the quantity of alcoholic liquors, principally saké, produced in the country amounted to 5,207,970 koku, or 206,756,409 gallons, yielding a revenue of 6,459,570 yen, which, taking the yen at half-a-crown, would be equal to 807,446*l*. Prof. Atkinson enters into a technical discussion of the several stages of the manufacture, and gives analyses of the various products, from the original rice to the finished saké. His essay is undoubtedly one of the most solid contributions to science which the University has yet issued.

GEOGRAPHICAL NOTES.

THE project of a land trade route between India and Western China is again to the front, its advocate being Mr. Charles H. Lepper, F.R.G.S., M.R.A.S., who read a paper recently on the same subject before the British Association. Mr. Lepper has now laid his plans before Government, and they have formed the subject of correspondence between the home authorities and the Governor-General. Mr. Lepper maintains that former failures, like Mr. Cooper's, for instance, have resulted from attempts being made in the wrong direction. To try to reach China by the north of Assam was first to encounter the uncompromising Mishmis, and beyond the impracticable Tibetan question. The more feasible route undoubtedly lies *viâ* Makum, and crosses into the Irrawaddi basin by passes none of which exceeds 2,500 ft. above sea level. The particular advantage, however, which Mr. Lepper claims on behalf of his route lies in the fact that it traverses the country of the Singphos, whom he can certify by personal experience to be a peaceable and extremely well-disposed race, while the Khamptis to the north are just the opposite. Another point of importance is that the railway from Dibrugarh will eventually be constructed right up to Sudiya and Makum, to which point steam communication will thus be available all the way from England. The precise advantages which will accrue to British commerce are rather lightly touched on by Mr. Lepper, though, of course, the introduction of our goods by an easy route into Western China may open up an important market in process of time. The prospect of importing cheap Chinese labour into Assam by the new route is certainly very attractive, for, as Mr. Lepper points out, that province, with a rich soil and ever bountiful rainfall, has still probably two-thirds of its area under forest growth, infested with wild beasts and pestilent from malaria. To reclaim these tracts, to work the coal mines, and to save the important tea industry from its present serious difficulty in getting an adequate supply of labour are matters calling for the earnest attention of the Indian authorities. Mr. Lepper's proposed expedition at the Government expense may involve a certain outlay, the exact amount of which is a matter for consideration and arrangement; but whether Mr. Lepper's theoretical views be correct or not, a thorough examination of the region in question is very much wanted. We may hope that the project will not be looked upon unfavourably by the Government of India, to whom the Secretary of State has referred the matter.

Those interested in the question of the development of Africa will be attracted by a paper by Mr. G. Grenfell in the last *Proceedings* of the Royal Geographical Society. The writer was sent out to the Cameroons river by the Baptist Missionary Society in 1874, and since that time has traversed a great deal of territory between the Cameroons and the Congo, of the resources and geography of which he is therefore qualified to speak. Eastward of the Cameroons, he observes, there stretches a vast unexplored area, partly accessible by means of the river, which furnishes an available waterway of seventy miles or so into the interior. On the slopes of the mountains which lead up to the interior the soil is mainly of volcanic origin and very rich. Coffee and india-rubber are indigenous, and cacao has been planted with success. Fruits are raised in great variety, and there are various timbers—such as ebony, African oak, a kind of teak, and a wood resembling mahogany and barwood—which might be profitably exported. Unfortunately there is great difficulty in penetrating into the interior from Cameroons, mainly owing to the jealousy with which the coast tribes reserve to themselves the monopoly of the direct trade with the European. So determined are they to preserve the boundaries that Mr. Grenfell was brought back by a party of armed men on one occasion on endeavouring to penetrate inland. With respect to the people, many of them are capable and faithful, notwithstanding that the African as a rule is very degraded, owing in great measure to the educational effects of the slave trade and gin at less than five shillings a case. Were the coast monopoly once broken down, however, Mr. Grenfell is confident that a promising future would be in store for the country and its people. An interesting paper by Mr. H. E. O'Neill, H.B.M. Consul, on the coast lands and some rivers and ports of Mozambique, furnishes curious details regarding the plan adopted by the Portuguese in the early part of last century for colonizing the rich country on both sides of the Zambesi, by offering parcels of land to well-dowered Portuguese women on condition they married Europeans of Portuguese extraction and dwelt on their holdings. The creation of this feudal system, however (for such it was), gave rise to insupportable abuses and disturbances, and in process of time the extinction of the export slave trade from the district helped to abolish it.

ASTRONOMICAL NOTES.

THERE can be little or no doubt that the great comet which has been distinctly visible to the naked eye for some days past in the early morning is the same as that found by M. Cruls and by Capt. Markham on the 12th of September (although there are probably some numerical errors in the places as telegraphed). It is certainly the same as that seen by Mr. Common at Ealing near the sun on September 17th, and which, it now appears, was also seen on the same day at Coimbra by Prof. Sousa-Pinto. Mr. S. C. Chandler, jun., of Harvard College, Cambridge, U.S., has computed the elements, according to which the comet passed its perihelion on the 17th of September, at the very small distance from the sun's centre of 0·0035 in terms of the earth's mean distance, which is less than 400,000 miles—less, therefore, than the sun's radius, indicating, if accurate, that the comet actually entered within the sun's surface, and emerged with the consequence only of an immense development of tail. The elements, indeed, bear (as Mr. Chandler did not fail to remark) a great resemblance to those of the first comet of 1880, which were at the time noticed to be very similar to those of the first comet of 1843. Hence it has been suggested that the comet, from approaching the sun so nearly at each perihelion passage, is, in fact, being drawn continually more towards it, and will ultimately be absorbed by it. It must be remembered, however, that there is no reason why different comets should not be moving along the same, or nearly the same, orbit at very considerable distances from each other. Should, however, the theory in question be true, and the three comets be identical, another return to perihelion will probably take place before many months are over. Mean time Dr. Copeland has computed from Mr. Chandler's elements an ephemeris of the comet for midnight at Greenwich, from which we extract the places for next week as follows :—

Date.	R.A.	N.P.D.
	h. m. s.	° ′
Oct. 8	10 32 49	100 2
,, 9	10 31 35	100 26
,, 10	10 30 25	100 50
,, 11	10 29 16	101 14
,, 12	10 28 8	101 38
,, 13	10 27 1	102 1
,, 14	10 25 55	102 24
,, 15	10 24 49	102 46

Barnard's comet continues to increase in brightness as it is approaching both the sun and earth. Its places for next week, as computed by Dr. Oppenheim, of Berlin (for Berlin midnight), are as follows :—

Date.	R.A.	N.P.D.
	h. m. s.	° ′
Oct. 8	8 16 35	162 12

After next week it will be too low in the heavens to be visible in these latitudes.

Dr. Julius Schmidt succeeded in observing Wells's comet at Athens until the 5th of August, after which its faintness became too great for observation.

The *Comptes Rendus* of the French Academy for September 25th reports announcements from various places in France, Italy, Spain, and Algeria, that the great comet was noticed at them in the daytime either on the 17th or 18th of that month. That from Rome states:—"Le dimanche, 17, à 10^h du matin, les habitants s'arrêtaient avec étonnement sur les places pour admirer la comète, visible près du soleil vers 1°·5 à l'ouest. Elle était si brillante qu'on l'apercevait à travers de légers nuages." MM. Thollon and Gouy examined its spectrum at Nice on the afternoon of the 18th. The interesting circumstance about it was the existence of the sodium bands (respecting which they write, "Les raies brillantes du sodium D_1 et D étaient données à la fois par le noyau et par les parties voisines"), presenting a similarity with the spectrum of Wells's comet, so much the more remarkable as no previous comets had ever shown those bands.

In the *Athenæum* for August 21st, 1880, we referred to the supposed discovery of the duplicity of Saturn's ring by Mr. William Ball and his brother Dr. Ball (the real location of whom appears to have been Mamhead, near Exeter; see Mr. Pycroft's letter in the *Athenæum* for October 9th, 1880), and pointed out that they did not announce the discovery as a certainty, but only requested attention to a drawing made by them on the evening of October 13th, 1665. This was in a letter to some friend (probably Hooke), who was induced by it to write to Huyghens, asking him to consider "whether the present appearance" of the planet "be to him as in this figure, and consequently whether he there meets with nothing that may make him think that it is not *one* body of a circular figure that embraces his disc, but *two*." In a letter to the *Observatory* for the following November (1880), Mr. Lynn remarked that the drawing in question was in some unaccountable manner omitted from the *Philosophical Transactions*. He now writes to the current number (October, 1882) of the same periodical, and states that there is an engraving of it in Lowthorp's abridged edition of the early volumes of the *Transactions*; also that it shows no appearance whatever of duplicity in the ring; so that one cannot help suspecting that by "two bodies of a circular figure" were meant either the two *ansæ* of the ring, or the ring itself and the dark space between the planet and the ring. Cassini's drawing, on the other hand, shows very clear indications of duplicity in the ring, and the view, held for nearly two centuries, that *he* was the first to notice the principal division is probably correct after all. The late Admiral Smyth was, we believe, the first to attribute the discovery to the Balls in his well-known 'Celestial Cycle,' published in 1844; but some astronomical

XUM

books refer this to Mr. Hind, who simply states in his 'Solar System' (which appeared in 1852) that "it is on record" that the brothers Ball had noticed the duplicity ten years before Cassini. The letter-press in the *Philosophical Transactions*, without the drawing, might, indeed, well lead any one to think so. We may add that the Balls were both original members of the Royal Society. Mr. William Ball (the name appears to have been usually spelt Balle) was also the first treasurer of the Society and a member of Council.

The planet Venus is approaching her greatest brilliancy, which she will attain on the 1st of next month. But, on account of her great southern declination (which will increase until the 5th of November), she does not remain above the horizon more than about an hour after the sun, although she was at her greatest eastern elongation so recently as the 26th of last month.

In No. 21 of *Copernicus* Prof. Ball, Astronomer-Royal for Ireland, communicates a determination he has made of the annual parallax of the star 6 Cygni B (=Σ 2486). The result is 0″·482, with probable error 0″·054, and, although he regards this as merely provisional, there can be little doubt that it is a tolerable approximation to the true value. "It is impossible," he says, "not to be reminded of 61 Cygni, which is in the same constellation, and the parallax of which is about the same amount. It will also be observed that Σ 2486 and 61 Cygni are doubles of the same general character and have each a large proper motion."

THE SACRED HAWK OF RESEPH AL ARSUF.

In the last number of the *Quarterly Statement* of the Palestine Exploration Fund (July), Herr Schick describes a fragment of a marble figure, consisting of a bird bearing, suspended from its neck, a medallion inscribed with certain characters. It was found, he states, among some stones fallen from the wall of the Haram Esh Shereef, at the south-east angle, and is now deposited at the Serai.

There is an error as to the finding of this monument which it is important to set right, because the exact spot where it was found, which I am in a position to guarantee, has a peculiar significance and is of special importance.

The figure has nothing whatever to do with Jerusalem. It comes from the ruins of Arsûf, the ancient Apollonias, which stands on the seashore about three hours north of Jaffa. It was brought to light early in the year 1881 by certain Arab workmen employed in extracting stones from the ruins of this important place for building purposes at Jaffa. The Mussulman guardian of the sanctuary of Sidna Aly, near Arsûf, got possession of it, and placed it secretly in a chamber of this place, which is the object of the greatest veneration, and is known as the Haram of Sidna Aly. Probably the word Haram has caused the confusion in Herr Schick's letter, and the Turkish authorities, whose information is always vague and superficial when it is not altogether erroneous, may be themselves the authors of the error. I had occasion in 1881 to examine the original at Arsûf on the spot. It was on the 9th of July, nearly a year before it was removed to Jerusalem. I opened negotiations with the guardian of the sanctuary for the acquisition of the monument; but they came to nothing, in consequence partly of his exaggerated ideas of its value, and partly of the insufficiency of my own resources. In order not to awaken suspicions, I made no drawing or copy of the object, which struck me as very remarkable — I will presently explain why — nor a squeeze of the monogram on the medallion, but confined myself to a little sketch made from memory in my note-book.

It represents a colossal hawk. Now, in a memoir published some years ago ('Horus and St. George,' 1877) I endeavoured to establish, by considerations of pure theory, (1) that the hitherto unexplained name of Arsûf—a city, so to speak, without history—was nothing else than the name of the Phœnician god Reseph; (2) that the equivalent of Reseph in the Phœnician Pantheon was Apollo; (3) that this fact explained the name Apollonias, an exact translation of the Semitic name; (4) that the Phœnician Apollo, closely related to the Egyptian Apollo Horus, would have the hawk, like Horus, for iconographic symbol; (5) that Arsûf Apollonias was one of the principal centres of the cult of Reseph; that the Haram (*ἱερον*) of Sidna Aly had succeeded in Mussulman superstition an ancient sanctuary of this Phœnician Apollo (the local prototype of St. George), and that the very legend of Sidna Aly concealed that of the god; and (6) that if my theory was correct we should find at Arsûf monuments of a cult so clearly characterized.

As is evident, this discovery confirms in the most unexpected manner a theory which might have seemed rash, and has definitively solved, in the sense I pointed out, the problem—I do not say unsolved, because it had never been proposed—of the origin of Arsûf. In the interests of my negotiations for its acquisition, and on account of the importance of the figure, I thought it well to maintain complete silence on the subject. I mentioned it, however, in a letter addressed to M. Renan on July 16th, 1881, and communicated by him to the Académie des Inscriptions et Belles-Lettres on August 5th, 1881 (see *Comptes Rendus*, p. 186). My return to France cut short these negotiations, and I suppose the guardian of the sanctuary judged it advisable not to keep the Turkish authorities in ignorance any longer of the monument. They caused it to be brought to Jerusalem on its way to Constantinople, where, perhaps, it will never arrive.

It is truly deplorable that the Ottoman Government, which is so jealous of antiquities found on the soil of the empire, should take such slender precautions not only to ensure their preservation, but also to establish authentically the place where they were found. This is, in fact, a point of capital importance. For example, if this monument had been found at Jerusalem it would have lost all its importance. Examples of the same kind might be multiplied. I will confine myself to one. Some years ago one of the pupils who followed my course of Oriental archæology at the École des Hautes Études, a native of Constantinople, brought me a copy of an inscription, apparently Semitic, said to have come from Cyprus, and placed with a label to that effect in the museum of Constantinople. Certain *savants* to whom it was submitted even recognized a Phœnician epitaph. At first sight what did I see? The bilingual inscription—in Hebrew and Greek—determining the limits of Gezer, which I discovered in 1874 while on my mission for the Palestine Exploration Fund. It had been seized by the local authorities without any form of process and sent to Constantinople, probably passing through Cyprus.* Happy the monuments which do reach their destination! The stone from Herod's Temple which was sent from Jerusalem *eleven years ago* by the Governor to Constantinople has not got there yet! If slanderous tongues may be believed, the stone has taken the *chemin des écoliers*, and is halting at St. Petersburg. C. Clermont Ganneau.

* This explains Conder's statement (*Quarterly Statement*, July, 1881, p. 147) that "the Gezer stones were not in the museum, so far as I could learn, nor was any one of the officials aware of their existence, although they were seized by the Governor of Jerusalem in 1874."

THE PRINCES' VISIT TO THE HOLY LAND.

The Prince of Wales has presented to the Committee of the Palestine Exploration Fund the report of the young Princes' visit to the Holy Land drawn up for him by Capt. Conder, R.E. (the surveyor of Western Palestine), who accompanied the royal party. With the report will be given a plan and description of the mosque of Hebron, made by Col. Sir Charles Wilson and Capt. Conder. Every part of the enclosure was visited and examined except the sacred cave: their firman granted permission to see even this, but it was found impossible to effect an entrance without breaking up the flags of the flooring. Three openings were found, all in the floor of the Christian church built over the cave by the Crusaders. If there was ever any communication from the outer courtyard it has been long built up. The opening to the eastern cave is a discovery made by the Princes, who also found, in the ante-chamber visible below the first opening, the door leading into the western cave. The various chambers about the Haram were also examined, and are figured in the plan drawn for the report. Capt. Conder took the party across the Jordan to Arak el Emir, Es Salt, and Jerash, where they found several new inscriptions. They found near Banias a dolmen centre resembling in character those examined by Capt. Conder in Moab. A map showing the route of the party is given, with drawings and plans. The report is also enriched by notes from the Rev. J. N. Dalton and Sir Charles Wilson. It will be published next week in the journal of the society. The same number will contain a paper by Canon Scarth on the route of the Israelites, being the result of personal examination of the country.

MEETINGS FOR THE ENSUING WEEK.

Mon. Aristotelian, 7½.—President's Address, 'The Method of Philosophy.'
Tues. Horticultural, 11.—Fruit and Floral Committee.
Wed. Microscopical, 8.—'Observations on *Stephanoceros*,' Mr. T. B. Rossiter; 'Swiss Jurassic Varieties of *Trochammina incerta*,' Dr. R. Haensler.

Science Gossip.

Dr. Bowman's 'Intermediate Text-Book of Physical Science,' which has been prepared to meet the want indicated by Prof. Huxley of a suitable class-book for students at night schools, mechanics' institutions, and similar places, will be published in a few days by Messrs. Cassell & Co.

Prof. Bischof's system of water filtration has been for some time before the public. The use of spongy iron has now been applied on a large scale to the water obtained from the river Nette for the supply of the city of Antwerp. Dr. Frankland has visited the Antwerp waterworks at Waelheim, about fifteen miles above that city, and reported on the results of his inquiry. He attaches especial value to the fact that spongy iron filtration "is absolutely fatal to *Bacteria* and their germs," and he considers it would be "an invaluable boon to the metropolis if all water supplied from the Thames and Lea were submitted to this treatment in default of a new supply from unimpeachable sources."

Dr. Beard, of La Rochelle, has described before the French Association for the Advancement of Science a method of generating electricity by combustion. He uses a brick of carbonaceous matter, and a brick of nitrate of potash or soda separated by a sheet of asbestos. Strips of brass are imbedded in these bricks to carry off the electricity developed. When placed in a furnace the carbon is oxidized and an electric current is generated. This is, we believe, the first successful experiment in the direction of obtaining from coal the electrical force which it may be assumed is given out in the process of combustion.

The death is announced of Dr. Huson-More, a well-known Lancashire physician. He was one of the founders of the Manchester Scientific Students' Association, a Fellow of the Royal Geographical Society, a member of the Anthropological Societies of Manchester and London, and a promoter of the National Education League. Early in his career Dr. Huson-More was a great traveller, visiting India, Australia, the west coast of Africa, and other places. He was only in his thirty-ninth year at the time of his death, which occurred after a few days' illness from erysipelas.

Miss Ormerod, the entomologist to the Royal Agricultural Society, is preparing her annual report, and solicits information from farmers and other observers upon the habits of injurious insects, and methods found serviceable in checking their ravages.

Mr. W. T. Blanford, Mr. Theodore W. H. Hughes, and Mr. Tom D. La Touch, of the Indian Geological Survey, are doing valuable work by communicating to the *Records of the Geological Survey of India* papers on the coal-fields of that country. The part just published contains notes, (1) 'On the Coal of Mach in the Bolan Pass and of Sharág'; (2) 'On the Umaria Coal-Field (South Rewah Gondwana Basin)'; (3) 'On the Duranggiri Coal-Field, Assam'; and (4) 'On the Outcrops of Coal in the Myanoung Division of the Henzada District,' by the chemical examiner, Dr. R. Romanis, of British Burma.

M. Albert Larbalétrier, in *Les Mondes* of the 16th ult., gives a clear account of a new pest against which man has to protect himself. This scourge — the *Anisoplia austriaca*, which has recently made its appearance in some districts of Russia which are the most productive of wheat —is a "coléoptère scarabéide" appertaining to the tribe of *Pittophages*, and forms with the "anisoplia des jardins," very common in France, the genus *Anisoplia* of Latreille. This has hitherto resisted all the means of destruction employed, although a great number of Russian entomologists are actively occupied with this most serious question.

A special mission is to be sent to Japan by order of the French Minister of Agriculture to study the cultivation of the vine. In Japan the vine grows almost up to the region of snow, and it is hoped that the Japanese plant would flourish in France.

M. Georges Leclanché, whose researches on the use of the oxide of manganese in the voltaic cell are well known, died in Paris on the 14th of September, at the early age of forty-three years. Leclanché was educated at the École Centrale des Arts et Manufactures in Paris, and in 1860 entered the laboratory of the Chemin de Fer de l'Est as a chemical engineer. He left the service of this company in 1867 to devote his attention to the manganese peroxide battery. He has lately been engaged in devising a system for distributing the true time by electricity to recording chronometers and clocks.

Commander Frené has communicated to the Académie des Sciences the results of his experiments on board the Desaix on the boilers of that vessel. He places zinc plates on the inside of the iron boilers, which thus become voltaic elements. The zinc is oxidized and hydrogen is liberated from the water, which prevents all danger from superheating and protects the boiler from the incrustation of any matter held in solution by the water.

M. Becquerel, whose name is associated with his large work on electricity, and whose researches in that science are of the highest class, has received from France the testimony to the value of his works which a public statue gives. On Sunday, the 24th of September, at Chatillon-sur-Loing, in the department of Loiret, where Becquerel was born in 1788, a statue by Guillaume, representing the chemist with the electrical apparatus in his hands with which he made his artificial crystals, was inaugurated in the presence of MM. Dumas, Daubrée, and other members of the Académie des Sciences.

M. Teisserenc de Bort, in a note to the Académie des Sciences on September 18th, attributes the exceptional cold of the winter 1879–80 to a displacement of the centre of high pressures of Madeira and the Azores, and to a perturbation of the barometric maximum of Siberia.

Herr Friedrich Wöhler, Professor of Chemistry at Göttingen, is dead. He was born near Frankfort-on-the-Main in 1800, was Professor of Chemistry in the Gewerbeschule at Berlin from 1827 to 1831, and since 1836 he has been connected with the University of Göttingen. He was the first chemist to obtain the metal aluminium in a coherent form, and was associated with Liebig in some of his researches in organic chemistry. For forty-four years Wöhler's chemical and pharmaceutical journal has been familiar to all scientific men.

Prof. Fresenius has undertaken the superintendence of the manufacture of a new fatty matter, "adepsine," which is obtained from petroleum. It is produced as yellow and white solids, and as a transparent colourless oil. Adepsine is said to be free from acidity, and it is not oxidized or resinified by the influence of the air.

The Congress of Italian Meteorological Societies held its first sitting at Naples on September 25th.

The last published part of the *Nova Acta* of the Royal Society of Sciences at Upsal contains a few papers well worth notice, as may be inferred from their titles:—A. Berger, 'Sur quelques Applications de la Fonction Γ à la Théorie des Nombres'; R. Hult, 'Recherches sur les Phénomènes Périodiques des Plantes'; H. Hildebrand Hildebrandson, 'Marche des Isothermes au Printemps dans le Nord de l'Europe'; Gustav Eisen, '*Eclipidrilidæ* and their Anatomy: a New Family of the *Limicolide oligochæta*'; Olof Hammarsten, 'Ueber Dehydrocholalsäure, ein neues Oxidationsproduct der Cholalsäure'; and Herman Almkvist, 'Die Bischari-Sprache Tū Bedāwie, in Nordost Afrika, beschreibend und vergleichend dargestellt.'

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Greek and Roman Sculpture: a Popular Introduction to the History of Greek and Roman Sculpture. By Walter Copland Perry. With 268 Engravings on Wood. (Longmans & Co.)

Mr. Perry has taken a leading part in agitating for the establishment of a museum of casts of ancient sculpture upon a comprehensive scale. Until the study of the antique receives such assistance it has but a poor chance of popular appreciation. Genuine connoisseurship must mean time be reserved for the more fortunate who, besides having access to private collections in England, have opportunities and leisure for the contemplation of original works and casts all over Europe. For their collections of casts London may envy many second-rate towns in Germany. In the absence of such material aid, it may be doubted whether the very best introductory handbook will provide more satisfactory help to the appreciation of sculptural beauty than a treatise on music to the enjoyment of the score of a symphony. Nevertheless it is well that a book like the present should circulate; it will do much to make known the wealth of neglected materials at command, and to promote an interest in the study which a good collection of casts would subserve, by indicating its bearing on the higher refinements of education.

It may be said in the author's praise that he distinctly recognizes in his preface the breadth of his subject, whatever his shortcomings—in some respects surprising enough—in filling up the details. It can but be good service "to furnish the inexperienced amateur" with some of the knowledge that he must carry with him to the contemplation of remains of ancient plastic art if he is to appreciate them for their proper artistic excellence, or as illustrative either of the development of the art independently, or of "the intimate relation between Greek art and the religious, political, and social life of the Greek people." But there are difficulties in the prosecution of these objects more serious than those which are due to an accepted obligation to treat them popularly. Although we are fortunately in possession of a certain number of important works of the ancients which can be assigned to certified dates, it is after all a very limited number. The most important are those of the Parthenon, the Mausoleum, the temple at Ephesus, the monument of Lysicrates, and now we may probably add the 'Hermes' of Praxiteles. But even in the case of some of these we are far from the certainty, or even the probability, that we have the best work of the time; in consequence, we are liable to be doing as gross injustice to its best masters as Phidias would have suffered if only the poorer metopes of the Parthenon had survived to be taken as types of his genius, or the Olympian sculptures to mark what efforts he was recorded to have surpassed indeed, but only surpassed. With respect to a large number of ancient works, groups, subjects in relief, or single figures, the elucidation to which we may be wise to confine ourselves, and after all probably the best and most important, is such as is derived, on the principle of Winckelmann, from study of the expression and treatment of the work in itself, without special reference to a conjectural date; and then to study it by the light of general indications in ancient literature, in accordance with the example so admirably set by Visconti.

A fine piece of sculpture may no doubt have the interest of an historical document as well as of a poetic creation; but as higher gifts are required for its appreciation under the latter aspect, this is often set aside entirely for the easier purely intellectual study. Yet if the work can be dated its æsthetic value is the most important historical fact connected with it, while without a date history is helpless. A history of ancient sculpture on the purely intellectual method has to be recomposed for several even of its most important periods from indirect notices, or it may be casual phrases, of Cicero, Pliny, Quintilian, Philostratus, Lucian, and others, eked out by equivocal evidence of conjectural copies of lost works —copies not merely good, bad, or indifferent, but deliberately modified, like the two representatives of the 'Diadumenus' of Polycletus, which protest against each other, face to face, in the British Museum. And moreover it is beyond question that we are destitute of information of this kind respecting entire periods of the production of works of distinct character and considerable excellence. It is in some respects fortunate that Teutonic pertinacity will not consent to consider itself foiled in its attempts to evolve a continuous history of sculptural develop-

ment. To this pertinacious spirit we have to be grateful for the recovery and systematic record of every ancient allusion to art and artists and numerous sagacious identifications of subjects. Mr. Perry, with the candour from which he never swerves, admits that his work is mainly based on German criticisms and researches; but when he adds that all such works must of necessity be so based, we are disposed to demur. Much gratitude is due to German archæologists, and not a little to those among us who save students of German the labour of disentangling their sense from its husk of verbiage; but unhappy is the critic who, overawed by an amount of labour and learning that he makes no pretence to rival, is not only seduced from original research, but surrenders independent judgment also; who gives himself over without reserve to teachers so exacting, and accepts their historical inferences or, worse still, their æsthetic appreciations with submissive deference, differs only with feeble vacillation, or is hopelessly perplexed when his instructors are at odds among themselves.

The wild theory of Stephani, Schulze, and others as to the Byzantine date and Herulian origin of the designs and ornaments of the antiquities from the Mycenæan graves excavated by Dr. Schliemann, is treated by Mr. Perry with a respectfulness of quotation that may now surprise even Mr. A. S. Murray, who, by dropping it silently in his own book, seems to signify that he at last recognizes its absurdity. Our author, as he shifts from the point of view of one after another of his German authorities, reminds us of the acrobat in Homer's simile riding four horses abreast, and only afraid lest he should be run away with by one of them. In fact, the German archæologist is to the English almost universally

> As is the osprey to the fish, who takes it
> By sovereignty of nature,

and the boldest of his pretensions are admitted as matter of course.

At p. 124 we have two arrangements engraved of the figures in the western Æginetan pediment, and assigned to Brunn and Dr. Conrad Lange respectively. The first of these coincides precisely with an alternative grouping engraved by Cockerell some half century since, and published (pl. xv.) in his magnificent volume as long ago as 1860. Yet we read:—

"According to a happy suggestion of Friedrich's, Brunn proposes to alter the arrangement of the figures by placing the archers in the second place from the corner instead of the third, by which the rhythm, the *arsis* and *thesis* of the group (the alternation of higher and lower figures), would be better preserved. The annexed plate gives Brunn's arrangement, which is all but universally accepted."

Few archæologists have rendered more valuable service than Brunn, and yet even in his case, when he has conducted us to his positive conclusion, notably in the case of the pedimental sculptures of the Parthenon, the impulse constantly arises to supplement it with a familiar formula from Euclid, "which is absurd."

The preface, already quoted, makes the candid admission that the numerous woodcuts are "not offered as works of art or as illustrative of the *beauty* of the originals from which they are taken." It is frankly avowed that, "with few exceptions, they aim at nothing more than to remind one class of readers of what they have already seen, and to indicate to another what they are to look for on entering a museum for the first time." This admission rather under-estimates the value of woodcuts which are better than we have been accustomed to lately, and are as good as the occasion requires; but it is unfortunate that the very title-page carries a delicately executed head of the Apollo Belvedere, with eyebrows daintily delineated and a winning smile on the mouth—that mouth of which an eminent sculptor declares that he vainly endeavoured to copy in marble its haughtily repressed scorn. Even the Niobe (p. 418) is endowed with the selfsame smile. Goldsmith's connoisseur, who made a character for refined taste by parading admiration of the works of Pietro Perugino, might in our day have succeeded as well by chiming in with those who denounce the best impersonation of "the god of light and poetry and life" as a dandy. It is right to say that Mr. Perry protests against "the unwarranted depreciation" of this statue; but he is presently found feebly acquiescing in the theory which would overbalance the composition of the figure by loading his right hand with the ægis of Jove in place of the silver bow required, if only to match the quiver which he wears, and which is consistently absent in the Stroganoff 'Apollo.' Again, the author expresses an unusually fine sense of the true expression of the Venus of Melos—though strangely bringing it down to an inconsistently late date—but only to shake our faith in his originality by an allusion in the next sentence to "bashfulness" as characteristic of the Venus de' Medici.

It would be easy to make out a list of the author's errors, some only manifest oversights, as inscribing a view of a secondary treasury "View of gate and walls of Mycenæ," some doubtless more serious; but very many may be set down as venial by the indulgence which is solicited in a work of many details; and it is merely invidious to insist on faults which will not mar the usefulness of the book for the beginners whom it specially addresses and to whom it may be frankly recommended.

We are startled, however, by a misapprehension at p. 271 which is unaccountable, and all the more necessary to correct. With reference to the pedimental sculptures of the Parthenon it is observed:—

"It is singular that by far the greater number of the figures on these pediments are female and consequently draped. It is the more remarkable because Pheidias especially excelled in the nude, and the treatment of drapery had not yet attained its highest perfection."

But among all the marvels of the genius of Phidias not least marvellous is it that to all appearance he first discovered the true function of drapery in sculpture, and, independently of example or precedent so far as literature or monuments give hint or indication, carried it at once to the highest perfection it has ever reached. The sculptured drapery of the triad of Fates has never been rivalled; ruined and broken as it is, still, whether trickling over bosom, in close adherence to the form, in broad or tightened folds, or freely agitated by disturbance of motion or of air, it has come down through the centuries beyond all rivalry, all praise, all imitation.

Mr. Parry refers to an opinion, "notably that of the more eminent sculptors themselves, that sculpture is a lost art." Surely we must understand that each notable sculptor makes exception in favour of a single studio. However this may be, sculpture certainly did not die in antiquity beyond all revival; and both by analogy and by more direct influence the revival of sculpture in Italy was so linked with antiquity, that the student of the history of the art will do well to pass on from the works of the ancients to those of the revival, and read by mutually reflected light the genius of Myron and Phidias, of Donatello and Michael Angelo.

The Life of George Cruikshank: in Two Epochs. By Blanchard Jerrold. 2 vols. Illustrated. (Chatto & Windus.)

Mr. Blanchard Jerrold's skill as a maker of books for rapid readers has been tested by many tasks, but of much less difficulty than the biography of the wittiest, most prolific, longest living, and, except Leech, incomparably the most genial satirist of our time. The eldest son of Douglas Jerrold—himself a close companion of Cruikshank and admirably qualified in most respects to deal with such a theme as the life of "dear old George"—has not inherited the whole of his father's aptitude for such a task as this. We do not think Douglas Jerrold himself, or indeed any one less powerful than Thackeray, could have been relied on to "pluck out the heart" of Cruikshank's mystery, and reveal—if, indeed, it could ever be revealed—the whole (as he had actually revealed a part) of the working of that fine genius which took forms that were by turns, or interchangeably, grotesque, poetic, majestic, crude, vulgar, and, by reason of tenderheartedness, sardonic. An ingenious writer, quoted by our author, truly said that the ambition of Cruikshank was, like that of Hogarth, the production of moral comedies. Like Hogarth, Cruikshank was never so happy or so wise as when lecturing on the advantages of virtue and the disadvantages of vice. The wonderful series of designs Cruikshank called 'The Bottle' probably gave to its designer more unalloyed pleasure and refreshment of the soul than any of his more refined and subtle conceptions—that, for instance, which illustrates so pathetically and tenderly the death of Falstaff, the compunction of his companions, and the womanly goodness of Dame Quickly during the last sad scene. We did not expect Mr. Jerrold would enter fully, or rather contrive to give himself time to enter at all, on the less obvious and more deeply pathetic phases of the mind of his subject—that wonderful artist whom he, in one of those happy turns of phraseology which are frequent in his text, felicitously terms a many-faceted genius.

It is, therefore, with the greater pleasure we testify that Mr. Jerrold has, on the whole, and despite not a few signs of haste and slightness in the execution of his task, produced a bright, readable, and well-constructed narrative, and dashing, yet sym-

pathetic, criticism and partial exposition of Cruikshank and his works. The haste attending the execution of this collection of anecdotes and running comments on the artist and his innumerable designs appears in the frequent employment of the term "caricature" to describe those works of Cruikshank which are not fairly and as a whole to be so designated. Cruikshank, like Hogarth, was rarely a caricaturist, but he was always a satirist. The error is, from Mr. Jerrold's point of view, not grave, but it is important. Caricature, which implies exaggeration of feeling, design, and conception, is but one, and the least excellent, ingenious, and meritorious mode of satire. Caricature is the rodomontade of satire, and seldom so witty as other modes are. Again, Mr. Jerrold, had he taken the pains his theme, his evident affection for his subject, and his zest for the vitality of Cruikshank's art demanded, would not have failed to give a full, or at least a concise history of satiric art in England. In the chapter on "Cruikshank as a Political Caricaturist" he says, "The art of the caricaturist does not date beyond the time of Hogarth in this country, and he did little in the way of political caricature." Without pausing to demur again to this use of the term "caricature," the palpable error as to the history of satire is excusable on grounds of haste alone.

Although in Hollar's etching, 'The World is Rvled and Governed by Opinion,' delineated as well as written satires flutter down and perish like leaves of trees, the fact remains that satirical prints dating before Hogarth's time, having been preserved by accident rather than design, exist by thousands to this day. Not a small proportion of Hogarth's "caricatures" are political, although (here Mr. Jerrold is right) the major part of his works are social or moral comedies. Cruikshank was inclined "always to moralize with his etching-needle," and in this respect he was, as in all others, the equal of Hogarth, the sole artist worthy to sit beside that noble master, and, in the number and "many-faceted" aspect of his works, far more worthy to be honoured than even he. Mr. Jerrold was sympathetically right when he wrote that the humour of Cruikshank was not his highest gift; the artist had otherwise "a perception of tragedy of a very remarkable kind; and he could realize his solemn meanings with the hand of a master." We may add, and our author has knowledge of the fact, that not even the Germans, those masterly delineators and *imaginators* of fairy-land, have shown greater or more exquisite insight into the lives and ways of elfs and fays than that which was shown by George Cruikshank.

In commending, with strict limitations, this collection of notes from many sources we do so according to the statement of Mr. Jerrold himself, who, in a dedication to M. G. Doré, justly describes his work as containing the "disjecta membra" of the life of the artist and satirist. We find errors in the spelling of proper names and numerous instances of thoughts and insight which are excellent in themselves, but undigested and out of harmony with their surroundings. Nearly every chapter compels us to remember the author's modest disclaimer of an intention to aim high, and makes us wish that he, or some one else, had taken up the subject in a manner worthy of its interest, wealth of matter, and characteristic charm.

Although Mr. Jerrold's book abounds in anecdotes, many of which are new, we have failed to discover that which is by far the funniest of its class, and sufficient to prove that Cruikshank was not only witty beyond measure, but the cause of others' delight in wit. The story refers to a wonderful blunder of the German writer, or congeries of writers, on art, renowned as "Nagler." It appears that originally two publishers quarrelled because one of them had tried to increase the sale of an illustrated book by stating that its prints were the work of "Cruikshank," by which the outside public understood the artist to be George of that name, and not, as was really the case, Robert (or Isaac Robert), his brother. A London critic, while exposing the catchpenny trick of the title, remarked that the latter person was "the real Simon Pure." "Nagler," ignorant of the idiom, and with all his *wissenschaft* at sea, not only, in innocent faith, reproduced the passage at length, but actually declared that "Simon Pure" was the real name of George Cruikshank. As if to make his own wisdom more apparent, the writer gave a cross-reference to "George Cruikshank" under the heading of "Simon Pure" (see Nagler's 'Neues Allgemeines Künstler-Lexicon,' 1835–52. vol. xii., and Mr. Reid's 'Catalogue of the Works of George Cruikshank,' 1871).

Mr. Jerrold's "two epochs" of Cruikshank's life are (1) that during which the artist drank spirits and other intoxicants, and (2) that which dates from 1847, when he became "a total abstainer." Our author is wisely more careful, if not more diffuse, in treating the former of those periods than the latter. His text sets right not a few common misconceptions about Cruikshank's career. There was no actual and pressing poverty in the house of the often-tipsy Isaac Cruikshank, whose bad example had much to do with the early errors of his sons Isaac Robert and George. A scrambling, irregular, thriftless, and laborious, but not absolutely impecunious household contained the three artists and that energetic and resolute Scotchwoman Mrs. Cruikshank, whose rough affection and devoted spirit kept discordant elements in something like order. We have it on Cruikshank's own authority that he earned more money in the first decade of his life than in the period between 1865 and 1875, when, though eager to work, and renowned by means of thousands of etchings, no one would employ him, so that he "had not made a shilling by his art" during all the latter period. This has been but too often the fate of satirists of immeasurably greater prudence than Cruikshank; but the fact is easy to explain and account for.

Mr. Jerrold gives a characteristic description of Cruikshank's mode of living:—

"When he had, in part, emancipated himself from the bibulous boon companions of his youth, George fell into a regular system of hard work. He breakfasted punctually at eight o'clock, after which he smoked a pipe, and went to work at nine. When biting up plates, he would smoke more in the course of the morning to drive away the fumes of the acid. At twelve he lunched, and then resumed work until three o'clock, when he dined. After dinner he sat, with a jug of porter before him, enjoying his pipe, and talking with any friend who dropped in. His visitors were many. At five he drank tea, and then worked again from six till nine, when supper concluded the labour of the day, and was the preliminary to pipes and grog."

The time at which he went to bed depended upon circumstances which were, according to the euphemism, not always under his own control.

The following note may interest Mr. Jerrold, who tells us that his hero was born September 27th, 1792, in Duke Street, Bloomsbury, where his father worked at his craft, or art, of etching and designing popular prints, many of which were satirical. Within a stone's throw of this spot, that is at one of the corner houses of Plum Tree Street, Hart Street, Bloomsbury, and a bare three months before the above date, was born William Linnell; a very little further off, that is at No. 8, in Old Belton Street, now Endell Street, Long Acre, in the house of his father, a japanner and tin-plate worker, and on the 8th of March, 1790, was born William Henry Hunt, the famous water-colour painter, the friend of Mulready and Linnell. Mulready himself went to school in the Long Acre region, and it is conceivable that Cruikshank, Linnell, Mulready, and Hunt, unconscious of their fates, must have often passed each other in the streets during their childhood. It would surely be worth while to find out the number of the house in which the famous satirist was born, and if the building has, unlike Linnell's birthplace, escaped destruction, to mark its front with a tablet in Cruikshank's honour.

NOTES FROM ROME.

A NEW quarter of handsome villas is being built in that portion of the gardens of Sallust which formerly belonged to the Barberinis and now belongs to Spithöver the librarian. Many works of art and remains of buildings have been found in cutting and levelling the new streets. Near the junction of the Via Venti Settembre and the Via Salaria the temple of Venus Erycina, otherwise called "Venus hortorum Sallustianorum," has been found, an imposing structure, some 100 feet long and 50 feet wide. Only the foundations remain, made of rubble work, so hard and strong that dynamite has been used to blow them up. The walls are 8 feet thick, and are sunk to a depth of 45 feet. Such an excess of solidity is not out of place, as the temple stood on the embankment or agger of Servius, made of loose earth. Of the thirty-two columns of the peristyle, and of the marble cella, steps, and entablature not a trace, not an atom, has been discovered, an example almost unique of wholesale destruction.

Sixty-four feet below the platform of the temple, at the bottom of the fosse or moat which protected the agger from the outside, a statue was found, representing Endymion dozing on the rocks of Mount Latmos. It is of natural size, of good if not perfect workmanship, and in a wonderful state of preservation. The attitude of the wearied huntsman is graceful, and must have pleased Diana, whose figure, however, is still missing. It pleased also the masons who had discovered the youth—they, too, stole Endymion in the darkness of night; and as in their hurry they found the trench at the bottom of which the statue had been lying too narrow, they broke the legs and one arm. Each of the scattered members was picked up by the detectives a few hours after the mutilation.

A few steps from this place another statue

came out of the same Sallustian grounds. It represents Leda and the swan, a good copy of a better original. Then came a dog, finely cut in *rosso antico*, a funny colour for such a creature. As regards the remains of buildings (fountains, nymphæa, reservoirs, &c.), they could not be properly described without reference to a plan.

From the Esquiline we have two more instances of the peculiar practice, so thoroughly appreciated by our ancestors, of building foundation walls with statues and works of art. It seems that as soon as the trench was opened men were sent round the district to pick up as many statues as they could secure among the ruins of private and public buildings. The statues having been brought to the edge of the trench, the wholesale slaughter was accomplished. Small figures were hurled down entire; big ones were smashed, and hammered, and split into fragments. Between 1872 and 1882 not less than two hundred statues and busts have been found on the Esquiline alone buried in this way. As a rule every portion of them is recovered.

The Hercules and the horse, one of the beauties of the Rotunda in the Conservatoire palace, have been recalled to life out of seventy-two pieces. It happens sometimes that the torso is found in one place, the head many hundred feet apart. The head of the Polymnia, in the same hall, was discovered in 1872, the body in 1874. The torso of the Farnese Hercules was found in the Baths of Caracalla, the head at the bottom of a well in the Trastevere, the legs at Bovillæ (le Frattocchie), ten miles from Rome.

On the west side of the Piazza Vittorio Emmanuele, where large houses are being built by Signor Marotti & Co., one of these peculiar walls has been found. It gave us some two hundred pieces of marble bodies. As far as I can judge, they belong to four statues, but a great many fragments have not yet been classified. One of the statues, of colossal size, seems to represent an athlete of the Greek-Roman school, brought to such perfection under Hadrian. Another represents a female figure, perhaps a Faustina. There are, besides, lovely busts of Hadrian, of Antinous, and others. It is difficult to state at what period these works of art were turned into building materials. Perhaps they met with their fate in the Middle Ages, although I should not wonder if such things had happened before the fall of the empire. Here is an example of statues walled up under Aurelian. A new gate is being bored through the walls of the city to afford a direct communication between the Esquiline and S. Lorenzo fuori le Muri. Between the third and the fourth towers south of the old gate the walls, ten feet thick, are patched up in the following way. The outside face is of brick-work of the time of Aurelian; the inside face belongs to an earlier building, of which Aurelian took advantage, as it fell exactly on the line of his projected ramparts. It is an enclosure or foundation wall of a garden, handsomely ornamented with a rustic kind of mosaic made of shells, coloured stones, and pieces of enamel, such as are often seen in Roman nymphæa and fountains. The wall had rows of niches for statues. Three niches have been found in cutting the new gate, and in front of each one the corresponding statue lay embedded in the nucleus of the wall. One represents a sitting Venus, of no artistic value; the second and the third represent fighting fauns, bright and spirited in their attitude, well chiselled, and beautifully preserved.

The Forum Transitorium, commenced by Domitian and completed by Nerva, was a long and narrow enclosure, resembling more a street magnificently decorated than a square. The street ran between two walls, 125 feet apart, decorated with fluted columns, and with a rich entablature, of which walls one piece only has escaped destruction, the one known to tourists and scholars as the Colonnacce. Another piece has been found underneath the house Via della Croce Bianca, No. 37, on the north side of the Forum, facing the Colonnacce. That house may be truly said to rest on a mountain of marble, made up with broken columns, capitals, friezes, pedestals, &c. The pavement of the Forum has been found 17 feet below the level of the modern street. There are also two fragments of a female colossal statue, finely draped, resembling to a certain degree the Thusuelda in the Loggia dei Lanzi at Florence. At the east end of the Forum stood the temple of Minerva, demolished by Paul V. Its casement has just been discovered at the junction of the Via Alessandrina and Torre di Conti during the execution of some repairs to the corner house, which is built on it.

The high ground between the Coliseum and the Baths of Titus, which formerly belonged to the Massimo family, and which may be remembered by former visitors to Rome on account of its lovely groves of pomegranate trees, is being built on by private enterprise, like every other available space of ground within the walls. In the maps of ancient Rome this land was marked as a blank spot, as no clue had yet been obtained as to how it was formerly occupied. The actual excavations have shown that the space was covered by a large square, 180 feet long, 120 wide, paved with a rough kind of mosaic in black and white. The level of this square is much higher than that of the arena of the Coliseum, which building is not very far off. The steep gradient was turned into a magnificent staircase with marble steps, divided into flights by landing-places paved with mosaic. On the east side of the square there are remains of a large public building, the character of which has not yet been ascertained.

From the Roman Forum comes rather exciting news. The front of the Farnese Gardens, designed and built by Vignola, with the two corner coffee-houses, painted, according to some authorities, by Raffaellino dal Colle, have been demolished, or are in course of demolition, in order that the excavations of the Palatine may be connected with those of the Sacra Via and of the Roman Forum. Science is sometimes very brutal in its requirements, and many friends of my native town will hear with sorrow of this disappearance of Vignola's masterly work on the Palatine. The Farnese Gardens were, if not unique, certainly a very rare specimen of a Cinquecento Roman villa and of the taste which prevailed at that period in laying out pleasure grounds, in which very little work was left to Nature itself, and nearly everything to the mason and the plasterer. Still the Farnese Gardens were born with a heavy original sin—that of concealing, of disfiguring, and of cutting piecemeal the magnificent ruins of the imperial palace. The scheme of creating a Pompeii in the very centre of ancient Rome (a Pompeii far more interesting and precious than the Campanian original), in which every inch of excavated space brings forth discoveries of the utmost importance, justifies, I dare say, the removal of obstructions, however respectable. At any rate, the great portal of Vignola will only be removed to the north side of the hill on the Via di S. Teodoro, and rebuilt as the main entrance to the excavations of the palace of the Cæsars. I hope and trust that the correspondents of some leading English papers will not take advantage of the removal of the gate to send a score of abusive telegrams about the Italian Government and what they are pleased to call the "land of brigands."

The space between S. Maria Liberatrice and the north corner of Vignola's frontage wall has already been excavated. The explorations were attended with splendid success. The Nova Via —that famous lane, the name of which is so closely connected with the most stirring events of the kingly period, and about which so much has been speculated and written by topographers —has been found and traced for 120 feet. It runs at the foot of Caligula's house, along the north-east spur of the Palatine, midway between the Sacra Via and the Clivus Victoriæ, some 30 feet above the level of the Forum. It is lined with rows of shops of reticulated work on the west side. The east side had not yet been excavated when I left Rome.

Near the Exhibition Palace on the Via Nazionale a portion of a statue of grey basalt has been found buried in a garden wall. It is of pure Egyptian workmanship, and represents a *Pastophorus* or priest carrying an *ædicula* or *naos* in his hands. In the hieroglyphic label is noticeable the cartouche of Rameses II., the third "great" king of the thirteenth dynasty. Near the same spot another work of art connected with Egypt has been dug up—a mosaic polychrome picture, representing the overflowing of the Nile on the rich fields of the Delta. One cannot deny that the genius of antiquities in Rome keeps up with the times and that it possesses in high degree the spirit of *à propos*.

R. Lanciani.

'HOPES AND FEARS FOR ART.'

The interesting testimony of Sir George Birdwood to the fact that the architects of India are not in the habit of using plans in the erection of their buildings, though not exactly bearing on Mr. Morris's original statement respecting the builders of Santa Sophia, is one that can be amply borne out by every one familiar in any way with Mussulman countries. Certainly in Egypt the traditional absence of plans is of great antiquity.

Some recent research on the history of the art of the Arabs having led me to consult the Arab historian Abdal Latif's 'Account of Egypt,' not in the Latin translation of Pococke, the son of the famous old Oxford Orientalist, nor in that of his successor White, but in the French translation of Silvestre de Sacy, the following passage, to be found in the fifth chapter, as the testimony of the writer of the twelfth century, seems curiously to confirm Sir George Birdwood's statement respecting the Indian builders:—"When a palace or other edifice has to be built, the architect to whom the execution of the building has been confided is called in. He visits the spot, plans it out in his mind, according to the nature of the building required; after which, he successively undertakes the different portions and terminates them one after the other, so that each may be used and occupied as it is completed."

Prisse d'Avennes, our latest authority respecting Arab art, tells us that the Arabs commenced the construction of a house by tracing the general plan on the earth with the aid of a sack of dry plaster; and, to show how tenaciously the tradition has been handed down to our days, relates an anecdote of Mehemet Ali's treasurer, who, seeing the plans of his palace thus being laid out, angrily ordered the plaster to be replaced by flour as the symbol of fecundity ('L'Art Arabe,' Paris, 1877).

T. Carew Martin.

*** Our correspondent must have noticed that our remarks on the subject in question were concerned with something more than the "plans" of a building, and included at least the *design* of the whole as a means of architectural expression, to say nothing of æsthetic proportion and scientific construction. A Gothic building, which was chiefly in view, is a far more complex affair than any of the other examples quoted. It has yet to be found that the Oriental examples are pathetic; some of them are probably not very beautiful. We wonder if anybody believes the Parthenon, or even the Pantheon, was designed by a congeries of "handicraftsmen."

Fine-Art Gossip.

The place of honour in the Liverpool Exhibition has been awarded to Sir Frederic Leighton's 'Phryne at Eleusis.'

Mr. Madox Brown is making great progress with his fresco in the Town Hall, Manchester.

This work is one of a series, the completed members of which we have already described. We have briefly noted the subject with which the artist is now occupied. It represents Crabtree, the Manchester astronomer, observing the transit of Venus on the body of the sun by means of the shadow of the planet projected on a reflection of the luminary on a prepared surface. The figure of Crabtree, the whole of the background, and the room in which he is at work, with his apparatus and indications of his trade as a "draper," are finished. Only Mrs. Crabtree and her baby and a little boy are now wanting. The effect is very novel; the room being darkened to allow of the astronomical experiment, for such it was, the whole scene is illuminated by the reflection of the sun's disc on the wall. The effect is softer than that of lamplight; the extreme blackness of the shadows, which would otherwise prevail, is mitigated by means of light admitted through an opening in the floor of the chamber. Some daylight enters by this opening and reveals the warehouse below the chamber, with indications of a sunlit snow scene, the time being December.

The Institute of Painters in Water Colours is about to inaugurate a new era in its exhibitions. It has been the custom to admit only the works of members, but the Institute intends for the future to open its galleries to all. The society has existed for forty-eight years at 53, Pall Mall. The removal of the Royal Academy to Burlington House and the opening of many art galleries in Bond Street has taken visitors in that direction; this, with the necessity for more space, has led the society to look out for a new home. A piece of ground was found in Piccadilly, nearly opposite Burlington House, and the Piccadilly Art Galleries Company was formed to construct the building, which is now completed. The Institute will next spring receive pictures under the new conditions, and will open its rooms about the beginning of May.

At the end of this month the Fine-Art Society proposes to open at the gallery in Bond Street an exhibition of pictures and drawings representing Venice and chosen localities in that city.

The autumn exhibition of the Manchester Institution has been opened with unusual attractions. It comprises not fewer than 1,319 works, all told, of which a very large proportion are drawings in water colours. It is to be feared that prudence, to say nothing of the merits of the greater number of the examples, will not sanction the gathering of such a mass of paintings as this. Quality, and not mere quantity, should be the standard of a provincial exhibition.

We are called upon to record the death at Venice, in his fifty-fourth year, of Mr. John W. Bunney. This event was due to acute peritonitis, and occurred on the 24th ult. Mr. Bunney had been occupied during the past four years on a marvellously careful and accurate picture of St. Mark's, the property of Mr. Ruskin, which will shortly appear in the gallery of the Fine-Art Society, at Bond Street. Mr. Bunney was much esteemed and well known in Venice. He contributed pictures of Venetian views to the Academy in 1881, 1879, and 1873.

Sir Joseph Whitworth has presented to the Corporation of Manchester, for the Fine-Art Gallery of that city, four paintings by Etty, the most notable being 'The Last Judgment,' which was in the Art Treasures Exhibition in Manchester.

It is regrettable that the authorities of the *Salon* have not yet seen their way to rewarding with the *prix* that work so richly deserved the 'Pêcheur retrouvant la Tête d'Orphée' of M. Longepied, which we had the pleasure of admiring in marble this year, and last year in plaster. The able sculptor has passed the age of thirty-two years, which is the limit of eligibility to which competitors are subject. Having exceeded this limit by a few months only, it appears officially impossible that the sculptor should receive the well-earned distinction. Although he exhibited this superb work in plaster last year, he cannot have the honour. No *prix* for sculpture will be awarded on account of the last *Salon*.

M. Frémiet, the distinguished French sculptor, has undertaken to execute an equestrian group of a herald at arms, bearing a cresset, which is to be erected in the Hôtel de Ville, Paris. The price of this work is to be 24,000 francs—about the cost of the Griffin of Temple Bar.

M. Verestchagin, the Russian painter, some of whose works were recently shown in London, has obtained leave from the Belgian Government to hold an exhibition of his pictures in three rooms of the Palais des Beaux-Arts at Brussels. The collection, which will be opened shortly, will be displayed by the electric light during the evenings.

MUSIC

NEW PUBLICATIONS.

Memorials of John Curwen. Compiled by his Son, J. Spencer Curwen. (Curwen & Sons.)—Among those who have been influential in promoting the interests of music in this country during the past half century the name of John Curwen will stand in the foremost rank. Though he cannot be credited with the invention of the Tonic Sol-fa notation—the system of teaching adopted by Miss Glover, a schoolmistress at Norwich, furnishing him with the groundwork of the scheme—yet to him belongs the honour of developing the idea and of formulating its principles so that it began to assume the importance of a national movement, which no one interested in music or the work of education generally could afford to ignore. There is no need to recapitulate here the history of this new departure in popular musical instruction—how indifference was succeeded by active and bitter opposition to a method which to some appeared superficial, and to others as likely to introduce the element of confusion where before unity had prevailed. Mr. Curwen received no special training as a musician, and it was merely in the exercise of his calling as a Nonconformist minister that he was drawn more and more to consider the importance of the art in its relations to religion, education, and social life. It speaks much for his energy and perseverance, as well as for the value of the Sol-fa system, that, commenced merely to facilitate Sunday-school work and congregational singing, the method should have gradually become what it now is, a power in the musical world. The personal life of its apostle was singularly uneventful, and this volume consists for the most part of written testimonies to his worth supplied by friends and the indirect evidence afforded by a careful selection from his own and his wife's private correspondence. Mr. Spencer Curwen says that he "has endeavoured to let others speak whenever possible," and he is to be commended for refusing to shirk his duty as a biographer on the ground that most of his readers would be out of sympathy with his father's religious and political views. It is, perhaps, unfortunate that in his desire to present a faithful portrait he should have been compelled to admit such evidences of a narrow sectarian spirit as those reprinted from the *Tonic Sol-fa Reporter* on the subjects of operas and balls (pp. 93 and 95); but the impartial reader will pass these with a smile and dwell rather on the many noble characteristics of one who was an earnest worker, a simple-minded and single-hearted Christian, and a musical reformer the value of whose labours it is as yet impossible to fully estimate.

We have received Parts 15 and 16, published together, of Grove's *Dictionary of Music and Musicians* (Macmillan & Co.). A period longer than ordinary had elapsed since the appearance of the last part of this work, but some portion of the delay may have been due to the anxiety of Mr. Grove to clear up the mystery relative to Schubert's Gastein Symphony. This, unhappily, has not yet been effected; but meanwhile his article on Schubert must be considered as an exhaustive treatise, and on the whole the most valuable compendium of information respecting the Viennese composer and his music yet published. It includes a classified list of his compositions and also a chronological catalogue. Among other articles of great value and interest must be named that on Schumann by Dr. Spitta, an essay on "Scotish" music by Messrs. J. Muir Wood and T. L. Stillie, and one on 'Service' by Dr. Stainer. Mr. Rockstro's lengthy contribution on 'Schools of Composition' might have been condensed with advantage; and it may be said that dogmatic expressions of opinion are out of place in a dictionary article. Controversy respecting the claims of eminent living composers cannot be settled in this way, and musicians will only smile on reading extravagant encomiums on Rubinstein and Max Bruch by a writer who also asserts that Senta's ballad will be remembered ages after the operas of Wagner have ceased to be performed in their entirety. The scope of the dictionary has been much enlarged since its commencement, and, as the present section only carries us as far as 'Sketches,' it will scarcely be possible to complete it even in three volumes. Further references are already made to an appendix.

The Rose's Love. Cantata for Three Female Voices. By A. Schliebner. (Stanley Lucas.)—There would seem to be an increasing demand for works of this kind, judging by the numerous examples which come before us. The libretto of the present cantata is rather childish in idea and language, and the author discreetly hides his identity. The music is facile and tuneful, being, perhaps, purposely subordinated to the capacity of vocalists still in the elementary stage.

NEW SHEET MUSIC.

Foremost among recent publications for the pianoforte to hand we must place *Serenade in* G, by Villiers Stanford, arranged as a piano duet (Boosey & Co.). This, of course, is a transcription of the work produced with such success at the recent Birmingham Festival. Although it cannot be said that in this guise the music is so effective as in the original orchestral arrangement, yet the freshness of the ideas and the high-class musicianship displayed in their treatment are still apparent; and it may be said that the composer has carried out the work of transcription so ingeniously that few would imagine the Serenade to be other than an original composition for the pianoforte.—As teaching pieces of moderate difficulty a word of recommendation may be given to the following:—*The Minster Tower, La Tristesse, Gavotte and Musette*, all by Sydney Smith; *Rigaudon in* D, *Polonaise in* E *flat*, by Boyton Smith (Ashdown); *Menuet Impromptu*, by Walter Macfarren (Stanley Lucas); *Héloïse*, by Wilfred Bendall, and *Torch Dance*, by Cotsford Dick (Weekes & Co.). All these are written in a melodious, agreeable style, and if not of a high order of merit are at least harmless.

We have also received transcriptions of the *Sarabande* and *Minuet* from Sir Julius Benedict's incidental music to the Lyceum version of 'Romeo and Juliet'; and *Wrist and Finger Exercises for the Pianoforte*, by A. Buhl (Goddard & Co.), calculated to prove exceedingly useful as practice.

We have a considerable number of new songs, but very few of them are worthy of even passing mention. The following are, on the whole, the most commendable, but the standard of merit varies but little in this class of composition: *Three Songs about a Rose*, for tenor voice, by Morton Lathom (Novello, Ewer & Co.), not very

taking in style, but superior in conception to ordinary ballads; *Sere Tints of Autumn*, by J. Matthews, rather melancholy in sentiment, and *It is not always May*, by A. H. Cox (Weekes & Co.); *Dawn*, by Ernest Ford, a little fanciful both in words and music, but by no means unpleasing; and *Take back the Flower*, by Ettore Gelli, more in the conventional manner (Stanley Lucas).

Musical Gossip.

In consequence of difficulties having arisen in the business arrangements, the series of six Richter concerts announced to take place in the present autumn cannot be given. It is hoped, however, that negotiations may be effected for three concerts in the course of November, at St. James's Hall.

We regret to learn that the prospects of another season of German opera next summer are exceedingly remote. Her Majesty's Theatre is already closed to operatic performances, and it is feared that Drury Lane will also be rendered unavailable for the purpose. This, however, will not affect Mr. Carl Rosa's season at Easter next, the contract for which was signed some time since. The Royal Italian Opera Company will then practically have a monopoly of the lyric drama, a condition of affairs which, in the interests of art, it is to be hoped will prove of short duration.

We mentioned some weeks since in these columns that an attempt is on foot to resuscitate the Sacred Harmonic Society, or rather, to speak more accurately, to found a new society bearing the time-honoured name, and carrying on as far as possible the work of the old institution. A circular has just been issued by the managing committee, from which it appears that it is intended, if possible, to raise the necessary funds by means of a subscription for shares of 1*l.* each, and we are informed that the total subscriptions already promised and received amount to over 1,400*l.* We would suggest to the committee the advisability of announcing further details as soon as practicable; at present so little definite information has been furnished as to the future operations of the society, that many will doubtless hesitate to pledge themselves to its support until more is known as to the exact intentions of the management.

Mr. George Riseley will commence the sixth series of his Monday Popular Concerts at the Colston Hall, Bristol, next Monday evening. Among the novelties promised at the concerts to be given before Christmas are Gade's Symphony in C minor, Goetz's Symphony in F, and Dvorák's Symphony in D, none of which has yet been heard in Bristol.

The new Théâtre des Arts at Rouen was opened last Saturday. It has been constructed from the designs of M. Sauvageot, and will seat 1,600 persons.

The Singakademie of Berlin will give three concerts during the coming season. The works to be performed are Blumner's new oratorio 'The Fall of Jerusalem,' Bach's 'Passion according to to John,' and Mendelssohn's 'St. Paul.'

The Rev. G. W. Torrance, Mus. Doc., of Melbourne, sends us the libretto of an oratorio entitled 'The Revelation,' composed by him. The work was performed at the Melbourne Town Hall in June last, before an audience of 3,000 persons, and was very favourably received.

DRAMA

THE WEEK.

Adelphi (Morning Performance).—'Chandos; or, the Jester who turned Traitor.' Adapted from Ouidà's Novel by Hartbury Brooklyn.

Globe.—'The Novel Reader,' a Comedy in Three Acts. Adapted from MM. Meilhac and Halévy by Joseph Mackay and Sydney Grundy.

Pieces produced at morning performances are as a rule heavily handicapped. A natural tendency exists in the public to accept, with some reservations, the vendor's estimate of his goods. When accordingly, with inappropriate costumes and with scenery which is recognized as intended for other purposes, a play is shuffled on to the stage for one representation only, the greeting it obtains is ordinarily cavalier. Conscious that rehearsals have been inadequate, but half up in the character he plays, and unable to trust his fellows, whose unpreparedness is, he knows, not less than his own, the actor is ill at his ease, and, as in the case of badly-drilled soldiers, a wrong movement is sufficient to bring about irremediable confusion. To these influences a version of 'Chandos,' produced at the Adelphi on Saturday last, succumbed. That the adaptation, which is extreme in length and disconnected in story, could under any circumstances have won a favourable reception is doubtful. With more preparation on the part of the actors, however, with costumes less extravagant, and with more care in the disposition of the scenes, it might have been played to the end, instead of, as in the present case, collapsing in the midst of the action. In spite of the success, which was genuine, of 'Moths,' the romances of Ouidà might with advantage be left untouched. Such epicene creatures as her heroes cannot with advantage be transferred to the stage, and it is putting too strong an indignity upon an actor to ask him to play one of them. In the case of a writer with so much talent as Ouidà it is singular that no sense of the absurdity of her heroes seems to flash across her mind.

No very formidable violation of propriety is exhibited in the version of 'La Petite Marquise' of MM. Meilhac and Halévy produced at the Globe Theatre under the title of 'The Novel Reader.' It is pretty generally known that a licence had been refused the play, and that the authors summoned to hear it a non-paying public in which were included the ordinary representatives of press opinion. An experiment of this kind is necessarily inconclusive. Before it can be said that the authorities were squeamish or unwise in withholding permission to play the novelty some assurance is required that the piece rejected and the piece performed are the same. The existence of a censure of plays in a country in which every form of literature other than the dramatic is free, is, of course, anomalous. So long, however, as a censure exists its functions are sure to be exercised.

In 'The Novel Reader' as it was seen there is nothing which on moral grounds calls for condemnation. Marriage is, it is alleged, treated with little reverence. Since the beginning of literature, however, the marriage of December and May has been a subject of banter with the waggish poets, and it is now late in the day to come forward with a protest. A score of pieces equally indecorous with 'The Novel Reader' have been played during the last few years, and public morality has not suffered from them to any appreciable extent. It is, however, inherent in the very existence of a censure that it should be, when possible, derided and evaded by the writer. One of the strongest arguments against the existence of such an institution is drawn from the mischievous and immoral influence it thus exercises. A licenser of plays learns to his cost that after a piece assumably innocent has passed through his hands, it becomes in the course of performance so charged with what Madame Chaumont describes as "intentions," it is no longer recognizable as the same. He is accordingly driven to a use of his powers that at times seems arbitrary, and that probably is so. Not wholly judicious are the alterations that have been made in preparing 'La Petite Marquise' for the English stage. Some portions of the imported "business" go near being tedious, and the interest is confined to the central action. Miss Lydia Cowell acted as the heroine with an unconsciousness that took from the character all possibility of offence. The general interpretation, though competent, lacked go. A piece of the class of 'The Novel Reader' needs to be acted in the manner in which plays a few months ago were given at the Criterion. The original is, in fact, a clever burlesque—not the insipid production now dignified with the name, but a genuine and stimulating parody of the moral theses expanded into plays by the French dramatists of the day.

Dramatic Gossip.

The Globe Theatre will pass in November into the hands of Mrs. Bernard Beere, and will open with a new pastoral drama by the Laureate.

During her New York engagement Mrs. Langtry will appear as Juliana in 'The Honeymoon,' in addition to the characters in which she has been seen in London.

In a city the population of which is near four millions and into which there is a constant influx of strangers, theatrical accommodation for 55,326 individuals cannot be regarded as excessive. That, according to the report of Capt. Shaw, is all that the existing theatres in London ought to hold. On certain occasions as many as 70,000 people are crammed into the theatres, but this practice of overcrowding points, according to Capt. Shaw, to a danger of the most frightful kind. A restriction of the numbers to be admitted into a theatre is, in the estimation of the chief of the Fire Brigade, one of the regulations for which there is most imperative need.

The house once known as the Connaught Theatre is going to make one struggle more for existence. It is now undergoing repairs and will be reopened about the beginning of next year for the performance of comedy and burlesque.

'For Ever,' the new drama by Messrs. Conquest and Meritt, produced at the Surrey Theatre, is in eight long acts. Its repellent plot deals with the love of a man who is more than half a monkey for a woman he saves from the penalty of murder. Mr. Conquest is a clever actor. His attempts, however, to invest with any kind of interest the character of Zacky Pastrana, the man-monkey, were abortive, and the only sentiment inspired by his performance was repulsion.

Mr. William Archer, a gentleman who a year or two ago wrote the stage criticisms in a London periodical, has in the press a volume entitled 'English Dramatists of To-day.'

'Les Noces de Mademoiselle Loriquet,' a three-act comedy of M. Grenet-Dancourt, has been given at the Théâtre de Cluny.

'L'Assassin,' a piece included by M. Edmond About in his brilliant volume 'Théâtre Impossible,' has been given at the Gymnase, with MM. Landrol and Frédéric Achard, Mdlle. Linder, and Mdlle. Devoyod in the principal characters.

LITERATURE

Stories from Robert Browning. By Frederic May Holland. With an Introduction by Mrs. Sutherland Orr. (Bell & Sons.)

No criticism of this book is likely to be so exhaustive as Mrs. Sutherland Orr's introduction to it, which contains many intelligent remarks on Browning's poetry and yet seems rather superfluous, as it largely anticipates much which follows. The present stories from the author of 'Sordello' were suggested by the Lambs' 'Tales from Shakespeare'; but the process employed by the Lambs of familiarizing young people with Shakspeare's masterpieces fails when applied to Mr. Browning, for this reason, if for no other, that while the mere plots of Shakspeare's plays are fraught with incident and romance, Mr. Browning's dramatic works owe their interest to their psychological treatment. Take, for instance, the great scene from 'Pippa Passes' between Sebald and Ottima. Sebald, it will be remembered, has murdered the aged husband of Ottima, his paramour, that their unlawful passion may be freed from the restraint of concealment. The old man had once rescued Sebald from starvation, and the murderer is stung with horror at the deed he has committed. Passion turns into detestation of its object, and life becomes too loathsome to be borne. But what idea does the bald presentment here given of these circumstances afford of the wonderful interplay of nature with nature revealed in the poem—what idea of the profound difference between the Teutonic and Latin races as evinced in the conscience that still struggles through the heavy brutality of Sebald, contrasted with Ottima's nature, treacherous, but so intense that the heat of it would consume all memory of the mutual crime as fire consumes fuel—what idea of the way in which she strives without scruple or remorse to hold her lover, while he would vainly stimulate into new life by the aid of memory a passion which he feels fast turning into loathing?

In his preface Mr. Holland tells his readers that "very few, even thoughtful, persons do read Browning." This is a statement so uncompromising as to raise the question—and now is a good time at which to raise it—whether a complete recognition of Mr. Browning is still a mere "prophecy" or amongst intelligent readers an accomplished fact. In adopting the latter conclusion it may well be admitted that a mind possessing such subtle and varied powers as Mr. Browning's cannot wholly be gauged by its contemporaries. Yet it is truly surprising to find Mr. Holland speculating whether the many people "who condemn Mr. Browning as obscure" are familiar with 'Evelyn Hope,' a poem which we should imagine to be almost as popular as the 'Pied Piper of Hamelin' itself. Although this journal can boast of having recognized the singular promise of Mr. Browning's earliest volume, it is true that just appreciation of the poet's work was tardy; but while he was engaged on his great achievement 'The Ring and the Book' the perceptions of poetic students were not standing still, and after that work had obtained its signal success a new departure in the public estimate of the writer was undeniably evident.

Of course a poet occupied with the subtlest phases of human nature—a poet who so closely identifies himself with his creations as to make the sophist husband in 'Fifine at the Fair' half persuade the reader that he is enunciating high doctrines, when in reality he only seeks to justify himself in his selfish pleasures—a poet bent on discovering what truth may dwell in systems of religion and philosophy quick or dead—cannot look for the popularity which attends a writer content to follow the more frequented paths of experience. Yet for one man who really knows anything of the works of Landor, surely ten are familiar with Mr. Browning's poetry. Each great mind influences its time, and no amount of pamphlets written to show how great that mind is and what its influence ought to be—nay, not even societies for the wholesale dissemination of its teaching—will avail one whit to deepen that influence or hasten by one hour its effect upon the age. Were books for the elucidation of Mr. Browning necessary, Mr. J. T. Nettleship's admirable studies and their keen and suggestive criticism would have rendered a work like the present needless; but all that can be done to make readers better acquainted with a poet is a judiciously prepared selection from his works, which in Mr. Browning's case already exists. There the busy man, instead of having to seek for himself with the chance of falling upon unfavourable ground, can turn with the certainty of finding at least some of his author's masterpieces. If these examples please him he will in time come to know the whole of the poet's work; but if they fail to charm him no societies will make him pursue his researches further. Noticeable minds, like noticeable countries, have their own climates, their own individualities. Each thinking man knows what spiritual climate is most suited to his own peculiar needs, just as one traveller delights to sequester himself in the privacy of deep woods, finding the company of birds and winds all sufficient, while another delights in the life-giving air of mountains, and feels that the very dangers of scaling them give a new zest to pleasure. We do not fancy that many people will be found disposed to spend time in studying the bare skeletons of some of Mr. Browning's poems, especially as, with the exception of 'Sordello,' the plots Mr. Holland has chosen to relate really need no simplification at all. The book seems an endeavour to make easy what was never difficult. The stories here comprised are as follows: 'Strafford,' 'Sordello,' 'Luria,' 'The Adventures of Balaustion,' 'A Blot in the 'Scutcheon,' 'The Ring and the Book,' 'Pippa Passes,' 'The Return of the Druses,' and 'Colombe's Birthday.' Of these 'Strafford' comes off perhaps the least badly, some of the strong dramatic touches having been preserved and the pathos of the situation being obvious in its appeal. If Mr. Browning is at times difficult to comprehend, it is not through his obscurity in the matter of plot, but through what Mr. Swinburne has rightly designated his rapidity of thought. That Mr. Browning's poetry calls for careful and alert reading is indisputable; a little patience is undoubtedly requisite, but to the reader who can appreciate his author this patience will soon become enjoyment. Mr. Holland has meant well by his author, and by what he regards as a somewhat unappreciative public; but the qualification for apprehending a poet remarkable both for imagination and for psychology is to possess in a measure both these qualities. We know no process by which the want of them can be made good.

The Hibbert Lectures, 1882.—*National Religions and Universal Religions.* By Prof. Kuenen. (Williams & Norgate.)

A Teutonic critic of the lively type, for there are such, would probably begin a critique of this book by asking, "Was will Herr Prof. Kuenen?" And sober English criticism may express a doubt whether any definite line of argument is consistently carried through the work. The title would imply, and the introductory remarks support the inference, that we are to expect a discussion of the causes which develope national into universal religions. Yet what we really have is a brilliant sketch of the universalistic elements in Judaism which formed the germ of Christianity, illustrated by and contrasted with the national elements in the two other religions, Islam and Buddhism, which can claim to be universal. In the main topic of the book we have a national religion depicted and the development of its universalistic elements traced; in the subsidiary sections universal religions are characterized and their dependence on national religions pointed out. We have the principle formulated: "The connexion between the universal and the national religions furnishes the explanation and the measure of their universalism." It cannot be said that this is in any adequate way either proved or illustrated.

The truth is that if the science of religions is to deal with such a problem as this at all it must widen its inductions before it can arrive at valid laws. Of universal religions there are at most only three, and Prof. Kuenen would almost seem to deny the right of Islam to be admitted into the class. In any science it would be recognized that conclusions drawn from but two or three specimens are of very doubtful validity. And in the new science of religion, if it yet deserve that name, it is clear that we should examine those national religions that did not become

universal, and find what are the qualities that are missing in these and present in the national religions which did. It is, indeed, somewhat doubtful whether the religion of Rome did not approach universalism almost as much as Islam. When it is added that in each of his three cases Prof. Kuenen finds the efficient cause of universalism in the personality of the founder, it will be seen that the science of religion is up to the present unfitted to grasp the hugely complex problem it has selected through Prof. Kuenen, still less to solve it.

As, therefore, Prof. Kuenen's treatment of Islam and Buddhism appears to be only superficially connected with the main topic of his lectures, it need not detain us long here. Not that any objection could be properly urged to a treatment of the main features of these creeds by one who does not profess to have made a special study of either. On the contrary, it is most desirable that specialists should from time to time overstep the narrow limits of their own subject and judge and criticize the work of specialists in cognate branches. Only by this means can the worst dangers of specialism be avoided. One may welcome, therefore, the very valuable *pensées*—they are scarcely more—of Prof. Kuenen on the religion of Mohammed and of the Buddha. Indeed, his Biblical studies have notably aided him in his exposition of the *origines* of Islam; not even Deutsch himself could go further than describe Islam as "the kernel of Judaism transplanted to Arabian soil." On the other hand, somewhat too much is made of the narrowing effects of the survivals of Arabism in the religion of the Prophet; if the principle formulated in the introduction were valid, the more deeply rooted the nationalism the more truly universal the religion that could rise above it. The objection that under each form of Islam the national elements still remain in the various countries might be applied with almost equal force to Christianity, and is, indeed, to a certain extent, turned to the advantage of the latter in the concluding pages of the book. And the denial of true universalism to Islam is somewhat contradicted by the fact that it is at the present day spreading more than either Christianity or Buddhism. Too little account is taken of the lower spiritual needs of the less civilized races, for which Christianity fails to afford satisfaction. The sketch of Buddhism which concludes the work is mainly devoted, as a sketch must necessarily be, to bringing into prominence the ascetic nature of the creed and its expression in monasticism. It is difficult to understand how Prof. Kuenen should have thought it incumbent on him to take notice of such a bizarre production as 'The Angel-Messiah' of Mr. E. de Bunsen, still less to speak of it as "the well-known volume" (p. 234). Perhaps the most striking point made, after M. Réville, in the comparison of Christian and Buddhist asceticism, so similar in appearance, so unlike in reality, is the defence of religious intolerance, not only on the usual ground of its being a proof of sincerity, but also as giving rise to the spirit of devotion to truth. Thus the scientific spirit is a clear outcome of the Christian intolerance of the Middle Ages.

Striking and suggestive as are some of these remarks on the two competitors to the title of universal religions besides Christianity, the chief interest and value of the book depend on the three middle chapters on the development of Judaism. The main fault of the Hibbert Lectures is that they give opportunities for men who have already written much on some special religion merely to repeat in popular form ideas more elaborately worked out previously. M. Renan's addresses were simply a repetition of his previous books, often, indeed, consisting of a string of extracts from them. To Prof. Kuenen, however, this need of stating in shorter compass the results of previous investigations has been a distinct advantage. As a writer his worst fault is prolixity; his fellow worker Prof. Wellhausen contrasts favourably with him in this regard. The confined space in which he has been obliged to move in the Hibbert Lectures has undoubtedly concentrated his forces and given vividness to his outlines of Israel's religious development. The contrast between the popular and the prophetic conceptions of the religion of Yahweh, the ethical character of the latter, the stereotyping of Yahwism in the Law, are all sketched with a firm hand. The leading assumptions of the school of Graf have now become familiar to students of the Bible in this country, mainly owing to the *éclat de scandale* gained by the utterances of Mr. Robertson Smith. Whether they will stand the test of criticism remains to be seen. Meanwhile they are gaining ground daily, and where Prof. Kuenen formerly spoke as the advocate of an unpopular view, he now speaks in the confident tones of a leader of a victorious theory. He is still ready to see in Yahwism too much the creation of the prophets; yet he does not altogether reject the more sober view that the prophets were after all of the people and spoke their thoughts, even if raised to a higher sphere. It is in the fourth lecture on Judaism and Christianity that the Leyden professor finds an opportunity of stating more fully than before his conception of the relation of the religions of the Old and New Testaments. One cannot but feel that too much is made of the Christianity of the older dispensation, if we may call it so; nothing said by the professor gives the differentia of the gospels from the prophets. Here, again, we are referred to the mystery of personality. The difficult topic of Christ's divinity is thereby evaded, it is true, but the evasion leaves the central problem untouched. On one subsidiary point there may be noted a serious omission in the apparatus of scholarship which the professor applies to the question of Essenism. He is content to accept Frankel's result that "Essenism is a *Jewish* phenomenon and specifically a result of *Palestinian* Judaism" (p. 200), in seeming ignorance that Bishop Lightfoot's dissertation in his edition of Colossians has now to be reckoned with, and puts the question on a new footing. It is to be regretted that this essay has been systematically overlooked by continental students. Prof. Kuenen seems somewhat too willing to accept the recent researches of Lucius on the same subject, but it is the note of his school to accept the newest view as the truest.

Some omissions occur which rather mar the completeness of the treatment. No adequate account is taken of the fact that the break up of the national limitations by the universal empires of the Assyrians, Alexander, and the Romans paved the way for the break up of the national religions. The intense nationalism of the Talmud is made little use of in contrast to Christianity. No account is taken of universalism in eschatology. "The pious of all nations have a share in the future world," says the Talmud, and thereby lays claim to a universalism transcending that of the 'Inferno' and 'Purgatorio.' Exaggerated as were Deutsch's rhapsodies on the Talmud, much remains to be done by way of elucidation from that source.

The conciseness of topics has led to a conciseness of phraseology which makes this volume very spirited reading. There is no lack of epigrammatic force, and none of this has been lost in Mr. Wicksteed's version, which fully deserves the thanks and praise freely given to it by Prof. Kuenen in his preface. Let a word of commendation be added, too, for the fine ethical spirit which pervades the author's criticisms and rightly forms his test of the comparative value of the religions he has discussed.

L'Empire des Tsars et les Russes. Par Anatole Leroy-Beaulieu. — Tome II. *Les Institutions.* (Paris, Hachette & Co.)

The second volume of M. Leroy-Beaulieu's great work on Russia is a worthy successor to the first, and fully deserves as high praise as we accorded to its predecessor when it appeared a year and a half ago (see *Athen.*, May 28th, 1881). Thoroughly fair and unbiassed, M. Leroy-Beaulieu dispassionately employs the great resources with which he has been provided by his own long labours and the assistance of many experts, and the result is that his statements are received everywhere with respect. It very rarely happens that Russians are content with what foreigners say about Russia. But they make an exception in favour of M. Leroy-Beaulieu, of whose knowledge and justice they almost invariably speak in high terms, even when they are contesting some of the conclusions at which he has arrived. The first volume of his work, it will be remembered, chiefly dealt with the various social classes in Russia, describing the nobles, the traders, and the peasants. The present instalment is mainly devoted to institutions, giving a detailed account of the administrative and judicial machinery by which the work of ruling the land is carried on, and examining the different means which have been employed for the purpose of giving utterance to public opinion. A third volume is promised shortly, in which religious questions will be examined. The final chapters of the present volume will probably be found the most interesting at a time when the attention of the civilized world is fixed upon the lamentable duel which has for some time been raging between the governing and the revolutionary classes of Russia. In order to understand its possibility, and to form any idea as to its probable results, it is absolutely necessary to have a clear conception of the divers classes of men whom M. Leroy-Beaulieu has clearly depicted, and the various institutions which he has lucidly described. But instead of commencing with these, and

showing how the different factors at work have produced the strange results which have shocked and puzzled Western Europe, we shall go straight to those results themselves, and examine the conclusions to which they have led so well-informed and unprejudiced an observer as M. Leroy-Beaulieu, with regard to the influence they are likely to exert upon the future of the empire of the Tsars.

The irony of fate has seldom been more clearly and cruelly manifested than in some of the events which closely preceded the assassination of the Emperor Alexander II. In the beginning of 1881, says M. Leroy-Beaulieu—whose intimate relations with many persons high in office in Russia enable him to speak on this point with authority—General Loris Melikof and the ministers who worked with him became convinced that it was a matter of vital necessity for the Government to obtain the willing support of the nation, and that for this purpose it would be necessary to convoke some sort of meeting of representatives of the country. What they proposed was an assembly the members of which should be elected by the already existing councils of the provinces and cities. The difficulty was to induce the emperor to consent to this innovation, for, "although he was personally but little attached to absolute power, he did not think himself called upon to inaugurate the constitutional era." It was, however, represented to him that the proposed assembly would only be of a consultative character. Its members would merely study such projects of laws as should be laid before them. The decision would rest, as before, with the sovereign. The emperor's scruples were not entirely overcome. "What you propose," he said at one of the councils in which the scheme was discussed, "is the Assembly of Notables of Louis XVI. We must not forget what followed it. But if you come to the conclusion that the change will be beneficial to the country, I will not oppose it." After much discussion the project, which was strongly supported by General Loris Melikof, M. Abaza, and Count Valuief, was provisionally adopted, and was afterwards worked out by a commission which met at the palace of the Cesarevich. In February, 1881, Russia was on the eve of the convocation of a representative assembly, "which would have been the starting-point of a transformation of undefined extent." The new charter had been drawn up with the approval of the sovereign and his heir. "A sort of fatality delayed its promulgation, and threw Russia, perhaps for long, back into the unknown." On the morning of what was destined to be his last day upon earth, March 1/13, 1881, the Emperor Alexander II. gave orders to his Minister of the Interior to announce the new reform in the *Official Gazette* on the following day. Just before leaving the Winter Palace he said to the lady with whom he had recently contracted a morganatic marriage, "I have just signed a document which will, I hope, produce a good impression, and will let Russia know that I grant it all that is possible." Then he made the sign of the cross, and set out on the expedition which proved fatal to him.

At the very moment when the emperor was assassinated, the text of the order convoking the new National Assembly was being set up in type at the official printing office. When the new emperor was consulted on the subject, he said, "Make no change in my father's orders. This shall be his testament." If Alexander III. had maintained this resolution, says M. Leroy-Beaulieu, and had accepted "this legacy, signed in the still moist blood of the 'Martyr Tsar,'" he would have escaped many difficulties, and would have rendered glorious the memory of his father without diminishing the authority of the Crown. Unfortunately the splendid opportunity was not turned to account. Under the influence of reactionary counsels, the new emperor sent a counter-order to the Minister of the Interior, and the *Official Gazette* appeared the next day without the announcement of the constitutional reform, which had been destroyed, along with the Emperor Alexander II., by the bombs of Kibalchich and Sophia Perovsky. When a council was held, a few days later, to decide the fate of the postponed scheme, "the policy of stagnation carried the day," and the proposed reform was condemned as "imprudent or premature." Several eye-witnesses have assured M. Leroy-Beaulieu that when the meeting broke up "the emperor was attacked by a kind of uneasiness and weakness, as if he had foreseen the grave results of throwing in his lot with the party of repression."

M. Leroy-Beaulieu devoted an interesting chapter of his first volume to a study of Nihilism "as a manifestation of the national temperament." In the present volume he discusses the political causes, the various evolutions, and the organizations of the revolutionary movement. It is a movement, he asserts unhesitatingly—and his assertions are based upon sound information—which is as yet almost entirely confined, so far as active participation is concerned, to a small section of the educated classes. Russia has always boasted of being free from an economical proletariat, but it possesses "a kind of intellectual proletariat" in the persons of a host of university paupers maintained at the expense of the State and the country. It is from this proletariat, from the failures of the civil, military, and ecclesiastical schools, that Nihilism draws its most determined recruits. Their numbers are but small and their pecuniary resources are most scanty. But in spite of these drawbacks they have produced an immense effect. As regards the paucity of their numbers, so far, at least, as the terrorists are concerned, one of the ministers of the late emperor made an interesting statement to M. Leroy-Beaulieu in 1880. As soon as a certain number of conspirators had been arrested it was observed that any one who figured in one plot was certain to be implicated in many others. The sinister actors in the great revolutionary drama appeared to multiply themselves with an untiring ardour, passing and repassing from one end to the other of the vast stage comprised between the Baltic and the Black Sea, constantly changing their names, their parts, and their disguises—in one place labouring with a miner's pickaxe, in another working at a printer's press. In this way the twenty criminal attempts of 1878 to 1882; the mines in the two capitals, in Odessa, and in Alexandrovsk; the explosions at the Moscow railway station and the Winter Palace; and the assassinations of divers officials, were all due to a handful of young men and women. The very smallness of the numbers of the conspirators, according to the statement of one of their party, contributed towards the success of their deeds. The fifteen young enthusiasts who in June, 1879, took part in what has been styled the Congress of Lipetsk, and decided that dynamite and other explosives should take the place in future of the dagger and the revolver, were not merely the delegates of revolutionary sections—they were the principal executive agents of the party of terror, which then attained its full development. Since that time they have almost all perished in the dungeon or on the scaffold. But the gaps in their ranks have been rapidly filled up, and it is difficult to predict what will be the final result of the terrible struggle to which many ardent and self-sacrificing souls have committed themselves.

M. Leroy-Beaulieu remarks that although the masses of the Russian people have no sympathy with the political aspirations of the Nihilists, and are apparently well protected against their attacks, yet they offer to the revolutionary propaganda one vulnerable point. A considerable portion of the soil is still alienated from the village communities, and towards it the agitators are able to direct the longing eyes of the peasants, who are told that the Tsar wishes the whole of the land to belong to them, but that his desire is thwarted by the nobles and officials. Utterly ignorant and credulous men, to whom such statements are made by the dangerous fanatics who hold that lying, like murder, is fully sanctioned by the necessities of revolutionary warfare, may possibly be induced to take part in a wholesale massacre of all persons who do not belong to their own order. As one of the high priests of Nihilism, now a Siberian exile, has remarked, if the masses rise in revolt they will recognize no difference between the various wearers of Western costume, they will act in the same manner towards all; they will destroy the whole of Russian civilization, "making no exception in favour of science, poetry, or art." After the three days of pillage at Kief last year, a man of the people was heard to say, "We are breakfasting with the Jews, we will dine with the landed proprietors, and then sup with the priests." Some idea of the strange opinions held by the peasants may be gained from the legends current among them with reference to the assassination of the late emperor. One of these, widely circulated in Little Russia, states that, after the fourth attempt on his life, God sent for St. Nicholas and said, "As there is such enmity against the Tsar he must have committed crimes. Go and protect him once more against his enemies. But if he does not amend his ways, abandon him to his fate." Accordingly St. Nicholas protected the Tsar against the fifth attempt on his life, the explosion in the Winter Palace. But as the Tsar did not amend, St. Nicholas allowed him next time to fall a victim.

The two great living forces in Russia, says M. Leroy-Beaulieu, following the Slavophile Yury Samarin, are the peasant community and the imperial autocracy. Between these

XUM

two there is a limited middle class of proprietors and officials who are in danger of being exposed to uncomfortable friction. Of the working of the communal institutions of Russia a most lucid account is given, beginning with the village assembly and the powers conferred upon it, and then passing on to the meetings and courts of the *volost* or group of villages. We are sorry to learn that so keen an observer as M. Leroy-Beaulieu holds that many of the recent communal decrees against drunkenness, undoubtedly remarkable so far as numbers are concerned, are due rather to the interested zeal of certain officials than to any horror of drink in the village mind. The decisions of the communes, he says, have often no other result than that of increasing the reputation of the functionary who has brought them about. But, with all due deference to so great an authority, we are inclined to think that a remarkable movement of opposition to the pot-house has of late been set on foot in certain provinces by the peasants themselves. They have at last begun to see that the *kabak* is their real enemy.

From the communal institutions of Russia M. Leroy-Beaulieu turns to a consideration of its "administration, bureaucracy, and police." After drawing a gloomy picture of the repressive system of Nicholas—in whose time, it is said, no one was allowed to build himself, in any part of the empire, a house with more than five windows unless he received the express sanction of the emperor himself—he goes on to depict the altered state of things under Alexander II. with respect to government offices, ministries, and ministers. He speaks of the *tchinovniks* with the contempt which too many of their number deserve, and which leads him to make now and then an uncomplimentary reference to the bureaucrats of his own country. Thus, in remarking that Russia does not possess any class of officials answering to the *sous-préfets*, he adds, not without a suspicion of malice, "Il est vrai que le défaut de constitution politique n'y a pas encore fait sentir l'utilité d'une classe de fonctionnaires qui, chez nous, sont bien moins des administrateurs que des agents de propagande ou d'élection." Our author's readiness to investigate both sides of a question is well illustrated by his observations about one of the great evils of Russian bureaucracy, the corruptness of its agents. This he admits has been the cause of many evils. But it also has its redeeming points. The venality of officials tempered the crushing effects of the system of Nicholas, in whose time "modern thought would have been stifled in its prison, every window being tightly closed, had it not been able to breathe a little of the outer air through the foul sewer which alone remained open to it." It is to the readiness of the police to accept a "consideration" that the schismatics are mainly indebted for the limited tolerance which has enabled them to exist, and to the same weakness may be attributed various little immunities granted in other matters.

The police system of Russia forms the subject of two very interesting chapters. An inquiry made last year brought to light the fact that many of the police agents of St. Petersburg were incapable of even writing their own names correctly, and a number of their officers were totally ignorant of the law which they were supposed to administer. It may easily be imagined what their colleagues were like in distant provinces. A rural police were set on horseback in 1875 under the name of *uryadniki*, followers of *uryad*, or order. But they very soon acquired the worst of reputations, and were styled by the indignant peasantry *kuryadniki*, followers after *kury*, or poultry. Of the infamous Third Section of the Chancery, M. Leroy-Beaulieu speaks with a just and generous indignation. He holds it and the whole police system of Russia directly responsible to a very great degree for the Nihilist propaganda. No one, as he justly says, who has not been subjected to its system of terror can fully understand the pitch of passion to which its cruel proceedings could drive natures originally calm and generous. The mines and bombs of the terrorists are the direct outcome of the rigorous pressure of the Third Section, now happily defunct.

From the police M. Leroy-Beaulieu passes on to "local self-government," giving an excellent account of the assemblies of the nobles, the *zemstvos* or Provincial Assemblies, and the *dumas* or Civic Councils. Nothing but the apathetic feebleness of the nobles, he justly remarks, has prevented them from turning to political account the privileges which Catherine conferred upon them. From a class so wanting in cohesion and public spirit little can be expected in future. When the Provincial Assemblies were created, twenty years ago, it was hoped that they would produce nothing less than a complete transformation of the empire. Such hopes have not been fulfilled. Still the *zemstvos* have done, M. Leroy-Beaulieu thinks, as much as their very limited resources allowed them to do. They have improved the peasant's intelligence by instruction and his health by medical assistance; they have rendered his house property more secure by means of a system of mutual assurance; and they have done their best to emancipate him, by the aid of popular banks, from servitude to Jewish and other usurers. In many instances their efforts in the cause of popular education have been weakened, if not altogether thwarted, by the jealousy of the Government, which has too often seemed to care less about the instruction of scholars than about the submissiveness of schoolmasters. From the Town Councils little can be hoped. As a proof of civic apathy, we are told that on one occasion when the Municipal Council of a great port in South Russia was called together to consider what measures should be taken to ward off an approaching plague, not a single member responded to the appeal of the mayor. That small independence is allowed to mayors in Russia may be gathered from the following anecdote. Not wishing to appear in the uniform of a mere *tchinovnik*, the Mayor of Moscow once attended in civil costume the first reception of a new governor. The governor showed his displeasure in so marked a manner that the mayor tendered his resignation. Soon afterwards a circular from the Minister of the Interior informed the official world that the wearing of a uniform was obligatory on mayors at official receptions.

We have so little space left that we can do no more than briefly mention the fourth book of M. Leroy-Beaulieu's second volume, which is devoted to the judicial system of Russia, and the fifth, which deals with the press and the censorship. One of the many interesting points to which he calls attention in discussing the administration of justice in Russia is the right of women to be called to the bar. This was at first refused to them by the authorities, but the Senate, when appealed to, decided in favour of female advocates. The victory was not, however, complete; for women cannot as yet be received into the faculty of advocates, nor will the ordinary tribunals allow them a hearing. It is only before the *juges de paix* that they have an opportunity of displaying their learning and eloquence. Of the services which medical women have rendered to the health of the Russian people, we may take this opportunity of remarking, M. Leroy-Beaulieu speaks in terms of warm praise. The peculiarities of Russian juries have given rise to a number of singular stories, several of which are mentioned by our author. In some cases, for instance, it is said that unfortunate jurymen, torn away from their means of gaining their daily bread, have been forced to beg for alms at the doors of the law-courts; in others, they have been known to spend their leisure time, between the sittings of the courts to which they were summoned, in stealing. It is stated, moreover, that once a tender-hearted jury, unable to acquit a criminal in the face of direct evidence, and unwilling to condemn him, opened a window in their retiring room and escaped through it from their duties and their dilemma. As for the history of the press in Russia, it is a sad story of unfulfilled hopes, of long-continued and too often unsuccessful struggles with that stupidity against which the gods themselves fight in vain. There is something very touching in one of the tales which M. Leroy-Beaulieu tells, about the sorrows of the unfortunate editor of the *Obzor* of Tiflis. He was summoned by the local censor for having knocked him up at two o'clock in the morning, waking all the neighbours by the noise he made, and refusing to go away until he received leave to print a certain article to which the censor had objected. The disturbed official went forth into his balcony and reasoned with his tormentor. Finding that his remonstrances were ineffectual, he was at length obliged to admit the enraged editor, and finally to grant him the desired permission, though only under protest. The defendant, when called upon to account for his behaviour, declared that he had availed himself of the only means in his power to extort from the censor the permission without which he could not carry on his paper, adding, "Only think that we are obliged to obtain after this fashion 365 authorizations every year!" In this case the editor was acquitted. But a few weeks later the paper for which he had struggled so persistently ceased to appear.

Chronograms. By James Hilton, F.S.A. (Stock.)

A CHRONOGRAM is an inscription or brief statement in which a certain date or epoch

is expressed by the numerical letters therein contained. Thus in 1666, when a day of national humiliation was appointed in the expectation of an engagement between the English and Dutch navies, a pamphlet issued in reference to the fast-day, instead of bearing the imprint of the year after the usual fashion, had this seasonable sentence at the bottom of the title-page: "LorD haVe MerCIe Vpon Vs." It will be seen that the total sum of the figures represented by the numeral letters (printed in capitals) gives the requisite date 1666.

Another common use of chronograms was on medals, as in the legend of one struck in 1632 to commemorate certain victories of Gustavus Adolphus: "ChrIstVs DVX ergo trIVMphVs." They also may be found, though very seldom, in England, inscribed on monuments and on buildings, both ecclesiastical and civil, to record the date of erection or construction, as on a tomb to Thomas Ford, who died in 1658 at Ilsington, Devonshire: "DorMIo et ut spero CIneres sIne Labe resVrgent." The letters that compose the chronogram are almost invariably printed or incised in a larger character than the remainder of the inscription, and when once the eye is familiar with the singular appearance of the mixed array of short and tall letters, the antiquary whose researches have not hitherto led him into the quaint field of chronograms is able instantly to unravel many a hitherto puzzling inscription.

Chronograms, as Mr. Hilton tells us in his preface, though generally composed in Latin, are not confined to that language, and some of the earliest known specimens occur in Oriental countries, especially where the Arabic language has been in use. The first known instance of a chronogram was written in Hebrew as early as the year 1208, and several occur in Arabic illustrating the year 1318. European examples are first met with in the fourteenth century, but the fashion of composing them prevailed to the greatest extent in the seventeenth century. Perhaps the most startling feature of a subject such as this, which has, for the most part, been altogether ignored by the scholars and antiquaries of the present generation, is the extraordinary amount of time and ingenuity that used to be expended by able men in the trivial occupation of chronogram making. Anthony Stock, a Belgian Jesuit, actually so far abused his intellect as to publish in the year 1658 a version of the 'Imitation of Christ' in which every single line throughout the book, with the exception of the preface, formed a correct chronogram of the date of publication. But another Jesuit writer, Gerard Grumsel, completely surpassed the efforts of Stock, for in 1660 he issued a volume of poems, termed elegies, on historical events of the century, which contains two thousand and sixty-eight hexameter and pentameter lines of no mean order, each couplet giving in chronogram the particular date 1660. And these two are but samples of many other books and tracts of a like character.

Second only to our astonishment at the marvellous perversion of genius which could make such laborious undertakings appear in any way profitable or pleasant is our astonishment at Mr. Hilton's own achievement in this quaint field of letters. That any one could be found to make the history and collection of chronograms his hobby is sufficiently surprising, but surprise gives way to some extent to admiration when the reader finds that Mr. Hilton's enthusiasm has resulted in the publication of a most tastefully printed antique quarto of 570 pages, containing a collection of 5,137 examples of chronograms culled from various languages and countries, ranging from A.D. 1208 to the present time, and carefully grouped under their different nationalities. As this craze of the human brain—with some truth branded by Addison in the *Spectator* as "false wit, a trick in writing requiring much time and little capacity"—has occupied no inconsiderable space in the curiosities of literature, it is well, we suppose, that the history of chronograms and chronogram making should be once and for all written; this much being granted, Mr. Hilton is to be distinctly congratulated on the exhaustive character and general ability of his volume. Nor is the book so monotonous as might at first be supposed. It is brightened by numerous fac-similes of curious engravings and title-pages in which chronograms are used, and also by illustrations of medals bearing chronogrammatic legends. The pages are no mere dry catalogue of chronograms and their translation or explanation, but much singular and out-of-the-way information is furnished from time to time for the purpose of throwing light upon the circumstances under which some special chronogram originated. Thus the remarkable history of St. John of Nepomuk is here given with many interesting details and illustrations in consequence of various chronograms on his statue at Prague and in other places. Another extraordinary series of chronograms relates to a Jewish robbery of the Host at Brussels in the fourteenth century, and to the jubilee pageants that have been subsequently held in honour of the miracle. It is related that in 1370 a Jew who had become a Christian, being bribed by a rich Jew, named Jonathas d'Anghien, to bring him some consecrated hosts, entered the church of St. Gudule at Brussels through a window, broke open the ciborium, and with the assistance of his family took the hosts, sixteen in number, and brought them to the synagogue. Being placed on a table, Jonathas and other leading Jews stabbed three of them with knives, whereupon blood flowed visibly from the wounds thus inflicted, and the Jews were stricken down by some unseen power. These hosts were afterwards recovered, and are said to be still preserved in the golden altar of the cathedral church of St. Gudule, whence they are conveyed in solemn procession through the city from time to time. In 1720 the anniversary of this event was kept with special magnificence, and on the various triumphal arches that then spanned the streets some hundreds of ingenious chronogrammatic inscriptions, all referring to the event, were placed. This singular way of showing honour to the anniversary was retained in many of the succeeding festivals even of the present century.

There are several ingenious and original chronograms on the title-page and first leaves of this handsome volume, and with the following sample of the art Mr. Hilton concludes his last page: "CoVrteoVs reaDer I fInIsh wIth thIs ChronograM. be the year It InVoLVes happy to Vs both. fareweLL."

NOVELS OF THE WEEK.

Under the Downs. By Edward Gilliat, M.A. 3 vols. (Sampson Low & Co.)

Treherne's Temptation. By Alaric Carr. 3 vols. (Smith, Elder & Co.)

The Flower of the Forest: a Romance. By Charles Gibbon. (Chatto & Windus.)

Fair Faces and True Hearts. By the Author of 'Margaret Mortimer's Second Husband.' 3 vols. (White & Co.)

Mr. Gilliat's new book reads more smoothly than the earlier stories to which he prefixed his name. The art of fiction evidently comes more easy to him, he keeps his characters better in hand, and there is less open display of the strings and joints. 'Under the Downs' is a pleasant tale of pleasant people, the worst villains being a match-making mother and a spendthrift baronet. Sir James Tripe, whom Mrs. Kent very skilfully secures for her elder daughter, is the son of a worthy City alderman, who "happened to be sheriff when the young queen opened the new pump at Bow." Sir James gives his title to Ione Kent in the hope of securing a good share of Mr. Kent's money; but neither the matchmaker nor her daughter, nor even the baronet himself, has much reason to be proud of the bargain. The hero is a bright, honest, rather foolish and priggish young Englishman. Entrapped by Mrs. Kent for both her daughters in succession, he eventually settles down very comfortably with the younger one, but not until certain of his shortcomings have been duly expiated between the wedding morn and the honeymoon. The fathers of this fortunate couple are capitally designed and drawn, Mr. Kent especially being one of the nicest of old men. There is a great deal to like in 'Under the Downs,' and little to carp at. Perhaps also there is little to dwell upon, either in the plot, which is thin, or in the execution, which is somewhat strained. By the way, has Mr. Gilliat any authority for saying that his heroine "stood at gaze," in the active sense of the verb "gaze"?

Mr. Carr writes fluently, for the most part in paragraphs consisting of one very complex sentence, wherein capital letters are economized at the cost of innumerable semicolons. There would be more to complain of in this breathless haste if the reader had sufficient inducement to put in the full stops for himself, and thus to correct the punctuation whilst he took time to appreciate the substance of the story. But in fact the inducement is rather to hurry forward than to hold back, and Mr. Carr's style distinctly aids a rapid progress through his pages. One example will suffice to illustrate the peculiar facility of this style:—

"'Well! enunciating one's opinions is very hard work; my pipe has gone out, and I feel thoroughly exhausted; it seems to me I have delivered a most eloquent discourse, on a variety of subjects, ranging from an inquiry into the characteristics of the feminine mind, down to wife-beating and Chinese domestic economy; *chérie*, do you feel proportionately instructed?'

"'I feel a little sleepy, which, let me hasten to add, is probably due to my having travelled all night; *père*, I like your idea of a Chinese

son-in-law; how you would enjoy contemplating several little flat-faced, pig-tailed grandchildren, dexterously feeding themselves with chop-sticks.'"

This flippancy on the heroine's part, with much more of the same kind, adorns her conversation within a month or so after the violent death of her betrothed husband. There is, indeed, "no nonsense" about her, though there is plenty of slipshod English and French, and sufficient frivolity to punish the best husband that her charms can secure for her.

In his new "romance" Mr. Gibbon has left the pleasant paths in which he once showed himself so true a guide, and we miss the local knowledge and appreciation of character which distinguished his early stories. The author of 'Robin Gray' has taught his readers to look with some confidence for interesting narrative and truthfulness of homely detail in the field of rural life and domestic incident. On the present occasion these qualities are not evident. There is nothing distinctively local in the description of places or people, though the scene is placed on the banks of the Clyde, and the action depends on the inhabitants of a gipsy camp. The gipsies and others talk the nondescript English of vulgar ruffians, and there is nothing in the way of local colouring to render one place more suitable than another for the purposes of the story. None of the numerous characters resembles anything in nature, though we can trace a strong family resemblance in some of them to sundry common acquaintances in fiction. On the whole, it is impossible to congratulate the author on his new departure. He is obviously uneasy in it, for even his grammar is not above reproach.

'Fair Faces and True Hearts' ends like March when it has "come in like a lion," or like the cry of the pious hawker of Constantinople. A dreadful murder, with a medical detail which in the interest of the victim's character might have been omitted, rouses our expectation that the opening chapter will be followed by others as agreeably horrifying. But when once the grave has closed on the unfortunate Miss Earl the author does not succeed in awakening in his readers more than a languid interest in the guilt or innocence of Mr. Osmyth Dalrymple, a feeling which is set at rest in the second volume as soon as they learn the existence of the secretive and unpleasant Mr. Grain, who obviously has the perilous stuff on his conscience from the first. The rest of the plot, if so it may be called, is extremely feeble and commonplace. In it figure the autobiographer, Mr. Dalrymple's nephew and heir, and a certain doctor who is termed a "reliable practitioner." We should add that there is a counterplot embodying the story of Nina, an Italian peasant girl, who, having been seduced by Dalrymple, for a long time conceals her existence from him lest he should injure his worldly prospects by marrying her. The structure composed of these materials is not remarkable for grace or beauty, though perhaps the detailed account of certain passages between Maxwell and his heroine may cause a tender thrill in the breast of ingenuous youth.

ORIENTAL LITERATURE.

After the early split of the Mohammedan religion into Sunniam and Shiism, there sprang up another sect called the Kharijites, or Heretics, which regarded the institution of the Khalifat as purely political, denying to it any religious character whatsoever. Philosophical ideas were introduced amongst the Arabs by the translation of Greek philosophy from the Syriac, viz., Aristotle, and the Neoplatonic and Neopythagorean works. In the tenth century, when luxury corrupted Mohammedan society, and when the Khalifat began to decline and to break up into smaller states, there sprang up a philosophical school at Basra, at that time the Athens of the East, which created a sect called the Mutazelits, or Separatists, whose members denied the theory of predestination, and declared the Koran to be the work of man and not the eternal work of God. These heretical ideas found adherents amongst the Mussulman society of other towns, and the result was the formation of a body of encyclopædists who called themselves the Pure Brothers, and who composed tracts on various scientific matters. These tracts (*Resail*), divided into four parts, viz., mathematics, physics, psychology, and theology, were spread about gratis for general instruction. We only possess the Arabic text of the last part, which contains first a history of animals, and at the end a kind of legend in which the dispute between men and animals on their respective superiority is brought before the king of the genii. This book, written in a very attractive style, was made accessible in the fourteenth century to Jews and Christians by a rather free Hebrew translation by the famous translator of Provence, Kalonymos ben Kalonymos. Dr. J. Landsberger, rabbi of Darmstadt, who makes his speciality the translation of fables written in Aramaic and Hebrew (he published in 1859 the Aramaic fables of Æsop, and has in hand now the fox fable by Berachiah), has just brought out an excellent and elegant translation of Kalonymos's book, entitled *Iggereth Baale Hayyim: Abhandlungen über die Thiere*, to which he has added a preface on the authors of the Arabic original and on the translator. At the end are copious critical notes, which contain chiefly emendations for the Hebrew editions of Kalonymos's book from the Arabic original, which was published at Calcutta in 1812 and 1846, and by Prof. Dieterici, of Berlin, in 1879, with a glossary; he also made a German translation of it in 1859. Most of these emendations, it is true, could have been made by collating the editions of Kalonymos's translation with manuscripts which are in existence in Paris; but it is not always easy to obtain the loan of MSS., and unfortunately Jewish writers are not generally in a position to incur expenses in visiting libraries for the sake of books which are certain to have only a limited sale. These notes also give much matter for comparative philology as well as for the history of the migration of fables. As to the Hebrew text of 'Kalilah v. Dimnah,' of which Dr. Landsberger mentions only extracts by De Sacy, he ought, perhaps, to have known the tenth chapter, published entire in Benfey's 'Occident und Orient,' and, moreover, M. Derenbourg's complete edition, which has been out about a year.

Messrs. W. H. Allen & Co. send us a *Malay, Achinese, French, and English Vocabulary*, alphabetically arranged under each of these four languages, and prefaced by a concise grammar of the Malay language. This work, which has been prepared with care by Dr. A. J. W. Bikkers, is intended to assist Europeans whom business or pleasure has attracted to the Malay districts in familiarizing themselves with the local native language, rather than as a contribution to the study of Oriental philology at home; and, so far as we have been able to examine its pages, we have found it to be an accurate guide. At the same time it is necessary to point out to beginners that here—as in all other books on the Malay language and its dialects which we have seen—the transliteration often fails to convey a true idea of the pronunciation.

Revue de l'Extrême-Orient. Publiée sous la direction de M. Henri Cordier. Tome Premier, Nos. 1 and 2. (Paris, Leroux.)—M. Cordier's writings in connexion with Oriental literature are well known, and the appearance of his name, therefore, as editor on the title-page of this new *Revue* furnishes a guarantee that it will prove a useful addition to the very scanty existing periodical literature on Eastern matters. These first numbers are full of promise. Mr. Wylie's translation of the chapters on the "Eastern barbarians" from the 'History of the Later Han Dynasty of China' is a valuable contribution to our knowledge of the tribes bordering on China during the first and second centuries, and we are glad to see that it is to be continued. The hitherto unpublished correspondence of the Jesuit missionaries in Peking during the first part of the eighteenth century, together with that between the Jesuit missionary Foucquet, who made himself so notorious in China during the previous century, and Cardinal Gualterio, which is here reproduced from MSS. in the British Museum, is interesting; as also is M. Moura's account of a royal hunting expedition in the Cambodian forests. The second number contains an article by M. Devéria on an undeciphered inscription at Yen-tai, which, however, is chiefly valuable for the transcription given of the text. The *mélanges* are well chosen, and the 'Bibliographie de l'Année 1881,' which is very complete, will, if carefully continued, prove of invaluable assistance to Oriental students. In addition to these articles the numbers contain notes on 'La Statistique des Sexes au Japon,' 'Histoire des Études Chinoises,' 'Manuscrits relatifs à la Chine' from the British Museum, and 'Le Divorce en Chine.'

Dizionario di Mitologia Egizia. Per Ridolfo V. Lanzone. Disp. I.—II. (Turin, Fratelli Doyen.)—The progress of Egyptology is distinctly marked by the production of special dictionaries on different branches of the study. Already a dictionary of hieroglyphic and demotic has been published by Brugsch Pasha, and a 'Vocabulaire Hiéroglyphique' by Pierret. A geographical dictionary has also been published by Brugsch, one of proper names by Lieblein, and here we have a very useful dictionary of mythology, containing all the names of the deities arranged in alphabetical order, with an explanation of their qualities and attributes. This dictionary has the merit of being accompanied by numerous references to the authors who have written on the mythology and the places where the different types of the gods are to be found. It has also numerous plates of all the types as yet known, and many inedited monuments of the Egyptian museum of the Louvre and that of Turin appear in it for the first time. The introduction of cuts of the deities on the scarabæi will be useful to those interested in the mythology and to collectors of Egyptian antiquities. The first instalment which has appeared begins with *Aas* and ends with *Ptah*. The work will prove most useful to students of Egyptology and archæologists who desire to class the various types or to know what they represent. It embraces all the varieties found in different works, and the philological part is brought up to the recent discoveries, corrections, and alterations. The Pantheon was so similar at all times that the types purely Egyptian are almost undistinguishable, but at a later period many pantheistic forms glided into the series, and they require to be carefully distinguished from the normal type.

OUR LIBRARY TABLE.

Roman Cameos and Florentine Mosaics. By Emil Gebhart. Translated and edited by M. Jeaffreson. (Remington & Co.)—A translation

of M. Gebhart's sketches of mediæval life and thought in Italy previous to and during the Renaissance is very welcome. The substance of the book is valuable, and the English rendering is adequate; but the claim of the translator to have edited Gebhart is a little too bold. A short preface in general terms and a few commonplace foot-notes scarcely amount to what we ought to understand by editing. As for the original, it has freshness and brightness as well as a suggestive value. The author's preface boasts of a fifteen years' study of Italy, and describes the present work as prefatory to "a complete history of the Italian Renaissance," and his sketches give us no cause to doubt that this more ambitious enterprise will be accomplished in a worthy manner. The deduction of the higher phases of Italian genius from the energizing influence of Greek culture, through Roman epicureanism, Pompeian refinements of the epicurean spirit, and the contemplative life of the monastic institutions, is, perhaps, quite sound as far as it goes, and M. Gebhart will carry his reader along with him in his very readable surveys of the work of Dante, Savonarola, Michael Angelo, Raphael, and Leo X. On the whole, the translation is satisfactory. There is evidence of competence and care, with occasional exceptions which emphasize the rule. Thus there is neither elegance nor correct translation in a sentence like this:—"The wealthy, irritated at being incessantly arbitrarily imposed upon for the finances of the Council, longed for an administration, under any government, that would only save them from being utterly ruined." But one has reason to be thankful if a translator never falls lower than that.

We have on our table *The Life of William Ewart Gladstone*, by G. R. Emerson (Ward & Lock), — *Foreign Relations*, by S. Walpole (Macmillan), — *The Smaller History of Germany*, by Dr. C. Brewer (De La Rue & Co.), —*A Bird's-Eye View of Irish History*, by Sir Charles G. Duffy (Dublin, Duffy & Sons),—*A Summary of English History*, by W. Reep (Longmans),—*Old Stories from British History*, by F. Y. Powell (Longmans),—*English History Readers*, Books I. and II. (Marshall),—*Complete English Grammar*, edited by T. Morrison, LL.D. (Gall & Inglis),—*Beówulf*, Text I., edited from M. Heyne by J. A. Harrison (Boston, U.S., Ginn & Heath), — *Scott's Lay of the Last Minstrel*, Canto I., edited, with Notes, by W. T. Jeffcott and G. J. Tossell (Relfe Brothers),—*How to Teach the Method of Unity*, by A. Gardiner (John Heywood),—*Light*, by L. Wright (Macmillan), — *The Concepts and Theories of Modern Physics*, by J. B. Stallo (Kegan Paul),—*The Wave-Lengths of some of the Principal Fraunhofer Lines of the Solar Spectrum*, by T. C. Mendenhall (Tokio, Daigaku),—*Annual Report of the Aëronautical Society of Great Britain for* 1880 (Hamilton),—*A Treatise on Shoring and Underpinning*, by C. H. Stock (Batsford),—*The Eight Circulars of Auguste Comte*, translated from the French (Trübner),—*Health Resorts and their Uses*, by J. B. Yeo, M.D. (Chapman & Hall),—*The Mind in the Face*, by W. McDowall (Fowler), —*Calendar of Trinity College, London, for* 1882–3 (Reeve),—*Transactions of the Royal Historical Society*, Vol. X. (The Society),—*Transactions of the Literary and Historical Society of Quebec*, 1881–2 (Quebec, 'Morning Chronicle' Office),—and *The Brahmo Year-Books from* 1876 *to* 1880, edited by S. D. Collet (Williams & Norgate).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Athanasius (St.) on the Incarnation, edited, with Introduction and Notes, by A. Robertson, 8vo. 3/ cl.
Bruce's (A. B.) The Parabolic Teaching of Christ, 8vo. 12/ cl.
Daniels's (Rev. W. H.) Short History of the People called Methodists, 8vo. 6/ cl.
Osborne's (Rev. W. A.) Revised Version of the New Testament, a Critical Commentary, cr. 8vo. 5/ cl.
Romanism, Protestantism, Anglicanism, by Oxoniensis, 3/6
Sadler's (Rev. M. F.) The Gospel according to St. Matthew, with Notes, Critical and Practical, cr. 8vo. 7/6 cl.
Skinner's (J.) Synopsis of Moral and Ascetical Theology, with Catalogue of Ancient and Modern Authorities, with Preface by Rev. T. T. Carter, 4to. 10/6 cl.
Spurgeon's (C. H.) The Treasury of David: Vol. 6, Psalm cxix. to cxxiv., 8vo. 8/ cl.
Stephens's (Rev. J.) Living Waters for Little Pitchers, 3/ cl.

Law.

Bower (G. L.) and Webb's (W.) The Law relating to Electric Lighting, the Act of 1882, 8vo. 5/ cl.
Fithian's (E. W.) The Bills of Sale Acts, 1878 and 1882, with Introduction and Notes, cr. 8vo. 5/ cl.
Fletcher's (B.) The Metropolitan Building Acts, cr. 8vo. 6/6
Symond's (J. F.) A Handbook of the Law of the Settlement and Removal of Union Poor, cr. 8vo. 5/ cl.

Fine Art.

Conway's (M. D.) Travels in South Kensington, with Notes on Decorative Art and Architecture in England, illus. 12/ cl.

Poetry.

Brine's (M. D.) Christmas Rhymes and New Year's Chimes, illustrated, oblong 4to. 6/ bds.
Christian Year (The), 12mo. 6/. (Parchment Library.)
Cole's (J. C.) The Bride and the Bridegroom, being Sonnets and other Verse for the Church's Year, 12mo. 1/6 cl.
Illustrated Poetry Book for Young Readers, illus., in Two Series, 12mo. 2/6 cl.
MacCarthy's (D. F.) Poems, cr. 8vo. 3/6 cl.
Marzials's (T.) Pan Pipes, a Book of Old Songs, set to Pictures by W. Crane, 7/6 bds.
Myers's (F. W. H.) The Renewal of Youth, and other Poems, 8vo. 7/6 cl.

Philosophy.

'TYLNEY HALL.'

October 12, 1882.

Will you kindly allow me space in your columns to answer the numerous letters I have received from literary men and critics why I make the statement in my little work 'Wanstead Park,' "It was in this house [Lake House] I proposed to Hood to write the novel of 'Tylney Hall' for my father," seeing that Mr. Bailey, of Cornhill, was the publisher?

My answer to this is simple. I in conversation with Mr. Hood asked him if he would write a novel for my father. In reply he said, "The idea is *novel*, never having written one. What would you call it?" "Say 'Tylney Hall,' the property next to yours," I said. An agreement was then entered into between Mr. Hood and Mr. Thomas Tegg, that Mr. Hood was to write a novel entitled 'Tylney Hall,' in three volumes, post 8vo., for the sum of three hundred guineas, the payment to be in the following manner, one half (one hundred and fifty guineas) to be paid upon the delivery of the entire MS., the remaining half upon a set of proofs or printed matter being delivered to him (Thomas Tegg). This agreement was duly signed and witnessed.

About a month afterwards Mr. Hood called upon Mr. Tegg with the *first volume* in MS., and asked for one hundred guineas. Mr. Tegg's reply was, "I am sorry, Mr. Hood, to refuse you; I am willing to advance a less sum"; but Mr. Hood declined it, and went straight over to Mr. Bailey, bookseller, who undertook to publish the work, but upon what terms I am unable to say. The work was afterwards reissued in Mr. Bentley's Standard Novels.

William Tegg.

ROBY'S 'TRADITIONS OF LANCASHIRE.'

Manor House, Milton, near Northampton, Oct. 3, 1882.

I beg leave to give the most emphatic denial to the statement in the *Athenæum* of Saturday last respecting my late husband's work, 'The Traditions of Lancashire.' Mr. Roby composed the tales in the midst of his family, seated in his favourite rocking-chair, which is still in my possession. The only restraint he laid on those around him was the prohibition of whispering, and, if I may be permitted to quote myself ('Sketch of the Life of John Roby, prefixed to his Poetical and Legendary Remains,' Longmans, 1854), I would add: "Wrapped in a loose study gown, he wrote with rapidity and pleasure. When invention flagged, and he had to seek an idea, he would fold his arms, and gently rock for a few minutes, then, with the air of a person who had found what he sought, return to the page with renewed spirit." From p. 29 to p. 34 of

the above work several incidents are named connected with the composition of different tales in the 'Traditions.' I would quote one respecting 'Rivington Pike,' but that I fear to intrude on your space. To any one who knew the late Mr. Jerdan, the supposition of the tales being from his pen is simply absurd. He had not the creative power requisite.

My husband was very generous-hearted, and nothing gave him greater pleasure than being able to help a literary friend in any way; and I well remember, in 1849 or 1850, when Mr. Jerdan's affairs were such as to call his creditors together, Mr. Roby sent in his claim for money which had been borrowed. He was not on the spot and was not represented by any one, and the creditors put aside his claim on the plea of literary service rendered; but it was a *bonâ fide* debt. All the literary assistance rendered was favourable reviews and assistance in bringing that work and others before the public. Mr. Jerdan was not the only literary friend whom Mr. Roby had the pleasure of assisting. From the returned bills of one well-known name we have kept the autographs. I am sure I may trust to your English love of justice, as well as to your courtesy to a lady, to lay the truth before your readers. E. Ryland Trestrail.

P.S.—The statement that Mr. Crofton Croker wrote one or two of the tales is also incorrect. Were I at home, I could lay my hand on a note explaining the exact connexion of Mr. Croker with one story, but I do not like to make assertions from memory only.

*** We have also received a letter from Mr. Charles Roby denying Jerdan's claim to the authorship of the work.

EDUCATION IN HUNGARY.

II.

The population of Hungary, according to the census of 1880, is 13,700,000, and of these 2,097,490 are regarded as "Schul-pflichtig" (liable to schooling), being between the ages of six and fifteen. It is remarkable that this number is 8¼ per cent. lower than the absolute numbers of 1870, and the report states that this decrease is due to the cholera of 1872–3, as well as to the prevalence of other infectious diseases. The authorities regret that many children who ought to attend are kept away by their parents, especially in wild pastoral districts; but nevertheless the *relative* school attendance, both in numbers and in regularity, has clearly improved during these ten years. Compulsory school attendance is now in fashion among lawgivers, but I confess the discussion of the question at the Social Science Congress of 1881 in Dublin convinced me that in a very poor and scattered population, where even small children help in herding cattle, and where the distances from school are great, compulsion involves such hardships as to make it unjust. The State is doing what it can in Hungary to spread schools, or even travelling masters, through the wilder districts, but still much remains to be done. In 1880, 81¼ per cent. of the children liable to schooling had been persuaded or coerced to attend. The proportion of various nationalities (according to language) was this:—

Hungarians	787,587
Germans	267,282
Roumanians	204,953
Slovaks	253,942
Servians	36,850
Croats	25,836
Ruthenians	43,242

But probably the Hungarian figure is too high, as the tendency to make this their school-tongue would influence many, *e.g.*, German and Jewish people.

As was before explained, the religious differences are still more important, and it is a pity the report nowhere indicates how far they correspond with nationality or language; but as the great majority of the primary schools, and a still greater majority of the intermediate schools, are denominational, it is important to give the following table of the proportions in which the various creeds contribute to the school-going population. The first column gives the proportion of each religion in the whole population, the second and third give their proportions in the school population:—

	In Population.	In Primary Schools.	In Higher Schools.
Roman Catholics	47·20	52·4	44·4
Greek Catholics	10·85	8·0	4·4
Greek Orthodox	14·07	10·6	4·5
Lutheran	8·16	9·5	10·3
Evangelical Protestants	14·71	14·4	14·9
Unitarians	0·44	1·0	0·6
Jews	4·55	4·1	20·9

In the various tables of more special returns scattered through the report the general features of this table are preserved, and sometimes intensified. Thus the Greek Church is all through worst represented, and takes the least education for its numbers. The Roman Catholic hardly holds its own, and seems rather decreasing in force. The Protestants, especially those of the Geneva confession, are strongly represented, and in many particulars, especially in their theological schools, show an upward tendency. Far ahead of all are the Jews, who use primary schools not more than the rest; in all higher education they show a zeal and success out of all proportion to their numbers.

The various kinds and systems of secondary or intermediate schools cause much perplexity to the reader. Attempts are being made to give higher training apart from the gymnasia or classical schools, by means of what we should call commercial (Real) schools and technical schools. The great conflict between the Real-schulen and gymnasia is restated, and the claims of advanced science and modern languages against easy mathematics and much Greek and Latin are carefully balanced. So far all the attempts of the State to supply technical and commercial education, apart from the old classical and university system, show a tendency to failure. I cannot but suspect that this is connected with the secular character of these schools. In the Real-schulen and kindred institutions the great majority of masters are laymen, whereas the gymnasia are managed chiefly by clerics. The teaching orders of the Catholics and Protestant theologians are far better fitted to move on the old lines, and they have no doubt swayed the population.

The chapter on the teaching profession shows an increase in the number of clerical teachers, and it is to be hoped that their efficiency may be kept up. There are many complaints of the want of efficient teachers, and even still their numbers are too small. There are now about 70 children to each teacher. This must produce classes quite too large for proper instruction. The evil has reached its climax in the University of Pesth, where there are some classes up to 300, and where no remedy is considered possible but the founding of a new university (a Protestant one, by the way) at Pressburg. There is a great demand for places in the model or teacher-training schools for girls; so much so that a special minute has been issued, warning none but real candidates for the profession to apply (p. 53). This strong desire for higher female education is curiously illustrated by the figures from the higher girls' school in Pesth. It is spoken of with the highest praise, and is rapidly rising in importance. Here are the creeds given for 1880:—Roman Catholics, 95; Greeks, 2; Protestants, 43; Jews, 201. The answering of the pupils was extraordinarily high. I have no doubt this is directly resulting from the fact that Jewesses are an actual majority in the school. There is no space for me to give the returns for the Jews in the various faculties at the universities, but the facts are very striking. Since their emancipation in 1867 the Jews have rapidly become a power of the first importance in every intellectual pursuit. How melancholy is the recent news of anti-Jewish riots at Pressburg in the face of this splendid and honest progress!

The returns given of the examinations and the proportions of success and failure are of little value, as we cannot tell whether the variations depend upon a stricter or laxer standard, or upon better or worse teaching. If some of the papers of questions were printed in an appendix, and the answers of the best unsuccessful candidates in a few schools given, we might form some judgment on this point. It is noteworthy that among the voluntary subjects pursued at schools French, stenography, and singing (not instrumental music) are the favourites, and that this again is owing to the clerics, who wish the children taught to sing at their services. So the gipsies monopolize instrumental music. I conclude with a very wise observation (p. 90). Literary societies in connexion with the gymnasia are discouraged, especially the Selbstbildungs-Vereine, "which strive at the artificial stimulating of a premature intellectual productivity in youth, and therefore do more to injure than to benefit the true development of the mind." J. P. Mahaffy.

THE COMING PUBLISHING SEASON.

Messrs. Rivington have nearly ready for publication, in addition to the works already announced:—'Studies in Philosophy, Ancient and Modern,' by Mr. W. L. Courtney, M.A., Fellow and Tutor of New College, Oxford,—an enlarged edition of the 'Physical Geology' of Mr. A. H. Green, F.G.S., Professor of Geology in the Yorkshire College, Leeds,—'Etyma Græca: an Etymological Lexicon of Classical Greek,' by Mr. E. R. Wharton, Lecturer and late Fellow of Jesus College, Oxford,—'A Companion to Algebra,' by Mr. Leonard Marshall, M.A., assistant master at Charterhouse,—'Bacon's Essays,' complete edition, edited by Mr. F. Storr, Chief Master of Modern Subjects in Merchant Taylors' School,—'A Short History of England for Schools,' by Mr. F. York-Powell, M.A., Lecturer at Christ Church, Oxford, with maps and illustrations,—'A Syntax of Attic Greek for the Use of Students and Schools,' by Mr. F. E. Thompson, assistant master at Marlborough College,—'Essays on Aristotle,' edited by Mr. Evelyn Abbott, Fellow and Tutor of Balliol College,—'A Second Latin Reading Book,' forming a continuation of 'Easy Latin Stories,' by Mr. G. L. Bennett, head master of the High School, Plymouth,—'A Latin-English Dictionary for Junior Forms of Schools,' by Mr. C. G. Gepp,—'Introduction to Greek Verse Composition,' by Mr. Arthur Sidgwick, Tutor of Corpus Christi College, Oxford, and Mr. F. D. Morice, assistant master at Rugby School, and Fellow of Queen's College, Oxford,—'Excerpta Facilia: a Collection of Stories for Translation from various Latin Authors, with Notes and Vocabulary,' by Mr. H. R. Heatley and Mr. H. N. Kingdon, assistant masters at Hillbrow School, Rugby,—'Stories from English History,' by Louise Creighton, with illustrations,—'A Geography, Physical, Political, and Descriptive, for Beginners,' by Mr. L. B. Lang, edited by the Rev. M. Creighton, late Fellow and Tutor of Merton College, Oxford, with maps: Vol. II., 'The Continent of Europe,'—Arnold's 'First Greek Book,' revised by Mr. F. D. Morice,—'The Jugurtha of Sallust,' by Mr. E. P. Brooke, assistant master at Rugby School,—'A Manual of Greek Verbs, with Rules for the Formation of Tenses, and Tables of Verbs for Practice,' by Mr. F. Ritchie and Mr. E. H. Moore,—and 'Selections from Thucydides: an Easy Greek Reading Book,' by Mr. E. H. Moore.

Literary Gossip.

Mr. Matthew Arnold's address at University College, Liverpool, is to be printed in the next number of the *Nineteenth Century*. It is rumoured, with what truth we cannot

say, that Mr. Arnold contemplates a visit to the United States.

A memoir of the late Canon Pearson, of Sonning, is in preparation.

Mr. Phil Robinson, the author of 'In my Indian Garden,' &c., has in the press, as, if we remember rightly, we announced some time ago, the first volume of a work on the 'Natural History of the British Poets.' This first volume is called 'The Birds of the Poets,' and contains copious quotations from the poets from Chaucer to Wordsworth, with critical and humorous comments. Messrs. Chatto & Windus publish it. Messrs. Sampson Low & Co. are bringing out another work of Mr. Robinson's, detailing his experiences among the Mormons in the early part of this year. His account is said to be highly favourable to the people of Utah.

A good deal of new verse is promised for the coming season. Mrs. Augusta Webster, who is a candidate for re-election on the London School Board (Chelsea), will publish immediately, through Messrs. Kegan Paul, Trench & Co., a new drama, entitled 'In a Day.' We may expect during the coming season a new and considerable poem by Mr. Edwin Arnold, C.S.I., author of 'The Light of Asia,' entitled 'Pearls of the Faith; or, Islam's Rosary,' being the 'Ninety-nine Beautiful Names of Allah,' with comments in verse. The poem will, we believe, treat metrically of the life and religion of Mohammed by means of legends, records, and traditions of Islam from the standpoint of an Indian Mussulman, as in 'The Light of Asia' Gautama Buddha's life and doctrine were expounded from the standpoint of an Indian Buddhist. Of the latter work the tenth edition of the English original is now passing through the press here, whilst of the numerous editions printed in different cities of America, in various forms and sizes, more than one hundred thousand copies have been disposed of up to the present time.

Messrs. Macmillan & Co. have undertaken, we are glad to say, to publish a complete edition of the works of Gray, edited by Mr. E. W. Gosse, whose recent volume in the "English Men of Letters" series has excited fresh interest in the poet's life and writings. Mr. Gosse would be very grateful if the possessors of Gray MSS. of any kind would communicate with him at his private address, 29, Delamere Terrace, W.

In the October number of the *Edinburgh Review* is an article on 'Shelley and Mary,' containing important documents from the Shelley Papers which present in a new light some incidents in the life of the poet.

Mr. Charles G. Leland has been spending some months among the Quādi Indians in New Brunswick, and has obtained from them a number of strange, quaint fairy tales. Some of these he will probably publish before long in the *Century*. The rest he will reserve for a book which he proposes to bring out when his collections have been increased by the legendary stores which two Indians, a hunter and a trader, are gathering together for him in the far North. Some of the tales are accompanied by illustrations on birch bark by a native hand.

Mr. David Bogue will shortly commence the publication of a series of original biographical handbooks entitled "Eminent Women." This series, to be issued under the editorship of Mr. John H. Ingram, will be written entirely by women, and is to be devoted to short but comprehensive biographies of women eminent for their genius, virtues, actions, or associations. The works which have already been arranged for are not compiled from existing publications, but are chiefly based upon original unpublished material, and are, therefore, likely, it is said, to prove of more than ordinary interest. The earlier volumes of the series will include 'George Eliot,' by Miss Mathilde Blind; 'Emily Brontë,' by Miss Mary Robinson; 'George Sand,' by Miss Bertha Thomas; 'Mary Lamb,' by Mrs. Gilchrist; and 'Maria Edgeworth,' by Miss Helen Zimmern.

Our readers may remember that a letter in the *Athenæum* of January 14th from Mr. W. J. Thoms drew attention to the importance of old periodicals as works of reference, and suggested the formation of a special library for the purpose of collecting and preserving them, and the idea met with a favourable response from other correspondents. The Committee of the London Library are anxious, as we have once before said, to make it known that they have already a sufficient number of works to form the foundation of such a library, and they have now issued a circular containing a list of periodicals of the last century already in the library, as well as of those of the present century now discontinued.

We regret to hear of the death, at the age of eighty-two, of Mr. George Philip, sen., the founder of the well-known publishing firm of Messrs. George Philip & Son, of London and Liverpool. Mr. Philip had also an interest in the bookselling business of Messrs. Philip, Son & Nephew, of Liverpool, which has from the commencement been conducted by Mr. Thomas D. Philip, nephew of the deceased gentleman.

Messrs. Field & Tuer will shortly publish 'Olde Ffrendes wyth Newe Faces,' a collection of early Northumbrian ballads, tales, &c., compiled by Mr. Joseph Crawhall, of Newcastle-upon-Tyne, to whom are also due the wood-block illustrations.

A project is afloat to establish an institution of a literary, social, and scientific character in the rapidly increasing district of West Kensington, to be called the West Kensington Club and Institute. The promoters suggest that lectures on subjects of general interest, musical and dramatic entertainments, a reading room and circulating library, and a debating club should form prominent features.

Amongst a number of literary relics which have been discovered in the breaking up of the Edinburgh Select Subscription Library is Burns's copy of Robert Ferguson's poems. We learn from the *Scotsman* that this scarce volume is the second edition of Ferguson's poems, printed by J. Ruddiman in 1772, and that it contains Burns's autograph and lines written by him. At the commencement of the volume Burns records that the book is presented by him to "Miss R. Carmichael, poetess, 19th March, 1787."

A long time before his death Mr. Thackeray expressed a hope that a memorial of Fielding would be erected in Somerset, his native county, but years have passed away, and no effort has been made to carry out his wish. We hear, however, that Mr. Arthur Kinglake, who happily suggested the formation of a Valhalla in that county, and has enriched it with portraits of Locke, Blake, Pym, and others, has been so far encouraged by promises of support as to commission Miss Margaret Thomas, who has already executed a marble bust of Charles Summers, the sculptor, for the same hall, to execute a memorial of the great novelist. The bust has been modelled from the celebrated drawing by Hogarth.

Under the title of "Heart Chords" Messrs. Cassell & Co. will publish a series of volumes by well-known divines intended to stimulate, guide, and strengthen the Christian life. The contributors to the series will include Bishop Cotterill, Dean Montgomery, Dean Bickersteth, Dean Edwards, Dean Boyle, Canon Farrar, Canon Boyd Carpenter, Prof. Blaikie, &c. Messrs. George Bell & Sons have just ready a volume of 'Mission-Room Addresses,' by Mr. Charles Mackeson, with a preface by Earl Nelson. The addresses, which were given by Mr. Mackeson at St. Saviour's Mission Room, South Hampstead, are published at Mr. Bell's request, and may be regarded as a fruit of the recent movement to utilize the efforts of laymen, who, as "readers" commissioned by the bishops, are authorized to conduct services in mission-rooms and other unconsecrated buildings.

The last general meeting of the Hellenic Society during the present year will be held at 22, Albemarle Street on Thursday next, the 19th inst., at 5 p.m. Among the papers to be read will be 'Explorations in Æolis,' by Prof. Sayce, and 'A New Statuette of Heraklês,' by Mr. A. S. Murray.

Messrs. Nimmo & Bain are about to issue a new library edition, in ten volumes octavo, of Dr. Lingard's 'History of England,' with all the copyright additions.

The syllabus of the proceedings of the Manchester Literary Club during the session 1882–3 has been issued. Amongst the papers to be read by different members during the session are these: 'Personal and Family Reminiscences of a Manchester Authoress,' Mr. Hadfield; 'Art and Morals,' Mr. Horsfall; 'Four Days in Iceland,' Mr. Abel Heywood; and 'A Defence of Flattery,' Mr. Franks. Mr. George Milner, the President of the Club, will on November 27th make a short communication 'On some Marginalia made by Mr. Dante G. Rossetti in a Copy of Keats's Poems.'

Mr. Robert Langton, of Manchester, announces the publication of 'The Childhood and Youth of Charles Dickens.' The book will be extensively illustrated from original drawings, &c.

Considerable dissatisfaction has been felt with the slow progress of the publications of the Chetham Society. The *Palatine Note-Book*, however, announces that the overdue volumes of the old series are being expedited, including an index to vol. xxxi. and its successors. Of the new volumes projected, the following are amongst the books which have been suggested for the subsequent issues: the Commonplace Book of John Byrom (including his journal and letters) for the years 1730–31; the Accounts of the Constables

XUM

of Manchester, 1613–47 and 1742–80; a volume of Lancashire and Cheshire wills; a history of Poulton-le Fylde and Bispham; a new edition of the diary of Dr. John Dee, with considerable additions; the chartulary of Furness Abbey, &c. Another book which the Council wish to edit is Canon Raines's 'Lives of the Fellows of the Collegiate Church, Manchester'; but that MS. never came into the possession of the Feoffees of the Chetham Library, it having been lent by Mr. Raines shortly before his death. The Feoffees would be glad if the present possessor of the MS. would restore it to its place among the other volumes forming Canon Raines's bequest.

The death is announced of Miss Cecilia Howiston, known as the Stromness poetess, in her seventy-fourth year. Deceased was the author of two volumes of verse, one of which, entitled 'Songs in the Night,' published some twenty years ago, was popular.

At a meeting of the Imperial Academy of Sciences of St. Petersburg last Saturday a report was read on the books relating to Russian subjects to which prizes had been accorded from the Uvarof Fund. The place of honour was given to Rovinsky's valuable work on 'Russian Popular Pictures,' the rude but quaint coloured engravings which circulate in such numbers among the Russian peasants. Next to it were ranked Count J. J. Tolstoi's 'First Russian Coins,' a detailed account of the coins struck by Vladimir the Great and Yaroslaf, and M. Jmakin's 'Life and Works of the Metropolitan Daniel.' Honourable mention was also made of M. Zablotsky-Desyatovsky's 'Materials for a History of the Emperors Alexander I. and Alexander II.,' and M. Sobko's essay 'On the Likenesses of the Early Russian Tsars.'

The Sixth International Congress of Orientalists will take place at Leyden from the 10th to the 16th of September, 1883. The organizing committee is thus composed: MM. Dozy, President; Kuenen, Vice-President; De Goeje, first Secretary; Tiele, second Secretary; Pleyte, Treasurer.

Canterbury has just issued a catalogue of its Municipal Free Library which is quite unique in its blunders. A local journal describes its vagaries. Horatii is described as being by Flacci; Virgilii, by Maronis. English writers have not fared any better. Shakspeare's plays (under the heading of "Fiction") are stated to be written by Edmund Malone; Thackeray's works (among the essays), by A. Pendennis and H. Esmond, as well as by himself. Ainsworth's 'Tower of London' is placed among the guide-books; 'Robinson Crusoe' among the biographies; Knight's 'Old Printer' among fiction; Wellington's Despatches, Venn's 'Duty of Man,' and Vince's 'Conic Sections' among manners and customs; Thomson's 'Seasons' among the sundries, &c. Babbage is spelt "Baggage," and so on. These are only a few of the blunders taken haphazard from a hundred others not less ludicrous.

SCIENCE

A Treatise on the Distillation of Coal-Tar and Ammoniacal Liquor, and the Separation from them of Valuable Products. By George Lunge, Ph.D. (Van Voorst.)—About fifteen years ago Dr. Lunge published a treatise entitled 'Die Destillation des Steinkohlentheers und die Verarbeitung der damit zusammenhängenden Nebenproducte.' It has always seemed to us a pity that this monograph was not translated into English, inasmuch as the industry to which it refers is one of the most important chemical manufactures carried on in this country. It was in England that the distillation of coal originated—we were the first producers of illuminating gas; and it was here, too, that most of the applications of coal-tar took their rise. Thus, benzene was discovered by Faraday; its manufacture on an industrial scale was initiated by Mansfield; and the earliest aniline dyes were prepared by Mr. Perkin. It is true that at the present time the manufacture of aniline colours is carried on to a much larger extent in Germany and Switzerland than in England; yet it is England that still supplies the greatest quantity of the crude materials which form the basis of the industry. Although Dr. Lunge now holds the Professorship of Technical Chemistry in the Polytechnic School at Zurich, he was for so many years resident with us that he knows well enough the wants of the English manufacturer, and he has felt that a treatise on so important a subject as coal-tar distillation would be an acceptable addition to our technical literature. It would, however, have been useless at the present day to translate the old work, for the advances in this branch of industry have been so rapid that a book written only a few years ago has necessarily become to some extent obsolete. Hence Prof. Lunge determined, after he had completed his great treatise on the manufacture of sulphuric acid and alkali, to turn his attention afresh to the subject of coal-tar and ammonia, and to make himself personally acquainted with the very latest improvements by visiting the largest works in England, France, and Germany. The results of his labours are given in the monograph now in our hands. On comparing this treatise with Dr. Lunge's recent contribution on the same subject to Bolley's well-known 'Handbuch der Chemischen Technologie,' we see at once that the two works are practically identical. It would, perhaps, have been better if the author had stated this in the preface to the English version, though the work is, of course, not a whit the worse for its almost simultaneous appearance in two languages. We simply call attention to the fact in order that those readers who are subscribing to Bolley's serial work may not suppose that the writer has prepared two independent monographs. Although the tarry and ammoniacal substances which are formed as by-products during the distillation of coal were for many years regarded as of little or no value, they have within the last quarter of a century acquired an enormous industrial importance, and as their uses are still extending it is quite conceivable that a day may come when coal shall be distilled for the tar and the ammonia rather than for the illuminating gas. Dr. Lunge gives an excellent account of the origin and composition of coal-tar, the methods of distilling the tar, and the economic applications of its products. In dealing with the ammoniacal liquor of gasworks the author does not enter into the subject so fully as in the case of tar, but rather limits himself to a notice of the more modern forms of apparatus and of such processes as promise to become of technical importance. In closing Prof. Lunge's volume we may express the opinion that it is likely to rank for a long time to come as a standard work of reference on the industry to which it is devoted. The wood engravings with which it is illustrated are of a degree of excellence rarely reached in the diagrams which accompany chemical treatises issued in this country. We believe that they are from the xylographic establishment of Vieweg & Son, of Brunswick, the publishers of Bolley's 'Technologie.'

Science in Short Chapters. By W. Mattieu Williams, F.R.A.S. (Chatto & Windus.)—It is so common a thing nowadays for scientific writers, whether eminent or not, to collect and reprint their scattered essays, that Mr. Williams is only following the fashion in publishing the present volume. The forty-four articles which it contains cover a very wide range of topics—astronomical and geological, physical and chemical. Writing on so great a diversity of subjects naturally tends to superficiality of treatment; yet it is only fair to admit that the author shows in most cases a very firm grasp of the questions which he undertakes to discuss. Mr. Williams is not simply a neat writer who can spin out a readable article on almost any scientific topic, he is a man who evidently thinks before he takes his pen in hand, and generally contrives to impart a touch of originality to his treatment of a subject. Probably the best of his essays are those on solar physics; and in arranging the series he has naturally given the place of honour to his favourite topic, 'The Fuel of the Sun.' There is no concealing the fact that Mr. Williams feels himself to be an injured man in the matter of "solary fuel"; he believes that some of his views have been appropriated by other writers without due reference to the book which he wrote on this subject some dozen years ago. But he must remember—as indeed he now admits—that a book of 240 pages with a popular title is hardly the best medium for the enunciation of an original hypothesis. Most scientific men have their time so fully occupied that their reading is necessarily confined to their special studies, and they naturally assume that any original views will be introduced to the scientific world through the medium of some of the learned societies. The controversial character of some of Mr. Williams's 'Short Chapters' gives to them an additional relish, and the reader soon feels interested in his attacks on the views of such men as Wollaston, Sir W. Thomson, Dr. Siemens, and Dr. Carpenter. In running over the essays in this volume we are disposed to think that some are too slender to have merited reproduction. This is notably the case with the trifling article at the end of the book headed 'Murchison and Babbage.'

An Illustrated Essay on the Noctuidæ of North America, with "A Colony of Butterflies." By Augustus Radcliffe Grote, A.M. (Van Voorst.)—Mr. Grote, whose fine collection of *Lepidoptera* has been acquired by the British Museum, discusses in this essay merely the external characters, the sorting of individuals into "species," and the literature of the North American *Noctuidæ*. He admits, and indeed asserts, that this method of classifying by appearance can lead to no scientific results, yet this is the method which has hitherto been sufficient to satisfy the class of English lepidopterists which is represented at one pole by Walker and at the other extremity by Doubleday. Far from being satisfied with this state of affairs, of which the United States lepidopterists are the legatees, the author insists upon the necessity for the frequent use of the microscope and the dissecting needle, and tells his brethren that at present they are merely employed in getting their cabinets into order. Four beautifully executed coloured plates of North American moths, engraved by A. H. Searle, form a conspicuous feature of the work. We are, however, somewhat surprised to observe that although the author expressly states that a knowledge of the structure of the legs is of importance in the classification of the *Noctuidæ* in order to locate the species generically, yet the legs are not figured in his plates. An important part of the book as regards American students is the chapter of about twenty pages on the identification of Walker's types of North American *Noctuidæ* in the British Museum. It must be admitted that Walker's descriptions were frequently of a most vague and unsatisfactory character; but no evil is without some compen-

sation, and we may reflect that but for their uselessness we should have been deprived of the pleasure of seeing some foreign fellow workers who have been forced to come over in order to identify the types. The last chapter of the book contains a graphic description of a colony of the white mountain butterfly, *Oencis semidea*, which live at an elevation of about 5,600 feet on Mount Washington in New Hampshire, where they are supposed to have settled about one hundred thousand years ago, during the decline of the ice period.

Timehri: being the Journal of the Royal Agricultural and Commercial Society of British Guiana. Edited by E. F. im Thurn. Vol. I. Part I. (Demerara, Thomson.)—The very necessary information respecting the origin of this journal and of its remarkable name is conveyed in the prologue. It is designed to be the organ of a society which has been in existence since 1844 with the avowed object, amongst others, of "establishing and carrying on a periodical publication"—a good intention which had until now produced no definite result for nearly forty years. It was certainly time that something should be done, and those who are acquainted with the energy of Mr. im Thurn will probably not be far wrong in surmising that, braced up by a visit to England, he returned to the country where, as an enterprising traveller, he had won his laurels, shook up the torpid society, and started the journal. The title, we are told, is convenient in its brevity, and is at the same time not falsely descriptive in that it is not descriptive at all, yet not without great appropriateness. *Timehri* or *Timeneeri* is a Carib word signifying certain marks or figures which, like our letters and words, were ideographic. On many of the rocks of Guiana these still remain engraved as the records of a forgotten time, and "hence this name is adopted for the writings which it is proposed to mark on the white paper of this journal"—a pleasant conceit, and decidedly a good opening. The contributions to this first number are of more than average interest, and if its material is not too quickly exhausted, the journal will be deservedly a success. Mr. A. H. Henson's article 'On the Cultivation of Cocoa' (*i.e.*, cacao) is interesting and not too technical; and the account of a journey in search of *Hevea spruceana*, with remarks on india-rubber and gutta-percha yielding plants generally, from the pen of Mr. G. S. Jenman, the Government botanist, conveys much valuable information. Mr. MacTurk assists geographical research by describing the course of the little known river Cuyuni, which comes down from the highlands of Venezuela; and other papers, although of less general interest, are by no means deficient in merit. The article which will probably be the most popular of all, and which we have reserved for mention last, is the one by the editor 'On Tame Animals among the Red Men of America.' It will doubtless be freely quoted in future articles in periodicals more especially devoted to natural history than the present one, and we therefore need only allude to it. So far this journal is excellent, and we wish it long life.

ASTRONOMICAL NOTES.

THE comet which has caused so much excitement lately was discovered by Mr. Finlay, of the Royal Observatory, Cape of Good Hope, on the 8th of September, four days before it was seen by M. Cruls at Rio. It will reckon, therefore, as comet *b* as well as II. of 1882, Mr. Barnard's being comet *c*. Mr. Finlay's discovery was made about five o'clock in the morning, and on the following morning (September 9th, at $5^h\ 14^m$ A.M., Cape local time) an observation was made which determined the place to be R.A. $9^h\ 40^m$, N.P.D. 90° 45½'.

Elements of the comet's orbit have been calculated by Prof. E. Weiss, of Vienna, by Dr. Oppenheim, of Berlin, and others. The former gives the time of perihelion passage as September 16th, at the distance from the sun 0·0336 in terms of the earth's mean distance; the latter as September 17th, at the distance 0·0076 on the same scale. The smaller of these distances amounts to about 700,000 miles, and would indicate that the comet approached within about 300,000 miles of the sun's surface. The elements certainly bear a great resemblance to those of the comets of 1668, 1843(I), and 1880(I.). The comets are either identical, or at any rate moving along the same orbit. If the former hypothesis be true, and the close approaches to the sun have produced successive checks to the comet's orbital velocity when near perihelion to such a degree as to diminish the period first from 175 years to 37 years, and then from 37 to only 2½, the next return will probably take place, as we hinted last week, in a few months, and final absorption can hardly be long delayed. It is, however, interesting to call to mind that the comet of 1680, observed by Newton and Halley, made nearly, if not quite, as close an approach to the sun without being followed, so far as is known, by any similar consequence. It was this close approach which convinced Newton that comets must have some solid matter in them; "for," he says, "if they were nothing else but the vapours or exhalations of the earth, of the sun, and other planets, this comet in its passage by the neighbourhood of the sun would have been immediately dissipated" ('Principia,' book iii. prop. 41).

For "Rome," in our "Notes" last week, speaking of places where the great comet was seen on September 17th, read Reus, near Tarragona.

The brightness of the comet is now rapidly diminishing. Its head rises, as most persons are probably now aware, about three hours before the sun, slightly to the south of the place where he afterwards rises. The comet has been this week a very brilliant object, the tail straight, long, and narrow. The following are its places for the next few days from Dr. Oppenheim's ephemeris, calculated for midnight at Berlin:—

The Annual Report of the Board of Directors of the Chicago Astronomical Society, together with the Report of the Director (Prof. G. W. Hough) of the Dearborn Observatory, for 1882, has recently been published. The work with the great 18½-in. equatorial has been chiefly confined, as before, to the study of special objects and phenomena requiring great optical power, for which there were selected during the past year (1) the great comet of 1881, (2) the planet Jupiter, (3) the satellites of Uranus, and (4) difficult double stars. In especial, the various spots and markings on Jupiter have been very carefully studied, micrometer measurements taken, and drawings made. The observations of the great red spot show that it has been retrograding with an accelerated velocity, the apparent rotation-period in March, 1882, being $9^h\ 55^m\ 37^s{\cdot}8$, four seconds greater than at the opposition of 1879. This appears to indicate a total drift of the red spot in longitude of 40,000 miles, being about 10,000 for the first year and 30,000 for the second year. "These observations," Prof. Hough remarks, "prove that the red spot is not the solid portion of the planet, as has been held by a number of astronomers. One of the most curious features of this interesting object is its stability. Here we have an immense floating island, 29,600 miles in length by 8,300 miles in breadth, which has maintained its shape and size without material change during more than three years." Some astronomers, he adds, have thought that the spot was fading, but "if such be the case, I have failed to recognize the fact." On February 2nd of the present year, under good circumstances, the colour was found to be the same as formerly, viz., a light pink.

We have received the *Memoirs* of the Italian Spectroscopical Society for August. The principal papers are on the dimensions and structure of the solar spots in 1881, by Prof. Riccò, and on the metallic solar eruptions observed at Rome during the first six months of 1882, by the editor, Prof. Tacchini.

GEOGRAPHICAL NOTES.

THE paper at the opening meeting of the next season of the Royal Geographical Society will probably be read by Mr. Colquhoun.

A classic institution has been restored. The Baths of Agamemnon or Lidja, in the Bay of Smyrna, were of repute ages ago. They were still frequented of late years by casual visitors, who had to camp out. They are now regularly occupied, and a Frank quarter and a native quarter have been already built.

In accordance with recommendations contained in reports prepared by the Russian Department of Mines, the Imperial Government has accorded a grant of 6,500 roubles to defray the cost of a scientific investigation of the Astrachan and Cheliabin salt lakes. The Crimean lakes are to be examined in a similar way next year, when arrangements will also be made for taking regular meteorological observations on the spot.

A new expedition to East Africa is being organized by the Geographical Society of Hamburg.

Messrs. W. H. Allen & Co. have in preparation a large-scale diocesan map of India, which has been compiled by Canon Mackey, of Perth, whose diocesan maps of the British Isles are already known.

A Correspondent writes:—"Whatever truth or not there may be in the saying that 'the world knows little of its greatest men,' it is certainly a fact that there have been some notable travels buried in oblivion, and that some remarkable contemporary travellers are ignored. How many well-informed persons know, for instance, of the journey through Central Asia and Kashgaria of the Hungarian Z. Berzenczey? This reflection is suggested by the doubt that seems to hang over the fate of 'Pioneer,' a correspondent of the *China Mail*, who carried on his explorations in the rear of the Chinese army that reconquered the Central Asian dependencies. The last news we heard from this adventurous traveller was in a letter dated from the town of Hami two years ago; but although the achievements of neither of these explorers will yield in point of interest and of the dangers incurred to any other journey of our day, they have by some piece of ill-fortune not attracted the same attention as luckier, but not more deserving travellers."

SATURN'S RING.

Blackheath, Oct. 10, 1882.

IN your "Astronomical Notes" last week I am referred to as having stated in the *Observatory* that the drawing intended to accompany a letter by William Ball, whence it has been inferred that he and his brother Dr. Ball were the first discoverers of the principal division of Saturn's ring, had been "in some unaccountable manner omitted from the *Philosophical Transactions*." My attention has recently been called to last week's number of *Knowledge*, in which is an engraving stated to be made from that drawing as given in the first volume of the *Transactions*, where Ball's letter and the remarks upon it appear. I did not make my statement without referring to several (in fact, three) copies of the *Transactions*, in case there might be a plate left out by the binder in the first copy I looked at (although I could not find that any other *figure* had been omitted). But since I have seen the number of *Knowledge* in question, I have con-

sulted two more copies of the *Transactions* (five, therefore, in all) without finding the said drawing. In the copy at the British Museum there is a list in manuscript, on the fly-leaf of the first volume, of errors and omissions in the first eighteen volumes. A pen has been drawn through the greater part of this list, but not so as to affect its legibility. Amongst the rest it mentions the omission of a plate in the first volume, stated to contain three figures, two of which had been transferred to another plate, and the third "a drawing of the planet Saturn" (unquestionably that by the Balls in which so much interest is felt).

One would have supposed that this list of errors and omissions applied to all the copies of the *Philosophical Transactions*, of which, as I said, I have seen four others; but we are now obliged to conclude that a few had the plates arranged according to the original scheme, and that the editor of *Knowledge* has possession of, or access to, one of these very rare copies. The drawing does not agree with the one in Lowthorp, professing to be a copy of that of the Balls, so that some carelessness was committed in reproducing it. But as regards the question which I at first started, there can be little or no doubt that it was the supposed unconformability of the two ansæ of the ring which attracted their attention, or the attention of the anonymous correspondent to whom their drawing was sent. In other words, the duplicity thus conjectured does not exist; and of the duplicity or principal division of the ring which does exist those observers had no idea, the credit of first discovering indications of it being due, as I before remarked, to Cassini I.

And now that I have restored to Cassini the credit of the first notice of the dark markings on the ring of Saturn, which indicated (as was afterwards clearly shown by his nephew Maraldi) that the appendage was divided, I should like to vindicate for William Ball the merit of being a careful observer of the planet. It is well known that when Huyghens had published, in 1659, his 'Systema Saturnium,' in which he first explained that the phenomena which had been such an enigma before were produced by a thin plane concentric ring surrounding the planet, his views were contested by Father Fabri at Rome under the *nom de plume* of "Eustachius de Divinis." Fabri was very satisfactorily answered by Huyghens in 1660 in a tract called 'Brevis Assertio Systematis Saturni,' in which he appealed to the observations of William Ball in England, who had noticed, not long after himself, the dark streak across the planet near the time of disappearance of the ansæ which showed the continuity of the body surrounding the planet. These, he said, were communicated to him by Dr. Wallis, in a letter dated December 22nd, 1658, from which I quote the following passage:—"Eam porro fasciam à 5 Febr. 1656 ad 2 Jul. quo tempore rotundus Saturnus absque ansis apparuit, medium Planetæ discum secare D. Ball adnotavit, ut in schemate ad me misso expressa est." W. T. Lynn.

P.S.—The copies of the *Transactions* which I consulted besides that at the British Museum are at the Royal Society, the Royal Observatory, the Royal Astronomical Society, and the London University. A friend has since kindly written to Cambridge, and ascertained that the drawing is not contained in the copy at the University Library there.

DR. THWAITES.

Letters from Ceylon announce the death, on the 11th ult., of Dr. Thwaites, formerly the Director of the Botanic Garden at Peradenyia. Previous to his undertaking the charge of that establishment Thwaites was known in this country as a singularly expert microscopist and an acute observer. His work in this direction was done at a period when the study of cryptogamic botany in this country was all but dead or pursued only by very few devotees. In consequence of this many facts in the life-history of these plants detected by him were passed over with scant attention, and the credit of the discovery has thus in some cases been attributed to French and German observers. On his appointment to Ceylon Dr. Thwaites abandoned to a great extent his researches in cryptogamic botany, and devoted such leisure as the administrative duties of his department permitted to the elaboration of the Ceylon flora, for which his numerous collections, and specially his enumeration of Ceylon plants, form an admirable preparation. The success of chinchona culture in Ceylon is largely due to his energy and discrimination. Dr. Thwaites died in his seventy-second year.

MEETINGS FOR THE ENSUING WEEK.

Mon. and Fri. Royal Academy, 8.—'Anatomy,' Mr. J. Marshall.

Science Gossip.

The Vice-Chancellor of Cambridge University (Dr. Porter) has called a meeting of members of the Senate and others for Saturday next (21st inst.), at 4.30 P.M., in the Comparative Anatomy Lecture Room in the new Museums, to take steps to establish in the University a memorial of the late Prof. Balfour. This meeting was called in pursuance of a requisition signed by a number of leading professors and natural science lecturers, including Professors Paget, Humphry, Hughes, Newton, and Moseley, Dr. Michael Foster, Mr. J. W. Clark, and Mr. G. H. Darwin.

We trust it may not be long before the Professorships of Physiology, Pathology, and Mental Philosophy and Logic will be established at Cambridge University; but it must be remembered that the increased stipends of nearly all the present professors may probably be paid out of the new funds accruing from the colleges, and for the first two years (1883 and 1884) less than 5,000*l.* will be received from this source. It appears that about 3,000*l.* will be required for the increase of stipends, so that if this step be taken and the new professorships established, there will be scarcely any surplus for payment of readers, university lecturers, or for building purposes for some years to come. But the University is not bound to pay any increased stipends until the next vacancies in the professorships, although it may do so, while at the same time most of the professors have been, or will be, elected to professorial fellowships at the colleges, giving them at once a considerable proportion of the benefits conferred by the new statutes.

It appears that a formal attempt will be made to celebrate in Cornwall the fiftieth year from the death of the great inventor Richard Trevithick, who was a native of that county, and who died and was buried at Dartford in 1833. Although many honours have been bestowed on the inventor of the locomotive and common road engine, of the high-pressure engine, and of so many applications of steam, a far greater share has befallen his successor, George Stephenson. As yet no statue has been erected to Trevithick in England, and it is thought that a statue will be a fitting tribute to him from his native county. The best memorial is in Canada on the Victoria Bridge, erected by Trevithick's son.

Mr. Keeting, of the Woodwardian Museum, Cambridge, has directed a recent excavation made by Messrs. J. W. Elwes and T. W. Shore for geological purposes in the New Forest in the Brockenhurst bed, which yielded nearly half a century since numerous interesting specimens. About a thousand examples have been obtained, comprising seventy species of molluscs.

Mr. E. Volckmar has made a trial on the Thames of a small craft constructed by him for the Electrical Power Storage Company of Millwall, named the Electricity, the motive power being obtained from forty-five accumulators of the Sellon and Volckmar type, working two Siemens dynamos. This launch was steadily propelled against the tide at about eight knots an hour. In every respect the trial, which was carefully watched by Prof. Silvanus P. Thomson, appears to have been most satisfactory. This has been stated to be the very first trial in which the electrical propulsion of a vessel has been undertaken. This is not correct. At the time of the first meeting of the British Association at Swansea a boat actuated by the electricity obtained from a Grove's battery was launched upon the lake at Penllegare by Mr. Dillwyn Llewellyn, carrying several of the most eminent men of science who attended that meeting.

Mr. Wake, engineer of the River Wear Commissioners, and Mr. Irish, manager of the Northern District Telephone Company, have made some interesting experiments in the use of the telephone by divers. The length of the cable connecting the receiver in the diver's helmet with the transmitter above water was 600 yards. It was found that the diver could converse with ease and ask for tools in any position in which his work might require him to place himself.

M. Deprez at the Munich Electrical Exhibition worked a plough by means of electricity, the current being transmitted over a distance of about forty miles.

Dr. D. van Monckhoven died on the 25th ult., on his forty-eighth birthday.

M. Pasteur communicated to the Congrès International d'Hygiène et de Démographie a paper styled 'De l'Atténuation des Virus.' This important paper does not admit of abbreviation. M. Pasteur says: "L'objet principal de la communication que j'ai l'honneur de faire est de fournir de nouveaux exemples d'atténuation par l'oxygène de l'air, et de démontrer que nous avons affaire à une méthode générale d'atténuation de certains virus." By this "attenuation" many of the most virulent forms of disease admit of being transferred with safety to healthy bodies, which are protected thereby from acquiring those particular diseases. M. Pasteur concludes by saying: "Les principes généraux sont trouvés et on ne saurait se refuser à croire que l'avenir, dans cet ordre de recherches, est riche des plus grandes espérances."

MM. Frézon, Dumont, and Françon have succeeded in solidifying petroleum, in which state it burns like tallow. This solidification is, according to *Cosmos*, effected by adding to distilled petroleum 25 per cent. of the purified juice of plants belonging to the family of the *Euphorbiaceæ*.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Ancient Helmets and Examples of Mail. By the Baron de Cosson and W. Burges. Illustrated. (Archæological Institute.)

William Burges, A.R.A., the late distinguished architect, was one of the most learned of our archæologists and an accomplished designer of minor works of art. He was an indefatigable student, ingenious in construction, and astute in investigating the mechanical problems which present themselves to antiquaries who are bent on learning more about relics of the past than literary records tell. It was not enough for him to gather from chronicles, histories, ballads, and romances all that had been said about the arms and armour of antiquity. He was not satisfied when he had pored over illuminations, drawings, and the incised and sculptured memorials on tombs

and walls. The ransacking of museums and private collections was not enough for him. Having, with rare energy and diligence, searched in every direction, and at considerable expenditure of time, tact, and money gathered headpieces, mail, swords, and other martial equipments, he digested what he knew and brought the results to bear on the chronological arrangement of his own possessions, and the exposition and illustration of the contents of other gatherings, public and private. In the Baron de Cosson, Burges had a colleague whose zeal and accomplishments were in no respect inferior to his own, and, on the Continent at least, even more widely renowned. Burges bequeathed nearly all his helmets to the British Museum, where they now are, and where they ought to have found already deposited the choice pieces of the famous Meyrick collection, which a too parsimonious Government department refused to buy.

It was, we believe, in accordance with a joint proposition of Burges and his friend that the Archæological Institute decided to bring together the largest number of helmets and examples of mail of all times, kinds, and countries that could be obtained. More than a hundred mediæval and renaissance European helmets, besides fragments, Oriental examples, and very noble relics of Greek and Roman antiquity, were lent to the society. Coats of mail, armour of combined mail and plate, small portions of plate equipments, and fragments of mail accompanied these specimens. The Baron de Cosson and his colleague undertook to annotate the catalogue of the whole. Unfortunately the exhibition thus formed was open for no more than a fortnight, and closed before the annotations were complete. The catalogue was delayed in publication until long after death had been busy amongst those to whom the exhibition owed its success, and Mr. W. J. Bernhard Smith, Mr. J. Latham, and Burges himself had been called away. Fortunately for students, Burges had completed the last of his tasks, and had, as his generous colleague affectionately says,

"instilled into me the necessity of investigating independently and for myself every point connected with the study in which we were fellow labourers, and, above all, his practical training in his art led him rightly to give pre-eminent importance to a close study of the *construction* of every piece of armour which came under his notice."

This last remark of Baron de Cosson's is the text of the lucubrations of our authors, and forms the special feature of this book. Searching study of the *construction* of arms and armour results in exhaustive knowledge of their uses, and enables us to decide beyond appeal as to their genuineness and even as to their history. A score of examples adduced in this book show that it is possible to detect forgeries of the most impudent kind in more than one renowned helmet (see below on the well-known Woolwich helmet, No. 135) or historical and personal relic of bygone champions — *e.g.*, the wonderful heaume of Sir John de Berkeley, No. 136. It has now become comparatively easy to detect the tricks of ignorant dealers, who "make up" choice specimens out of fragments, or so patch and repair shattered works that their ancient owners would not know them. A section of this catalogue is devoted to forged helmets, some of which are transparently false, while others are very cleverly made, to the honour or dishonour of their authors.

The study of the examples gathered by the Institute—here we quote Mr. Hartshorne's brief preface to the book—

"could not fail to throw much light on the construction and the development of the various kinds of helmets, and the presence of most [*sic*] genuine headpieces of rare forms afforded a point of comparison for the test of doubtful ones and the detection of forgeries. One special circumstance which became apparent was that several of the helmets had been more or less altered at the time they were in use."

This is well as far as it goes, but the close and logical analysis of the structure of distinct examples as practised by Burges teaches more than comparisons can. It is not beyond the possibility of conjecture, as Sir Thomas Browne was wont to say, that the people who had so far improved their opportunities as to turn the monumental brasses of their forerunners and inscribe new names on old tombs—thus following immemorial Egyptian practices—would shape helmets to the heads of new owners, or, as we said the other day of the corslet of the Porlock effigy, "let out" breastplates of knights become corpulent. Changes in the fashions of vizors, crests, and basinets were to be expected if the owners cared for the whims of their times.

"The numerous examples of mail threw a new and clear light on the method employed in the construction of a form of defence hitherto but imperfectly understood." So says Mr. Hartshorne, putting the matter perspicuously and with characteristic modesty. He might have stated the fact much more strongly and decidedly, the full truth being that this book contains the first complete and satisfactory analysis of the very curious and ingenious process of mail-making, with careful discrimination of the various kinds of mail, and notices (see p. 113) of the differing modes of delineation employed by sculptors of mediæval effigies, illuminators, and engravers of monumental brasses. These modes are as numerous as they are bewildering. Mail, be it remembered, has been discovered in Assyrian ruins, and is still made in Birmingham for the African market. It is one of the most ancient and curious of manufactures.

All who have occupied themselves with the very remarkable subject of mail manufacture by the armourers of the Middle Ages and the problems of construction involved will welcome the results of Burges's researches, which are copiously illustrated by diagrams. Mr. Hewitt's very brief but important communication to the *Archæological Journal*, vol. xxiv. p. 318, comprising a mediæval drawing of a mail-maker and his assistant at work on a hauberk and a helmet, was, till this book was published, the most valuable contribution that had been made to our knowledge of a much debated antiquarian puzzle. The same author had previously (see the *Archæological Journal*, vol. vii. p. 360), in a very valuable essay on the De Sulney effigies, carefully expressed his opinions on this recondite subject. We much regret that without ample space and many diagrams Burges's notes on mail-making are not available for quotation.

On no subject connected with archæology and handicrafts has a greater amount of nonsense been written than in regard to helmets and mail. The ignorance and carelessness of general scholars when dealing with strictly technical points remind one of the well-known story of Dr. Johnson and his definition of the word "pastern." Richardson's wild guess at the origin of the name "burgonet" is a specimen of a large class of absurdities.

"Richardson, in his Dictionary, suggests that it might be derived from the Anglo-Saxon byrgan, to protect, to defend; but as the word does not appear in any language till the sixteenth century, and people did not then go to the Anglo-Saxon when they wished to invent a new name, the theory is manifestly absurd. In the same way he suggests morion might come from myrran, A.-S., to dispel, or repel. As this is also a new word in the sixteenth century, one might as well seek an Anglo-Saxon derivation for telephone."

If sham derivations for terms of armoury abound, they cannot be more frequent than sham helmets. Of the "very rare specimen" (it is thus officially described) in the Museum of Artillery at Woolwich, here No. 135, said to be due to the early part of the fourteenth century, and elaborately described in the *Archæological Journal*, vol. xxiv., the Baron de Cosson gives a very amusing notice. This "very rare specimen" is a glaring forgery, made of sheet iron (!) defaced by modern corrosion, and unpractical in all its details:

"And the most marked feature about all these English forgeries of early helms is their complete inapplicability to the purposes for which they would have been intended, whilst the more genuine specimens of the armourers' art are studied, the more will it be found that the *use* for which the piece was intended was never lost sight of for a moment by the craftsman who formed it, each curve having its *raison d'être*, and the thickness of each part of the piece being regulated by its probable exposure to an enemy's weapon. It is unnecessary to say that in the sheet iron example before us nothing of the kind was to be found. The edges of the occularium, which in all real helmets are strong and turned outwards, are here flat and weak. The form of the opening behind the vizor was quite meaningless, being copied from the left for the *whole* face in helmets which have no slit for the sight: that is to say that when the vizor was closed, the wearer seemed intended to look out of the slit, and when open it would have been much simpler for him to have looked out of the big opening which had a double arch as if for the eyes. It was really a helmet with a double occularium. The bottom edge of the helm was straight all round, nor was any means of fixing it either before or behind traceable. This bottom edge, not being rolled or turned in, would have been singularly cutting and unpleasant as the cumbrous unfixed helm wobbled about its wearer's head."

The force of Burges's advice to examine, and, in all cases, test the *practicability* of armour claiming to be ancient could not be better illustrated than by this notice of the construction of a "relic" which the *cognoscenti* rivalled each other in praising, although not one of them took the pains to examine it. The student will appreciate the remarks on the varying thicknesses of the parts of a headpiece, which, in fact, differed from each other as much, and for the same reason, as the parts of the wearer's skull differed. The much esteemed "heaume of

Sir John de Berkeley," belonging to Sir Noel Paton, seems to be a copy made of rolled sheet iron (the roller marks are distinct). It was found to be weak where it ought to have been strongest, and distinguished from genuine examples by the so-called "venticular perforations of the mezail," or breathing holes, being punched *outwards* and the burs filed off, leaving a bright and uncorroded ring round each hole. In genuine specimens no trace of punching is visible, the plates being hammered flat after the holes were made, and each hole slightly countersunk on the outer side. Sir Noel's "relic" had a sham wooden crest, possibly of the seventeenth century, which probably suggested the whole helm and its circumstantial history to the forger who imposed on his customer. Nos. 137 to 140 are all condemned as forgeries, although three of them bear factitious names of knightly owners and even names of churches from above tombs in which they were said to have been taken. It is not improbable that several of the false antiquities classed under the head of forgeries in the book before us were really parts of armorial achievements taken from tombs, and, like much antique mortuary jewellery, not fabricated to deceive, but merely intended for sepulchral service and commemorative offices. Some of these things may have been memorials renewed by pious descendants of the dead, and made by ignorant craftsmen, too careless even to copy more ancient remains. Some relics have a sort of half-genuineness, and are really contemporaneous with the persons said to have worn them, but were not, as traditions allege them to be, the personal property of men of renown. Thus the fine heaume over the monument of Henry V. at Westminster is popularly supposed to have been worn by that prince, but by Rymer's 'Fœdera' it is known that for the king's funeral in 1422 a heaume was bought of Thomas Daunt for thirty-three shillings and fourpence. The heaume over the monument is undoubtedly a fine tilting helm of that period. Theatrical "property men" and modern trophies of arms have not seldom furnished "antiques" which were not intended to deceive.

In the course of a recent review of an effigy at Porlock, which has been referred to above, we took occasion to comment on the slowness of progress in matters of armour wearing and the gradual changes of costume as important points to be considered before it is possible to decide on the dates of monuments and to ensure correctness in delineating attire of the Middle Ages. On pp. 12 and 13 of this catalogue will be found some curious notices bearing on this subject. Some delineations are conventional, while the ancient artist's imagination not unfrequently supplied forms of armour which are obviously impossible, and could never have been in use. Tapestries are very frequently fallacious as authorities for costume. On the other hand, the armour in many early pictures has been closely copied from originals (for instance in P. Ucello's battle-piece in the National Gallery), and forms invaluable evidence. In the Liverpool Royal Institution is an old German picture which bears more artists' names than one, and represents in a group about the Crucifixion some men-at-arms wearing armour of splints covered with richly coloured velvet and studded with nails—a variation, in fact, of the well-known brigandine jackets described on pp. 117 and 118 of this book. A brigandine jacket in the late Meyrick collection had 5,500 nails.

A cause of confusion, more potent than the slow progress of changes, is that various fashions of armour prevailed in different countries at the same period, and a harness worn in France might be of the Italian fashion or of the German (see our recent remarks on the prevalence among the so-called Scottish weapons of Italian, German, and English examples). The armour of the statue of B. Coleoni at Venice, 1494, is, says this book (p. 12), as far advanced in ornament and decoration as the armour worn in Germany a quarter of a century later. In referring to the Porlock effigy we pointed out that a frequent cause of the retention of old forms of armour was the comparative poverty of the wearers, and we quoted a series of dated brasses which attest the long retention of old-fashioned armour. Armour of an antiquated type was, as might be expected, common in poor countries. Ireland is a case in point. "So conservative was that country," says the book before us,

"that at the end of the reign of Henry VIII. an Irish gentleman appeared in armour which would have been fashionable at the battle of Crecy, while under Queen Bess he had only reached the basinet, with a gorget of plate such as might have been worn at Agincourt."

The effigy of John Grace, in Kilkenny Cathedral, who died in 1552, wears a pointed basinet and a large camail, and has mail sleeves and *gloves* of *mail* such as were worn in England in the thirteenth century. In the review above mentioned we gave English examples which are hardly less curious. The Scotch were almost, if not quite, as backward as the Irish.

Not a few helmets have strange histories. There is a genuine basinet belonging to Aldborough Church, Holderness, of the fourteenth century, traditionally assigned to Sir John de Melsa (or Meaux), which, being deposed from its place of honour over the champion's tomb, long served as a coal-scuttle and held fuel for the church fires. It is a fine relic, and very similar in form to a specimen in the Christy Museum (British Museum), which is said to have come from Kordofan, on the White Nile, and was exhibited by the Viceroy of Egypt in Paris, 1867. Burges called the Baron de Cosson's attention to the fact that one of the indictments against Jacques Cœur, *argentier* to Charles VII. of France, was that he had sold armour to the Soldan of Babylon, as the Khalif of Egypt was then called, and it is not impossible that this helmet might have been exported by the great French merchant. Coal-scuttles shaped like helmets were not long since in vogue in this country, and it may be that they owed their invention to some such practice as that which disgraced the authorities of Aldborough, in Holderness.

ILLUSTRATED BOOKS.

Randolph Caldecott's "Graphic" Pictures has been reissued by Messrs. Routledge & Sons, and, of course, preserves the spirited trifling of the original work. At best the designs are far from equal to the clever draughtsman's earlier work, but in the letter-press and its cuts there is enough cleverness to ensure for the pretty book a popular welcome. Mr. Caldecott would be very unwise to endeavour to rival Leech. This is what he seems to aim at now.

More Outlines for the Little Ones to Colour (Wells Gardner & Co.) comprises neatly drawn figures of children in pretty actions, printed on sage-green paper, too dark for colouring except in chalks. "T. Pym" is the artist, and her works we have praised before. The same draughtsman has produced *Pictures from the Poets* (same publishers), which are not so good in design, but comprise a few that have animation and show careful drawing.

We have already commended the first number of *Art and Letters* (Remington & Co.); the first volume is now complete and turns out to be the elegant, accomplished, and popular periodical it professed itself. Among its contents is a series of intelligent essays on 'Modern Landscape,' with several good illustrations. Excellent are prints accompanying the essay on Millet (p. 3). Some of the best cuts have been borrowed from the works of M. Yriarte, *e.g.*, 'The Young Florentine,' after Granacci's picture at Berlin. Others, such as the 'Dancing Lesson' (p. 85), after Mr. Du Maurier's design, are unfortunate in showing lack of invention, richness, and style on the part of the draughtsman when compared with a dozen finer foreign examples. The vigorous text and brilliant sketches borrowed from MM. Meissonier, De Neuville, and Detaille for 'Military Painters' are capital examples of their kind. Fac-similes of sketches by Henri Regnault are especially welcome; they accompany a dashing and sympathetic memoir of the painter. Essentially a compilation, this work is a model drawing-room table book of the highest class in that category, and comprises numerous beautiful cuts of fine subjects, including pictures, statues, portraits, armour, tapestries, and what not, associated with high and decorative art, costume, and furniture. The text is, on the whole, more sketchy than solid, but it is rarely deficient in brightness and compactness—fruits of cultivated taste and art associations.

Messrs. Remington & Co. (Librairie de 'L'Art') have completed the publication of *L'Art*, 8me Année, Tome III. This is the thirtieth volume of the series, and not inferior to its forerunners, unless it be in the choice of a few inferior subjects for engraving among the pictures of the late *Salon*, *e.g.*, the 'Éventail et Poignard' of M. A. Falguières, a coarse, if not vulgar and meretricious example of much that is bad in taste and art. A series of critical articles on the *Salon* deserve attention. Some of the landscapes selected for engraving from that exhibition were worthy of the distinction, *e.g.*, the fine and pathetic 'La Saint Marc' of M. Yon. A spirited etching by M. Bocourt reproduces effectively the amazingly "clever" and ominously audacious and showy 'El Jaleo' of Mr. J. S. Sargent, which attracted all the untrained eyes in the Champs Élysées, as if it represented a new avatar of design instead of tending towards a coarse imitation of Velazquez as the highest aim of the painter. The 'Les Couturières' of M. Uhde gives no sufficient idea of the picture. A higher and uniform choice of subjects for its illustrations would add much to the value of *L'Art* as an exponent of design and sustain the pretensions of its title and the skill and tact lavished in its production.

The *Magazine of Art* (Cassell & Co.) has completed its fifth volume, the first of a new series, which proves to be much superior, in a literary point of view at least, to its immediate forerunner. Still it is extremely unequal, and, aiming at being very popular, the editor has printed several papers that are comparatively trivial, and criticisms that are crude, if not ignorant. One of the best essays is a light sketch, written with a lively appreciation for the subject, 'Greek Myths in Greek Art,'

XUM

by Miss Jane E. Harrison. Another good contribution is Prof. Colvin's notice of Dürer's drawings. A third of equal merit it would be hard to find in a volume the papers in which are too short to allow of due exposition of the subjects. Still, there is a good deal of pleasant reading to be found in Mr. Kershaw's 'Book Decoration,' Mr. G. Wallis's 'Decorative Iron-work,' and Mr. B. Champneys's notice of 'The Towers and Spires of Wren.'

The Draper's Dictionary: a Manual of Textile Fabrics. By S. W. Beck. ('Warehousemen and Drapers' Journal' Office.)—This volume gives us, in a more homely style than Fairholt's 'History of Costume,' a very fair idea of the "drapery" of our ancestors, using the word in its original sense, as well as a correct and very clear account of the numerous fabrics and articles of dress formerly or now in use. Not less interesting and useful are the accounts of the introduction into England of such commodities as cotton, alpaca, &c. Many of the articles are full of interest and information; amongst the more important we may mention those on flax, lace, linen, silk, and wool. The compiler has not been content to confine himself to the description and history of the various articles, but has also in many cases included statistics of the trade done in each. It would have been a great improvement and advantage if when books or authorities were quoted something like an exact reference had been given. In a work of this class we must not be too critical as to the etymologies given or suggested by the compiler—as, for instance, the derivation of the slang term "mortar-board" from Fr. *mortier*, given under "Cap," p. 52. Altogether we can confidently recommend the volume as one certain to afford instruction and amusement to many who want either the time or the opportunity to study the more elaborate works of Fairholt and Planché.

NEW PRINTS.

Mr. Lefèvre has sent us an artist's proof of the last plate engraved by the late Mr. W. H. Simmons. It is in the mixed manner of engraving, and reproduces Mdlle. R. Bonheur's picture of the head and shoulders of an ass which is one of her home pets. The animal is in front view, the body being foreshortened. The print is entitled 'An Old Pensioner,' and intended to be associated with 'An Old Monarch' and 'An Humble Servant,' by the same artists, which we have already admired. Apart from the painter's share, which is full of animation, character, and pathos, the print has all the qualities of a masterly drawing with the brush in monochrome, or black and white body colour. The foreshortened part is a little weak, if not flat; but the draughtsmanship of the head, especially the modelling of the nostrils, muzzle, and lips, is most creditable to the skill of the engraver.

From Messrs. Seeley, Jackson & Halliday we have received a proof of a line engraving by Mr. Lumb Stocks after Mr. Millais's diploma picture in the Royal Academy, representing a little English damsel seated on a pile of books, wearing a black dress of Spanish character. Her pale gold hair flows in ordered disorder on her shoulders; her hands lie in her lap with a branch of fruit. Being a reminiscence, or rather re-translation into the English mode of feeling and art from Velazquez's famous study in the Louvre (551) of the Infanta Maria Margarita, this charming little work is called 'A Souvenir of Velazquez,' and, without ceasing to be English, reproduces with spirit and taste the technical and pathetic motives of the Spanish master. The charm of the face has been well rendered by the engraver. The solidity of the line manner tends to greyness, and causes some lack of light richness of colour, and wealth of tone. To this, or a peculiarity of the impression before us, may be due a slight hardness and flatness which is the sole shortcoming of a little gem of fine art, not unworthy of choice cabinets. From the same publishers comes a proof of a plate engraved by Mr. F. Holl after Mr. Poole's picture of a boy sleeping on a rock near a moonlit sea, called 'A Midsummer Night's Dream.' It is a pretty little print, somewhat deficient in colour and the richness which characterized the art of Poole, and only needing to be carried somewhat further to be even better than it is.

From the Fine-Art Society comes a re-mark proof of an etching by M. L. Flameng after W. Nicholson's portrait of Thomas Bewick. The figure is seated, and shown to mid leg; the face is nearly in full view, turned one quarter to our right, and shown by a strong light, with deep and sharply defined shadows. The etcher's art being French, the features have, at least partially, the character of what may be called a translation into the language of his country, and have lost a trifling portion of the thorough Englishness of the engraver's countenance. In other respects, technical and the like, the work is a capital example of drawing and fidelity. The re-mark is a spirited transcript from T. Bewick's 'The Huntsman and the Hound,' executed for Gay's 'Fables.' We could not say better of the likeness before us than that it closely resembles John Jackson's version of his master's face.

Lettered proofs of Parts IV. V. and VI. of Messrs. H. Graves & Co.'s 'Works of Sir E. Landseer,' the library edition, lie on our table; and though we must reserve detailed criticism till the work is finished, a few words of praise are due to their usefulness as illustrating in a compendious form and moderate size the art and progress of the painter. Each part contains four prints. Of the twelve works before us one of the best is Mr. C. A. Tomkins's spirited reproduction in mezzotint of 'The Widow,' the white duck lamenting her drake extended at her feet, which is clear and good. Very soft and broad, but somewhat deficient in fibre of touch, is Mr. Josey's version of 'A Piper and Pair of Nutcrackers,' in the same mode of engraving. 'Morning,' by Mr. J. C. Webb, is not his best production. Mr. Josey's 'The Sick Monkey' is first rate in all respects. Mr. Tomkins's 'Midsummer Night's Dream,' or 'Oberon and Titania,' is beautifully drawn and modelled, but there is excess of black in the shadows; his 'Maid and the Magpie' is excellent. Mr. Webb's 'Night' might be much better, and so might his 'Sleeping Bloodhound,' which is hard and spotty.

A number of etchings, comprising varied states and proofs, which Mr. J. F. Hudson has sent us from Shieldfield, Newcastle-on-Tyne, are, he writes, the results of an attempt to achieve self-expression and independent art. These works are preparing for publication shortly. Our advice to our correspondent is to refrain from issuing works of this nature until by unflinching practice of draughtsmanship he has gained power enough to render natural forms completely and faithfully. At present he is unable to do more than suggest the pathetic ideas of landscape which are in him. His figure drawing will not bear examination. The supposed facility of etching will surely be injurious to solid studies in art. That the number of persons who believe etching to be easy and drawing superfluous is prodigious, is proved by the number of poor prints we receive. Possession of etching needles and plates will not make artists.

Messrs. W. H. Biggs & Co. have favoured us with 'Wilkes Ancient and Modern, being Portraits of Messrs. John Wilkes and C. Bradlaugh,' by Mr. W. Strang. They are both very bad, boneless, and trivial.

Decade II. of 'Plant and Animal Forms as used by Workmen of the Middle Ages' comprises transcripts of Gothic carvings, the originals of which have the highest merit. They were made by Prof. D. Oliver, of Kew, to whom we would suggest that photography would be the best medium for carrying out his excellent intentions in respect to this privately printed work.

Fine-Art Gossip.

A complete rearrangement of the pictures and sculpture in the National Portrait Gallery has been resolved on and will be commenced forthwith. The portraits formerly in the British Museum and hall of Serjeants' Inn will no longer be kept apart, but incorporated chronologically in the general series. Every picture will have, according to rule, a distinct statement on the frame of the donor's name. It is not intended to close the whole of the gallery during the alterations, but one portion or another will always be open to the public.

The great attraction of the Grosvenor Gallery Exhibition, to be opened on the 1st of December next, will be a representative and, so far as possible, complete gathering of the works of Mr. Alma Tadema. The signal success attending the exhibition of Mr. Watts's pictures in this place has prompted repetition of the experiment. Owners willing to lend pictures are requested to communicate with Sir Coutts Lindsay, at the Grosvenor Gallery, New Bond Street. We trust that several masterpieces from continental collections will appear at the Grosvenor.

Collectors and students of the history of art in England will be glad to learn that it is the intention of the Royal Academicians to reprint and publish, with indexes prepared under the direction of Mr. Eaton, Secretary to the Academy, the whole of the catalogues of the exhibitions of the body from the first to a comparatively late period. This reprint will be sold at a price sufficient to pay the expenses of the undertaking, not more.

Mr. F. G. Stephens is engaged on a work treating at length the art-life and pictures of his old friend and "P.R.B.," Dante G. Rossetti.

It may be desirable to remind our artistic readers that the Paris *Salon* is open to Englishmen as well as the natives of every other country. Englishmen, compared with other nations which cultivate art with success, contribute but scantily to the great gathering. Pictures intended for the next *Salon* must be delivered in Paris early in April next.

The only catalogue now sold at the National Gallery is, so an angry and disappointed correspondent declares, the reduced version of the account of foreign pictures; no catalogue whatever is obtainable of the British works. The larger catalogue of foreign examples has long been out of print.

The usual exhibition of the Photographic Society was opened on Monday last in the gallery of the Society of Painters in Water Colours, Pall Mall East.

Some French papers report that, on the night of the 25-26th ult., a thief abstracted from the Musée at Grenoble a collection of medals in gold which have been valued at 800,000 francs. The works were contained in thirty-five cases, all of which were opened with false keys, except one, which was forced. In all 1,911 medals have been, it is said, taken away by the thief or thieves. The intrinsic value of the metal stolen is estimated at 20,000 francs. Access was obtained by an unguarded door in the basement.

MUSIC

BRISTOL MUSICAL FESTIVAL.

The fourth triennial musical festival at Bristol takes place during the coming week at Colston Hall, under the direction of Mr. Charles Halle. It commences with a performance of 'Elijah' on Tuesday morning, in which the principal solo parts will be sustained by Miss Anna Williams, Madame Patey, and Messrs. Joseph Maas and Santley. On Tuesday evening Beethoven's great Mass in D is to be given, the soloists being Madame Albani, Madame Patey, Mr. Edward Lloyd, and

XUM

Mr. Robert Hilton. The Mass will be followed by a miscellaneous selection. Gounod's new oratorio 'The Redemption' will be brought forward on Wednesday morning, and will doubtless form one of the chief attractions of the festival; while on the same evening a miscellaneous concert is to be given, the most important items of which are Schumann's 'Rhenish' Symphony, Beethoven's Concerto in G, played by Mr. Halle, and the "Spring" from Haydn's 'Seasons.' Rossini's 'Moses in Egypt' will occupy Thursday morning; and the one absolute novelty of the festival, Mr. A. C. Mackenzie's cantata 'Jason,' is to be given on the evening of the same day. A performance of the 'Messiah' on Friday morning will bring the festival to a close.

The degree of approval that will be accorded to this scheme will largely depend upon the standard by which it is judged. If compared with the programme of the last Bristol festival, in 1879, the management may at least be congratulated on having to some small extent recognized the claims of English art. While reserving till after the performance any detailed criticism of Mr. Mackenzie's new cantata, we can at least say, from an examination of the score, that we believe it will fully justify its place in the programme of the festival. But with this single exception the talent of our countrymen is as much ignored as ever; the only other pieces from English pens to be found in the whole series of programmes are a song by Mr. F. Clay and an unaccompanied chorus by the late Dr. S. S. Wesley. In this respect Bristol contrasts very unfavourably with Birmingham. At the recent festival in that city English music was worthily represented, three new and important works being brought forward; and the festival was the most successful of recent years. Bristol, however, seems nearly as unwilling as heretofore to admit that anything of home production can have value; nay, more, she appears to entertain considerable apprehensions with regard to novelties of any kind. Gounod's 'Redemption' may almost claim that title, we admit; but excepting this work and 'Jason' there is nothing in the whole scheme of the festival which is not familiar to music lovers in general, and very little with which the Bristol public are not familiar.

Unfortunately the distrust of native art on the part of the Committee is not confined to the selection of the programmes. We spoke on this subject three years ago, and, as a matter of simple justice, we must recur to it again. Why is the Bristol Cathedral and Borough organist, Mr. George Riseley, completely ignored? For many years he has been working in the city, at heavy personal sacrifice, for the cause of music; he has given Bristol a permanent series of orchestral concerts such as very few provincial towns enjoy, and the Festival Committee show their appreciation of his services by relegating him to the subordinate position of accompanist at the organ. For the sake of argument we are willing to admit that it was thought more expedient to engage Mr. Halle as conductor. His name may have been relied upon to "draw," for no one could be found better qualified for his post; it is possible, also, that by engaging his band *en masse* a considerable saving of expense may have been effected. How this may be we know not, and without further information we do not condemn the Committee for not engaging Mr. Riseley to conduct the festival. But it is impossible to acquit them of putting a slight upon their organist in not having asked him to play a solo at one of the concerts. Colston Hall possesses one of the finest organs in England; and if Mr. Riseley had been invited to play a fugue of Bach's or a sonata of Mendelssohn's, it would at least have been a compliment which was no more than due to him. But, as is generally the case, a prophet has no honour in his own country. It is too late, of course, now to rectify any errors into which the Committee may have fallen; but we believe that if they continue in their present policy it will be long before their festival will take rank with those in which English art is less grudgingly recognized.

Musical Gossip.

The Saturday Concerts at the Crystal Palace will be resumed this afternoon. The special feature of the concert will be the first performance in England of Brahms's new Pianoforte Concerto (No. 2, in B flat), which will be played by Mr. Oscar Beringer. The programme will also include Bennett's overture, 'The Wood-Nymph,' Beethoven's Symphony in A, and the "Waldweben" from Wagner's 'Siegfried.' Mr. Edward Lloyd will be the vocalist.

The Opéra Comique Theatre reopened on Monday evening with an entertainment of a novel character, carried out entirely by ladies. Miss Lila Clay, who directs the company, has not been over careful in the selection of its members, some of whom would be better fitted for the music-hall. Others, however, possess vocal, if not histrionic ability, and with care and tact the programme might be made pleasing and graceful. An operetta, entitled 'On Condition,' by Messrs. Reece and Meyer Lutz, achieved only a partial success, the music being greatly superior to the libretto.

We have already mentioned that Mr. A. C. Mackenzie has completed his opera 'Columba,' to be produced under Mr. Carl Rosa next Easter, and it is now said that Mr. Rosa has arranged with Mr. Goring Thomas to compose an opera for the season of 1884. This encouragement of native talent deserves warm acknowledgment from musicians.

Herr Richter announces two orchestral concerts to be given at St. James's Hall on Thursday, November 9th, and Tuesday, 14th. The usual series of nine concerts will be given next season.

Madame Christine Nilsson and Mr. Sims Reeves gave a joint benefit concert at the Albert Hall on Thursday evening. This was the first concert of the autumn season, but as the programme was entirely of a popular character it needs no comment. The artists announced to assist were Madame Trebelli, Miss Clements, and Miss Spencer Jones, Mr. Herbert Reeves, Mr. Barrington Foote, and Mr. Santley.

While English musicians are about making the acquaintance of Brahms's Second Pianoforte Concerto in B flat, the composer, according to intelligence received from Germany, has just completed two new works, a String Quintet in F and a Pianoforte Trio in C. The *finale* of the quintet is a fugue, and the slow movement of the trio an air with some surprisingly original variations. Both works are said to be in the composer's best manner.

The tablet erected in Westminster Abbey in commemoration of Michael William Balfe is to be unveiled next Friday, the 20th inst., after the evening service at three o'clock.

Mr. Geaussent was announced to give a pianoforte recital at St. James's Hall on this (Saturday) afternoon. His programme was well selected, and included Beethoven's Sonata in F minor, Op. 57, Sterndale Bennett's sonata, 'The Maid of Orleans,' and items by Bach, Chopin, Schumann, Heller, Scharwenka, and Rubinstein. Miss Spenser Jones was the vocalist.

The Popular Ballad Concert Committee commence their winter series of concerts for the people next Saturday evening at the Foresters' Hall, Clerkenwell.

Mr. Charles Halle has issued the prospectus of his coming series of concerts at Manchester. As this will be the twenty-fifth season of these concerts, Mr. Halle proposes to give, as far as possible, a complete series of representative works by the greatest composers. Among those to be brought forward are Bach's 'Passion Music'; Handel's 'Messiah' and 'Israel in Egypt'; Haydn's 'Creation'; the first act of Gluck's 'Alcestis'; Mozart's Symphonies in G minor and C major; Beethoven's Mass in D, and his C minor, A major, and 'Choral' Symphonies; Mendelssohn's 'Elijah' and 'Scotch' Symphony; Schubert's Symphony in C; Spohr's 'Weihe der Töne'; Rossini's 'Stabat Mater'; Schumann's Symphony in C; Berlioz's 'Faust' and 'Harold'; and Bennett's 'Woman of Samaria.' The services which Mr. Halle has rendered to the cause of music in Manchester are so well known that there can be little doubt that the inhabitants of that city will seize the opportunity, on the completion of a quarter of a century of these concerts, of showing their recognition of what he has done for art.

It is announced that the posthumous works of the late Chevalier Lemmens are to be published in three volumes, under the auspices of a committee, at the head of which is M. Gevaert.

The Stern 'sche Gesangverein of Berlin will commence its season on the 4th of November with a concert in commemoration of Mendelssohn. Bruch's 'Odysseus' and Handel's 'Judas Maccabæus' are to be given later.

Armenian opera is prospering in Turkey. At Smyrna is announced the first representation of 'Leblebiji Horhor Aga,' a comic opera in three acts, by the "Maestro" Chohajian (Draper), with several new singers, special decorations and costumes, and an orchestra of fourteen musicians. It appears to be an extraordinary production. The libretto is thoroughly Oriental, or rather Turkish, the personages being Turkish, with a love adventure, an endless succession of intrigue, and abundant buffoonery. The music is described as a medley from the Paris *répertoire*, and rather too much for the incapacity of the orchestra. The *prima donna*, Miss Siranush, is well spoken of. The opera is evidently admirably suited to its audiences. The same Armenian company performed with success a Turkish version of 'La Belle Hélène.'

DRAMA

THE WEEK.

Lyceum. — Shakspeare's Comedy 'Much Ado about Nothing.'

Haymarket. — 'The Overland Route,' a Comedy in Three Acts. By Tom Taylor.

Of the comedies of Shakspeare which retain possession of the stage, 'Much Ado about Nothing,' revived on Wednesday night at the Lyceum, stands second in order of popularity. Yielding to 'As You Like It' in most dramatic and poetical respects, it takes precedence of 'Measure for Measure' in being more distinctly a comedy, including no such episode as that of Barnardine, and touching upon no matter so repellent as the cowardly supplication of Claudio to Isabella. With 'Twelfth Night' it runs neck and neck, winning, so to speak, only in the last stride. In their introduction of fairy machinery, and the consequent opportunity they offer for musical and scenic accessories, 'The Tempest' and 'A Midsummer Night's Dream' stand apart. 'The Comedy of Errors,' 'The Merry Wives of Windsor,' and 'The Taming of the Shrew' belong to Shakspearean farce; and 'The Merchant of Venice,' when, as is ordinarily the case in representation, the romantic setting is removed or reduced to insignificance, is hardly to be distinguished from tragedy. There remain 'The Winter's Tale,' which for some inexplicable reason is judged by managers a dangerous play; 'The Two Gentlemen of Verona' and 'All's Well that Ends Well,' pieces which, except at the famous Sadler's Wells revivals, have not been seen in

London for a couple of generations; and 'Love's Labour's Lost,' of the performance of which, unless it was given at Sadler's Wells, no record is preserved.

In the present instance the preference accorded 'Much Ado about Nothing' over 'Twelfth Night' is probably due to the fact that Mr. Irving, who, in a revival of the piece last named, stands pledged to play Malvolio, elects to appear in a part like Benedick, in which he may profit by the bright companionship of Miss Terry. To award the present performance of 'Much Ado about Nothing' precedence in respect of scenic adornment and *ensemble* over any previous representation is to say little in its favour. No specially noteworthy revival of 'Much Ado about Nothing' can be recalled. Not a single name of eminence since that of Mrs. Charles Kean is associated by the present generation with Beatrice, and Wallack is the only man since the days of Charles Kemble who has made a reputation as Benedick. In the more remote past even there are few representations which attract special attention. The cast at the first recorded performance—Lincoln's Inn Fields Theatre, February 9th, 1721—remains uncertain. Garrick on his first appearance as Benedick—Drury Lane, November 14th, 1748—was all but eclipsed by his Beatrice, Mrs. Pritchard. When, thirty-nine years later, at the same theatre Kemble assumed the same character, he was doubtful of the attraction, and supplemented it by a recitation of Collins's 'Ode on the Passions.' This occasion seems, however, in the retrospect one of the most noteworthy on record, the cast including Parsons as Dogberry and Miss Farren as Beatrice.

On the whole, 'Much Ado about Nothing' must be pronounced the most successful of Mr. Irving's Shakspearean revivals. As a spectacle it is at least equal to 'The Merchant of Venice' or 'Romeo and Juliet'; as a performance it attempts no such innovation as in the former piece startled Shakspearean students, and manifests no such incongruities as in the latter damped the ardour of the most enthusiastic supporters of the management. The principal actors are, indeed, suited to the *rôles* they assume, and it is only in subordinate characters and in matters in which a complete reproduction of past life is not easy that shortcoming is detected. Benedick is probably the best Shakspearean performance Mr. Irving has yet supplied. In eccentric comedy Mr. Irving has few equals, and his banter of Beatrice is given in admirable style. No actor of whom the present generation has any knowledge or preserves any recollection can claim to have so thoroughly entered into the character or charged it with equal vitality. Except that, on the strength of the speech of Don Pedro concerning the fancy that Benedick "hath to strange disguises, as to be a Dutchman to-day, a Frenchman to-morrow," &c., too many costly garments are worn, the performance does not depart from nature, and to compensate for this drawback it has much fancy and variety, and attains distinct intellectual elevation. Commencing a little tamely, the Beatrice of Miss Ellen Terry improved, until in the stronger scenes it reached a high point of excellence. Nothing could be better than the scenes in the garden; and the defence of Hero and the challenge to Benedick to kill Claudio were charged with an amount of feeling they rarely display. Few Benedicks could be found to resist such conjuration as was supplied. Miss Millward played well for a *débutante* as Hero; Mr. Glenny was a good Don John; and the Leonato of Mr. Fernandez and the Antonio of Mr. Howe were satisfactory performances. Mr. Terriss lacks the distinction essential to Don Pedro, and Mr. Forbes Robertson the fire requisite in Claudio. Much of the scenery was admirably artistic, and the representation of the cathedral at Messina may vie in impressiveness and splendour with the famous temple of Artemis in 'The Cup.'

To the establishment of a national theatre, such as the management of the Haymarket Theatre is supposed to contemplate, a national drama is an indispensable preliminary. This, unfortunately, England cannot claim. To point to that drama of past days which constitutes the most splendid possession any nation can boast is not to the purpose. It is time the fact should be recognized that a very small portion of the public can ever be led to take an active interest in a world outside that in which it lives. A clever man is reported to have said that when a new book was published he read an old one. For one who has consciously withdrawn from participation in the world's struggle such a course is probably the wisest to be adopted. To the majority of readers, however, the living dog is better than the dead lion. To carry out this argument and to show how wide is its application would furnish matter for a volume, and cannot be attempted as preface to a notice of a modern revival. Few, however, who regard philosophically the development of human nature will question the allegation that, under the most favourable conditions and among the most art-loving people, a very small portion of the drama of past times can be rendered generally acceptable. Shakspeare is an exception to all rules. Of his works, however, a very small per-centage, as we have remarked above, holds the stage, and his contemporaries are practically buried. Buried, too, is, so far as regards the stage, the drama of Dryden, Wycherley, Fielding, Byron, and a score of writers of scarcely less repute. One comedy of Goldsmith, two comedies of Sheridan, and so forth—half a dozen works in all of past ages—are frequently accessible on the stage to the modern public. The drama of even a generation ago is dead. What curiosity now exists concerning 'The Willow Copse' and 'The Flowers of the Forest'? As the best-known interpreters of these plays vanish from the stage the memory of the plays fades with them. In France it is now a dangerous experiment to revive the elder Dumas. Recently 'La Tour de Nesle,' once held one of the most effective of melodramas, has been timidly brought upon the stage, and has been found laughable. Nothing short of absolute incapacity to obtain a play dealing with modern subjects and written in what may be called the key of to-day could have induced the Haymarket to mount 'The Overland Route.' Twenty-two years only have passed since this play, clever enough in its time and in its fashion, was first set on the stage. Already, however, it is out of date. At no time was it more than a species of entertainment in which actors then at the height of their reputation were seen to advantage.

As its hero Charles Mathews worked a series of miracles, carrying, with his jaunty air, his imperturbable and passionless good nature, and his contentment with himself, a character that in the hands of a more serious actor would have been rejected as preposterous. In the method of this excellent comedian there was something that dulled the edge of ridicule. Into the good characters he played he imported as it were a portion of his personal identity. Avowedly not a good man himself, the good man he presented was only a good man for Charles Mathews. Regarded in this light the character of Dexter became conceivable. Mr. Compton's drollery rendered diverting in the Anglo-Indian he presented the loss of false teeth and the silence thereby imposed, in themselves not supremely funny things. Buckstone, meanwhile, in manacles as a malefactor was a sight to rouse Homeric laughter. When these actors disappear what is left is seen to be not even a piece.

With all seriousness, however, the Haymarket has tried to put life into these dead bones. It has accomplished wonders. Thanks to a mounting in its way unsurpassable, it succeeded at the close of the second act in stirring in the public genuine emotion. Just as the select public that went to the Dutch plays was stirred when in the representation of 'Marie Antoinette' it became aware of the approach of an unseen and a terrible mob, heard the dull, low sound of menace like the roll of distant thunder, and the sharp cry recalling the flash of lightning, even so felt the large public which thronged the Haymarket when in the night watch the ship presented the spectacle of undisciplined panic to be expected when alarming and irreparable calamity happens at sea. True to its self-imposed mission, the management has given 'The Overland Route' the best mounting it has ever received, and has supplied the best cast obtainable. The only result of this is to show how essentially flimsy is the play. Subordinate characters such as Sir Solomon Fraser and Mr. Colepepper obtain probably the best rendering they have ever received. Mrs. Bancroft is, however, too good for a part so insignificant as Mrs. Sebright; and Mr. Bancroft, who as Tom Dexter conquers his mannerisms, and plays with sincerity, truth, and earnestness worthy of all praise, renders the character only the more improbable. Mrs. John Wood, delightfully comic, and Mr. David James, conscientiously artistic and humorous, make the most of the character of the Lovibonds. The revival will probably be a financial success. Art, however, in the representation is concerned with externals only.

Dramatic Gossip.

A NEW farce by Messrs. Arthur Law and George Grossmith, produced under the title of 'Mr. Guffin's Elopement' at Toole's Theatre, may claim to supply Mr. Toole with one of the most genuinely comic characters he has recently assumed. As Benjamin Guffin, an elderly gentleman eloping with a middle-aged bride, Mr. Toole is placed in a comic predicament in which he has to hear from a rival, who fails to

recognize him, a description of the chastisement in store for him. Mr. Toole's display of terror and his attempts at escape are as funny as they can be. A song called 'Catching the Speaker's Eye' is nightly encored.

A MONOLOGUE by Mr. C. Brookfield, delivered by that actor as a *lever de rideau* at the Haymarket, appears from its subject to be French in origin. It represents the difficulties of a young gentleman surprised by his *fiancée* at the moment when he expects a compromising visit from another lady. Mr. Brookfield is as yet deficient in lightness. The delivery of the trifle is, however, creditable.

IN February next Mr. Kyrle Bellew will commence a tour in the country with 'Romeo and Juliet,' the representation being in all scenic and spectacular respects the same as was supplied at the Lyceum Theatre. This is Mr. Bellew's first effort at management.

'CHARLES VII. CHEZ SES GRANDS VASSAUX,' a five-act tragedy of Alexandre Dumas, first played in 1831, has been revived at the Odéon. Its heroine is Agnes Sorel, who rouses the indolent monarch to take arms to expel the English.

LITERATURE

The Friendships of Mary Russell Mitford, as recorded in Letters from her Literary Correspondents. Edited by the Rev. A. G. L'Estrange. 2 vols. (Hurst & Blackett.)

In Maclise's well-known *Fraser* portrait gallery is a group of the popular authoresses of the day. There, sitting round a tea-table, are Mrs. Norton and Miss Porter, Lady Morgan and L. E. L., while between Mrs. Hall and Harriet Martineau appears—but we will quote Maginn's queer versified prose: "And last, the jolliest of them all, soft seated on a well-filled bustle, her coffee sips, by Mrs. Hall, dear darling Mitford (Mary Russell)." 'Regina's Maids of Honour' is the title of the engraving; and now poor "Regina" herself (the old, fond, half-forgotten name for *Fraser*) has passed away, and who is there to bury her?

Of all this sisterhood none has left a happier memory behind her than Miss Mitford. She was not, of course, in any true sense of the word a great author, but she was a very pleasant one. Her books are fresh with all the freshness of country life. They are redolent of wild violets and garden roses. The sights and sounds, the joys and sorrows of a quiet village, the natural beauties of hedgerow, woody copse, open moorland, or tangled lane, have never, perhaps, been drawn with truer or more tender touch. Her pictures become a trifle monotonous, no doubt, for her opportunities and her genius were neither of them wide in range; but if they are looked at one by one they are admirable of their kind.

But what Miss Mitford chiefly prided herself upon were her tragedies. "And yet at her kind heart sat Tragedy thinking," says Leigh Hunt in his 'Bluestocking Revels.' Her great triumph was 'Rienzi,' of which she here tells us that seventeen editions went forth to the world. It was popular on the American no less than on the English stage, and Miss Mitford, who seems to have been very fastidious in the matter of actors, observes in one of her latest letters that it would now have a still better chance, "since Macready has left the stage and his most offensive mannerisms will die out." Some of her other plays were also successful, but some got astray in the pigeon-holes of managers, and for her 'Charles I.' she was unable to obtain a licence, and it could only be acted on the other side of the Thames. The reason of the refusal of the licenser of plays it is hard to guess, especially as we are told that "all political allusions were carefully avoided." She appealed to the Duke of Devonshire for assistance, but he declined to interfere, though, with an eye to business, he begged to be allowed "to retain the copy of your play, to add it to my dramatic library." But it will not be by her tragedies that Mary Russell Mitford will be remembered. Her best friends (and her friends knew how to flatter) hardly placed her on a level with Joanna Baillie, and who now reads the 'Plays on the Passions'? Her 'Recollections of a Literary Life' will not, however, be soon forgotten, and probably the survival of the fittest may be exemplified here rather than in 'Our Village.' With much grace of style and enthusiasm of manner Miss Mitford has blended her personal reminiscences of interesting men of letters with extracts from their prose and verse. The book is singularly unhackneyed, and many of the best poems she gives were quite new to her readers. She had a knowledge, too, of American literature before American literature was much read among us, and in one of these newly printed letters she says, with conscious pride, "As for Dr. Holmes, who lives, they say, on every man's lips in Boston, he was totally unknown in England till I published my book."

Hardly less delightful are Miss Mitford's letters. The two volumes before us purport to be rather the letters from her friends than those she wrote herself; but although the bulk of her letters have already been harvested there is a sufficient gleaning here. She wrote better than any of her correspondents, for, as she says in her 'Recollections,' "My theory as to letter-writing is that it should be like the easiest, most careless off-hand talk"; and her own talk was always good. Then she was a warm-hearted and affectionate little woman. She honestly believed that no one ever had such an admirable father, nor any one such adorable friends: not a goose among them but in her eyes was the most magnificent of swans. She was insatiable of friendship, and, as love is apt to beget love, many of her friends were really very warmly attached to her. Occasionally, too, she developed a curious hero-worship, and her admiration for Louis Napoleon, of all people in the world, amounted to a craze.

"Mr. Fields," she writes, "who saw much of him, and was close to him for two hours at a ball at the Tuileries, is quite as enthusiastic about him as Mrs. Browning and I. So is dear old Lady Stanley, who was here yesterday. Mr. Fields says that he never saw such manners in his life, such dignity, such courtesy, such simplicity, such grace."

And there is a great deal more of it. She carries what she calls the Louis Napoleon "faith" to the extent of saying:—

"Truly, of all the fine things Louis Napoleon is doing for France, none, to my mind, is so valuable as the putting down of journalism! That vile engine, the Press, is to genius of modern times what the rack was of old."

In 1834 Miss Mitford visited London, and in a letter to a friend she describes the people with whom she was particularly charmed. It was certainly an incongruous selection:—

"The woman whom I like best is Harriet Martineau, who is cheerful, frank, cordial, and right-minded in a very high degree, and my favourite amongst the men is decidedly that most accomplished and delightful person, Mr. Hayward (the translator of 'Faust'), a very young man, but decidedly the leader of the best London society. I also liked much Mr. Willis, an American author, whose unwritten poetry and unwritten philosophy you may remember in my American book, and who is now understood to be here to publish his account of England. He is a very elegant young man, and more like one of our peers' sons than a rough republican."

We hope Mr. Hayward will feel duly flattered by an admiration in which Mr. N. P. Willis so largely shares. But the author of 'Pencillings by the Way' seems to have fascinated several people. Mrs. Hofland, writing to Miss Mitford, says she set him down (can anything be more delightful?) "as a nobleman or as an Oxford man," and declares him "my beau-ideal of a gentleman." As for Harriet Martineau—what would poor Miss Mitford have thought had she lived to read what her sister authoress wrote about "her habit of flattering and the twin habit of disparagement of others," adding, "I never knew her respond to any act or course of conduct which was morally lofty"? The second part of these strictures probably only means that Miss Mitford was not an ardent abolitionist; but as regards the flattery and the disparagement there certainly was some ground for amused censure. As we have already said, Miss Mitford was a kindly little woman and most susceptible of kindness from others. A word of cordial praise, some cuttings for her garden, a present of grapes, almost any unconsidered trifle, went to her heart at once, and she was probably your friend for life. On the other hand, if she did not know you, or you did not care about her, she could be as bitter as the bitterest of her critics. In these volumes of her "Friendships" there are some estimates of men and books which are severity itself. She speaks of Leigh Hunt's "want of truth" and "eternal mendicancy," and of Wordsworth being "wrapt up in the double worship of his own poetry and of mere rank and riches in others." She asserts of Dickens and Jerrold and Bulwer that they are "all, to my fancy, so vulgar in their different ways"; and again, while saying that Lever's "works are so unmistakably those of a gentleman," she makes a clean sweep of various reputations:—

"The English novels of these days seem to me more detestable the one than the other,—Dickens all cant (Liberal cant, the worst sort) and caricature; Thackeray all cynicism, with an affectation of fashionable experience; and the lady-writers, the Miss Jewsburys, the Miss Lynns, and *tutte queste*, emulous of the passion and daring of George Sand, without her grossness, but also without her genius and her beauty."

She supposes that Lamartine is "always false," and has an "incapacity for appreciating truth." Guizot fares almost worse, for he is "a solemn coxcomb with a good deal of the hypocrite about him." She thinks

"Longfellow has beautiful bits, but his prose is trash, and I confess that I think he owes his success here quite as much to his faults, his obscurity, his mysticism, and his little dash of cant as to his merits."

XUM

There is one more depreciatory extract which is too amusing not to give. Miss Mitford is writing in 1853:—

"Do you see the *Times*? and if so, do you remember certain letters signed 'An Englishman' abusing my dear Emperor? Those letters had a tone of authority which might have become not merely a judge or a bishop, but a cardinal or Lord Chancellor. Well, they were written by an undergraduate at Oxford, a lad called Vernon Harcourt.....The letters were inflated and bombastic enough for Tom Thumb; but there was an air of grandeur about them which must have taken in the *Times*. What a fool the lad was not to keep his own secret!"

But the old lady's story is not strictly accurate, for the "lad called Vernon Harcourt" was a Cambridge, and not an Oxford, undergraduate, and at this time was not an undergraduate at all. Nor is it certain he was the writer.

The letters addressed to Miss Mitford, as here given to us, are extremely miscellaneous. Some are good enough, but others were barely worth preserving as autographs, and many were not worth preserving on any ground. The most amusing letter is one from an unknown young Irishman, who says, "Dear Madam, excuse my freedom, but I love you with all my soul"; he is full of admiration, and indulges in a dream of how Miss Mitford might be driven by a storm to take refuge in his mother's cottage, and, "Oh, delicious! to see you sitting at the fireside cracking with my mother, while I would be ransacking the presses for everything drinkable and eatable." Rather a platonic sort of love, but no doubt gratifying, for Miss Mitford's friends were not in the habit of turning into lovers. Still, in 1829 there was a report that Miss Mitford had married a distant relative and been taken off to his beautiful place in Northumberland, and Mrs. Hofland writes a gushing letter to tell Mrs. Hall the good news. But the good news is unconfirmed, and Mrs. Hofland is obliged to ask Miss Mitford herself the delicate question: "I have loved you too long and too well to sustain the solitude which belongs to uncertainty any longer—are you married or not?"

Of the other letters there are some characteristic ones from Cobbett, chiefly about coursing, some really clever ones from Sir William Elford, and some full of pleasant gossip from Mrs. Trollope. Then there are letters from Mrs. Hofland, Mrs. Hall, Mrs. Opie, the Howitts, Talfourd, Ruskin, and others of less interest. A few from Miss Barrett (Mrs. Browning) were worth publishing, and Miss Barrett long continued one of Miss Mitford's truest friends. It was genial John Kenyon who brought them together and who also introduced Mr. Fields, the American, to Miss Mitford. In later life Mr. Fields's untiring kindness was one of Miss Mitford's greatest pleasures. He wrote to her often, sent the different books he published, and never came to England without seeing her. Another American correspondent she also had in Miss Sedgwick, with whom she must have had much in common, and whose reputation in America was not altogether unlike her own. Mr. Ticknor, too, saw her when he was in this country; but the American for whom she had the greatest literary reverence, Dr. Holmes, she never met, and we do not gather that she ever saw Hawthorne, whom she also greatly admired. In one of her letters, however, there is a bit of nonsense about Hawthorne which is perhaps worth knocking on the head. She writes, "Miss Brewer [Miss Bremer, of course], who was two years in America, told Mrs. Kingsley that Hawthorne was mad." Now Miss Bremer's interview with Hawthorne (she only saw him once) has been described by herself:—

"I spent one evening with Hawthorne in an endeavour to converse. But whether it was his fault or mine I cannot say, it did not succeed. I had the talk to myself, and at length I became quite dejected and felt I know not how."

Hawthorne's own account of this interview, as told to an English friend, quite explains Miss Bremer's discomfiture:—

"Miss Bremer is an odd little woman; she talks very fast and not very good English. I couldn't get on with her, for she threw me off my guard at once and destroyed all my presence of mind by saying, 'I do so love you because of "The Great Stone Face"' [one of his smaller stories]. She told my wife, too, that I reminded her of 'The Great Stone Face.'"

It is distinctly hard upon "The Great Stone Face" that, because the Swedish novelist could not make it talk, it was to be called mad!

There is one story too good to be omitted, and then we must close our extracts. Miss Mitford is giving an account of a conversation Mr. Fields had had with Carlyle:—

"'So, sir, ye 're an American?' quoth the self-sufficient Scotchman. Mr. Fields assented. 'Ah, that 's a wretched nation of your ain. It 's all wrong. It always has been wrong from the vera beginning. That grete mon of yours, George' (did any one under the sun ever dream of calling Washington George before?)—'your grete mon George was a monstrous bore, and wants taking down a few hundred pegs.' 'Really, Mr. Carlyle,' replied my friend, 'you are the last man in the world from whom I should have expected such an observation. Look at your own book on Cromwell! What was Washington but Cromwell without his personal ambition and without his fanaticism?' 'Oh, sir,' responded Carlyle, 'George had neither ambition nor religion, nor any good quality under the sun. George was just Oliver with all the juice squeezed out.'"

Miss Mitford evidently tells this story with some delight, for she did not like Carlyle. She says (in 1852):—

"In England his fashion is waning rapidly, and I have no doubt but that, like most over-rated men, he will live to share the common fate of idols—knocked down by his former worshippers in revenge of their own idolatry."

Of the editing of this book it is unfortunately impossible to speak in high terms. The letters seem fairly well arranged up to a certain date, and then suddenly the reader passes from a letter of Bayard Taylor's in 1854 to one of Miss Edgeworth's, not addressed to Miss Mitford, in 1843. The fact seems to be that a collection of letters belonging to Mr. Starkey fell into the editor's hands, and he has thrown them together at the end of the second volume. But the first thirty pages of this collection have nothing whatever to do with Miss Mitford, and, though no doubt of interest in Mr. Starkey's own biography, are here absolutely out of place. Then we have an index, but an index so disgracefully incomplete that it serves only to mislead. The misprints—we suppose they *are* misprints—are rather serious; these are only a few of the more important:—"Lady Beecher" (ii. 12, 24) should be *Lady Becher*; "Judge Family" (ii. 189) should be *Fudge Family*; "Mr. Payne" (ii. 113) should be *Mr. Payn*; "Sefton Court" (ii. 219) should be *Ufton Court*; "Mr. Nielson" (ii. 156) should be *Mr. Neilson*; and "Gramont" (ii. 232) should be *Grammont*. Then it was not "A. Harvey," but A. Ramsay, who wrote 'The Gentle Shepherd'; and Hawthorne's story is not 'The Great Stone Tale,' but 'The Great Stone Face.' Lastly, Mr. Kenyon's poem is not 'The Rhymed Plea,' which suggests nothing, but 'Rhymed Plea for Tolerance,' which means a good deal.

A Short History of French Literature. By George Saintsbury. (Frowde.)

Mr. Saintsbury may fairly be said to have done his best to illustrate the literary history of France. To his many excellent contributions on the subject which have appeared in the new 'Encyclopædia Britannica' we need but refer in passing. We have had frequent occasion to speak of them with respect; and in this place we shall say no more than that of themselves they represent the labour of an ordinary lifetime and constitute no inconsiderable achievement. In the sort of series — the critical trilogy, as it were—to which the present volume belongs Mr. Saintsbury addresses himself to another audience. In the 'Primer of French Literature,' reviewed by us on its appearance, he gives, as he says himself, a bird's-eye view of his subject. In this 'Short History' he fills in and completes his picture. In a third and concluding volume he proposes to give a selection of representative and appropriate extracts, which—in so far at least as later literature is concerned, the mediæval writers being disposed of in the 'Short History' itself—shall round off his arguments and prove his case.

The 'Short History' is a piece of excellent and most honourable work. It is, in the author's own words, "a succinct history of the course of French literature compiled from an examination of that literature itself, and not merely from previous accounts of it"; and as such, as he modestly suggests, it is unique in English. It has its faults, as we propose to show; but it is in many ways a masterpiece. Mr. Saintsbury writes of nothing which he has not read; and if his insight is sometimes at fault, his experience is always individual and complete. He treats his matter at first hand throughout; from the 'Strasbourg Oaths' to 'Les Deux Masques' and 'Numa Roumestan,' from the mystery of 'The Ten Virgins' and the 'Cantilena of St. Eulalie' to the 'Petit Hôtel' of Henri Meilhac. This is as much as to say that he has mastered some nine or ten centuries of varied and complex literary production, and is qualified to discuss them even in their minute details. It is hardly possible to speak too highly of the intellectual activity, the phenomenal industry, the dauntless intrepidity of mind and temper, that are necessary to the accomplishment of so prodigious a task. It were no mean achievement to read one's way through a single one of the five periods into which Mr. Saintsbury divides his story: through the vast and trackless accumulations of mediævalism,

for instance, or through the stately monuments—the palaces and temples and eternal towers—of the heroic age. Mr. Saintsbury, however, is not as other men, and has explored all five of them. He seems to be almost as familiar with Rutebeuf as with Rétif, with Christine de Pisan as with Joseph Bouchardy, with the 'Roman du Renart' as with 'Les Quatre Vents de l'Esprit.' He speaks with equal authority of 'Le Roi Flore' and 'La Comtesse de Chalis,' of Pascal and Jean de Meung, of Philippe de Thaun and M. de Jouy, of Thibaut de Champagne and 'La Morte Amoureuse,' of Descartes and Raoul de Presles, of Maurice de Sully and Jules Janin, and of 'Robin et Marion' and 'Les Odeurs de Paris.' To have a visiting list of such range and comprehensiveness as this is to be not much less than omniscient; and omniscience, within certain limits, is an attribute to which Mr. Saintsbury, if he were so minded, could really lay claim. One result of this unrivalled competency in experience is the production in the reader's mind of a great deal of confidence and respect. Another is seen in the author's ability to perceive things clearly and largely, to generalize with equal breadth and assurance, and to select for discussion only such points as, the scope and size of the work being granted, are of vital importance to the main issue. This ability is marked throughout. Mr. Saintsbury's narrative is clear and fluent; his summaries are judicious and comprehensive; his analysis, whether of collective movements or individual talents, is very often direct, sufficient, and perspicuous in no mean degree. His style is merely that of his work, which is, after all, no more than a text-book for the use of students; in other words, it is only sober and workmanlike, and lays no claim to exceptional elegance, and none to exceptional vigour. For all that the 'Short History' is excellent in certain ways, considered as a piece of literature. It is a work of art in its union of brevity and completeness; and as exemplifying the essential attributes of order, method, proportion, and due subordination of style to matter and of the writer to his subject, it has not often been equalled.

The plan is at once workmanlike and ingenious. The book is divided into five parts, which are devoted respectively to the literatures of the Middle Ages, the Renaissance, and the seventeenth, eighteenth, and nineteenth centuries. In the first of these Mr. Saintsbury proceeds not by writers, but by forms. He is careful, when it is possible for him to do so, to distinguish and describe the individual; but, speaking generally, he has considered the mediæval literature of France, from its origin under St. Mummolinus (if we may so put the matter) to its close in the verse of Charles d'Orléans and the prose of Alain Chartier, as a procession not of artistic intelligences, but of dominant literary forms. During this time, as he very justly remarks, we are not so much concerned with the methods of individual minds as with the general and collective method—*fabliau* or *chanson de geste* or romance—of the epoch to which they belonged. Jean de Meung, for instance, is of far less interest and importance to us as himself than as the author or part author of the typical 'Roman de la Rose'; there is very much more to be said of 'Renart le Contrefait' or of 'Sire Hain and Dame Anieuse' than of the men who wrote them; and the 'Chanson d'Alixandre' is certainly a good deal more significant and striking as expressing the mediæval idea of antiquity and an antique hero than as the work of "Lambert the Short and Alexander of Bernay." Mr. Saintsbury has, therefore, done well to write the first section of his work as a history not of authors, but of books, and to fill his chapters with accounts of literary fashions and not of literary men. In this part of his history he is seen to very considerable advantage. His narrative, as we have had occasion to remark, is practical, rapid, and pertinent, and his generalizations are careful and sound; and as his prejudices have not yet begun to be, and his predilections—if he has any—are not in the least obtrusive, his critical faculty has fair play and his conclusions are sensible and appropriate. Nothing could be better, for example, than his account of the *romans d'aventures* or his pithy and comprehensive dissertation on the literature of Provence—than his chapter on the early lyrists or the pages in which he tells the story of the early drama. In his second section, which is at least equal in merit to the first, he changes his method, and writes not of forms, but of men. Starting with Villon and Comines—in whom he recognizes not the last of the mediævalists, but the first of the moderns—he works on to Marot and his contemporaries, to Rabelais and the tribe of Rabelais, and to the Pléiade, with all its stars and all its stardust. In his next chapter he treats of the theatre from Gringoire and 'Les Folles Entreprises' to Larivey and 'Les Esprits'; and so, after an admirable account of Calvin and Amyot, he passes—not very brilliantly—to the consideration of Brantôme and Montaigne, and finally to a rather pedantic analysis of the 'Satyre Ménippée'—the humour and perhaps the literary merit of which he appears inclined to overestimate—and to a critical note on Mathurin Regnier which is one of his happiest pages. In his next two sections he adopts the common method, and classes his writers as poets, novelists, philosophers, and so forth, with special chapters on the theologians and preachers of the great century, and on the scientific writers of the century after. In his fifth and last section he changes his method once more, and ends his book with a sketch of the literature of the nineteenth century, with special reference (as we need hardly observe) to the tremendous achievement of Hugo, the literary divinity of Théophile Gautier, and the noble genius of Mérimée and Flaubert.

In these three sections the scholar and the historian are as remarkable as ever. The critic, however, is a little wayward and peculiar. Mr. Saintsbury, in truth, might fairly be described as "le dernier Romantique"—as a last incarnation of Petrus Borel. The crimson doublet of "le grand Théo" seems to wave ever before him as a banner; it is as if, in his mind's ear, the notes rang always of Hernani's horn. This amiable idiosyncrasy inspires him with impregnable convictions and a courage that is above suspicion; but it also obliges him to be a somewhat partial critic, and disables him from doing justice in French literature to much that is peculiarly and exquisitely French. In writing of mediæval France and of the France of the Renaissance he is, as we have noted, acute and judicious. In writing of the France of Boileau and Racine he is not nearly so discriminating. His dissertations are laboriously precise and dispassionate, of course; but a sort of distant echo—a remote but haunting reminiscence—of Petrus the Lycanthrope runs through them all. Undertones, as it were, of the famous aspiration "A la guillotine les genoux!" are audible and distinct in them; they are survivals of Romanticism—"remote, unfriended, melancholy." To Mr. Saintsbury, indeed, 'Andromaque' and 'Phèdre' are only the work of a pupil of Boileau. He thinks a vast deal more of Hugo's drama, in fact, than Dumas thought of it, and a vast deal less of Racine's than M. Taine; and we cannot but believe that his theory of both is not the right one, but only the one that would have seemed right to Petrus Borel. And this is only one of many points on which the belated Romanticism to which he is subject appears to lead him astray. It is impossible, for instance, to read without a smile his description of 'La Morte Amoureuse' as "one of the unsurpassable things of literature," or his remark that in Prosper Mérimée "grasp of human character, reserved but masterly description of scenery, delicate analysis of motive, ability to represent the supernatural, pathos, grandeur, simple narrative, appear turn by turn. . . . as they appear hardly anywhere else"—except in Théophile Gautier! Of outbreaks of this sort Mr. Saintsbury has many. Hugo, Gautier, Mérimée, are the gods of his idolatry, in fact, and he does not seem able to speak of them without passion: as when, to take another instance, he observes that it is impossible to read any of the first-named writer's better works "without gradually rising to a condition of enthusiasm in which the possible defects of the matter are altogether lost sight of in the unsurpassed and dazzling excellence of the manner." "This," he reflects, "is the special test of poetry, and there is none other." In comparison with excesses of this sort his criticism of Dumas and Balzac, of George Sand and Alfred de Musset, is felt to be curiously inadequate; and to forgive it we are obliged not only to recall the earlier parts of the 'Short History,' but to remember that its author is a practical Romanticist, and perhaps the last of the race.

To this may be added that Mr. Saintsbury omits all mention of Henri Monnier, Berlioz, and Monselet; that he clings with a curious and abnormal affection to the work of M. Henri de Bornier; that in speaking of the novel of incident he is unfortunate enough to remark that its "literary success in the hands of Hugo, and its pecuniary success in the hands of Dumas, were equally striking"; and that there are few things in his book so inadequate as his description of M. Labiche unless it be his account of MM. Erckmann-Chatrian, his estimate of Champfleury, and his contemptuous note on M. Alphonse Daudet.

Die Verfassung und Verwaltung des Römischen Staates. Von Dr. J. N. Madvig. 2 vols. (Leipzig, Teubner.)

It will be no fault of Prof. Madvig's if the aim and scope of these two volumes are misunderstood. He expressly informs his readers that they are not meant to form an exhaustive treatise on Roman antiquities, such as, for instance, the 'Staatsalterthümer' of Mommsen and Marquardt. Fifty years spent in the study and in the teaching of Roman literature have, he says, brought home to him the need for some clear and trustworthy manual which will supply students with a knowledge of the forms and institutions of the Roman state sufficient to enable them to understand the conditions amid which Roman authors lived and wrote. The whole subject is therefore treated from a literary and historical rather than from a strictly antiquarian point of view, and with a predominant regard to the interests of brevity and clearness. But there are other special circumstances connected with the composition of this work which the critic must bear in mind. It has been written in old age and under the terrible disadvantage of blindness, conditions unfavourable enough to have deterred most men from even attempting anything of the kind, while the German version before us was written by another hand at a distance, and its revision was a difficult and not always a satisfactory process. But, in spite of all, Prof. Madvig has produced a book in many respects worthy of his high reputation, and throughout likely to prove useful to the class for whom it is written. The style, indeed—for which we imagine the translator is directly responsible—is spoilt by the excessive length and cumbrous form of the sentences; and the practice of inserting most of the authorities in the text does not conduce to clearness. The references are as a rule well chosen, but might, we think, have been given more liberally without damage to the general plan of the book. Still more is this the case with the modern literature on the subject, which is treated all through in very cavalier fashion. We do not for one moment wish to suspect Prof. Madvig of anti-German prejudices, a suspicion against which he protests by anticipation in his preface, or to deny that he is often right in refusing to discuss seriously the fanciful theories which scholars hard pressed for something new to say have invented in abundance. But he might with advantage have indicated more frequently where the views expressed in his text are at variance with those of writers whose claim to be heard is scarcely inferior to his own, or at least have told his readers where to look for a fuller discussion of controverted points. As it is, the views of recent writers are too often summarily dismissed in a cursory and half-contemptuous note, and in some cases a sweeping sentence of condemnation is pronounced which ought in fairness to have been supported by solid reasons. Thus, for instance, Rubino's unfinished work on the Roman constitution is only once mentioned, and then as "a remarkable instance of misconception from beginning to end" (vol. i. p. 364). Kiene's treatise on the Social War is similarly disposed of (vol. i. p. 25) as "eine unbrauchbare Specialschrift." And merely to say of other views that "what some have recently written [on them] is without any foundation" (i. 92) is to adopt an unnecessarily dogmatic tone. The result is that, though his readers will carry away a clear idea of the author's own views on the Roman commonwealth, they will gather little or nothing as to the general state of opinion on the subject among scholars, and will not improbably form an unduly low estimate of the value of modern researches in this field.

Against these blemishes in the method and tone of the book must, however, be set not a few conspicuous merits. The complicated technicalities of the Roman system are handled with the ease and skill that only a thorough mastery of the subject can give, and this is especially the case in those parts of his wide field which the author has carefully gone over in his earlier works; such, for instance, as the colonial system and the history of the equestrian order. The scholarship throughout is what we should expect from Prof. Madvig, and every page bears the stamp of a vigorous personality which has risen superior to age and blindness.

On the vexed question of methods of criticism the author holds a position midway between Niebuhr and more recent writers. In dealing with such leading authorities as Livy and Dionysius, while he recognizes fully the importance not only of a scholarly revision of the text, but also of a right estimate of their special idiosyncrasies, he views with a rather exaggerated suspicion the efforts which have been made by Mommsen, Nissen, and others to get behind these Augustan writers to the authorities whom they followed, and so to distinguish the various pieces of older tradition which they rudely patched together. With more justice he warns his readers against the danger of using the statements of later Roman jurists and writers as evidence for the forms and institutions of the Republic or even of the early Empire. At the same time he seems to us to go too far in his unqualified condemnation of Mommsen's brilliant attempt in the first volume of his 'Staatsrecht' to expound the abstract constitutional ideas which underlay the system of the Roman state. Without for one moment contending that the Roman constitution, or any part of it, was framed in conformity with preconceived theories and ideas, we may urge that it involves certain leading conceptions, such as those of the magisterial authority, which must be firmly grasped if the details of the system are to be understood, and which it is at least convenient to treat of separately. Nor were abstract conceptions of the kind so wholly foreign to the Romans themselves as Prof. Madvig seems to think, for by the end of the Republic much had evidently been done by jurists and antiquaries to elucidate the principles of the constitution, and to systematize the mass of ancient usages and traditional maxims of which it was largely composed.

But while in some respects Prof. Madvig is unduly conservative, he may justly take credit for the manner in which he keeps clear of baseless hypotheses or rash guesses, and for the clearness with which he marks the point at which our knowledge ends. He successfully avoids the temptation, to which Mommsen too often succumbs, of securing an artificial completeness for his picture by conjecturally filling up inconvenient gaps. When speaking of Sulla he rightly insists on confining his legislation within the limits specified by our authorities. "There is no ground," he says, "for attributing to Sulla a general and thoroughgoing revision of the whole constitution" (vol. i. p. 521, note); and on the same page he rightly notices—what it is too much the fashion to overlook—the grave omission on Sulla's part to deal seriously with the pressing administrative problem of the day, that of bringing the old republican system into harmony with the new conditions created by the enfranchisement of Italy, the acquisition of the provinces, and the altered status and character of the army. In the same spirit of cautious adherence to authority he declines to accept the magnificent programme of reform which Mommsen has attributed to Cæsar, most of which is after all mere speculation as to what Cæsar might have done had he lived. What we know of Cæsar's real plans, if he had any, for the final reorganization of the Roman state, is too little to enable us to do more than guess at their probable direction. But while in both these instances our author has done good service in insisting on the claims of sobriety and truth, he is scarcely fair in his estimate of Mommsen's account of the principate. The "theoretical reconstruction" which he denounces exists more in appearance than in reality. The great German historian recognizes as fully as Prof. Madvig does that the imperial system was not created at a blow by any positive constitutional enactment; that the emperor was at first merely a citizen to whom senate and people had entrusted certain powers; and that the justification of much that was done by Augustus and Tiberius must be sought, not in any prerogatives inherent in the imperial authority, but in the simple fact that they were *de facto* in possession of nearly absolute power. And while on this fundamental point the two are in virtual agreement, we cannot help thinking that Prof. Madvig has taken a step backwards in refusing to acknowledge the justice of the analysis by which Mommsen makes it clear that, among all the powers conferred upon Augustus and his immediate successors, two (the tribunician power and the proconsular imperium) stand out prominently as the main supports of the principate, and as connecting it directly with the two offices which by the close of the Republic had thrown all others into the background, those of the tribunes of the plebs in Rome and of the proconsuls in the provinces.

In the matter of arrangement Prof. Madvig has another quarrel to pick with Mommsen. It will be remembered that in his 'Staatsrecht' the latter leads off with an account of the magistracy, as the proper key to a right understanding of the other elements of the constitution, in this respect following Rubino, who pronounces any other order of treatment to be misleading. Prof. Madvig, on the contrary, declares that a description of the Roman system which does not commence with the people and the senate "lacks the necessary foundation" (pref. p. viii); and the earlier half of his first volume is accordingly devoted to these two elements in the state. Something more than a mere point of order is involved in this difference of

opinion. The arrangement favoured by Rubino and Mommsen proceeds on the assumption that the keystone of the Roman constitution was the magisterial authority, which, though in the course of time it became in practice subordinate to the senate and even at times to the assembly, yet in its forms never lost its original autocratic character, and under the Empire regained its old position of superiority. And this view we believe to be essentially true. It is perhaps allowable to begin, as Madvig does, with the Roman community and its assemblies; but in doing so the fact should be clearly brought out that though the assembled people were the source from which the magisterial authority was derived, and were in theory sovereign, they were yet in the exercise of their powers dependent at every turn upon the magistrate. It is true that in Cicero's day the assembly actually elected the magistrates, but the forms under which they did so clearly presuppose not a free popular choice so much as the nomination of the magistrate by his predecessor and his confirmation by the people. And so again, while the legislative authority of the assembly was in one sense absolute, it could vote only on proposals brought forward by a magistrate, for in Rome, unlike Athens, private bills were unknown to the constitution. Nor was this dependent position of the assembly without its effect on the history of the Roman state. It helped to make real democracy impossible, and converted the assembly into a powerful weapon in the hands of ambitious magistrates, who sought and found here the readiest means of successfully encountering the senate. But if the position of the Roman assembly cannot be properly appreciated without a previous study of the Roman magistracy, still more is this the case with the Roman senate. Prof. Madvig allows, of course, that the place filled by the senate in the days of the elder Cato and even of Cicero was not its original one, but that the ascendency it then enjoyed had been gradually won, and won without recourse to any formal constitutional changes. But what he fails to bring out is the fact that not only was the senate in early days simply a subordinate council of advice attached to the magistrate, but that the forms of its procedure, even in the Ciceronian age, still imply the strictest subordination to him and could still be taken advantage of to enforce it. If a magistrate had the courage, as Cæsar had, to ignore established custom, he could override or ignore the senate without infringing the constitution. And the rapid alternations of power and weakness which mark the senate's career in the last century of the Republic can only be understood by remembering how completely dependent it was on the readiness of the magistrate to acknowledge its customary supremacy. On the ground, then, that in the unique position assigned to the Roman magistrate by the forms of the constitution lies the key to the constitutional history of Rome, we must declare in favour of Mommsen's arrangement as against that adopted by Prof. Madvig.

Passing to our author's views on particular points of detail, we find him as a rule stanchly adhering to the conservative side. He pronounces against the theory that Rome in early days was a mercantile city (*Handelstadt*). On the vexed question of the change in the organization of the "comitia centuriata," by which the tribes and centuries were somehow or other brought into combination, he holds, as against the majority of modern scholars, that Livy's words (i. 43) are to be interpreted literally, and that in Cicero's day each tribe was divided into two centuries only—one of seniors and one of juniors—in each of which all the five classes were represented. But though he says confidently that this conclusive passage, as he considers it, has been "inconceivably ignored and distorted by many recent writers" (vol. i. p. 118), he fails, in our judgment, to remove the very serious objections which Lange, among others, has urged against this view. Nor can we accept as entirely satisfactory his reading of the difficult passage in the second Philippic (vol. ii. p. 33). We are also sorry to find that he adheres to the old explanation of the title "princeps," borne by the early emperors, as an abbreviation of the fuller "princeps senatus," an explanation which is now almost universally abandoned. In the sections dealing with the nature of the franchise and the mode of its extension, as well as in those which treat of the municipal system, there are many points of interest, of which a few only can be mentioned here. As one among the circumstances which led to the formation of fresh tribes he suggests, with great probability, the elevation to the full franchise of communities hitherto invested only with the "civitas sine suffragio." The bestowal of the latter status, he argues, was regarded not as a favour, but as a penalty, by both parties alike; and the objections to this view arising out of the case of Cære are ingeniously explained away. He puts the meaning of the term "præfectura" in its right light by pointing out that the inferior degree of local freedom in a "civitas sine suffragio," which it originally implied, was in Cicero's time merely "an historical reminiscence" (vol. ii. p. 6), and that after the Social War the term no longer connoted any existing peculiarity of status.

In the second volume there is as a rule less that calls for special remark. But we may notice that Prof. Madvig agrees with Marquardt in thinking that in certain cases, notably in that of the confiscated Campanian land, there was an actual letting of the land itself, and not merely of the tithes payable upon it. On the other hand, he declines to identify the agrarian law of 111 B.C., which is still extant in a fragmentary condition, with the third of the three laws mentioned by Appian as undoing the work of the Gracchi; and Appian's statement as to the law he treats as a sheer blunder. The account of the gradual establishment of the imperial land tax appears to us a little confused, and the long note (ii. 440) on the meaning of the "jugum" or "caput" does not contribute much towards the solution of that difficult question.

We may say in conclusion that these two volumes do not in any sense make an epoch in the study of Roman antiquities. While they contribute little that is new, in not a few points they fall below the level of recent research, and are too often unduly conservative and dogmatic in tone. Nevertheless, the brilliant scholarship displayed throughout them, their general freedom from fanciful hypotheses and false analogies, and not least their brevity will make them a useful part of the apparatus of the lecture-room.

The Foray of Queen Meave, and other Legends of Ireland's Heroic Age. By Aubrey De Vere. (Kegan Paul, Trench & Co.)

In this volume Mr. De Vere attempts to do for the heroic lore of the Celt what Mr. William Morris has successfully accomplished for that of the Teuton. His chief poem substantially embodies the story told in the 'Tain bo Cuailgné.' This tale—held by some scholars to be the great Irish epic of ancient times, while others believe it to be only the fragment of a larger work—is to early Irish literature what the 'Story of the Volsungs and the Niblungs' is to that of Scandinavia. It is curious to note the points of similarity and contrast between two such representative works. The ideal of an heroic age assumes naturally much the same shape in every race and country, and it cannot surprise us, therefore, that there should be something of a family likeness between the Norse and the Gaelic chieftains. Cuchullain is the Irish Sigurd. From childhood he shows a genius for fighting, coming by his weapons much in the same fashion as the hero of the Volsunga Saga; for while Sigurd alone of men succeeds in welding the shards of the sword Grani, Cuchullain, on being knighted when a mere stripling, snaps every sword and lance in two till the King of Uladh (Ulster) is fain to give him his own arms and chariot. But in spite of this resemblance between the leading characters, the two stories are widely dissimilar. The passion and the tragic intensity of the old Norse tale are lacking in this Gaelic tradition as well as a central idea which should make of it an artistic whole. This was exactly where the modern poet could have developed whatever power of dramatic imagination he possessed; for by weaving the various elements of the legend skilfully together Mr. De Vere might have produced a really fine poem. Unfortunately he lacks the gift of selection and condensation, and has contented himself with putting the fragments of the old epic into easy and fluent verse.

'The Foray of Queen Meave,' the most important poem in the volume, is the story of the war between Uladh and Connaght (Connaught). It consists of five fragments and begins with a conjugal dispute between the Queen of Connaght and her feeble husband Ailill, each claiming to be the wealthier and more powerful. The lords declare that they are equally great in all respects save one—that is, the possession of the white bull Fionbannah, which turns the scale in favour of Ailill. This so incenses the queen that she determines to go to war with the King of Uladh in order to obtain his black bull Donn, which is a still mightier beast. Unless Mr. De Vere wished to write a serio-comic poem, should he not have modified or changed the *motif* of the old legend so as to bring it more within the range of modern sympathies? As it is, an element of unconscious comedy lies at the very heart of his work; for however poetic it may be to make a supremely beautiful woman the origin of a great war, the idea of two nations butchering each other

XUM

for the sake of a bull could only serve as a theme for satire. Mr. De Vere, however, describes the incident with imperturbable gravity. Queen Meave, wilfully bent on the attainment of her object, marches with a large host to the borders of Uladh. Magic and witchcraft, which play a large part in these Irish traditions, come to her assistance; for the witch Faythleen lays a ban of imbecility on the people of Uladh, so that instead of going to meet their enemy they are befooled by dreams. Cuchullain is the only man in the realm prepared to meet the advancing host, and the queen engages that the warfare shall for the present be restricted to a combat between himself and a single champion. When Cuchullain has slain ninety of her men, the queen, following the advice of the magician Cailitin, invites Ferdia to a feast; for this great warrior, Cuchullain's dearest friend, is the only man by whom the hero may be overcome. At the banquet Ferdia is placed by the side of the queen's daughter, the beautiful Finobar. The princess, versed in all the arts of fascination, sits whispering beside him to the music of harps:—

"I love not songs of love!
Better the war-song! Best, methinks, of all
That lullaby half war and sorrow half
Breathed by some bride while o'er her wounded lord
Softly descends the sleep:—so softly sank
Cold dews of evening on this flower still wet!"
She took it from her breast and held it near:
He smelt it; kissed it; kept it. With a smile
She added: "For your sister? Have you one?
If so, 'tis likely she resembles me:
They chide me oft: 'No Gaelic face is thine,
Dark-eyed, dark-browed, a rebel since its birth.'"
She ceased; again she spake: "Even now, methinks,
That lullaby I spake of I can hear!
Is it for thee, my friend, or Cuchullain?"
That hand, of flower amerced, drew nearer yet
To his. That smile had passed. Tearful she turned
On him those luminaries of love and death,
Her eyes, like stars in midnight waters glassed;
Turned them, but spake no longer.

The noble Ferdia cannot resist those eyes; and when the queen offers him her daughter's hand if he will meet Cuchullain in mortal combat, love overcomes friendship. On the first day, when Cuchullain and Ferdia stand confronted as enemies, their hearts still yearn tenderly towards each other, and at the close of that unnatural strife the friends draw near and throw their arms round each other's necks. On the second day they fight with more heat, yet on its cessation still share meat and drink together; but on the evening of the third day the excitement of battle effaces all earlier memories, and they turn away haughtily from each other when it is over. The fourth day they meet unrelentingly, determined that one or both must die. The combat rages wildly between them, sometimes one, sometimes the other gaining an advantage; but at last the "madness-rage" descends upon Cuchullain, and, hurling the Gae-Bulg (a huge missile which no one else can wield) on Ferdia's breast, he smites him dead. No sooner has his friend fallen than Cuchullain's old affection for him reawakens in full force. Overcome at once by his wounds and the grief he feels, he faints away, and lies long like one that is dead.

This episode, which occurs in Fragment III., is by far the finest in the book. Not only is the situation at once grand and pathetic, but the verse gains a strength and fire for which it would be difficult to account did not the author himself explain that this is the only portion of his work which contains some translations from the original. Here, indeed, we catch a far-off sound of the spirit of ancient Gaelic poetry — a blending of tender sentiment and sadness with a touch of that natural magic which, Mr. Matthew Arnold tells us, is peculiar to the Celt. Thus the lament of Cuchullain over Ferdia, which seems evidently adapted from the 'Tain,' has an echo in it of the old heroic tale:—

He raised again his head: once more he sang:
"Each battle was a game, a jest, a sport
Till came, fore-doomed, Ferdia to the Ford.
I loved the warrior though I pierced his heart.
Each battle was a game, a jest, a sport
Till stood, self-doomed, Ferdia by the Ford.
Huge lion of the forestry of war;
Fair, central pillar of the House of Fame;
But yesterday he towered above the world:
This day he lies along the earth, a shade."

Ultimately Cuchullain, who, after a long trance, has been healed by ministering spirits, suddenly bursts upon the combatants after the hosts of Uladh have been routed. He utterly defeats Queen Meave, drives her across the Shannon, and, when some of his men would slay her, magnanimously saves her life, crying:—

One day I shared her feast: she shall not die!

The same merits and defects which mark 'The Foray of Queen Meave' are still more noticeable in the two shorter poems, 'The Sons of Usnach' and 'The Children of Lir.' Mr. De Vere's verse is invariably easy, graceful, and refined, but, unless when reflecting the afterglow of the old bardic fire, sadly wanting in genuine inspiration. Especially in 'The Children of Lir' the descriptive passages are Mr. De Vere's strong point, although his illustrations taken from nature seem frequently forced and artificial. "A breeze-like step," "sparkling like a flower," "lids of snow," are conventional expressions which convey an untrue image of the object they describe. These, however, are mild similes compared to such daring flights as—

From the wan brows the horror-stricken hair
Bickering like meteors rose, or seemed to rise.

In his narrative Mr. De Vere is constantly diffuse where he should be brief, and occasionally brief where we require a fuller analysis of the situation. Thus in 'The Sons of Usnach' a young warrior, for the first time meeting a maiden destined to marry old King Conor, makes love in this startling fashion:—

Then, for the maiden's safety fearing,
With passion changed continued: "Spurn my suit!
The king will slay thee!" She, the warrior nearing,
Held forth both hands, and gazed upon him mute;
And last, in love's high truth—and truth is best—
Made answer, "Thine!" He snatched her to his breast.

In 'The Children of Lir'—a Celtic adaptation of the well-known fairy tale of children changed to swans by sorcery—Mr. De Vere is, on the whole, happier in his descriptions than in 'The Sons of Usnach.' The tender fancy of this touching legend, in which weird pagan traditions are absorbed in the dawn of Christianity, suits the author's vein better than the more tragic spirit of the other story. Mr. De Vere's sympathy with Roman Catholicism gives to this part of his volume a peculiar sincerity of tone, his most impressive work consisting, indeed, of some religious poems addressed to the Virgin Mary published in an earlier volume of verse. The two narrative poems last mentioned are written in the six-line stanza, structurally the same as that used by Shakspeare in 'Venus and Adonis.' This metre, admirably adapted for narrative poetry, although used by Mr. De Vere with much fluency, is never in his hands wielded with the vigour and terseness of which it is capable at its best. Indeed, he is more successful in his handling of blank verse, especially in certain portions where it seems to rise and be sustained by the greater elevation of the narrative.

On the whole, this volume may be read with considerable interest by lovers of ancient Irish legends, with which the public is as yet but little familiarized. We cannot help hoping, however, that the quarry of Ireland's heroic age, which Mr. De Vere describes in his preface as peculiarly rich in materials, will by-and-by be opened by a poet whose creative gift may enable him to refashion a poem of truly human interest from the primitive lore of the past.

The Historye of the Bermudaes or Summer Islands. Edited, from a MS. in the Sloane Collection, British Museum, by General Sir J. Henry Lefroy, C.B., K.C.M.G. (Hakluyt Society.)

It is fortunate for all those interested in the history of our early colonies—and can any Englishman fail to take an interest in the subject?—that General Lefroy seizes every opportunity of identifying himself with "our oldest plantation." It is not very long ago that the gallant editor of the work now before us completed his great undertaking of the 'Memorials of the Discovery and Early Settlement of the Bermudas,' in two handsome octavo volumes, to which we then drew the attention of our readers (July 5th, 1879; also September 22nd, 1877); and here we have, as issued to the members of the Hakluyt Society, another volume edited by General Lefroy, and printed for the first time from the Sloane MS. No. 750, in the British Museum, comprising 'The Historye of the Bermudaes from its First Settlement in 1609 to the Year 1622,' when Capt. Nathaniel Butler was superseded in the government of the islands.

The original MS. consists of 363 pages of closely written foolscap, but there is no title-page or date to it, and no clue to the authorship. The very sparing introduction, however, of the personal pronoun throughout the MS. coupled with an amount of internal evidence leaves no doubt whatever in General Lefroy's mind that this 'Historye' is an unpublished work of Capt. John Smith, the historian of Virginia. If such be the case—and we see no reason to disagree with the editor's opinion—the book will be read with avidity by American historians and students, who take the deepest interest in everything which tends to throw new light on the works, character, or writings of the first admiral of New England, the man of whom it has been said, to quote General Lefroy's preface, "that he has for nearly three centuries maintained the unparalleled honour of being the most distinguished member of the most numerous family (patronymically speaking) of all the tribes of men." We think, however, that Mr. Allibone in his 'Dictionary of English Literature,' which is here referred to, might

have qualified the superlative epithet. Is Capt. John Smith more distinguished than Adam Smith, who "patronymically" might certainly be called the first of that numerous family, or than the humorous and satirical divine who helped to found the *Edinburgh Review*, or than the naval hero who defied Napoleon?

Generol Lefroy always throws his whole heart into his work, and delights in making others acquainted with what he himself knows of the history of these islands, of which, as is well known, he was for some years the popular governor. His enthusiasm is catching. The present work, he says, needs no recommendation; for though the theatre of the events described is a small one, and the Bermudas have not, and could not possibly have, maintained the prominent place before the world which they occupied on their first plantation, the graphic style of this narrative and the vivid picture given of the social condition of life in his (Capt. John Smith's) day must always have attractions for those who delight to throw themselves into the past and to contrast its habits, its ideas, and its aspirations with what succeeding centuries have brought forth.

The editor furnishes some additional information about Capt. John Smith. His baptismal register is preserved at Willoughby, Lincoln. He was the son of George Smith, and was baptized on the 6th of January, 1579, old style, that is as we now compute January, 1580; and he died on the 21st of June, 1631, rather unexpectedly. At the time of his death Capt. John Smith was at work upon a 'History of the Sea,' with the devout hope that "if God be pleased I live to finish it." Now although General Lefroy does not suppose that the present unfinished work, expressly entitled a 'History of Bermuda,' was any part of the intended 'History of the Sea,' still he says there is no difficulty in the supposition that Smith had both works on hand, and a strong confirmation of his authorship lies in the minute coincidences between this work and his account of Bermuda in Book V. of his 'Generall History of Virginia,' first published in 1624, coincidences which are so numerous as to show beyond a doubt that the history before us was written subsequently to the 'History of Virginia' and was based on the same materials—an amplification in fact of that narrative, with such fuller particulars and occasional corrections as were likely to come into his hands.

These are some of the arguments put forth by the learned and gallant editor in support of his conviction as to the authorship of the original MS. We refer our readers to the book itself for all that is said on this subject, which we have little doubt will cause some discussion, if not controversy, in the United States.

NOVELS OF THE WEEK.

A Fearless Life. By Charles Quentin. 3 vols. (Bentley & Son.)

Red Ryvington. By William Westall. 3 vols. (Hurst & Blackett.)

Robin. By Mrs. Parr. 3 vols. (Bentley & Son.)

Mr. Quentin's book is remarkable not only for a good deal of ability in the description of a wild Cornish coast and the individuality of certain unusual characters, inhabitants of a village thereon, but for some suggestive peculiarities in the author's view of life. The chief male character, Allan Moore, is a carefully studied portrait. He is something of a poet, a painter, and a sculptor, with a vein of genius and a great desire to rule. He is "tender, but not unselfish; he desired that even his love for others should minister to his own mental development." In the language of Philistia, he is a sad prig, and acts as might be expected in falling in love with a lymphatic piece of prettiness, who deceives him without a suspicion she is doing wrong. Nora, the heroine, is a far nobler character. The "emotion" which supersedes the idea of duty, and the aspirations after universal progress which seem to stand in the place of individual right and wrong, are not in her case the merest phrase-mongering and sham. She loves (and hates) ardently and honestly, yet she offers Guy Clifford, whom she does not love, to become his mistress for a time; and to please Allan, whom she does love, she commits deliberate perjury. The contrast instantly suggested between Nora's self-accusation to save Clifford and the higher heroism of old-fashioned Jeanie Deans is not to the advantage of the latest religious cultus, as expounded by an evidently sincere and not unintelligent believer. The minor characters are of various merit. Guy Clifford is the smuggler of the stage, but worthier of Nora than the despicable Allan Moore. Evelyn's petty femininity is ably drawn; the parson is odious, but not absolutely untrue to life; and the squire is a monster of iniquity who goes out shooting with a staghound! It may be observed that "I would be agreeable to her" is not a classic method of conveying the notion that "I would agree to her marriage with my son."

Mr. Westall writes of the manufacturing districts with knowledge, and in his hands the rough Lancashire folk and the grimy purlieus of the cotton towns lend themselves not unpicturesquely to the needs of fiction. The present story runs upon the ancient lines of the 'Menæchmi' and 'The Comedy of Errors.' Randle Ryvington of Deepdene and Randle Ryvington of Redscar, cousins and cotton spinners, resemble one another in outward appearance as closely as they differ widely in character. The audacious personation of Red Randle by his "Deep" namesake, though a little too farcical to be artistic, is managed as well as such an incident can be; and the absurd will of the elder owner of Deepdene is hardly too gross in its vulgar ambition to be regarded as beyond possibility. Follies as melancholy have been put in writing by testators as that by which Randle and Dora are pitted against each other in a race for marriage with a title, the stakes at issue being the inheritance of a property of 12,000*l.* a year. In contrast to the sordid wooing of the baser Randle, the romance which surrounds the acquaintance, and then the love, of Lady Muriel and his cousin is quite idyllic. Red Ryvington's whole story shows his sense and honesty to be equal to his courage. A contested election gives an opportunity of dealing with several types of Lancashire character, such as Twister, the self-made manufacturer, Bentley, the literary weaver, and other supporters of the hero, not to speak of such minor personages as John Gully, the tailor, whose soul soars above his trade until he finds the danger of being taken for an unpopular master by a factory mob. But the personage on whom most of the romance depends is Sergius Kalouga, the Russian revolutionist, who charms, Othello-like, the gentle Dora, and thus by a strange turn of fate puts her into possession of the fortune from which she was intended to be debarred. His story is well told, and if all revolutionary martyrs were as wise and moderate as Kalouga martyrdom would be unnecessary.

'Robin' is one of that numerous class of novels which undertakes to illustrate bohemian life, but it possesses the exceptional merit of not being coarse. The story, it is true, makes us acquainted with an extremely coarse man, but, purified by the fire of affliction, he in the end loses all coarseness of heart and enlists the sympathies of the reader. The two main types of bohemianism are well described: the one, the father of Robin, unprincipled and selfish, yet with some of the instincts of a gentleman, and with the redeeming virtue of love for his child; the other, a younger man, unconventional rather than actually bohemian, quits Bohemia as soon as circumstances give him a chance. The bohemian young lady is seldom attractive to those who live out of Bohemia, but Robin is a dweller in that land from circumstances over which she has no control, and is to be pitied rather than harshly criticized. Besides, though up to her marriage she is *in*, she is not *of*, the doubtful land, and neither heart nor mind is affected by her sojourn. She is at all times thoroughly pure in spirit and feminine, and resists temptation better than most well-brought-up young ladies would do. In fact, she is an attractive character, which is more than can be said of the hunting hoiden Georgie Temple. That the latter is goodhearted and honest does not, to our mind, redeem her, for no one is altogether bad, and it is dangerous to try to show that a young woman devoid of feminine graces and refinement is yet beloved because she possesses masculine virtues. The retired railway contractor, Mr. Blunt, is more coarse than was necessary for the purposes of the story, and therein Mrs. Parr has sinned against the art of the novelist. The best character in the book is the son of Mr. Blunt, who is pure, refined, and thoroughly good without being in the least namby-pamby, or too ideally perfect to be natural. One great merit of the story is that the plot is not complicated and the stage not crowded. The book ought to add to Mrs. Parr's reputation as a novelist of the second class.

SCHOOL-BOOKS.

Essays of John Dryden. Selected and edited, with Introduction and Notes, by C. D. Yonge. (Macmillan & Co.)—It is questionable whether any selection from Dryden's prose writings could be made suitable for school purposes. Certainly Mr. Yonge has not accomplished the task in the present volume. He acknowledges the difficulty of selecting from Dryden's prefatory essays, and has not been very happy in the choice he has made of three. The sketch of Dryden's life is imperfect, no mention being made of his death. Mr. Yonge's want of accuracy in minor matters, which marred his life of Goldsmith, is visible

here. The name of so eminent a judge as Sir Matthew Hale is misspelt "Hales," both in the text and notes. Bartholomew Fair is described as "a fair in the neighbourhood of London," instead of in Smithfield. Some of the translations of Latin and Greek quotations are also inexact. Still, the notes supply a considerable amount of varied information, and are, in fact, the part of the book best fitted for the purpose of education.

Longmans' Modern Series.—Arithmetic. Parts V., VI., and VII. (Standards V., VI., and VII.). —*Answers to Arithmetic.* Parts I.–VII. (Longmans & Co.)—The examples contained in these arithmetics are appropriate to the several standards and sufficiently numerous. The statement and explanation of rules might as well have been left for the teacher to supply *vivâ voce*, which is the only effectual method in such cases. Generally speaking, the explanation here given is clear, but in one or two instances it has appeared to us that simpler methods of working might have been adopted.

Longmans' Modern Copybooks. Nos. VII.–XII. By J. Tidmarsh. (Longmans & Co.)—The writing in these copybooks is bold, but rather too round and upright.

Longmans' Modern Series.—The Illustrated Readers. Book V. (Longmans & Co.)—The text of this reader is scarcely on a par with the illustrations, which are very good, or with others of the same class. Newspapers and periodicals are not the most suitable sources from which to derive reading lessons. The meanings affixed to difficult words are often scarcely less difficult than the words explained, and, even if they suit the passage in hand, give no correct idea of the proper force of the word or the other meanings it bears. The explanation of such words might safely be left to the properly qualified teacher. Useful explanation of phrases and allusions is given in the notes at the end of each lesson.

Cassell's Readers for Elementary Schools.—The Simple Outline of English History. For Standard IV. In accordance with the New Code of 1882. Illustrated. (Cassell & Co.)—As a preparation for Standard IV. and an introduction to history well suited for all children at that stage of advancement, this 'Outline' is entitled to general acceptance. Within the compass of about 180 pages are comprised all the leading facts of our history, narrated with transparent simplicity, calm impartiality, and substantial accuracy; so that, after going carefully through them, the reader can hardly fail to have a good general idea of the way in which the nation has gradually grown to its present form and condition. Simple as the style generally is, it is never unworthy of the subject, and is free from the childish small talk into which writers for children are so often betrayed. In some few cases easier words might, perhaps, have been adopted with advantage. It is not the happiest way of stating the result of the trial of the seven bishops in James II.'s reign to say "the jury who tried them would not allow them to be punished." The illustrations are generally of real value for the information they convey with regard to the condition and manners of the country at different periods. The contrast between the extent of London in the time of Elizabeth and about the middle of this century is strikingly exhibited in a small sketch. Printing, paper, and binding are all good, and the price is moderate.

The Globe Readers. Illustrated. Primers I. and II.; Books I.–VI. Compiled and edited by A. F. Murison, M.A. (Macmillan & Co.)—Among the numerous sets of readers before the public the present series is honourably distinguished by the marked superiority of its materials and the careful ability with which they have been adapted to the growing capacity of the pupils. The plan of the two primers is excellent for facilitating the child's first attempts to read. In the first three following books there is abundance of entertaining reading, comprising nursery rhymes, fairy tales from Andersen and Grimm, stories of adventure, striking incidents from history, short sketches of natural history, and pleasing poetry. Better food for young minds could hardly be found. The last three books are of a more literary and scientific cast, consisting of passages in prose and verse from well-known authors, and elementary lessons in various branches of science by eminent professors. We are inclined to think them too large and over-weighted with heavy matter. Anatomy, geology, physical geography, and political economy are scarcely suitable subjects for such young readers. Had these been omitted, and more space devoted to biography, we should have liked the series better. In selecting poetry the editor seems to have been too studious of freshness, and hence has admitted pieces which have no other recommendation. Surely the thing most to be desired in reading-books is not mere novelty, but excellence of thought and style, by familiarity with which the reader may acquire something of the same tone and expression. The illustrations, which form a marked feature of the series, are sometimes of indispensable utility, and often remarkable for artistic execution. Generally speaking, the explanation of difficult words and allusions is highly satisfactory. But now and then, as in the derivation of the words *prerogative* and *asylum*, something more is needed to render the explanation complete.

English Lessons for School-room Use. By K. Knox. (Bell & Sons.)—These lessons consist of poetical extracts, with a few passages in prose, from some of our best writers, accompanied by a brief life of each, and examination questions on each lesson. They are arranged, not in the order in which they are intended to be used, as would seem most convenient, but chronologically. Miss Knox is quite right in attaching great importance to poetry as a means of education, but experienced teachers will hardly approve of her choice of pieces, most of them being too difficult and deficient in interest for such young readers. She tells us they have been worked through by a boy of ten or eleven; but what child of that age, even after such a preliminary study and explanation as she indicates, can possibly be made thoroughly to grasp Bacon's 'Essays,' Pope's 'Essay on Man,' Gray's 'Bard,' and Keats's 'Nightingale'? The questions are, to say the least, unnecessary. Competent teachers will prefer their own; nor is it desirable that the pupils should know beforehand what they will be asked. It is surprising to meet with such questions as the following: "What characteristics of style do you find in the opening paragraph of 'Rasselas'?" "What are the principal points to be noticed in Shakspeare's works?" How many boys of ten can be made to answer such questions as these properly, except by mere parrot repetition of what they have been told?

Notes of Lessons on English Grammar, for the Use of Teachers in Elementary Schools. By J. E. Singleton. (Jarrold & Sons.)—It is hard to see the necessity or utility of this book, which contains nothing that a pupil teacher cannot and does not usually learn better by other means. The directions, arranged under heads called "Steps," of which there are as many as eleven in one lesson, are tedious beyond measure to read, being not only excessive in detail, but clumsily expressed.

Outline of the History of the English Language and Literature. (Chambers.)—In this little volume the compiler has given a more correct, and, indeed, in every way a better, outline of the history of the English language and literature than is to be found in many works of far greater pretensions. All the important points are clearly, though of course briefly, treated, and we can confidently recommend the work for use in elementary and secondary schools as an introduction to the study of our language. The statement that *its* occurs in Levit. xxv. 5, where the compiler says *it* is "another reading," requires modifying, since *it* is the true reading, and *its* an innovation of the printers.

Specimens of Early English. Part I. A.D. 1150–A.D. 1300. With Introduction, Notes, and Glossarial Index. By the Rev. R. Morris, LL.D. (Oxford, Clarendon Press.)—With this volume, which, though the last to appear, contains the passages selected from the earliest authors, the Clarendon Press series of "Specimens of Early English," begun fifteen years ago, is completed. The pieces here printed are nineteen in number, and cover the period from 1150 to 1300. For the selection of the specimens, the notes, and the greater part of the glossary Dr. Morris is responsible; for the remainder of the glossary and the introduction we are indebted to Prof. Skeat. In the complete series there are specimens from no fewer than sixty-six different works, ranging in date from 1150 to 1579, and thus presenting to the student a perfect view of the history of our language. The present volume, which has so long been earnestly looked for by students of Early English, is especially valuable as illustrating the history of the language at that important period when the later Anglo-Saxon of the twelfth century gradually gave way to the English of the fourteenth century, and as showing how slow and gradual was the introduction of Anglo-Norman words, now so numerous, into general use. The specimens, the majority of which have been selected from works edited for the Early English Text Society, are admirably suited for the purpose intended. The glossary is exceedingly, one is almost inclined to say too, full; the introduction, although to a certain extent a reprint of that prefixed to the edition of 1867, has still been so largely added to and altered by Prof. Skeat that it is practically a new one, and no student can ask for a more clear and satisfactory introduction to the grammar of Early English. The section on metre, which is a new feature in the work, and has been supplied by Prof. Skeat, will be found especially valuable. Prof. Skeat has also carefully revised the whole work, and has pointed out in pp. 536–540 several corrections and additions which the student will do well to mark in the body of the work before beginning to use it.

CHRISTMAS BOOKS.

The Good Ship Barbara. By S. W. Sadler, R.N. (Society for Promoting Christian Knowledge.)
Isabeau's Hero. By E. Stuart. (Same publishers.)
One of the Old School. By Austin Clare. (Same publishers.)
Under the Blue Flag. By Mary E. Palgrave. (Same publishers.)
Friar Hildebrand's Cross. By M. A. Paull. (Hodder & Stoughton.)
Home-spun Stories. By Ascott R. Hope. Illustrated. (Hogg.)
José and Benjamin. By Prof. F. Delitzsch. Translated by J. G. Smieton. (Hodder & Stoughton.)

'THE GOOD SHIP BARBARA' is a suitable boys' book of the Marryat type, dealing with West Coast slavery and cruisers. There is a certain wildness in the coincidences by which the brothers come together; but this is sufficiently atoned for by stirring adventures to reconcile more captious critics than the public for whom the book is written.

'Isabeau's Hero' is a story of Jean Cavalier and the revolt in the Cevennes. It follows the lines of history pretty closely, and is sufficiently well written. The illustrations are less good than the text, notably one in which a man is represented as being stabbed to the heart, and obviously has his heart on the wrong side.

'One of the Old School' is the autobiography of an old servant-maid, more true to life than

many in these days will believe possible. "The constant service of the antique world" appears well in this good Tyneside dame.

'Under the Blue Flag,' a story of Monmouth's rebellion, is well told and fair in spirit.

In 'Friar Hildebrand's Cross' we have the story of an enlightened and pious monk at the time of the dissolution of the monasteries. His own reflections and his love for Cicely Hawley are more valuable than the legends he is supposed to have transcribed, in which modern English is thinly disguised by the use of a few archaic forms of spelling.

Mr. Hope's new series of tales is of very varied interest, and seems well suited to boys. School life and adventures of boyhood in different parts of the world, told as the author tells them, should be popular enough to secure the continued support of the gentleman to whom they are dedicated.

We should hardly have expected to find the learned Oriental scholar Prof. Delitzsch writing what can only be called a "Sunday book." Those who delight in this class of literature will find something to please them, doubtless, in 'José and Benjamin,' a tale of Jerusalem in the time of the Herods, and they may at least read it with the full assurance that they can accept all the writer's historical and archæological statements. The purpose of the story is to bring before the modern reader the varied features and observances which were required by the Mosaic law of leprosy, and also to show that the first Christian care for lepers was evinced in Jerusalem itself. The characters delineated in the story are of that feeble, lifeless kind that is peculiar to the class of works to which the book belongs. The picture presented to our minds is laboured but not graphic. Could not Mr. Smieton have found some German work worthier of translation?

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Bramston's (M.) Judea and her Rulers, cr. 8vo. 3/6 cl.
Child's Life of Christ (The), demy 4to. 21/ cl.
Cutts's (Rev. E. L.) A Devotional Life of our Lord and Saviour Jesus Christ, 8vo. 5/ cl.

SONNETS FROM THE CHANNEL.

I.

WE are in the "Coloured Caves" the sea-maid built;
Her walls are stained above yon lonely fern,
For she must fly at every tide's return,
And all her sea-tints round the walls are spilt.
Outside behold the bay, each headland gilt
With morning's gold; far off the foam-wreaths burn
Like fiery snakes, while here the sweet waves yearn
Up sands as soft as Avon's sacred silt.*

And smell the sea! No breath from wood or field,
No scent of may or rose or eglantine,
Cuts off the old life where cities suffer and pine,
Shuts the dark house where Memory stands revealed,
Calms the vext spirit, balms a sorrow unhealed,
Like scent of sea-weed rich of morn and brine.

II.

As if the Spring's fresh groves should change and shake
To dark green woods of cedar or terebinth,
Then break to bloom of amorous hyacinth,
So 'neath us changed the waves, rising to take
Each kiss of colour from each cloud and flake;
But this our tire-room, this wild labyrinth
Of sea-wrought column, arch, and granite plinth,
Shows how the sea's fine rage dares make and break.

Young with the youth the immortal brine can lend,
Our glowing limbs, with these bright drops empearled,
Seem born anew, and in your eyes, dear friend,
Rare pictures shine—like faery flags unfurled—
Of Child-land, where the roofs of rainbows bend
Over the golden wonders of the world.

THEODORE WATTS.

Petit Bot Bay, Guernsey.

COMPULSORY REGISTRATION OF BOOK TITLES.

13, Paternoster Row, Oct. 17, 1882.

WHILE there has been so much agitation and discussion recently about international copyright with America, it is surprising that the compulsory registration of book titles should have escaped all our legislators, although the matter is one of every-day importance to the whole publishing trade, and the remedy ought not to be beyond our grasp, as it does not present any serious difficulty.

The present state of things is most unsatisfactory. When a title is chosen by author or publisher, the first care is to make a diligent search of all available catalogues, with a view to ascertain if the title has been used before. But it does not follow that because such a search does not disclose a previous use of the title, therefore it is free. Books have been published which are to be found neither in Low's Catalogue, the Museum Catalogue, Whitaker's Reference Catalogue, nor Stationers' Hall. Even if an entry is made at Stationers' Hall, if the author's name is given it is entered under that only, and not under the subject, so that unless one knows of such a book it is impossible to trace it there.

The publisher now supposes that he has got hold of a title which is free, and proceeds to announce the book and get it ready for sale, involving printing, binding, &c. But after every care has been exercised, it occasionally happens that in "subscribing" a new book to the trade a prior use of the title is discovered, in which case there is still time (not having actually published or delivered the book) to arrange with the holder of the copyright for permission to sell what have been printed and bound; or should that be impossible (as in the case of one who insists upon the strict legal rights), then voluntarily to withdraw all that has been done, cancel all that have been bound, choose and print a new title, &c., and so put up with a considerable loss. In other cases the previous use of a title may not be found out until after the book has been published and is in the hands of the public generally, and then may come an injunction in Chancery, with all its attendant worry and expense.

Thus at present there is no absolute security about the selection of a title; and I have no doubt many others in the trade will have experienced what has just now fallen to my lot, which is what has led me to write this letter, in

* There is nothing so delicious to the bather's feet as the low-tide sands of Petit Bot Bay save the "silt" of a Midland river.

XUM

the hope that a movement may be got up for the introduction of a short Bill by some member of Parliament to remedy the present defective state of the law. Stationers' Hall could very well be utilized for the purpose, which should be compulsory registration, to be followed by actual publication within a given date, and the deposit of a copy of the book on the day of publication; all existing titles to be brought into the register within, say, three months; search to be made and official certificate supplied upon application. The practical details and the fees to be charged would not be difficult to arrange, if only we could get a few members of the trade to take up the matter actively; and I hope I have now set the ball rolling. JOHN HOGG.

HELEN IN THE ILIAD AND ODYSSEY.

MAY I point out that the argument by which the reviewer of my 'Helen' tries to prove the separate authorship and comparatively late date of the Odyssey is not founded on fact? "It is only in the Odyssey," he says, "that any attempt is made to shift the moral blame from Helen on to some god." But (Iliad, iii. 164) Priam says that he does not hold Helen to blame, "the gods are to blame." In Iliad vi. 357 Helen herself lays the fault on fate and Zeus, though this means, perhaps, not much more than *la belle Hélène's* frequent references to *la fatalité*. Again, the reviewer says, "In the Iliad Helen is neither moral nor immoral. No question of immorality approaches her." This is a most singular statement, for in the Iliad, as Mr. Gladstone has observed, Helen's penitence and self-abasement come nearer to the Christian ideal than probably any other passage in pagan literature. In neither Iliad nor Odyssey do the other characters of the poem criticize Helen's behaviour with any freedom, though she complains (Iliad, xxiv. 778) that her husband's kin upbraided her. But Helen herself repeatedly expresses her own sense of moral guilt in both poems. The passages in the Iliad are familiar to all—iii. 173–176, vi. 344. Curiously enough, Helen uses the same very strong terms of reprobation about herself in both the Iliad and the Odyssey:—

Δᾶερ ἐμεῖο κυνὸς κακομηχάνου ὀκρυοέσσης.
Iliad, vi. 344.

ὧτ ἐμεῖο κυνώπιδος εἵνεκ' Ἀχαιοὶ
ἤλθεθ' ὑπὸ Τρώιην, κ.τ.λ. *Odyssey*, iv. 144.

The passage in the sixth book is remarkable for the depth of Helen's penitence and her clear view of the nature of her fault, as well as for her expressed contempt of Paris. In face of these and of countless other ethical passages—"tonic" passages, as Mr. Arnold calls them—it seems odd to speak as the reviewer does of the "absence from the Iliad of any notion whatever of morality." It follows that arguments for the later date of the Odyssey based on the theory of the non-morality of the Iliad are valueless.

A. LANG.

*** It is, perhaps, pardonable in the latest translator of Homer to decide off hand a controversy that has amused and interested the world since the beginning of criticism. That a scholar quite capable of fighting his own battles, and intelligent enough to raise a controversy upon a side issue rather than upon his own singular conception of the character of Helen, should shelter himself behind Mr. Gladstone is less easily explicable. In the opinion of the general reader the name Mr. Lang advances seems a tower of strength. Those genuinely interested in questions such as are raised in Mr. Lang's complaint know that to ascribe to Mr. Gladstone a view of this description is to stamp it as fanciful. The paragraph in the 'Juventus Mundi' from which Mr. Lang quotes is as follows:—

"Upon the whole, I think that no one, forming his estimate of Helen from Homer only, could fall into the gross error of looking upon her as a type of depraved character. From the odious Helen of the Second Æneid she is immeasurably apart. Her beauty, grace, refinement, are not contaminated by vicious appetites; they are only not sustained by an heroic, almost a superhuman, firmness. Her fall once incurred, she finds herself bound by the iron chain of circumstance, from which she can obtain no extrication. But to the world, beneath whose standard of morality she has sunk, she makes at least this reparation, that the sharp condemnation of herself is ever in her mouth, and that she does not seek to throw off the burden of her shame on her more guilty partner. Nay, more than this; her self-abasing and self-renouncing humility come nearer, perhaps, than any other heathen example, to the type of Christian penitence."

If Mr. Lang accepts this view, the adhesion of one scholar to Mr. Gladstone's singular proposition is established. It would be gratifying, however, to see a passage in the New Testament that in any way conforms with Helen's description of herself in the passage Mr. Lang advances. "Shameless" is the rendering Mr. Lang himself gives in his translation of the Odyssey to the word κυνώπιδος, spoken by Helen of herself. A more literal rendering would better convey the genuine feeling of Helen that she had behaved like the animal to which she compares herself. That Helen blames herself in the Iliad as the cause of woe to Trojan and Greek is obvious. The expressions to which she listens from Hecuba and the Trojan matrons, who attribute to her the loss of their husbands slain in battle, are—not, however, without a faintly indicated sense of injustice—echoed by her. She is disastrous, woe-bringing. This is the sense in which the reproach quoted by Mr. Lang from the Iliad is to be taken. It is at least the view of those whose assumptions he so summarily dismisses. Of no more value in settling the question are the words of Priam (Iliad, iii. 164) on which Mr. Lang relies. Priam, whose tenderness towards Helen is chivalric, lays vaguely on some god the responsibility of suffering which he knows Helen is in the habit of hearing ascribed by others to herself. Once more we assert, then, that the question of morality is not raised in the Iliad, even in the rudimentary manner in which it is raised when, in the Odyssey, Penelope says of Helen—

τὴν δ' ἤτοι ῥέξαι θεὸς ὥρορεν ἔργον ἀεικές·
Odyssey, xxiii. 222.

translated by Mr. Lang, "Howsoever, it was the god that set her upon this shameful deed."

PROF. KARL VON HALM.

ONE of the lights of German learning has departed in the person of Karl von Halm, who died on the 5th of this month in his seventy-fourth year. Most of his life was passed in Munich; he was born and educated there, first at the Gymnasium, and then at the University under Thiersch. After an interval of a few years, during which he worked as a schoolmaster at Speyer and Hadamar, he returned to Munich in 1849, to become rector of the newly founded Maximilian-Gymnasium—an office which he relinquished in 1856, when he was nominated to the distinguished post of Director of the Munich Library and Ordinary Professor at the University. His life, therefore, was all along busy; but in his case, as in that of Ahrens, Meineke, and so many eminent names in German philology, scholastic duties do not seem to have been found incompatible with the interests of learning. He was certainly one of the best Latinists of his time, and the range of his knowledge was such that he was equally at home with Cicero and Quintilian and with the Latin Fathers. Those who knew him personally will not easily forget the distinction of his manner and his somewhat ecclesiastical air, which made one think for the moment that one was talking with an abbé of a former age rather than with a living German philologist.

I have satisfied myself of the existence of these eighty-nine issues, with the exception of the doubtful Maunder and one other, by personal examination. There are others, but my attempts to obtain copies of them have failed. Many differ only in the names of the publishers or in the date. Those marked with a star have

escaped the notice of Ellis, Pickering, Russell Smith, Bohn, Bethune, and Westwood (1864), and are here recorded for the first time. The most important is the Hawkins of 1791, of which I know but one copy; the others are chiefly issues of the Hawkins-Rennie series.

THO. SATCHELL.

PLAGIARISM.

Marseilles, Oct. 16, 1882.

MR. JAMES PAYN having been (oh, wonder of wonders!) accused of plagiarism, on my authority, as I learn, and from a story of mine, I beg you to reproduce this copy of a letter which I dispatch by the same post to the *New York Tribune*.

ROBERT LOUIS STEVENSON.

To the Editor of the New York Tribune.

Terminus Hotel, Marseilles, Oct. 16, 1882.

Sir,—It has come to my ears that you have lent the authority of your columns to an error.

More than half in pleasantry—and I now think the pleasantry ill-judged—I complained, in a note to my 'New Arabian Nights,' that some one, who shall remain nameless for me, had borrowed the idea of a story from one of mine. As if I had not borrowed the ideas of the half of my own! As if any one who had written a story ill had a right to complain of any other one who should have written it better! I am, indeed, thoroughly ashamed of the note and of the principle which it implies.

But it is no mere abstract penitence that leads me to beg a corner of your paper; it is the desire to defend the honour of a man of letters equally known in America and England; of a man who could afford to lend to me and yet be none the poorer, and who, if he would so far condescend, has my free permission to borrow from me all that he can find worth borrowing.

Indeed, sir, I am doubly surprised at your correspondent's error. That James Payn should have borrowed from me is already a strange conception. The author of 'Lost Sir Massingberd' and 'By Proxy' may be trusted to invent his own stories. The author of 'A Grape from a Thorn' knows enough, in his own right, of the humorous and pathetic sides of human nature.

But what is far more monstrous—what argues total ignorance of the man in question—is the idea that James Payn could ever have transgressed the limits of professional propriety. I may tell his thousands of readers on your side of the Atlantic that there breathes no man of letters more inspired by kindness and generosity to his brethren of the profession; and, to put an end to any possibility of error, I may be allowed to add that I often have recourse, and that I had recourse once more but a few weeks ago, to the valuable practical help which he makes it his pleasure to extend to younger men.

I send a duplicate of this letter to a London weekly; for the mistake, first set forth in your columns, has already reached England, and my wanderings have made me perhaps the last of the persons interested to hear a word of it. I am, &c.,

ROBERT LOUIS STEVENSON.

THOMAS LODGE AT SCHOOL.

29, Delamere Terrace, W.

To the courtesy of the Rev. Charles J. Robinson I am indebted for a scrap of important information respecting the poet Thomas Lodge which has hitherto evaded every investigator. I regret very much that it reaches me just too late to be incorporated in the 'Memoir of Thomas Lodge' which the council of the Hunterian Club have employed me to write, and which is to be prefixed to their superb reprint of the poet's complete works. In case of our being unable even to slip it in on a fly-leaf, I ask leave to print it here for the present. It is an entry in the records of the Merchant Taylors' Company, stating that on the 23rd of March, 1570/1:—"Item the foresaide M^{r} and Wardens have admitted Thomas Lodge, fil' Thome L. militis [and certain other boys] are admitted [*sic*] to be of the number of those l schollers that are limitted to be broughte within o^{r} schole." The reference, Mr. Robinson tells me, is to fifty scholars who were to pay 2*s.* 6*d.* a quarter.

This entry, which is of considerable value in determining the question of Lodge's probable year of birth, had escaped Mr. Robinson's attention until I happened to ask him to search for it. It increases the debt which we owe to his admirable investigations. As, unfortunately, the school lists of the date are not extant, we cannot hope to ascertain the much less important date when Lodge left. EDMUND W. GOSSE.

DR. ABEL'S LINGUISTIC ESSAYS.

DR. ABEL has sent a long letter, which begins as follows:—

"In his article upon my 'Linguistic Essays' your reviewer says: 'The general conception of love discovered for one nation from the consideration of all its terms is compared with the parallel conception formed by each other nation, and finally the different conceptions are combined to show us all that can be thought or said about love—a result which we certainly cannot attain to without a much larger induction of facts; the Sanskrit alone, as we have said above, would add an entirely different conception.' In this passage my critic attributes to me the intention to extract all that can be said or thought about love from the four languages I happen to compare in my essay. It must be almost unnecessary to disprove so very unlikely an imputation; but as the charge is preferred I may be permitted to reprint the passage (p. 52) on which it is founded:—

"'Considering all the words [expressive of love], independently of the people to which they belong, as products of the one human soul, and arranging them according to their spiritual connexion alone, we may aim at a systematic and diversified adumbration of all that can be said or thought about love.....For points particularly accentuated by, and specially characteristic of it, each language will find the nearest synonyms in itself, and turn their distinctions to account for purposes of logical discrimination; whilst for other features less completely expressed, and only represented by one or two words, a foreign language will generally supply the word to be put next, and offer a means for testing and defining, which does not exist in the idiom of the word tried.'

"Both in its wording and meaning the above plainly refers to all languages indiscriminately, but not to any limited number of them."

Dr. Abel then proceeds to say that we have misunderstood him in sundry instances—*i.e.*, by saying that he considers that we need first to know each nation's logical modes, and then we shall see the meanings of their case-forms; by not observing that he gave his reasons for ignoring historical research; and by hinting, as he thinks, that he had failed to make clear his use of the term *psychologie*. As to the part of Dr. Abel's letter we have printed in full, we owe him an apology. The very obvious slip in our review was due to the accidental omission of three or four words. On the other points we must say that, though we are quite willing to allow we may have misunderstood our learned correspondent, we think his book is to blame for this, and that our remarks were fair inferences from it. But to substantiate this it would be necessary for us to print the whole of Dr. Abel's letter, and add a reply at least as long, for which we have no space, and which would have little interest for our readers.

THE COMING PUBLISHING SEASON.

MR. MURRAY'S list of forthcoming works includes the third and concluding volume of the 'Life of Bishop Wilberforce,' by his son, Reginald G. Wilberforce,—'Raphael: his Life and Works,' with particular reference to recently discovered records, and an exhaustive study of extant drawings and pictures, by J. A. Crowe and G. B. Cavalcaselle,—'The Golden Khersonese and the Way Thither,' by Isabella Bird (Mrs. Bishop),—'Greece: Pictorial, Descriptive, and Historical,' by Bishop Wordsworth, a revised edition, edited by Mr. H. F. Tozer, M.A.,—'Asiastic Studies, Religious and Social,' by Sir Alfred C. Lyall, K.C.B.,—'The Revision Revised: Three Articles reprinted from the *Quarterly Review*,' by Dean Burgon,—'Memoir of the Life of Lord Lyndhurst,' by Sir Theodore Martin, K.C.B.,—a popular edition of the 'Life of a Scotch Naturalist (Thomas Edward),' by Samuel Smiles, LL.D.,—'Life of Jonathan Swift,' by Henry Craik, M.A.,—'Selections from Oxford Lectures, chiefly on Historical Jurisprudence,' by Sir H. S. Maine, K.C.S.I.,—'Worship and Order,' by the Right Hon. A. J. B. Beresford Hope, M.P.,—'James and Philip Van Arteveld: Two Remarkable Episodes in the History of Flanders,' by James Hutton,—'Siberia in Asia: a Visit to the Valley of the Yenesay, in East Siberia,' by Henry Seebohm, F.R.G.S.,—'Recreations and Studies of a Country Clergyman of the Last Century: being Selections from the Correspondence of Thomas Twining, M.A.,'—'The Parthenon: an Essay on the Mode in which Light was introduced into Greek and Roman Temples,' by James Fergusson, F.R.S.,—'The Works of Alexander Pope: Vol. IV. The Dunciad,' &c., Elwin's and Courthope's edition,—'Religious Thought and Life in India,' by Monier Williams, M.A.,—'Method in Almsgiving: a Handbook for Helpers,' by M. W. Moggridge,—'The Rise and Growth of the Law of Nations,' by J. Hosack,—'Practical and Conversational Pocket Dictionary of the English, French, and German Languages, for the Use of Travellers,' by George F. Chambers, F.R.A.S.,—'Mexico To-day,' by T. Unett Brocklehurst,—'The Principal Facts in the Life of our Lord,' six lectures, by Henry Wace, D.D.,—'The Student's Manual of the Political Geography and Physiography of British India,' by George Smith, LL.D.,—'The Student's Evidences of Christianity,' by Henry Wace, D.D.,—'Journal of a Lady's Travels round the World,' by F. D. Bridges,—'London: its History, Antiquarian and Modern,' founded on the work by the late Peter Cunningham, F.S.A., a new edition revised by James Thorne, F.S.A.,—'Italian Principia: Part II. A First Reading Book,'—'The Student's Ecclesiastical History: Book II. The Middle Ages and the Reformation,' by Philip Smith, B.A.,—'The Student's History of the Roman Empire, from the Establishment of the Empire to the Accession of Commodus, A.D. 180,'—'The Student's History of Modern Europe, from the End of the Middle Ages to the Treaty of Berlin, 1878,'—'The Apocrypha, with a Commentary, Explanatory and Critical,' by various writers, edited by Henry Wace, D.D.,—'A Dictionary of Hymnology,' by the Rev. J. Julian,—'Life and Writings of St. John the Divine,' by the Bishop of Derry and Raphoe,—the third volume of the 'Dictionary of Christian Biography,' edited by W. Smith, D.C.L., and Henry Wace, D.D.,—and 'The Student's Commentary on the New Testament,' abridged from the 'Speaker's Commentary,' and edited by J. M. Fuller, M.A.

Encouraged by the success of their 'Universal Instructor,' Messrs. Ward, Lock & Co. have long had in preparation, and will this month commence the publication, in monthly parts, an entirely new work for the education of young children, entitled 'The Child's Instructor.' It is intended for children from the ages of three to eight years, and presents many novel features, being based on the kindergarten principles of toy-teaching and play-learning. Messrs. Ward, Lock & Co. will next month commence the publication of an edition of Scott's Waverley Novels, containing all the illustrations that appear in the handsome French edition now in course of publication by Messrs. Firmin Didot & Co., of Paris.

Mr. Gardner (London and Paisley) will issue next week a two-volume novel entitled 'Julian Ormonde,' by W. C. Maughan, author of the 'Alps of Arabia,' &c. Mr. Gardner has also in the press a new novel of special interest, by the author of 'A Lonely Life,' 'Wise as a Serpent,' &c.

Messrs. John F. Shaw & Co. announce the following books for the young:—'Red and

White: a Tale of the Wars of the Roses,' by E. S. Holt,—'The Foster Sisters: a Story of the Great Revival,' by L. E. Guernsey,—'Seeketh not her Own; or, the Workers of La Garaye,' by M. Sitwell,—'Pretty Pictures for Little Paint Brushes,' with descriptive narratives, outlines by T. Pym,—'Only a Cousin,' by Catharine Shaw,—'Lonely Jack and his Friends at Sunnyside,' by Emily Brodie,—'Cripple Jess, the Hop-picker's Daughter,' by L. Marston, — and 'Little Freddie; or, Friends in Need,' by E. E. G. For smaller children: 'Jack and Jill: a Story of To-day,' by Mrs. Stanley Leathes, — 'Bertie's Wanderings, and What came of Them,' by Ismay Thorn, — 'A Little Wild Flower; or, Rosy's Story,' by L. J. Tomlinson,—'Living Water for Little Pitchers,' by the Rev. J. Stephens,—and 'Something for Sunday,' outline texts for the children to paint. Of religious works: 'In Defence: the Earlier Scriptures,' by H. Sinclair Paterson, M.D.,—'A Portrait from God's Picture Gallery,' lessons on the life of David,—'The Glory of the Gospel,' by Rev. W. H. M. H. Aitken,—'Shining Light,' memorials of Caroline W. Leakey,—'At Rest among the Laos,' the story of the missionary career of M. M. Campbell,—and 'The Compassion of Jesus,' by the Rev. A. Saphir, D.D.

A short 'History of the Church of England,' by Miss Yonge, the author of 'The Heir of Redclyffe,' is in the press, and will shortly be published by the National Society, mainly for the use of schools. The same inexhaustible writer is editing a series of historical ballads, many of them of her own composition, which will also be shortly published by the National Society, in three volumes.

Messrs. Eyre & Spottiswoode will publish in a few days two works, entitled 'Her Beautiful Dream,' a Christmas fancy, intended mainly for the young, and 'Songs in Sunshine,' a collection of short poems by the Rev. Frederick Langbridge.

Mr. George Redway is about to publish 'Sandracoltus,' a drama in five acts, by Mr. W. Theodore Smith, and 'The Angelic Pilgrim,' a poem by W. H. Smith. The same publisher announces 'The Handbook of Palmistry,' by Miss Rosa Baughan, revised, with illustrations.

Literary Gossip.

Mr. John Morley has, it is understood, abandoned the idea of bringing out a new magazine.

The leading story in *Good Words* next year will be written by Mr. Walter Besant, author of 'The Chaplain of the Fleet,' &c. The title is to be 'All in a Garden Green.'

Among the contents of the November number of the *Fortnightly Review*, which will henceforth appear under the editorship of Mr. T. H. S. Escott, will be 'The Reform of Egypt,' by Sir Samuel Baker; 'The Future of Zululand,' by Sir Bartle Frere; 'Lord Falkland,' by the Earl of Carnarvon; 'British Agriculture in 1882,' by the Hon. G. C. Brodrick, Warden of Merton College, Oxford; 'The late Professor F. M. Balfour,' by Prof. Moseley, of the Challenger; 'Some Aspects of American Politics,' by Mr. James Bryce, M.P.; 'The Irish Parliamentary Party,' by Mr. T. N. Healy, M.P.; 'Egyptian Finance,' by Mr. A. J. Wilson; an article embodying an authentic exposition of M. Gambetta's views; and an article on the state of the Opposition, by a Conservative.

Mr. John Addington Symonds, whose 'Studies of the Greek Poets' are well known, is now engaged on a collection of 'Studies of the Elizabethan Dramatists.'

The Bampton Lectures of Mr. Hatch, on the 'Organization of the Early Christian Churches,' of which the second edition, with revised notes and a new preface, has recently been issued by Messrs. Rivington, seem to be more fortunate than their predecessors in attracting attention abroad. Lately, on taking up the first number of Signor Bonghi's new magazine, we were surprised to find the opening review was devoted to them, and wondered that an Italian audience should be supposed to care for anything so typically English as a Bampton Lecture. Now we hear that Mr. Hatch's book is being translated into German. It is the only series of Bampton Lectures which has ever been considered worth reproducing in Germany for the benefit of German theological students.

A Welsh translation of 'East Lynne' is now appearing in serial form in the Principality.

A translation of M. Gabriel Charmes's 'Experiences of Egyptian Life' will shortly be published by Messrs. Bentley; and *à propos* of Egypt a new book by the author of 'Eau-de-Nil' is, we understand, in the press, entitled 'Azahar; or, Journal of a Residence in Spain.'

It may be noted that both the Steventon edition of Miss Austen's works and Mrs. Kemble's notes upon some of Shakspeare's plays, which Mr. Bentley is publishing, are to appear printed throughout in brown ink. The notes on 'Macbeth' are the most exhaustive; those on 'Romeo and Juliet,' on the other hand, are unfortunately somewhat scanty. Another novelty in the publishing trade may be mentioned. Several new books we remark are coming out in covers made of various sorts of wood, similar to that which recently appeared on the Hon. Mrs. Fetherstonhaugh's novel 'For Old Sake's Sake.'

Dr. McCosh, formerly of Belfast and now principal of an American college, has issued a programme of a philosophic series. "For the last thirty years," he says, "I have been taking my part in the philosophic discussions of the age. I have a few things yet to say before I willingly leave the arena. These have long occupied my thoughts, and they relate to thrilling topics of the day on which many are anxious to have light thrown. In order to bring my views before the thinking public I start a philosophic series, to consist of small volumes of about sixty pages each, in stout paper, at fifty cents per volume, and issued quarterly, and each embracing an exposition complete in itself of one theme. I begin with 'The Criteria of Diverse Kinds of Truth as Opposed to Agnosticism, being a Treatise of Applied Logic.'" This treatise will be followed by one 'On the Nature of Causation in relation to the lately discovered Doctrine of the Conservation of Energy or the Persistence of Force'; one 'On what Development can Do and What it can not Do'; by 'A Criticism of the Philosophy of Kant'; and 'A Criticism of Herbert Spencer's Philosophy as Culminated in his Ethics.'

The *Publishers' Weekly* announces that an American publishing firm will issue immediately 'Ralph Waldo Emerson: an Estimate of his Life and Character,' by Mr. A. Bronson Alcott. Mr. Alcott, the neighbour and lifelong friend of the "Seer of Concord," is now approaching his ninetieth year. The illustrations are from original photographs not before collected. The edition is limited to 200 copies. The same publishers announce that they have in the press the Hon. William T. Davis's contribution to the history of the early settlement of the Plymouth colonists, to be entitled 'Ancient Landmarks of Plymouth.' The work will be divided into two parts, the first of which will treat of the methods by which the Pilgrims obtained possession of their lands, including their various patents, and their negotiations with the merchant adventurers of London, and will trace the titles of estates along the streets of Plymouth from the first grantees to their present owners. It will give also a history of the houses at various times built on them, and will include a history of the churches, schools, manufactures, and government of the town, and sketches of different places of interest, with the derivation and meaning of their names. The second part will be devoted to genealogical records of Plymouth families, of which over seven hundred are treated with more or less fulness.

Mr. Edward Pocknell, author of 'Legible Shorthand,' has taken a hint thrown out in our review of Anderson's 'History of Shorthand,' and, in a small manual now in the press, will show what his "system can do when limited to the use of simple means, such as an ordinary memory could retain after a few lessons, and to styles of spelling not too brief to be easily read." This simple system, adapted to correspondence and ordinary purposes, is to be called 'Common Shorthand,' and to be issued at a cheap price.

A new edition of the 'Ancient Customs of Hereford,' by the late Mr. Johnson, town clerk of that old city, is now in the press. It contains much of interest relating to the trade and government of the city in mediæval times.

"Spelling reform note-paper" is the latest device of the so-called reformers. It has been prepared by the English association, and is headed by the "five rules of partial corrections" that have been agreed on in England and America. The reformers intend to agitate their views at the coming School Board elections. They think that as the Department now allows nearly 50 per cent. of misspellings in the First Standard, a little more perseverance will get rid of spelling altogether.

The *Magazine of Art* seems to be improving. It promises articles by Mr. R. L. Stevenson and Prof. Sidney Colvin, on two Japanese romances and on Mr. Hamerton's 'Graphic Arts.' An account of Prof. Costa, by Julia Cartwright, includes an autobiography, political and artistic, written specially for the magazine, and illustrated with an engraving after Sir F. Leighton's portrait.

Messrs. Hansard's Monthly List of Parliamentary Papers for September comprises 21 Reports and Papers and 34 Papers by Command. No Bills are included. Among the Reports and Papers are a Return showing the Comparative Progress of Population, Revenue, and Expenditure, 1841–2 to 1879–80, and the Second Report from the Select Committee of the House of Lords on

the Irish Land Law, with evidence. Among the Papers by Command we call attention to Mr. Danvers's Report on Indian Railways for the Year 1881–1882; to the General Report to the Board of Trade on the Railways of the United Kingdom; to the Agricultural Statistics of Ireland for the Year 1881; to Papers relating to the Affairs of the Suez Canal; and to the Digest of Evidence taken before the Commissioners on Tonnage, with general analytical index.

Mr. C. R. Low is preparing for press a new and cheap edition of his memoir of Sir Garnet Wolseley published in 1878. The new edition will include the later portion of the gallant officer's career, including his administration of Cyprus, his services in Zululand and the Transvaal, with the Secocœni campaign and dealings with the Boers, and the Egyptian campaign.

W. C. R. writes:—

"A paragraph in last week's *Athenæum* states that a bust of Fielding has been modelled from the celebrated drawing by Hogarth to serve as a memorial of the great novelist in Somerset. It is, of course, well known that Hogarth's drawing was after a profile of Fielding 'cut by a lady,' says Murphy, 'with a pair of scissors,' the painter furnishing the expression, &c., from memory. Could such a portrait be trustworthy? And what sort of full face is a sculptor going to get from a profile? If a bust is not like the original it is surely of very little use. A bare inscription would be a cheaper reminder and more to the purpose. Here is a bust, containing, of course, a full face, to be taken from a profile that owed its existence to friendly memory working on a paper cutting! Was the miniature likeness mentioned by Chalmers ever discovered? If Fielding is to be memorialized, would it not be as well to put up something to him that will be true?"

According to the last advices the Porte is disturbed by a new manifestation of intellectual activity in seditious literature in Turkey. It had been found necessary, on account of the nature of the inscriptions outside cigarette packets, to subject them to the censure of the Ministry of Public Instruction. Now it has become necessary to take in charge the labels and tickets on tobacco boxes. To a population, male and female, habitually addicted much to smoking and little to reading, conspirators found direct access by means of their tobacco, nor was there smoke without fire. Such tobacco papers will be a choice find for collectors here. They already have the old snuff papers with conundrums and amatory effusions, but wanting in the zest of treason.

Mr. Gasprinsky, who has from time to time published several pamphlets in the town of Bakhchissarai, in the Crimea, for the benefit of the Tartar population and written in the Tartar language, seems to have met with success enough to encourage him to edit a weekly publication having for its object to make the Tartar Mussulmans of the Crimea better acquainted with Russia and, as far as may be, with European civilization. The new publication is named the *Terdjiman* (*Translator*), and is printed in Russian and Tartar in parallel columns. The first number contains articles entitled 'Is the Education of Women Necessary?' and 'The Mussulman Press in Russia.'

The first volume of Mr. Seebohm's work on 'English Land Tenures,' which we have already announced, will probably be out at Christmas.

In consequence of the unsettled state of Egypt, M. Renan has delayed his visit to Sinai and Palestine till February, 1883. He is hard at work in the mean time on his history of Israel and on the index of his 'Origines du Christianisme,' which is partly in type.

The Rev. J. Martineau writes:—

"My attention has been called to a paragraph in the *Athenæum*, intimating that I am collecting or sifting materials for an autobiography. Allow me to say that there is no foundation whatever for such a statement."

We greatly regret to hear of the death of Dr. Burnell, the eminent Sanskrit scholar.

SCIENCE

ASTRONOMICAL NOTES.

A telegram was received at the end of last week by the Astronomer Royal from the Vienna Academy announcing that Dr. Julius Schmidt, Director of the Observatory at Athens, had discovered on the 8th inst. a comet only four degrees south-west of the great comet, and having the same motion. Is this a parallel case to that of Biela's comet? and is this remarkable comet undergoing a process of gradual disruption? In the case of Biela's the separation into two companion comets was almost actually seen, Dr. Hind noticing on the 19th of December, 1845, that the comet appeared "somewhat elongated or pear-shaped," and Maury at Washington perceiving, on the 13th of January, 1846, a separate smaller nucleus near the principal nucleus, which he at first thought might be a nebula, but as it continued to move in the same direction and with the same velocity as the other, he noted on the next day, January 14th, "Biela has a companion close aboard!" That comet returned, it will be remembered, in the autumn of 1852 as two comets, but has not since been seen, although it is thought that it may be connected with a meteoric stream which is frequently remarked about the end of November, when the earth passes through the comet's orbit. Another comet accompanied by a companion was discovered at Olinda, near Pernambuco, Brazil, by M. Liais, Director of the Observatory at Rio de Janeiro, in February, 1860, which was observed by himself and his assistants during a few days, but not seen elsewhere, and could not, owing to its position, have been visible in the northern hemisphere. But neither the latter comet nor that of Biela made any close approach to the sun, which renders the present one so especially interesting. It is much to be regretted that the weather over the greater part of England has been lately very unfavourable for astronomical observations. The following telegrams were received at the French Academy from the Emperor of Brazil:—(1) From M. Cruls at Rio, dated September 26th, "Grande comète australe visible de jour observée aujourd'hui. Queue 30°. Présence sodium et carbone." (2) From Don Pedro de Alcantara, dated September 25th, "Visible de jour au sud de Rio 18, 19, 20. Vue par moi aujourd'hui de 4^h 10^m à 5^h 40^m matin. Splendide 26."

A series of observations of the comet made by Prof. Riccò at Palermo has been communicated in a letter from Signor Cacciatore, Director of the Observatory there, to *Astronomische Nachrichten*, No. 2462. He very soon noticed an alteration in the appearance of the nucleus, which, at first almost spherical in form, became in the last days of September elongated in the direction of the axis of the tail, suggesting an approaching separation into two nuclei. Prof. Krüger's observations at Kiel commenced on the 5th of October, and he then noticed that, during occasional moments of greater stillness of the atmosphere, the comet's head appeared to him to consist of two distinct nuclei; this idea was confirmed on the night of the 7th. The comet is now moving so rapidly to the south that not much more will be seen of it in Europe.

The planet Mercury will be in inferior conjunction with the sun early on the morning of Monday next, the 23rd inst., and will be at the time within a degree of the sun's limb. The date of the next inferior conjunction of Venus is Wednesday, December 6th, when the second transit of the pair taking place this century occurs. The next pair of transits will be in June, 2004, and June, 2012. The next transit of Mercury over the sun's disc will take place in May, 1891, but will not be visible in Europe.

The death is announced of Prof. Gabriel Strasser, Director of the Observatory at Kremsmünster, on the 13th of September, at the age of fifty-eight.

GEOGRAPHICAL NOTES.

Dr. Bayol, only recently returned from Futa Jallon, has been attached in a scientific capacity to a military detachment which is to start from Medina on the Upper Senegal in December, and will make a tour through Kaarta. About the same period Col. Borgnis-Desbordes will once more start for the Upper Niger, amply provided with means for building a fort at Bamaku, the garrison of which is to be supported by a "flotilla" of armed steam launches. These launches are to be built at Bamaku, but will be furnished with engines sent out from France.

We are in receipt of another sheet of Mr. Bartholomew's reduced Ordnance map of Scotland, drawn on a scale of two miles to the inch. The sheet now before us includes the Fort William district, and extends from Ben Nevis to the northern extremity of Loch Ness. The hill features are shown by contours, and there are numerous altitudes. Twelve sheets of this excellent map are now in the hands of the public, and must prove a great boon to tourists. We hope soon to see it completed, and would suggest the introduction of graduated tints to show the height above sea level. Messrs. Black are the publishers.

Dr. Paul Neis is about to return to Cochin China, where he will continue his researches into the natural history, geology, and anthropology of that important French colony.

M. A. Ubicini, whose authority in matters relating to Turkey is universally acknowledged, is publishing in the *Revue de Géographie* an essay on 'La Bosnie avant et depuis le Traité de Berlin,' to which we desire to draw the attention of students of modern politics and statistics. They will find in this monograph a vast mass of material lucidly arranged. The portion referring to Austria's government in Bosnia still awaits publication.

L'Esploratore, of Milan, continues to publish Signor Bianchi's interesting reports on the commerce of Abyssinia and Shoa as it exists at the present time. These reports contain but little to tempt commercial enterprise. Signor Bianchi computes the number of oxen annually killed at the residences of the principal chiefs thoughout the country at 87,120 head. It follows from this that ox-hides must be a drug in the market, still it may be doubted whether they would pay to export.

A book designed for the use of officers and travellers in Egypt will be issued almost immediately by Messrs. W. H. Allen & Co. It is entitled 'The Egyptian, Syrian, and North African Handbook,' a simple phrase-book in English and Arabic, by Rev. Anthon Tien, Ph.D., M.R.A.S.

'A Royal Warren; or, Picturesque Rambles in the Isle of Purbeck, Dorsetshire,' by Mr. C. E. Robinson, is the title of a work about to be

published by subscription. It will be illustrated by Mr. Alfred Dawson.

SATURN'S RING.

62, Camden Square, N.W., Oct. 16, 1882.

THE remarkable statement by Mr. Lynn in last week's *Athenæum* that the five principal sets of the *Philosophical Transactions* are all imperfect induced me to look at my own. Finding that it contains the missing plate, I at once sent it to Burlington House, for it would be too selfish to keep in a private library that which the Society clearly ought to have.

I would not trouble you with this note but that it seems desirable to indicate where a copy can be seen. G. J. SYMONS, F.R.S.

*** We are informed, with reference to Mr. Lynn's search for an engraving of Saturn, that one of the copies of the *Philosophical Transactions* in the library of the Royal Society does contain the figure in question.

Mr. Lynn informs us that he has consulted three more—at the Royal Microscopical Society, the Royal School of Mines, and the Royal College of Surgeons—in all which it is missing, as well as in a second copy at the British Museum which had belonged to George III. (that in the Reading Room, to the manuscript notes in which allusion was made last week, was formerly the property of Sir Joseph Banks); also that Mr. Wickham, of the Radcliffe Observatory, Oxford, has, at his request, examined the copy at the Bodleian Library (kindly shown him by Mr. Madan, Sub-Librarian), and that the drawing is not in that.

SOCIETIES.

ENTOMOLOGICAL.—*Oct.* 4.—Mr. H. T. Stainton, President, in the chair.—Two new Members were elected.—Mr. R. McLachlan exhibited nymph skins of *Hagenius brevistylus*, Selys (a dragon-fly occurring in Texas).—Mr. C. O. Waterhouse stated that the beetle exhibited at the August meeting as destructive to beer-casks at Rangoon was not *Xyleborus Saxesenii*, Ratz., but *Bostrichus perforans*, Woll.—A discussion followed as to whether wood-feeding beetles attack healthy as well as unhealthy trees.—The following papers were read: 'Further Descriptions of Insects infesting Figs,' by Prof. J. O. Westwood,—and 'A Supplementary Note on the Specific Modifications of Japanese *Carabi*, and some Observations on the Mechanical Action of Sun Rays in relation to Colour during the Evolution of Species,' by Mr. G. C. Lewis.

NEW SHAKSPERE.—*Oct.* 13.—Mr. F. J. Furnivall, Director, in the chair.—Miss E. H. Hickey read a paper 'On Julius Cæsar.' She deprecated the modern notion that the Cæsar of the play was lacking in heroism, which was a nineteenth century way of looking at a sixteenth century treatment of character. Cæsar was the hero, because the interest of the play centred round him. She pointed out the falsity of Brutus's line of reasoning, that Cæsar should be destroyed because of his potential evil, and concluded by placing the Antony of 'Antony and Cleopatra' above the Antony of 'Julius Cæsar.'—Mr. Furnivall held that Shakspeare had distinctly reduced the heroic proportions of Cæsar. He noticed how Brutus would not admit against himself, in the case of Antony, his own argument of "potential evil" by which he condemned Cæsar; and considered the Antony of 'Julius Cæsar' a higher character than the Antony of 'Antony and Cleopatra.'

ARISTOTELIAN.—*Oct.* 9.—Mr. S. H. Hodgson, President, in the chair.—Dr. C. J. Grece and Mr. F. G. Fleay were elected Members.—The Rev. W. C. Barlow, V.P., took the chair while the President delivered his address 'On the Method of Philosophy.' In former addresses he had shown that the object of philosophy as seen in its history was to render the universe intelligible to thought—that is, to obtain a rationale of the universe. The present address had for its object the definition of the method of philosophy obtained from its history. The first part was devoted to a consideration of the history of philosophy with the object of exemplifying the development of its method. It was shown that there were two features in the history of philosophy which were constantly recurring, the gradual exclusive adoption of the subjective method and the gradual rejection of assumptions, an assumption being something unknown taken as known. Scepticism in philosophy had always led to a return to the subjective method. Descartes's philosophy, which commenced with a universal doubt, had for its fundamental canon the subjective truth expressed by "Cogito ergo sum." Hume's scepticism led to Kant's subjective inquiry, "How is experience itself possible?" From a brief sketch of the history of philosophy it was shown that the distinction between consciousness and objects of consciousness—that is, of subject and object—belongs to philosophy, while that between mind and matter belongs to science. This was done by an analysis of Kant's apperception, in which act of apperception the distinction between the analysis of the essence of objects and their real conditions of coming into existence is seen. The method of philosophy was shown to consist in repeating this act of apperception. After a consideration and explanation of the ambiguities arising from language, which is a pre-philosophic formation, subjective analysis was defined as the work of apperception moving in logical order and analyzing objects of consciousness by means of the distinction between conditions of their essence and conditions of their existence.—It was decided to hold a special meeting on December 11th to discuss the President's address.

MEETINGS FOR THE ENSUING WEEK.

MON.	Aristotelian, 7½.—'Spinoza,' Mr. W. R. Dunstan.
—	Royal Academy, 8.—'Anatomy,' Mr J. Marshall.
TUES.	Photographic, 8.
FRI.	Royal Academy, 8.—'Anatomy,' Mr. J. Marshall.
—	Quekett Microscopical, 8.—'Fibro-vascular Bundles in Ferns, and their Value in determining Generic Affinities,' Mr. T. W. Murrin.

Science Gossip.

THE new departure which the old universities are now making can hardly be better illustrated than by the fact that last week a course of lectures 'On the Practice of Iron and Brass Founding, with Practical Demonstrations in the Foundry,' was commenced by the Demonstrator of Mechanism at Cambridge, under Prof. Stuart's auspices.

MR. ADAM SEDGWICK, M.A., lately Demonstrator under Prof. Balfour, has been appointed to a lectureship by Trinity College, Cambridge, in order that he may continue the classes in morphology during the ensuing academical year; and it is probable that a sum of 300*l.*, equal to the late professor's stipend, will be granted by the Senate to provide demonstrators for the large classes requiring instruction during the coming year. Considerable favour has been shown to the suggestion that a suitable memorial to Mr. Balfour would be the establishment of a studentship in animal morphology, on somewhat similar lines to the G. H. Lewes studentship in physiology, which was first won by Dr. Roy, at present professor at the Brown Institution, and now is held by Mr. L. C. Wooldridge, D.Sc. London.

MR. WRIGHTSON is appointed to deliver the course of lectures at South Kensington in the new Department of Agricultural Chemistry, while Mr. Chapman Jones will take charge of the practical instruction. Dr. J. M. H. Munro is appointed Professor of Chemistry in the College of Agriculture, Downton, Salisbury. The laboratory is open daily for agricultural investigations, and lectures on agricultural chemistry will be given during the winter session.

M. DUMAS, the President of the Academy of Sciences, will occupy the chair at the annual meeting of the Institute of France on the 25th inst.

DR. W. SIEMENS has had considerable success in his endeavours to establish chairs for "electrotechnik" over Germany. At Stuttgart, at Aix-la-Chapelle, at Karlsruhe, and in Hanover, lectures on the application of electricity are regularly given, and at Berlin Dr. Slavy is appointed to deliver this winter a series of lectures on electro-power engines.

M. MARGIS, of Paris, has succeeded in obtaining oxygen directly from the atmosphere by dialysis. A set of membranes prepared by immersing taffeta in ether, sulphide of carbon, or alcohol, are covered with a fine layer of caoutchouc. These membranes are formed into bags—four, enclosed one within the other, are usually employed—and these are placed in a cylindrical iron vessel admitting air, which is drawn through them by means of steam power. The percentage of oxygen is, in respect to nitrogen, increased in passing through each membranaceous bag until that which has passed through the fourth bag gives 95 per cent. of pure oxygen.

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

ILLUSTRATED BOOKS.

A Pilgrimage to the Shrine of Our Lady of Loreto, by G. Falkner (Stock), contains, within ordinary printers' borders, notes of a popular sort contributed to a local newspaper on the return of the author from Italy, and expanded to a small volume. Mr. Falkner, being a printer, had little difficulty in publishing his notes; it would have been better if he had supplied better illustrations. The subject is extremely interesting, and we need not say that Loreto moved Mr. Falkner deeply. The Black Virgin and its "Holy House" might well astonish him, but he tells us nothing new about them—indeed, does not appreciate the archæological or the historical value of the former relic.

George Cruikshank's illustrations to Robert Bloomfield's "Provincial Ballad," called *The Horkey*, have been published by Messrs. Macmillan & Co., the cuts being printed in colours and combined with the text and some pretty borders. The designs are marked by abundance of character and spirit in a style like that of Miss Kate Greenaway's best productions, and the colouring is nice and agreeable. They excel in character rather than in humour and are quite free from extravagance. They suit Bloomfield's verses exactly. The book is one of the best we have yet received this season. Mr. Cruikshank is a nephew of the celebrated caricaturist.

The Lady of the Lake, by Sir W. Scott, has been republished by Messrs. Chatto & Windus, with several pretty woodcuts—elaborate and delicate, but somewhat flat and mechanical—representing scenes associated with the poem. These cuts and the neat printing of the volume ensure it a welcome as a gift.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXXII.—GALLERIES IN AND NEAR LIVERPOOL.

WE may conclude our notes on the pictures belonging to Mr. Frederick Leyland at Woolton Hall by noticing the works he possesses by the old masters of continental schools.

One of the most important works of Velazquez out of Spain, and, among portraits, hardly surpassed by the best of his productions anywhere, is the superb, whole-length, life-size figure of a Corregidor of Madrid. He holds a scroll and a hat and pair of gloves in his left hand, which is placed downwards before him, while his right hand, with the fingers apart and extended, is—somewhat like Rubens's famous likeness of himself bowing and smiling gently—pressed lightly on his breast. A stiff, square collar surrounds the officer's neck. A rapier hangs at his hip and is slung behind the figure diagonally, being half covered by the heavy black cloth cloak which hangs from the shoulders of the wearer. Dense, bushy hair covers each side of the saturnine visage, which is otherwise not marked by more than ordinary character or intelligence. He looks a commonplace man, but may have been astute and resolute. The charm of the picture is by no means diminished by this lack of demonstrativeness and the absence of anything melodramatic, or even dramatic, in the figure and the face. Velazquez might have met any day in Madrid a score of persons like this, and yet, simple as the characterization of the subject is, the verisimili-

tude and sober animation are not to be questioned. The picture has the magic which hovers about many fine portraits, and most of all about those of Velazquez. With it in the room no man could feel alone, and if he spoke aloud he would almost expect a reply from the figure on the canvas. Technically speaking, the masterpiece is at once sad and energetic; the chiaroscuro is of the simplest, and comprises, with the deep brown and grey tints of the background, a mass of the warmest black garments and grave, adust, and almost monotonous grey carnations, a white collar, and its echo, the paper in the man's hand. The handling and modelling of this picture are broad, and there are no symptoms of straining to produce relief or luminosity.

Next to the Velazquez hangs a fine portrait by a Spanish master comparatively little known here, and who has often been confounded with men who worked in a very different style from his. This is Coello, to whom was attributed a capital life-size head in the Hamilton Palace sale, which, on its own merits and apart from its questionable authorship, we should like to see in the National Gallery. Mr. Leyland's Coello is better than the Duke's, and it is said to represent the renowned Albuquerque, Governor of Milan, during one of the most momentous periods of Spanish history. It is a life-size, whole-length figure in profile, in black, gilded, and embossed armour; the face is in profile to our left; the action is that of energetically grasping a general's baton, as if in presence of an enemy. The carnations have the brown under-tint and ruddy flush which are commonly recognized in the painter's flesh, with his smooth, firm, well-defined modelling, excellent and searching draughtsmanship, and power in delineation with the point. The armour is superbly painted, and, although a little hard, not unworthy of Titian in his severest mood. Straps, passing down the sides of the thighs, support the long white leggings, and, with the leggings themselves—to say nothing of the uncertain way in which the feet have been set on the floor, so that the figure does not stand securely—betray a defect in the draughtsman's skill such as Mytens and even the assistants of Velazquez were apt to exhibit. Some pictures by Coello have been ascribed to Antonio More, a not absurd ascription considering the resemblance which exists in more than one feature of the artists' styles. The carnations are a little heavy, not to say opaque; there is some rawness in their redness.

A fine study by Tintoret attracts by its rich and potent inner glow of light, tone, and local colouring. It is said to be a portrait of Aretino, and represents a studious and luxurious man seated, turning towards us while he holds a book on the table at his side. He seems as if he were about to explain the subject of his reading, using deliberate and weighty terms with animation and emphasis. The flesh is enriched with the so-called Titianesque inner tint of ruddy gold which characterized the art of Robusti. A bushy brown beard surrounds the lower features. The noble three-quarters portrait of the beautiful lady who bears the name of Violante is, not unfairly, ascribed to Giorgione, and we cannot quarrel with the ascription because it needs to be proved on other grounds than the fineness and beauty of the technique which produced this work. The lady wears a dead-leaf satin dress, the pure, deep-toned local colour and rich sheen of which are precious, set open enough to reveal the bosom, half hidden though it be by a semi-transparent white chemisette. Masses of glorious golden hair, with half tints of chestnut and reflections of green, fall from the head on to the shoulders. A meditative, almost sad, if not sorrowful, air pervades the face and modifies its voluptuousness. If this be the Violante of Palma, she was less plump and more set and square than when, at an earlier date, she was painted by other hands. The firm flesh has the morbidezza of an exuberant vitality, and was, by whatever hand, modelled with great skill; the bust, throat, and chin are in this respect fairly marvellous. In subject as in technique the Giorgione differs mightily from its neighbour, the 'Portrait of Mary of Modena,' by, we think, Wissing. This is executed in an eminently respectable and conscientious fashion. It is faithful to the traditions of old Dutch portraiture, and there is an unusual amount of animation in it. Wissing produced another likeness of this lady, which is in the National Portrait Gallery, and is thoroughly characteristic of his manner, or rather his mannerisms. He was but a dull artist, yet not without merits and skill, and to be relied on for a likeness. Speaking from memory of the portraits of the ladies at South Kensington and Woolton Hall, we are not able to say that a strong likeness exists between them, although, on the other hand, we cannot challenge the ascription of either picture to the same subject.

A fine portrait of a Venetian senator in his red robes trimmed with white fur is a life-size, three-quarters-length figure, inspired with the veracity of Tintoret. It depicts an astute, easy-going, and yet careful merchant of good blood and breeding. The dark, ruddy flesh, with its brown shadows, massed in the centre of black, cropped hair, tells powerfully on the canvas. The picture is a first-rate example of a very numerous class, to which Venetian artists, from Titian down even to the imitators of Jacopo da Bassano and the Guadagnini, contributed. A second Tintoret represents with equal felicity another senator, wearing his red robe lined with spotted fur and gathering this garment in his left hand before his figure, the right arm being nearly concealed in its folds, and leaning on the table at his side. The picture deserves attentive and careful examination of its expression, suggestive vitality, and grave pathos. The fine rendering of the commonplace, or rather simple, characteristics of ordinary men and women, in which Tintoret—whose men never attitudinize, whose women never "act" — excelled, is really one of the most subtle and powerful charms of the master's portraits. Among his many "Senators,"—nearly all of which were specimens of a strictly analogous, if far from limited, application of a single set of principles, with a consequent general likeness,—the individuality of each sitter is distinct as in life. Therefore, although they are all dressed alike, and exhibit national resemblances approaching a common type, every spectator will agree in thinking that he could discriminate man from man if he met him in the flesh. The Royal Academicians would oblige the world of art by gathering in one winter exhibition as many "Senators," "Venetian Gentlemen," "Noblemen," and the like, as they could find. They are more common in England than elsewhere, and at one period were to be bought for curiously small sums. Of course a great number of these pictures are copies; an equal number are unquestionably the productions of the sons of Bassano and Tintoret's imitators and pupils. To bring in one room a score or two of these works would be profitable and instructive in a very high degree, and enable us to separate the respective artists' productions with something like confidence in our knowledge of the qualities of each man's art.

Probably by Velazquez is a large painting representing an attack by brigands on a coach, which has been brought to a stand near a noble clump of trees. Four horses are panic-stricken because a man has fired his gun at the driver on the box. The inmates of the vehicle are eagerly striving to release themselves from confinement and run away. The fine silvery tints of the landscape, the somewhat warm and excessive depths of the brown shadows of the figures, are characteristic of Velazquez, and render the ascription to him of this very curious and valuable picture likely to be correct. An additional ground for the same ascription appears in the massing of the figures, which is rather formal.

By Rembrandt a magnificent 'Portrait of Young Six' is a life-size bust in three-quarters view to our left; the eyes, with a soft, intelligent, and gentle expression, look to the front. A red baretta is set sideways on the head in the manner Rembrandt affected for his own portrait and those of other men. Deep yellow hair escapes from under this cap, and emerges into the light, while it surrounds the face like a halo, and "fuses" the brilliancy of the flesh with the sober and tender greys of the reposeful background. The complexion has a fine ruddy glow of the true Rembrandt quality. It seems to be a work of the latter portion of the middle period of the painter's art, and is wonderfully luminous and pure. It must have been well cared for. Another illustration of Rembrandt's principles applied to portraiture is the likeness of a young man in a dark cap, which, although the surface is very tenderly and delicately modelled in a searching mode of execution, has that peculiarly smooth, not metallic, still less mechanical, surface to be found in examples by Solomon de Koningh, and belongs to the conscientious labours of pupils of Rembrandt, never to his own work, except during that early stage of his practice when golden carnations, and smooth, highly finished, and fine surfaces attest the unflinching toil with which he produced them. Even in this stage of his art Rembrandt's modelling was never deficient in precision, fibre, and "bone."

A real masterwork of Wynants hangs at the foot of the staircase at Woolton, and was formerly in the famous collection at Scarisbrick Hall. It gives, with characteristic crispness, vigour of touch, and solidity of impasto, a view of an alley in a wood, with mounted figures traversing its lighted and shaded spaces. Glimpses of open country are obtainable between the trunks of the larger trees, and seem in full sunlight. The finest part of this striking picture is the powerfully painted oak on our right, near the foreground. It is a tree which would have moved the heart of Crome or Hobbema.

A little picture by M. Basaiti should not be overlooked here. It represents the Virgin as a sweet, half-childlike Venetian damsel with the Infant in her lap. His pale rosy flesh, the smooth and delicately finished surface of the picture, the complete draughtsmanship, clean finish, and clear, pearly tones, are all characteristic of the charming painter, and retain traces of Bellini at his finest, especially in the grey half-tones of the carnations and their warmer shadows. The white lining, a frequent feature in Marco's pictures, sets off the rosy tenderness of the flesh.

NOTES FROM ATHENS.

It is not works of ancient art only that have a claim to our attention, nor the relics of antiquities, but frequently documents mentioning ancient buildings prove to be as interesting as the buildings themselves. For instance, the two documents we possess relating to the Erechthæum, and the contract which had for its object the improvement and strengthening of the long walls of Athens, and which probably belongs to the time of the administration of the Orator Lycurgus, are of the utmost importance. Among pieces of this character, unfortunately few in number, is to be ranked the inscription lately found in the Piræus, and giving an accurate account of the Sceuotheca of Philo. It makes important additions to our knowledge of the arsenals of the Athenians. Old Böckh would have exulted had he been able to make use of such a source of information in his 'Public Economy of the Athenians.' The discovery of the inscription in our day is singularly timely, as, thanks to the minute researches of M. Cartault in his treatise 'La Trière Athénienne,' many questions regarding the war navy of ancient Athens have, so to say, been sifted afresh.

Every one who knows anything about ancient history is aware of the importance of the Piræus to a maritime power like Athens. In its three harbours, Munychia, Zea, Cantharus, the war vessels of the city, which in the most glorious days of Greece ruled the seas, anchored in time of peace. It may easily be supposed that proper precautions were taken for preserving the ships; and that for docks and magazines every provision was made is proved, if not by the scanty remains of them, at any rate by the passages in ancient authors referring to them and the notices of naval matters that have come down to us. The Sceuotheca of Philo was particularly celebrated. Strabo mentions that the harbours were full of magazines, among which was the Hoplotheca, a work of Philo. He does not, however, mention its position. Plutarch notices that Sulla, among other acts of destruction, burnt the arsenal of Philo, a wonderful work. According to Pliny, the building could contain the equipment of a thousand ships of war.

More details, however, we do not possess regarding this Sceuotheca. It was, indeed, conjectured that it had been built during the administration of Lycurgus (B.C. 334–330). On the other hand, Pausanias seems to say that the celebrated orator built only docks (*νεωσοίκοι*) at the Piræus, and no armoury. Or are we to suppose that the Periegete cared little about naval affairs, and confused matters, and is, therefore, not to be trusted? In the inscriptions hitherto known—as well as in those discovered in 1834, which Böckh published, and also in those edited by C. Schäfer in the *Proceedings* of the German Archæological Institute in Athens (vols. iv., v.)—was no express mention of the Sceuotheca of Philo. In spite of this it has since Ross's time been universally assumed that the Sceuotheca lay behind the present Customs House, in the neighbourhood of Cantharus. This seemed to be settled by the place where the inscriptions relating to the arsenal and some triglyphs were found, which had been built into a Byzantine conduit. But C. Wachsmuth, in 'Die Stadt Athen,' called attention to the fact that "while a topographical inference from this circumstance is altogether untrustworthy, it is in the nature of things most probable that the arsenal lay on the chief military harbour Zea." This conjecture was confirmed by the discovery of a second series of arsenal notices, which Milchöfer used in his commentary on the maps of the Piræus to establish the conjecture that the Sceuotheca, for the sake of easy access, lay on the heights between the two military harbours Zea and Cantharus. But new light has been thrown on the question of the site by a discovery lately made. In erecting a house in the street now called Soteira, the foundations of a building and fragments of architectural features were discovered, and as at the same time a highly interesting inscription was unearthed at the same place, it seems probable that the spot is the site of the building to which the inscription refers, the Sceuotheca of Philo. The site lies quite in the inner part of the harbour of Zea, below the theatre of Munychia, and in the neighbourhood of the Hippodamian market. The inscription is so interesting that I cannot avoid noticing the most important parts. The exact investigation of its details is a work that still remains for archæologists to do, although that detracts in nowise from the merits of its discoverer and publisher, Mr. Alexander Meletopulos, who has enriched his handsome edition of it with a reduced photograph of the stone tablet. The tablet is 1·16 mètres high, 0·54 mètre wide, and 0·10 thick. It contains no less than ninety-seven lines written *στοιχηδόν*. Its state of preservation is excellent, only the smallest letters forming an exception. Written in the fourth century before the Christian era, it contains the contract between the architect Philo and Euthydemus, the son of Demetrius of Melite, about the building of the arsenal. Everything is so precisely and exactly stated that a modern architect versed in ancient art could easily reconstruct at least the outlines of this grandiose structure.

The building of Philo, the son of Execestides of Eleusis, was erected in Zea (*Zεία*), close to the Propylæum of the harbour, behind the ship-sheds which were united under one roof. It was of large dimensions, four hundred feet long and fifty-five broad, and must have been accommodated to the ground, as part of the site had to be excavated, but the rest was merely cleared, and was supported by walls. The building was to be adorned with a double row of columns, between which a passage was to be left. Walls and pillars, the contract stipulates, are to be of stone from Acte, the peninsula of the Piræus, the capitals of Pentelic marble. The contract describes the technique of the walls, doors, and windows, the window fastenings, the pillars and their parts, the details of the roof, the filling of the door openings with bronze doors, the construction of a stone floor, the closing of the colonnades with stone railings — the centre passage was closed with grated doors,—and the arrangements for housing the various *κρεμαστὰ σκεύη*, the means of ventilation, &c. At the end it is stipulated that the contractors are bound to complete within a fixed time all that they have undertaken, in conformity with the contract and a plan set before them by the architect. This is not the place to set out the particulars in full; that would need a special and technical monograph, which will no doubt be supplied, and help the complete understanding of this interesting document. A point of interest is the occurrence of several words unknown to the dictionaries, and most of which still need explanation. They are as follows: *ὁμοτεγὴς*, *διαμέσως*, *ὑπερτόναιον*, *μετακιόνιον*, *καταιέτιον* (*γεῖσον*), *μεσόμνη*, and *διέρεισμα*. Two others, *πενθημιποδίων*, in the genitive, and *δορώσας* appear to be due to misreading. I suspect that in the sentence *πάχος πενθημιποδίων καὶ δακτύλου* (line 20) we should rather read *πενθ' ἡμιποδίων*. The incomprehensible participle *δορώσας* is, in my opinion, a mistake for *δοκώσας*. The third letter is in the tablet hardly decipherable. Further, the form *πεντελικὸς* for the usual *πεντελικὸς* and *πεντελήσιος* is noticeable. The technical terms *εὐθυντηρία*, *τόνος*, *κορυφαῖον*, bear a meaning hitherto not assigned to them.

The inscription has been carefully deciphered by the editor. Beside the two corruptions mentioned above the following may be noted. In the sentence *θεὶς εὐθυντηρίαν τοῖς τοίχοις, πλάτος τριῶν ποδῶν, πάχος τριῶν ἡμιποδίων, μῆκος τετραπόδων τῶν . . . ων* (lines 16–18), I believe that the gap in the stone which Mr. Meletopulos leaves a blank should be filled up thus: *τῶν [λίθ]ων*.

In Northern Eubœa an inscription relating to the site of the temple of Artemis (whence Artemisium, celebrated in the Persian War) has recently been found, of which I shall give an account in my next letter. On other subjects of interest to the readers of the *Athenæum*, the delivery, according to treaty, of the duplicates from Olympia to the German Government, the continuation of the excavations at Delos, and the first results of the excavations now begun at Eleusis, a report will follow speedily.

Sp. P. Lambros.

Fine-Art Gossip.

Mr. Alma Tadema has just completed a powerful portrait, a head, of the Duchess of Cleveland. The high finish and pure colouring of this work are doubtless designed to protest against the fashionable mode of painting, which sacrifices all searching execution and learned art for the sake of saving labour, and the concealment of lax studies and insufficient accomplishments. Apart from this the duchess's picture might be taken for a Van Eyck if it had not something of Antonio More and most of a Tadema. As a likeness it is perfect. Mr. Tadema has also on hand several works of cabinet size which are not yet sufficiently advanced for description, including two or more destined for New York.

The Society of British Artists will receive pictures intended for exhibition on Monday, the 30th, and Tuesday, the 31st inst., at the gallery in Suffolk Street. Sculptures will be received on Saturday, the 18th prox.

The Rhind Lectures in Archæology, which are given under the auspices of the Society of Antiquaries of Scotland, are now in course of delivery by Dr. J. Anderson, who has taken for his subject 'The Bronze and Stone Ages in Scotland.' On Monday last he lectured on the 'Bronze Age Burials,' beginning with a description of a cairn at Collessie, in Fife; on Wednesday he discoursed on 'Stone Circles'; on Friday, on the 'Culture and Civilization of the Bronze Age.' Three lectures next week conclude the course, Monday being devoted to 'Stone Age Burials—the Horned Cairns'; Wednesday, to 'Chambered Cairns of Circular Form'; and Friday, to the 'Culture and Civilization of the Stone Age in Scotland.'

The Liverpool Art Club have arranged to hold a loan exhibition of works by the late Hablot K. Browne, and are desirous of receiving information from owners of the whereabouts of any works in oil, water colour, or other vehicles.

The *Chronique des Arts* says that M. Bonnat is engaged on a picture, which may appear at the next *Salon*, representing the martyrdom of St. Denis. This is, of course, a subject which the painter is likely to treat without flinching. The price of this work is reported to be 20,000 francs. It is destined for the Panthéon. M. Galland is at work for the same building, and representing 'La Prédication de St. Denis,' for which he is to be paid 20,000 francs. M. Meissonier is to receive 50,000 francs for his 'Les Derniers Moments de la Vie de Sainte Geneviève,' which is in hand for the Panthéon.

Reynolds's portrait of Lady C. Talbot and other family likenesses, besides a certain number of modern paintings, were rescued from destruction during the fire which consumed the greater portion of Ingestre Hall, the Staffordshire seat of the Earl of Shrewsbury, on Thursday of last week.

The death of the French animal painter M. Jean Pierre Paul Gélibert is recorded as having occurred on the 24th ult. at Barthe-le-Neste, Hautes-Pyrénées, in the eighty-first year of his age. He obtained a medal in the *Salon* of 1843. He had been very energetic in promoting a system of teaching drawing with unprecedented facility. M. Jules Rozier, one of Delaroche's pupils, a landscapist of marked ability, who was much interested in the chemistry of artists' materials, died lately at Versailles, aged sixty-one years.

A periodical to be entitled the *Messenger of the Fine Arts* is to be published from the beginning of next year by the St. Petersburg Academy of Arts.

The French journals announce the death, on Tuesday, the 10th inst., of that distinguished art archæologist M. Clément de Ris, formerly Conservateur du Musée de Versailles, and author of many critical and historical essays on archæological subjects.

A reproduction in bronze of M. Barrias's statue of B. Palissy is to be placed near the church of St. Germain-des-Prés, Paris.

Mr. Preziosi, a painter well known at Constantinople, where he had been established for forty years, met with an untimely death last month while out quail shooting.

MUSIC

THE WEEK.

Crystal Palace.—Brahms's New Concerto.

The present season of winter concerts at the Crystal Palace was inaugurated last Saturday afternoon by a selection which left nothing to desire either on the score of interest or variety. The concert opened with a performance of Bennett's Overture to the 'Wood Nymph,' which, under Mr. Manns's direction, was given with a refinement and finish fully worthy of the traditions of the Crystal Palace orchestra. To this succeeded the "Hymn to Happiness" from Berlioz's 'Lelio,' charmingly sung by Mr. Edward Lloyd, though the song loses considerably apart from the context. The special feature of the concert was the first performance in this country of Brahms's new Concerto in B flat. The work was announced for production last season, both at the Crystal Palace and at the Richter Concerts; but it was found impossible then to fulfil the promise, owing to the non-publication in time of the score and orchestral parts. Mr. Manns has, after all, been fortunate enough to secure the honour of giving the first performance in England.

Whatever Brahms writes is characterized by intense earnestness, in many cases one might even say seriousness. No composer has a more hearty contempt for *ad captandum* effects; and, whether his music please or not, it is impossible not to admit that no other than art considerations have influenced the author in writing. For this reason, if we except the 'Hungarian Dances,' the 'Liebeslieder-Walzer,' and a few detached movements in his larger works, we find but little in his music which appeals on a first hearing to a mixed audience. Much of it is written by a student (using the term in its broadest sense) for students. Brahms's works are so full of original thought that even with the advantage of a previous study of the score it is often by no means easy to grasp them fully at a first hearing. His Second Concerto is an example of this. In form it is as clear and logical as any work of Mozart or Beethoven; but it is so elaborate, so overloaded with subject-matter, as to require to be heard several times in order to be fully appreciated. In more than one respect it differs from concertos of the older school. In the first place it approaches very nearly to the form of the symphony; to the three customary movements Brahms has added a fourth, which, though only entitled "*allegro appassionato*," is in reality a *scherzo*. This innovation had already been tried by Henry Litolff in his 'Concert Symphonique' in E flat; but, so far as our memory serves us, the example had not since been followed, though Xaver Scharwenka has introduced a *scherzo* as the second of the three movements of his Concerto in B flat minor. Brahms gives symphonic dimensions and importance to each of the four movements of his work, which the analyst of the Crystal Palace programme justly describes as "a symphony for orchestra with pianoforte *obbligato*." The first movement of the work (*allegro non troppo*), in B flat, is the most elaborate of the four; its general tone is that of dreamy romanticism, and its themes are stamped throughout with the composer's individuality. We find this on a first hearing the portion of the work which is fullest of charm; but it suffers from the besetting sin of most modern composers, too great length. It would be hardly correct to describe the movement as diffuse; more accurately it should be said that it is too full of material, and that Brahms gives more than the musical digestion can take at one meal. The following *scherzo* (in D minor) is by far the least interesting part of the concerto; it is hardly too much to call it dry. Clever it undoubtedly is; but the musical value of the ideas is very small. The slow movement, on the other hand, is delightful; and the *finale* very graceful and playful, forming a happy contrast to the more serious vein of thought which has preceded. The concerto, which occupies forty minutes in performance, is probably the longest ever written; it is certainly one of the most difficult for the solo player. We speak advisedly when we say that there are very few even of the excellent pianists residing in our midst who would have the power to do full justice to this most exacting work. It requires not only uncommon endurance and perfect command over technical difficulties, some of which are of a very unusual kind, but a breadth of conception and a complete sympathy with the composer's ideas which are probably even rarer than the mechanical acquirements referred to. Mr. Oscar Beringer, to whom fell the honour of introducing the work to an English audience, deserves for his rendering the highest praise it is in our power to give him. To a certainty which was marvellous in the performance of the difficult passages with which the concerto abounds, he united a warmth of style which was admirable. His reading was full of expression, without a trace of exaggeration; while the apparent absence of the slightest effort and the evident wish of the player to sink himself in the work added much to the enjoyment of listening. Mr. Beringer has long since made his mark among us; by his performance on Saturday he again proved himself one of our first resident pianists.

The "Voices of the Forest" ("Waldweben") from Wagner's 'Siegfried,' which followed the concerto, was another novelty at the Crystal Palace. The piece is an extract, arranged for concert use, from the second act of 'Siegfried.' All who have heard the work on the stage will remember the lovely effect of the orchestral murmurings depicting the rustling of the leaves, the chirping of the birds, and the various sounds of nature heard by the young Siegfried as he sits alone and meditates. In the concert-room much of the significance of the music is necessarily lost; and we think, moreover, that the delicacy of detail with which it abounds renders it unsuitable for so large an area as that of the Crystal Palace concert hall. On no other theory can we explain the fact that at the end of the room many of the passages sounded indistinct, and were even at times difficult to recognize. Mr. Manns is so careful and painstaking in the production of new music that it is quite impossible that the piece can have been insufficiently rehearsed; we have, therefore, no doubt that the comparative failure in its effect is due to the acoustic properties of the hall. Walther's Prize Song from 'Die Meistersinger,' excellently sung by Mr. Lloyd, and Beethoven's Seventh Symphony completed the programme of an admirable concert. This afternoon, in memory of the late Joachim Raff, his Sixth Symphony (in D minor) will be given for the first time in England.

Musical Gossip.

The Monday Popular Concerts were resumed for the present season at St. James's Hall on Monday evening last. The programme comprised Brahms's Sextet for strings, in G, Op. 36, Haydn's Quartet in D minor, Op. 42, Mendelssohn's Variations Sérieuses for pianoforte solo, and a Prelude, Romance, and Scherzo for violin with pianoforte accompaniment by Franz Ries. The performers in the sextet were Madame Norman-Néruda and Messrs. L. Ries, Holländer, Zerbini, Pezze, and Piatti; Mdlle. Janotha was the pianist and Miss Carlotta Elliot the vocalist. The first of the Saturday Popular Concerts takes place this afternoon.

The Musical Association has just issued its volume of *Proceedings* for last session, the eighth of its existence. As a whole the volume may compare favourably with any of its predecessors. We are glad to find the Association devoting its attention more to practical points in connexion with the art than in some former years, and to see that, while abstract questions connected with the acoustical and mathematical parts of music are not altogether neglected, they no longer hold that prominent position in the proceedings which at one time threatened to make the Association a mere parade-ground for scientific crotchets. Not only the papers read at the meetings, but the subsequent discussions, which are reprinted verbatim from the shorthand writer's notes, will be found full of interest, in the large majority of cases, even to non-musical readers. The contents of the present volume are as follows:—'On the Arrangement of the Stops, Pedals, and Swell in the Organ,' by Mr. R. H. M. Bosanquet; 'On the Beats of Mistuned Harmonic Consonances,' by the same; 'The Cultivation of Church Music,' by Mr. W. H. Monk; 'Songs and Song Writers,' by Mr. Eustace J. Breakspeare; 'On some Italian and Spanish Treatises on Music of the Seventeenth Century,' by Sir F. A. Gore Ouseley; 'Consecutive Fifths,' by Dr. Gladstone; 'Sir William Sterndale Bennett,' by Mr. Arthur O'Leary; 'Some Remarks on Richard Wagner's Music-Drama "Tristan und Isolde,"' by Mr. H. F. Frost; 'From Rhythmic Pulsation to Classical Outline,' by Dr. H. Hiles; and 'On Various Attempts that have been made to record Extemporaneous Playing,' by Mr. T. L. Southgate.

We gave last week the programme of the Bristol Festival. As the only novelty, Mr. Mackenzie's 'Jason,' was produced on Thursday evening, too late for notice in the present number, we shall defer our remarks not only upon that work, but upon such features of the festival as call for comment, until our next issue.

M. Planquette has not heightened his reputation by his new work, 'Rip van Winkle,' produced at the Comedy Theatre last Saturday evening, for the music contains little or no trace of original thought or fancy. But his lyrics are elegant and pleasing, and there is a welcome absence of mere jingle and vulgarity in his score. Boucicault's drama has been, on the whole, tastefully and effectively arranged by Messrs. Meilhac, Gille, and Farnie, and the new work approaches nearer to genuine comic opera than most examples of the kind. Mr. Fred Leslie gives a forcible and pathetic rendering of the character made famous by Jefferson, and the refined singing of Miss Violet Cameron is another pleasing feature in the representation.

XUM

The Balfe memorial tablet was unveiled on Friday, the 20th inst., at Westminster Abbey.

Madame Pauline Lucca is at present in Paris, studying with Madame Pauline Viardot the music of Auber's 'L'Ambassadrice,' in which work she wishes to appear at Vienna.

A new comic opera, 'Muzzedin,' composed by Bachrich, is in preparation at the Vienna Opera. On the 4th inst. a new ballet, 'Melusine,' the music by Doppler, was produced, and is said to have been very successful.

At Stockholm the centenary of the Royal Theatre was lately celebrated by a performance of Naumann's opera 'Cora und Alonza,' the same work with which the theatre was opened on September 30th, 1782.

The distinguished violinist Jean Becher intends to open a violin school at Mannheim.

Schubert's 'Alfonso und Estrella' was performed on the 4th inst. at Cologne, without any great success.

DRAMA

Dramatic Gossip.

Miss Calhoun, whose first appearance in England took place on Saturday last at the Imperial Theatre, and who is said to have established a position in the Western States of America, has a good stage face and presence, a musical voice, and a distinct articulation. She is a little given to posturing, however, and is occasionally too loud in speech. Hester Grazebrook in 'An Unequal Match,' in which her *début* was made, is not suited to her style. No display of comic talent is made, and such expression as is shown is emotional. Either Juliet in 'Romeo and Juliet' or Julia in 'The Hunchback'—characters in which Miss Calhoun has been favourably received in America—is better suited to her than Hester Grazebrook or than Rosalind, in which she is this night to appear. What, however, will probably prove her real line is domestic drama.

'Wedded Bliss' is the title bestowed by Mr. Paulton upon a one-act comedietta translated from the French and produced at the Avenue Theatre. The version is poorly executed and is badly put upon the stage. When the action of a piece passes under the first Republic to clothe some of the characters in the dress of to-day is to run counter to all the traditions of modern management.

The principal *roles* in 'L'Aventurière' are now being rehearsed at the Comédie Française by the younger members of the company. A change in the direction thus promised has long been seen to be necessary.

The cold reception awarded at the Châtelet to 'Madame Thérèse,' a drama in five acts and ten tableaux, drawn by MM. Erckmann-Chatrian from their romance of the same name, seems chiefly ascribable to the fact that a plot almost idyllic in conception is buried beneath spectacle. M. Lacressonnière plays Le Commandant Simon; Mdlle. Lina Munte, Thérèse; and M. Masset, Le Docteur Jacob, her lover.

After many abortive attempts, M. Ballande, whose management of the Théâtre des Nations is about to expire, has obtained a success with 'La Vicomtesse Alice,' a drama in five acts and eight tableaux by MM. Albéric Second and Léon Beauvallet.

LITERATURE

The Salon of Madame Necker. By Vicomte d'Haussonville. Translated by Henry M. Trollope. 2 vols. (Chapman & Hall.)

There has never been any doubt among those who have known anything about French society in the last century that Madame Necker was an interesting woman. To some, indeed, her principal interest may seem to be that she happened to be the beloved of a very remarkable lover, the wife of a very remarkable husband, and the mother of a very remarkable daughter. But, however insolent a game Fortune may choose to play, she does not usually put in such a group of relations a person who is not remarkable herself. Nevertheless, until this book appeared, Suzanne Curchod, or Madame Necker, can hardly be said to have been intimately known. We had spiteful accounts of her by people who were envious of her beauty, her *salon*, her husband's wealth; adoring accounts of her by people who liked to eat her dinners and sit at her feet; and enigmatical accounts of her by the lover who left her and the daughter of whom she was jealous or who was jealous of her. M. d'Haussonville has printed so much new matter that all we had before seems insignificant. But with his contribution of this matter his good deeds end, or very nearly so. He has not known how to weave his letters and diaries, his anecdotes and his facts, into anything like a coherent biography. The reader sighs for one page of Sainte-Beuve or, in another way, for one chapter of Cousin. He even remembers regretfully the use which a person who is not by any means Sainte-Beuve or Cousin — M. Caro — made of much more scanty Coppetiana than these not so very long ago. Nor let it be said that a man who only professes to give us "The Salon of Madame Necker" ought not in fairness to be asked for a complete biography. M. d'Haussonville is by no means troubled about his title, and devotes great (perhaps the greater) part of his book to matters which have little or nothing to do with the *salon*, and to his heroine's life before and after the *salon* existed. However, to be content with what one has is not only a religious, but perhaps also a literary duty.

The points of chief interest among the many that are here handled are, perhaps, the question of Suzanne Curchod's engagement with Gibbon, that of her marriage with Necker, that of her relations with the frequenters of her *salon* in Paris, and that of her affection for her daughter. The second and the last may be quickly dispatched. When Mdlle. Curchod found that Gibbon was obdurate, she seems to have made up her mind that she must marry some one else, and that in the mean time, as her income was almost nominal, she must accept the position of *dame de compagnie*. She was in no want of offers of marriage, but she was curiously fastidious, rejecting one well-to-do Swiss lawyer (but nevertheless keeping him in reserve as a kind of second string) because he hesitated to accept the extraordinary condition that she should be allowed to spend a great part of each year away from him and with her friends. As for the companionship, the facts that Necker had been a suitor of Madame de Vermenoux, the patroness or mistress finally selected, that she had given him a very lukewarm refusal, and that the marriage was kept secret from her until it was an accomplished fact, seem rather significant and not wholly creditable to Madame Necker. It seems also certain, despite M. d'Haussonville's attempts to smooth over the fact, that there was a certain incompatibility between Madame de Staël and her mother, and that it was by no means wholly, or even chiefly, the daughter's fault. But in the Gibbon affair M. d'Haussonville has had the delight—dear to a biographer—of glorifying his heroine at the expense of somebody else. It is true that even before this book nobody could think very well of Gibbon's admitted desertion of Mdlle. Curchod; but still, as the historian tells the story, he himself seems to be almost blameless, and the lady, though not in the least blameworthy, yet capable of allowing her affections to be blighted with a rather singular *sangfroid*. The documents which M. d'Haussonville produces appear to establish beyond doubt the facts that Gibbon heartlessly, or at the best thoughtlessly, left the girl whom he loved without tidings of him and without knowledge whether her engagement held or not for four whole years; that he then announced his inability to marry her in a very shuffling and unsatisfactory manner; that so far from taking the matter with "cheerfulness and tranquillity," she continued to hope against hope for a year longer; and that when, at the end of that time (five years from the original engagement), Gibbon returned to Lausanne, she addressed him in terms which, though by no means unmaidenly, seem to prove passionate affection, while he responded with studied coldness and constraint. "Monsieur," she wrote,—

"I blush at the application I am now going to make; I would willingly hide it from you, I would also hide it from myself. Is it possible, good heavens! that an innocent heart should so far bemean itself? What a humiliation! I have had greater troubles, but never one that I have felt so keenly. I cannot help it, and in spite of myself I feel as if I had lost my head. My own peace of mind exacts that I should make this effort. And if I lose this present opportunity I shall never have another. Whenever I have had a moment's relaxation, my heart, ever ready to torment itself, has always imagined your signs of coldness to be proofs of your delicacy of feeling. For the last five years I have been indulging in this idle fancy in the most exceptional and unaccountable way; but at last, romantic as I may be, I am now convinced of my error. Upon my knees I beseech you to dissuade a maddened heart. Make a frank avowal of your complete indifference to me. I shall then be in a position to govern my own actions. Certainty will bring with it the repose for which I am anxiously longing. If you refuse me this mark of openness you will be the most contemptible of men; for God, who sees my heart, and who loves me though He so sorely tries me; God, I say, will punish you in spite of my prayers, if there is the slightest prevarication in your answer, or if by your silence you treat carelessly my peace of mind as though it were a plaything."

The tone of his reply, which is not preserved, may be judged from her next letter:

"A separation of five years did not do so much to alter my feelings as what has lately taken place. I could have wished that you had written to me sooner, or that your last letter but one had been couched in a different tone. Exalted ideas, when they are supported by an appearance of virtue, may lead one into great errors. You might well have spared me five or six that are now irreparable, and which will for ever determine my lot in this life. I know as well as you that what I am now saying may appear to be neither delicate nor kind-hearted. For a long time past I have lost my self-control, but I am pleased to find that I still have enough left to me to feel the bitterness with which I now reproach you. I would, at the same time, ask your pardon, and beg that you do not distress yourself at the unhappiness of my condition. My father and mother are dead; what chance can hope offer to me? It was not to you that I sacrificed my hope, but to an imaginary creature who never existed but in a mind such as mine, crack-brained with romance. For as soon as your letter undeceived me you were then to me no more than any other man; and after having been the only one for whom I could feel attachment, you became one of those for whom I had the least inclination, because you are the most unlike my *beau-idéal* of a sentimental lover. And you are the only one who can recompense me. Carry out your plans of which you have given me the outlines. Join your friendship to that which my other friends have professed for me. You will find me as open-hearted, as kind, and at the same time as indifferent to you as I am towards them. You may believe me when I say that it is not petulance that makes me speak in this way; if I make use of this last term (no matter how true it be), it is only to assure you that my heart in the end will save yours. My conduct and my sentiments have deserved your esteem and your friendship. Let me reckon upon the one and upon the other, so that henceforward there be no further question of our late intimacy."

The cautious Gibbon wrote after a delay of three weeks an answer from which the following is an extract:—

"Mademoiselle,—Must you still continue to offer me happiness which prudence compels me to refuse? I have lost your affection, though I still possess your friendship. In giving me that you do me so much honour that I have no room left for doubt. I accept it, mademoiselle, as a valuable exchange for mine which is most perfectly yours, and as a treasure whose value I know so well that I can never part with it. But of our correspondence, mademoiselle, if I feel all its pleasures, I perceive also all the dangers. I feel this as regards myself, and I fear for both of us. Pray let my silence protect me. Excuse my fears, mademoiselle; I think they are not unfounded."

No more passed till the pair met one day at Ferney, when Gibbon's cold manner

stung the lady into writing a bitter and passionate letter, which is far too long to quote in its entirety, and to which extracts would do little justice.

As a sample of the miscellaneous contents of the book we may give an excerpt from a letter of the Abbé Galiani which is very pleasant:—

"Naples, 6th July, 1771.

"My Divinity!—At last a letter from you has reached me. If this continues I do not ask for anything more from the goddess of friendship. According to what you say in your letter, you still maintain your principles; so much the better for M. Necker, and so much the worse for the others. However, your letter gave me great pleasure, for it proved that I was the Hector of this Troy, and that

Si Pergama dextra
Defendi possent, etiam hac defensa fuissent.

If the thing had been feasible I would have done it. Let us rejoice, then, and triumph in the general overthrow. You tell me that all your pleasures are being reduced to conversation. I am sorry for you; for conversation is dying out in Paris, and soon will be altogether dead. *Curæ leves loquuntur, ingentes stupent.* The French talk and sing when some one pinches them; they are silent, as one might expect, when they are knocked down. For my own part, it is now two years since I have heard any conversation. In default of other rational animals, I associate with a cat. At the present moment he is ill. If you know how strong are domestic griefs you may judge of my affliction. I have learnt cat language since I left Paris, and for a man I talk it with tolerable fluency. If you come to see me, instead of saying to you, 'I adore you, I am pining away, I am dying,' and a hundred other imbecilities in the human tongue, I would say, *Miaôu.* I should then have amply expressed myself, and even with a certain energy. The thing is to know how you would answer. Would you say in a low tone, like that of a pretty lady cat, *Mie, mieù, mioù?* or would you hiss as a wild and savage cat? You know you risk nothing in talking to me in this way when there are two hundred leagues between us. Neither your claws nor mine are long enough. But *revenons à nos moutons.*"

It is in stray "finds" like this rather than in the merit of the book as a whole that its attractions consist, and it must be confessed that there are not very many of them.

We cannot altogether compliment Mr. Trollope on his translation. To speak of "Miss Curchod" and "Mr. Mommsen" seems to us an absurdity, made all the more absurd by the fact that the writer has not the consistency to talk of Mrs. Necker and Mrs. Récamier. The gentle reader surely can have done nothing to deserve the flinging in his face of such a sentence as "We must not altogether form our opinions as to these manners and habits from the enthusiastic letters of Voltaire to d'Alembert and to Moncrif, he dated from his 'petite cabine de Monrion,' written, too, at a time," &c. It is odd, to say the least, to translate *Tiers État* "Third Party." When Mr. Trollope says that the gloomy-looking walls of the old part of Geneva "presented to the mind of the young girl a singularly unforbidding aspect when she compared them to the fruit gardens of Crassier or the terraces of Lausanne," he means, of course, forbidding; and though this is doubtless a mere slip of the pen, it is an ill-regulated pen which slips into such a word as "unforbidding." There is, however, one thing much worse in the book than Mr. Trollope's English prose, and that is Gibbon's French verse. M. d'Haussonville has mercifully given only one sample of the appalling doggerel in which the future author of the 'Decline and Fall' courted Mdlle. Curchod; but that specimen may appropriately finish this review:—

VERSES TO MADEMOISELLE S——.

Tôt ou tard il faut aimer,
C'est en vain qu'on façonne;
Tout fléchit sous l'amour;
Il n'exempte personne,
Car Gib— a succombé en ce jour
Aux attraits d'une beauté
Qui parmy les douceurs d'un tranquil silence
Régnoit sur un fauteuil une heureuse indolence (?)

Implacable pudeur, règne sur mes désirs,
Intimide ma voix, mes yeux et mes soupirs,
Puisque de mon teint abattu la sensible pâleur
Vous dira mon amour sans blesser ma pudeur.
Car je pâlis, je frémis, quand ma douleur mortelle
Me reproche en secret que j'aime une cruelle.

Foreign Classics for English Readers.—Tasso. By E. J. Hasell. (Blackwood & Sons.)

Though not marked by pre-eminent insight or special information, this volume furnishes a readable and fair account of the life of the much-suffering poet of the 'Gerusalemme Liberata.' The author professes to have relied chiefly upon Tasso's own letters, forming no less than five volumes, edited by Guasti. Next come the biographies by Serassi and Manso, and, though of minor importance, the works of Cecchi and Ferrazzi. After the Life follow chapters upon Tasso's various writings in verse and prose, the numerous translated passages from the 'Gerusalemme' being often taken from Fairfax, while some other passages and the remainder of the translations are supplied by Miss Hasell herself.

We need not at this time of day go over the general events of Tasso's life—from his birth at Sorrento in March, 1544, to his writing the poem of 'Rinaldo,' begun before he was eighteen years of age, and so on to his sojourn at the court of Ferrara. The question which every reader about the poet asks himself, and wishes a biographer to elucidate, is, "Was Tasso mad?"—a question which has been asked as often and answered as variously as that other query "Was Hamlet mad?" Other inquiries, of proportionate difficulty and interest, are connected with this. Was the poet in love with the Princess Leonora d'Este? and why did Duke Alfonso, after treating him with as much consideration and liberality as could reasonably be expected of a sovereign patron in the sixteenth century, keep him in confinement for seven years and four months, and after his release ignore his letters? Miss Hasell speaks with moderation on all these topics; and in the twilight of uncertainty which still surrounds them, and which is not likely to be ever removed, moderation is sound sense. She holds that Tasso did entertain a sincere but respectful and unpresuming passion for Leonora, who was some eight or nine years older than himself—not strong in health, a pious lady averse from marriage and not addicted to gallantry; that Tasso's homage to Leonora found utterance and acceptance in many verses and other allowable demonstrations, but that, having in at least one instance deviated into some philandering with another lady, the poet incurred the princess's temporary displeasure, as expressed in her caustic written comments, still extant, upon one of his sonnets; that the duke's displeasure was first aroused by the well-known broil in which Tasso, sword in hand, and with more than poetical prowess, wounded two gentlemen of the court, and put two others to flight; and that it was aggravated by his having corresponded with the Medici, who were inimical to the duke, and perhaps by a supposition that some of Tasso's less reserved verses were aimed at Leonora. After this, mutual suspicions arose; Tasso conceived morbid and exaggerated apprehensions, drew a knife in Leonora's apartment, and assaulted a servant supposed to be about to poison him. In February, 1579, Tasso—then aged nearly thirty-five years, and Leonora well turned of forty—hoped to reingratiate himself with the duke by complimenting him on his third wedding; but the duke received him coldly, and Tasso, when alone, was overheard indulging in all the bitterness of indignant denunciation. Alfonso thereupon chose to regard him as a madman, and shut him up in the hospital or lunatic asylum of Sant' Anna.

Miss Hasell, after briefly discussing, as subordinate causes of the ducal resentment, the homage paid by Tasso to the Princess Leonora, and in a minor degree to her sister, and the affair of the Medicean correspondence, expresses her conclusion thus:—

"Perhaps the simplest explanation may be the truest: that the Duke had come to regard Tasso as a person of unsound mind whose hatred might, through his brilliant talents, be dangerous; that, so long as he could keep his grasp on his poem and its complimentary dedication, he cared not much what became of the author; but that, rather than re-attach him to himself by rewards which he was perhaps unable and certainly unwilling to bestow, or than suffer him to depart from Ferrara for the third time in a tempest of wrath which might echo throughout Italy, he readily believed and willingly acted on the report of Tasso's madness—a report which there were undoubtedly fair grounds for believing, and which the poet's own want of prudence and ungoverned anger had done their best to confirm."

And of his madness she says:—

"Was then his madness a pure fiction, invented by his enemies, and given colour to at times by his own policy in order to disarm their malice? Learned Italian physicians of our own day have felt an interest in investigating this question, and their conclusion seems to be that, at least in the middle part of his life, Tasso was afflicted with a species of monomania, which had many perfectly lucid intervals, which at no time interfered with the workings of his intellect in the higher spheres of thought, but which occasioned the suspicions, the restlessness, and the hallucinations under which we have marked his sufferings; which was aggravated by his cruel and unjust detention at Santa Anna, but from which he was probably never afterwards entirely and for long free. This may indeed have been the case. Yet a few hypochondriacal fancies and optical delusions, fits of deep dejection and occasionally of frenzied rage, seem only natural results, in an excitable temperament and a morbidly sensitive disposition, of Tasso's sudden and terrible reverse of fortune, of his mostly solitary imprisonment, and of the horror of being surrounded by and treated as the mad. The mind which was not wholly overset by such causes may well seem to have been one of exceptional soundness."

The result is that Miss Hasell inclines towards a belief in Tasso's substantial sanity

and in Alfonso's selfish harshness, but with qualifying clauses on both sides.

Comparatively little is said about Tasso's visions and his assertions of intercourse with the spiritual world. On this subject the poet's friend and biographer Manso, not to speak of the more elaborate Serassi, is vastly more explicit; indeed, it may be said that Manso's graphic and genial little book contains a great number of particulars and of characteristic traits which would have been highly apposite in enriching the narrative of Miss Hasell, who, however, can plead the necessity of condensing. Tasso's allegations bear not a little resemblance to the statements of modern spiritualists; for instance, his assertion that an imp (folletto) filched things away from him, and his lengthened colloquy, of which Manso was an astonished ear-witness, with a spirit (to Manso invisible), carried on in a very high strain by Tasso himself, with intervals of presumable question or answer on the spirit's part. Neither do we gather from Miss Hasell's book what was the disease of which Tasso died at the age of fifty-one—a point which we might reasonably expect to learn from any and every biography. Manso terms it a "mirarchia," followed by fluxion and blood-spitting, and closing with fever. An Englishman would, therefore, probably say that Tasso died of consumption. Another point which one might almost have counted upon finding in Miss Hasell's book, or in any modern biography of Tasso, is some sort of comparison between this poet and his great predecessor and rival Ariosto. Nothing of the kind, however, is supplied; nor is the omission much to be regretted, as the comparison has long been a fruitful source of literary commonplaces.

Some English readers will be surprised on reading the translation of Tasso's ode on the Chapel of the Holy Manger in Santa Maria Maggiore to find how largely indebted Milton was to it for his ode on the Nativity. We remark, as a flaw in Miss Hasell's Italian, her phrase "the Delle Roveri, Dukes of Urbino"; such a pluralizing of the proper name Della Rovere is a solecism. It is a mistake also to call Metastasio a "later witness" than Voltaire to the charm of the 'Jerusalem Delivered'; the two writers were contemporaries.

Im Fernen Osten. By Lieut. G. Kreitner. (Vienna, Holder.)

Lieut. Kreitner deserves the thanks of the reading public for his account of one of the most interesting expeditions of recent years. We understand that Count Széchenyí, the organizer and leader of the undertaking, is engaged on a detailed record of the journey, entering fully into the scientific results. Such works, however, require elaboration, and it is an advantage to be enabled to peruse Lieut. Kreitner's preliminary account, which, though described as popular, contains also enough scientific matter to render its thousand and odd pages attractive to geographers as well as to more general readers.

The object of Count Széchenyí's journey appears to have been primarily to visit Tibet and its very imperfectly known northern boundaries, including the Kuen Lun Mountains, and, secondarily, to pick up any information which might throw light on the cradle of the Hungarian race. We have no means of knowing whether the latter quest met with any success, but the hope of entering Tibet was doomed to disappointment, though the party succeeded in approaching its borders, first on the northern route near Sining-fu, and next at Batang, on the high road which enters Tibet from the east. It now seems clear that it is useless for European travellers to expect that the Chinese can secure for them admission into Tibet. Permission was, indeed, readily granted to the count at Peking, and the Tsungli-yamen furnished him with an official passport authorizing him to enter the country; but this was, to some extent at least, a worthless document, as the same authority afterwards informed him when he was at Batang that their power went no further than the boundary pillar at Chropa-long, one day's journey beyond Batang, and that as the Tibetan priests had sworn a great oath to kill any foreigner entering their country, the Chinese Government was powerless to help him.

This open official avowal of the independence of Tibet is to our mind an important declaration. It shows that nothing is to be hoped for from China, whose authority even over some of her own outlying districts is of the most feeble description, and whose former suzerainty over Tibet has now practically disappeared. Whatever measures are taken by India to enlarge her intercourse with her northern neighbour (and the vital importance of opening up fresh markets for her ever-growing products makes it difficult to suppose we can fetter her by dwelling on the horrors of foreign entanglements), the overtures must be made direct to the Tibetan authorities, for to expect support from China is clearly to rely on a broken reed. So far the result of the present expedition, in spite of its want of success, may be said to have a negative value which should not be lost on the Indian authorities.

Count Széchenyí's journey was an extended one, occupying the greater part of the four years 1877–80, but the portion which will attract most attention is that leading overland from Hankow to Kokonor and the great Gobi desert, and the return to Batang and to British Burma. In this part of his travels much new ground was traversed and a good deal of light thrown on very imperfectly known regions of North-Western and Western China. The passage of the great Sing-ling range, for instance, was made at a point where no European travellers had crossed before, Sosnofsky and the Abbé Armand David having crossed at some distance to the west. The range forms an important boundary to the remarkable *loess* region which Baron von Richthofen has described so graphically in his great work on China. Lieut. Kreitner does not add much to one's knowledge of the extraordinary features of this yellow earth, though he treats of it at length; but he tells an amusing and even exciting story how, owing to his anxiety to avoid the clouds of *loess* dust on the road, he took a side path, gradually got separated from his party, and eventually had considerable difficulty in clambering down the face of a dangerously precipitous cliff to the road again. It is absolutely necessary, he adds, to stick religiously to the track, for the slightest deviation may lead you hopelessly astray—a fact of which the Chinese, whose topographical knowledge is extraordinarily accurate, are quite aware.

From Singan-fu, the *Sera metropolis* or silk mart of Ptolemy, Count Széchenyí's route lay north-westwards through the province of Kansu, by that well-trodden road into Central Asia which has been followed by the Buddhist pilgrims, the silk traders, Marco Polo, Shah Rukh's embassy, and almost every traveller in those parts whom history records. Baron von Richthofen has given a careful description of all these successive journeys between China and the West; and in analyzing the different claims which might be put forward for a Russo-Chinese railway, he arrives at the conclusion, which Lieut. Kreitner corroborates, that the line passing through Hami and Su-chow is the best. The route-maps show that nearly every traveller of note has selected this road as being the easiest. In addition, therefore, to its historic fame the route possesses a possible future importance which makes us follow investigations like Count Széchenyí's with considerable interest.

In Lan-chow-fu, the capital of Kansu, the travellers were made acquainted with the circumstances under which a wool manufactory had been started in that remote district. The establishment of this industry and various facts connected therewith were mentioned in the pages of the *Athenæum* last year. The original idea of the project seems, according to Lieut. Kreitner, to be due to the governor of Kansu, who was seized with the notion of clothing his troops in cloth instead of silk and calico, and who desired the general at Lan-chow-fu to put the project into execution. Communications were opened with a German firm through the agency of the banker Hu in Shanghai, and a German engineer and manager and workmen were brought all the way from Europe, while a steam engine and other machinery were conveyed with considerable trouble by the laborious land route from Shanghai. Enormous quantities of wool were brought in by the Mongols; but the most recent information which has reached us concerning this undertaking, and which we published last year, was that the project, deserving though it was, had met with very indifferent success on account of the failure of the machinery.

The Hoang-ho being frozen was easily crossed over the ice, and at Kulang-shien the first glimpse of the great desert of Central Asia was obtained. Lieut. Kreitner says that it is a popular error, notwithstanding that Von Richthofen's authority is ranged on its side, to treat "Gobi" and "Shamo" as synonymous terms. After extended and patient inquiry, he is satisfied that the former is applied to the stony and the latter to the sandy desert, and that these definitions find general acceptance among the Chinese. Travelling in or even near the desert must be a most trying undertaking, for the dry north wind which sweeps across its expanse cracks the hands, face, and ears into perfect wounds. This, with sandstorms of hurricane-like violence, was discouraging enough to the Europeans; but they steadily kept on to Su-chow, where much diplomacy had to be resorted to in order to prevail on the Tso-tsung-tang, the viceroy, to permit

them to travel any further. Sosnofsky, in his account of his journey along pretty nearly the same line of country, remarks that China is anything but a centralized empire, and that everything depends on the local authorities. The same thought will certainly occur to the reader of the account of the interview between Count Széchenyí and the governor of Kansu, when the question arose as to the former being permitted to proceed beyond the Great Wall into Mongolia. It was no use quoting the authority of the Tsungli-yamen in Peking and displaying their passport. The governor, who seems by-the-bye to have been decidedly out of temper, retorted that he was master there, that no Chinese should accompany the party beyond the boundary, and that the statements that Prejevalsky and the Abbé Huc had ever entered Tibet were pure inventions. In the middle of this conversation a mandarin brought in the card of the Belgian Bishop Humer, who had chosen this inauspicious moment to prefer some request concerning his mission. The peppery governor promptly refused to see "such people," but eventually consented to do so on the count's intercession, though only on condition that the bishop should remain standing during the interview. The passport was not, however, obtained till the following day, when a judicious outburst on the count's part seems to have had the wished-for effect.

The famous Kia-yu-kwan gate of the Great Wall was safely passed, and An-si-fan (Ngan-si-chau of our maps) reached, where the great western route turns northward and crosses the desert at its narrowest part over to Hami. The count and his party, however, passed to the south-west, and, crossing the Sula-ho (called Bulungir on the maps), reached Tung-wan-shien, a place mentioned by Hwen Thsang. Sha-chow, referred to by Marco Polo, the Daxata of the Seric traders, has disappeared, so Lieut. Kreitner tells us, and nothing but ruins testifies to its former greatness. So far as we understand his narrative, it and Tung-wan must have stood on opposite sides of the same river, whereas most maps make them far apart.

Tung-wan was the extremity of Count Széchenyí's journey westward, a matter which one cannot help regretting from every point of view, as further exploration would have cleared up some most interesting points. It would have shed considerable light on a route followed by Marco Polo and the ambassadors of Shah Rukh; it would have closed on, or nearly so, to Prejevalsky's investigations about Lob Nor; it would have settled definitely whether the Kuen Lun Mountains end on the further side of the Tsaidam plain; and lastly, it might have given the party an opportunity of entering Northern Tibet. Some of these questions may be settled by Prejevalsky's last expedition, but its geographical results appear to have been jealously kept secret, and we are still in ignorance of most of the details of his latest tour.

The count and his party retraced their footsteps and entered the Kokonor district, a country already known to us from Huc's and Prejevalsky's descriptions. But here no better luck awaited them, for the governor did all he could to deter them from visiting the sources of the Hoang-ho by a lugubrious tale of the persecutions sustained at the hands of Tangut robbers by one of the Chinese residents at Lhasa eight years ago, who chose the route to Peking *viâ* Batang, Ching-tu-fu, and Sining-fu. The priests of the Kumbum monastery spoke in the same strain, and refused the count any assistance when he expressed his wish to follow a road leading to the Hoang-ho sources, and plainly visible from a neighbouring hill. To induce any one to act as guide by offering money was equally useless; and on the 10th of August, 1879, the party gave up the attempt, left Sining-fu, and returned to Lan-chow-fu. On leaving this town a southern route was followed, probably the same as that traversed by the Abbé Armand David, and leading from the basin of the Yellow River into a picturesque alpine region partially explored to the west by Capt. Gill. On arriving at Ching-tu-fu, which Lieut. Kreitner describes as the finest city in China, the governor — who appears to have been an intelligent and well-informed person, very different from the cross-grained, little, would-be despot in Su-chow, and the outwardly civil, but impassable Manchu governor of Kokonor — explained that Tibet was a country which the Foreign Office at Peking really knew very little about, and which was as independent of China as Corea is. He added that the real rulers of Tibet were the priests, and not the Dalai Lama for the time being, who was never allowed to attain adolescence, but was put out of the way by the priests, so that the sovereignty might always be vested in a mere infant. The governor did all he could by dispatching a courier to the Chinese *amban* at Lhasa, requesting him to arrange with the Tartar minister for the friendly reception of the Europeans; but this messenger was not allowed to proceed beyond Kianka, his pouch was rifled, and the news spread far and wide that the hated foreigner was coming, and that the holy country would be laid waste and the people murdered. In a short time 4,000 men were got under arms near the boundary pillar beyond Batang, and a huge grave dug there for the reception of the corpses of the Europeans. A word of warning was also sent by the Kianka priests to the missionaries at Yerkalo, informing them that they would be most assuredly murdered if the Europeans did not desist from their plans of advancing on Lhasa; while the matter was clinched by the offer of a temptingly large price for the heads of the party.

Thus was Count Széchenyí's second attempt doomed to disappointment. Considering the openness with which his wishes were everywhere laid before the local authorities, it is, perhaps, not surprising that the Tibetans should have got an exaggerated idea of the importance of the expedition. The most exclusive and priest-ridden country in the world was most unlikely to tolerate a sudden incursion without some diplomatic overtures, and no doubt future advances will be useless unless the good will of the nearest ecclesiastical dignitary is previously enlisted. Some renewed attempt of this kind might be made from the side of British Sikkim. It is clear from the increasing numbers of British rupees at Tatsien-lu, testified to by Count Széchenyí, Mr. Baber, and others, that the trade which filters through from India to Tibet is considerable, and where intercourse of this kind already exists there ought to be more chance of arriving at a friendly understanding.

The remainder of Lieut. Kreitner's book, dealing with the well-known route from Batang to Burma, scarcely calls for detailed review, though as a readable record of the general incidents of travel it is fully equal to what precedes. There are about two hundred really excellent illustrations to the book, which give one a capital idea of the very dissimilar scenes—deserts, oases, high mountains, plains, lakes, cities, and temples — traversed by the explorers. There is little doubt that a good translation of the book with its illustrations would find numerous readers in England.

Early Spring in Massachusetts. From the Journal of Henry D. Thoreau. (Boston, U.S., Houghton, Mifflin & Co.)

American Men of Letters.—Henry D. Thoreau. By F. B. Sanborn. (Sampson Low & Co.)

Nature must be greatly astonished at the amount of attention she has been receiving of late; yet it may be doubted whether she is at all flattered by it. Mr. Darwin and the evolutionists have clearly established that during all those ages of patient and quiet work when she had to be content with basking in her own beauties and marvels, never expecting to be admired or greatly considered by those firstborn children of hers which we have christened the lower animals, she was indulging in dreams of the far future when she should give birth to an intelligence capable of really looking at her and knowing her. Every organic form, however primitive, shows that man was foreshadowed from the first. Of no possible use, indeed, was man except to understand and admire Nature; while as to ornament he has at least had the good taste to conceal himself more or less behind the trappings of better appointed creatures. Wingless, he could not fly; finless, he could not swim; clawless, he could not climb; tailless, he could not hang; and though he was not legless, he was very early obliged to cajole better mounted creatures into carrying him. Yet, as an old English writer quaintly says, he was endowed with a soft cushion or seat whereon he could sit upright and contemplate the beauties of the universe, especially the stars. It follows, therefore, that while the proper study of racoons is perhaps racoons, the proper study of mankind is not man but Nature. Yet what racoon or chickadee in Walden Wood lived in such a perpetual state of sensitiveness as to himself and his fellows as Thoreau lived in when he roamed about the wood, speculating about Thoreau and the education of Thoreau, about Emerson and the *Dial* and the little Concord world, peopling the wood with faded godheads from Greece and the handful of heroes about whom what we call history has been written? And Thoreau is but a type of the race to which he belongs. A literature such as man's, that has almost nothing to do with Nature, but is all about man —how he has lived and died, how he has fought, how he has hated and envied and sometimes loved—is interesting to us no doubt; but if the woodchucks could only read there would be much merriment

going on during those long winter nights of Walden which Thoreau has described. The alienation from Nature is no new thing. While in Greece and Italy Nature was at least looked upon as a kind sort of nurse, but subject to terrible variations of temper, in the colder climates of Europe, where her severer moods were more frequent, she came to be looked upon as an enemy to be hated, feared, and shunned. In England and Germany and France, though it was always the fashion for the poets to pretend otherwise, the entire energies of the people were exercised in schemes for shutting Nature out. Though this culminated in the eighteenth century, it began even in our own country earlier than is generally supposed; for in our literature as far back as Chaucer, Nature has no meaning in literature save as a background more or less cosy and comfortable to a human drama. In French literature this is still more clearly seen. As we said on a former occasion when discussing French writers, and especially George Sand, we never, except in Hugo, really get away from "cosiness" in French writers upon Nature. Deep as their forests may be, we feel that though we cannot see the homesteads they are not far behind the trees; we know that we have only to thread our way for a few yards to see the blue smoke curling above the thatch, where the white basking pigeons are preening their feathers cosily in the sun. No French writer perhaps ever really knew Nature as she lives and breathes in her own lairs far away, lonely and holy, heedless of man, ignorant of all the delights of Paris, deaf to all the beauties of *les vers*, listening to nothing, indeed, but the wind, seeing nothing but her own expanse of light and shade and limitless luxury of colour; and with the exception of Brockden Brown and Cooper, the same must be said of American writers. For to get away as far as possible from all intercourse with Nature is the chief goal of all civilizations. No wonder, then, that man's very senses became dulled, and he could only guess at Nature's moods by using the senses of the other animals as interpreters. But now it seems we are going to change all this. The entire civilized world is patronizing Nature in the kindest way. There is no schoolgirl who will not dilate upon her favourite bits of landscape, there is no cockney who has not his own notions of the picturesque. Ladies are "doing" the deserts, cruising about the Pacific in yachts, and roaming about the American prairies alone, while no sooner has the Alpine Club conquered every one of those fortresses which were once thought impregnable than one mountaineer calmly proposes a Himalayan Club to do the same with the Himalayas. This is what makes us say that Nature, though she must be astonished at the change of man's attitude towards her, is perhaps not flattered.

For it is doubtful whether there is any real change, whether there is any more true Nature worship now than there ever was, leaving out of consideration the Nature worshipper's Dark Age, the eighteenth century. Ever since the poetry of Wordsworth brought Nature into fashion, she has been more and more patronized, simply because she is in fashion. Among the thousand and one people who now talk and write about Nature, there is, perhaps, one who would have done so before the publication of the 'Lyrical Ballads.' Indeed, it is only when certain amiable critics speak of their idol as though he had not produced a bushel of chaff for every peck of corn that people are apt to forget how immense has been Wordsworth's influence all over the world. Without Wordsworth would there have been any Thoreau or Emerson or Walt Whitman? Would there have been any Nature-worshipping Concord worth mentioning? Very likely Wordsworth's impulse was not entirely his own—very likely it came in part from Burns. But his energy, his single-mindedness, his sublime narrowness and ignorant independence of literature, were the very forces needed to render him in a certain sense the high-priest of Nature which he considered himself to be. And self-conscious as he was, how small was his self-consciousness compared with that of the self-educators of Concord or Brook Farm!

Of the two books before us both are interesting. Nothing can exceed the closeness of observation shown in Thoreau's Journal. Mr. Sanborn's monograph is also worth reading, although too much space is wasted on the minor luminaries of Concord.

How a man like Thoreau, who by his own confession went into the woods "to transact some private business with the fewest obstacles," and who, as Emerson (unconscious of irony) says, "as soon as he had exhausted the advantages of that solitude abandoned it"—how such a man could observe Nature as closely and describe her aspects as admirably as Thoreau did is a standing enigma. To study Nature the student must forget not only Convention, but forget himself—this is the great axiom of the genuine Nature worshipper. But here was a man who did most intelligently study her and yet never for a moment could forget the little conventions of Concord. The very opposite of George Borrow, the truest and most simple-minded lover of Nature, perhaps, that has lived in our time, he was profoundly self-conscious when confronting Nature, and yet free from Borrow's shyness in the presence of man. To Borrow the enjoyment of Nature was all-sufficing. It must be remembered, however, that while Borrow was born in England, Thoreau was born in America, the very "pimple," to use Hawthorne's word, of modern self-consciousness. With all our admiration of a great and wonderful people, we are obliged to say that at present Nature worship such as Borrow's or even as Wordsworth's is scarcely possible in America. The proud self-sufficiency of a Wordsworth is needed for the soul to be able to draw itself from human surroundings and bring itself *en rapport* with Nature. Like a great eagle unfledged, who feels, but as yet dares not trust, the power of his wings, America, while in her heart knowing how foolish is Convention, yet answers to Convention's idle breath like an Æolian harp. Not knowing how really great she is, her chief desire is still to show to the European world that without a long history she is a great country, and that without a titled aristocracy she is patrician and perhaps genteel. M. Taine could no doubt, if he would take up the subject, find some harmonious general principle connected with the climate, air, or food of the parent country that would fully account for this infirmity; yet it is somewhat disappointing to those who must needs look to America as the Promised Land. But, in truth, the whole history of civilization is nothing more than a history of the warring of the peculiar instinct for change which belongs to the human race alone with the great primary instinct of conservatism which runs through the entire animal kingdom, acting, indeed, as a drag even upon men, but keeping the woodchuck a burrower and without a literature still, learning nothing and losing nothing. Much has been said about the self-sufficiency of Thoreau, about its being more pleasant for him to say "No" than "Yes," but we have only to read this interesting and delightful diary, 'Early Spring in Massachusetts,' to see how different was this self-sufficiency of Thoreau's from that English stolidness which is probably requisite for the mind to free itself from the trammels of opinion and confront Nature with calm eyes. Nothing else was really of so much moment to Thoreau as educating his mind up to the Emersonian standard. Therefore the puzzling question in relation to Thoreau is, Will Nature reveal her secrets to a man who can never look at her with the frank eyes of a child, but looks with the eyes of an interviewer of the bookish, self-improving, transcendental species?

That an immense objective power can coexist with an entirely subjective temperament is seen in the case of Goethe, perhaps in the case of Shakspeare too. In Thoreau, though always occupied with his scheme of self-improvement, the senses were as acute as those of an Indian. His extraordinary intimacy with the lower animals has not improbably, however, led people to take an exaggerated view of his intimacy with Nature. The animals are not trustworthy witnesses in the question of a man's relation to Nature. Of human character they are, of course, exceedingly poor judges. Bill Sikes's dog fully and honestly believed his master to be the first hero in the world. The fact is that gratitude is a passion with all the lower animals, and this demarcates them very sharply from man, who (though he knows generosity and magnanimity, which the lower animals do not) knows nothing of gratitude, save as a mere sentiment, except in very rare and fine natures. While a greatly caressed child results in the inevitable *enfant gâté*, a greatly caressed puppy results in a dog that would rejoice to lay down its life for you if it only knew how. By arousing this passion of the lower animals and playing upon it anything can be done with the most ferocious creature, as Thoreau knew before he began his remarkable experiments. Moreover, Thoreau's magnetism, consciously or unconsciously exercised, was of that peculiar kind which, while it will attract a dog or a heifer, has no influence over man. Under no circumstances could Thoreau have dominated men, but perhaps he possessed the kind of magnetism we are alluding to more strongly than any other man who ever lived. Wonderful as must seem to most people the power of attracting fish from a river, it is almost incredible to the adept,

XUM

for the eye of the magnetizer can here play no part. Yet the evidence seems quite clear that the fish would suffer Thoreau to put his hand into the river and lift them out.

But all this, as we have said, is no evidence that he had more than the mere observer's intimacy with Nature—the very intimacy, in short, which he was perpetually sneering at in the man of science. It is strange, indeed, to read these sneers at science from Thoreau, who was himself somewhat of a man of science, though without scientific education. The scientific method is the only method of approaching Nature at all, save for the very rarest temperaments, and Thoreau was not one of these. The chief point of interest about Thoreau, indeed, is that it is impossible to classify him. He cannot be called a man of science; he cannot be called a poet; he cannot even be called a prose poet, like Carlyle and Emerson, who, without the gift of verse, have still the poet's impulse for subjecting matter to the demands of expressional form. The examples of Thoreau's so-called "poems" here given are more unmitigated doggerel than even Carlyle's and Emerson's. Mr. Sanborn gives with much praise some specimens from Thoreau's poem 'Sympathy,' which first appeared in Emerson's *Dial*. They are commonplace itself. With regard to men of such splendid gifts as Carlyle, Emerson, and Thoreau, the remarkable thing is not that they should have no sense of metre—many fine and perhaps great writers have had no sense of metre—but that, having none, they should try to write in metre. We only wish that men of this type could write in metre. It would be refreshing in these times to get real verse from a man answering to this description of Thoreau by Emerson:—

"It was a pleasure and a privilege to walk with him. He knew the country like a fox or bird, and passed through it as freely by paths of his own. Under his arm he carried an old music-book to press plants; in his pocket his diary and pencil, a spy-glass for birds, microscope, jack-knife, and twine. He wore straw hat, stout shoes, strong grey trousers, to brave shrub-oaks and smilax, and to climb a tree for a hawk's or squirrel's nest. He waded into the pool for the water-plants, and his strong legs were no insignificant part of his armour. His intimacy with animals suggested what Thomas Fuller records of Butler the apiologist, 'that either he had told the bees things, or the bees had told him.' Snakes coiled round his leg, the fishes swam into his hand, and he took them out of the water; he pulled the woodchuck out of its hole by the tail, and took the foxes under his protection from the hunters. He confessed that he sometimes felt like a hound or a panther, and, if born among Indians, would have been a fell hunter. But restrained by his Massachusetts culture, he played out the game in the mild form of botany and ichthyology. His power of observation seemed to indicate additional sense; he saw as with microscope, heard as with ear-trumpet, and his memory was a photographic register of all he saw and heard. Every fact lay in order and glory in his mind, a type of the order and beauty of the whole."

The test of poetry is simple. The difference between it and every other form of literature is that it is metrical, and while imaginative prose needs nothing but imaginative life, poetry requires also metrical or rhythmic life—the metre must be an impulse and not an accident; and though the rhythm does not exist for itself, it must be so vital as to show that it has a right to exist for itself.

To enrich one's genius by nourishing it on the waters of life takes so much time and so much expenditure of force, that to become also a master of poetic methods is given to but few; for the *nuances* of metric art are quite infinite, and it may be said without hesitation that there are in every fine poem delicacies of metrical effect which are lost to all save a handful of readers, while to become a master and a creator of these a lifelong literary study of poetry seems to be requisite. To such a study men like Carlyle, Emerson, and Thoreau give no time at all. Yet they try to write verse. Not only do they write "poetry," but they find people to read it and admire it. One of man's most lovable traits, distinguishing him from racoons and other creatures, is his infinite capacity of admiring his fellows. To Mr. Sanborn, Thoreau's doggerel verses are as ravishing as the music of the spheres. In prose, however, Thoreau has said most wise and beautiful things, and he will always retain a place in literature.

NOVELS OF THE WEEK.

A Chelsea Householder. 3 vols. (Sampson Low & Co.)
Bell and the Doctor. By Thomas Shairp. 3 vols. (White & Co.)
Talbot's Folly. By W. B. Guinee. 3 vols. (Tinsley Brothers.)
Abu Telfan; or, the Return from the Mountains of the Moon. By Wilhelm Raabe. Translated from the German by Sofie Delffs. 3 vols. (Chapman & Hall.)

'A Chelsea Householder' is cleverly written, with a good deal of natural aptitude and scarcely any sign of effort. Both the subject and its treatment are fresh, and the story runs on smoothly and lightly, being free alike from sensational incidents and lofty flights. The scene opens in the New Forest, where we are introduced to the heroine, Muriel Eliis, her friend Miss Prettyman, and a clergyman with whom her future life is to be more or less closely associated. Their uneventful intercourse affords matter for the whole of the first volume, and it is not until the beginning of the second that we find ourselves in Chelsea. The "householder" is the young artist Muriel, who is depicted as a strangely composite young woman in every sense. She is the granddaughter of a rough tenant-farmer and the sister of a peer of the realm; she has been brought up in poverty and has fifteen hundred a year; she is haughty in temperament, but not ashamed of her poor relations; she does wise or foolish things as the impulse of the moment guides her; she is ambitious and somewhat romantic, but she sinks back into the commonplace after all. The author, indeed, cannot quite persuade us that this chameleon-like character is natural, though it certainly abounds in natural touches. The incongruities are too numerous, and that this is not merely an artful concealment of art seems to be proved by the fact that similar incongruities appear in most of the remaining characters, as well as in the construction of the story. Two or three personages are brought on the scene, carefully described, and then virtually dropped out of the record. The title, again, is not a distinctive label for the romance, which is almost purely personal in its interest, and is occupied throughout with the fortunes of Muriel Ellis. But, after every reservation has been made, 'A Chelsea Householder' is very pleasant reading.

'Bell and the Doctor' is intended to be what is commonly known as a sensation story; it is full of strong meat for novel-readers possessed of a good digestion. But though the author has doubtless expended much labour over his plot, it fails to interest because of its extreme improbability. The heroine, Bell Conway, is the only daughter of a general living at the Limes, Kensington, and she has two very eligible suitors. One of these, Mr. Casway Akers, is a rising toxicologist, and for him Bell entertains a sisterly affection; but the favoured lover is the Rev. Jasper Iddles, who is described as "the handsomest man in Kensington." This idyllic parson has a desperate enemy, and comes to a desperately bad end; but how, or by whose machinations, it would not be fair to the author to reveal. Undoubtedly Mr. Shairp deserves all the credit he is likely to get for the very remarkable construction of his story, and for situations almost strong enough to startle the veteran novel-reader. It will be no betrayal of his secret to say that the toxicologist finds plenty of scope for his ingenuity, and quite justifies his claim to be regarded as the hero of the piece. Before the claim can be admitted, however, Dr. Akers passes under a cloud of grievous suspicion and obloquy, for the chief villain, though exceedingly stupid over his principal crime, is not too stupid to make use of the doctor as a screen for himself. A little greater relief to the darker shades on his canvas would have enabled Mr. Shairp to produce a more attractive picture; but it is conceivable that 'Bell and the Doctor' will give satisfaction to a numerous class of readers.

"Ridentem dicere verum" might have been set by the author of 'Talbot's Folly' alongside of the appropriate motto on his title-page. The election at Ballymaquirk and the occasional glimpses of the House of Commons are capitally done, and the best is made of the bright side of a sorrowful subject. The elastic spirits of Mr. Doherty sustain us through the troubles which beset the hero, who seeks to enact Cophetua in the present age. For a well-regulated young barrister, the son of so dignified a statesman as Mr. Welbore, M.P., a match with the beautiful ward of a costermonger, though the costermonger be a merchant prince in his way, is likely to produce trouble with his adoring circle of relations. Fortunately the author has no scruples in bringing about what he justly calls a miracle to smooth the uneven tenor of love's pilgrimage. The romantic owner of the circulating library, Miss Twitterley, and her sardonic brother, the professor, are somewhat farcical, but the epithet will not make their biographer uneasy. Mr. Warnock and his satellites are more true to life, and his affection for his "Blossom" is pathetic enough. As a lively bit of nonsense, not without its hints of more serious capabilities, 'Talbot's Folly' is to be commended.

The translator in a preface tells us that

'Abu Telfan' is "one of the best novels that have lately appeared in Germany." We will not dispute her assertion, but we are much mistaken if it will meet with a warm reception in England. The characters are the mere abstractions of an armchair philosopher. The dialogue is heavy, but even that better than the tedious reflections and metaphysical disquisitions which make up the bulk of the book. As might be expected, the humour is ponderous and more calculated to excite a yawn than laughter.

RECENT VERSE.

Ariadne in Naxos. By R. S. Ross. (Trübner & Co.)

Midsummer Idylls, and other Poems. By Lennox R. P. C. Amott. (Lewes, Richards.)

Sly Ballades in Harvard China. By E. S. M. (Boston, U.S., Williams & Co.; London, Trübner & Co.)

Ane Booke of Ballades. By Jeanie Morison. (Edinburgh, Bell & Bradfute; London, Simpkin, Marshall & Co.)

To put fresh life into such an old theme as the legend of Theseus and Ariadne requires rare imaginative gifts—gifts, too, which might possibly be better directed than to a rather superfluous resuscitation. Mr. Ross writes at times gracefully, he has some sympathy with his task, and, on the whole, he is commendably free from inflation. But he wants the vigorous individuality and the force of expression which his subject requires. Now and then an image not without beauty makes its appearance, but the mode of utterance, especially in the earlier part of his drama, is diffuse and cumbrous. Take, for instance, this example, detached from a soliloquy of Artemis:—

> My rites in fitting shrine are celebrate,
> And the superbest fane e'er reared by man
> (E'en to Apollo's worship) dedicate
> Of yore by Cecrops' son, increasing aye
> In fine proportions, beauties, wonders, wealth,
> Still stands pre-eminent (e'en as its God
> In loveliness and loving works to man,
> Benighted ere his advent) o'er all shrines,
> And there still reigns in his most holy place
> The God of universal excellence.

The passage in which Ariadne refers to her first meeting with Theseus is better, though even here the beauty of the figure is weakened by elaboration:—

> True, no excelling day had brought to Crete
> Athenian Theseus in the swift-oared ships.
> Still, to my view, like some empyrean-clasped
> Heaven-climbing peak, out-dazzling its white fellows,
> Stands out that shining day, unveiled of mists,
> Rising above all other heights, beyond
> All other luminous days, peerless, alone.

Ariadne's vision of the mystic flood that at length descends into Hades has also force of conception that only needs briefer and more vigorous treatment to make it a descriptive success. There is a modernness of idea about Mr. Ross's Ariadne, who holds up to Theseus the standard of right for right's sake, while the hero is gradually tempted from her by his ambition. The death of Ariadne in the present version of the legend is ascribed to a chance arrow from the bow of Artemis. Altogether there is sufficient merit of intention and grace of detail in the work to make us regret the absence of strength and decision of style.

The muse of Mr. Amott is both humorous and sentimental. In the former vein he thus depicts paterfamilias when responding to the entreaties of his daughters for a country excursion:—

> Then quoth the pater: "What you say is right,
> Quite right, I know, my pretty little dears."
> We fancy here, tho' usually so bright,
> Our worthy friend was almost moved to tears:
> Perhaps some sad and manifold *ideas*,
> Some sudden anxious thought had filled his eyes,
> And since we know not what were all his fears
> Of course we really cannot sympathise,
> So say philosophers; how nice 'tis to be wise!
>
> There is a proverb, readers all have heard it,
> "Events to happen cast their shade before."
> You all will see I am obliged to word it
> To keep within the limits of the *law*,
> Which you must know is oftentimes a *bore*.
> Our friend proceeded after some delay,
> "Let's say the Lakes, the Lizard or Bangor;
> But there is time enough to name the day
> And make some fine arrangements ere we start away."

When the muse is more plaintively inclined she exhorts us as follows:—

> Oh stay not the tear-drop that tells of the past,
> Full many a tear-drop has bathed it before,
> Our hopes are the nothings which, ruthlessly cast
> From the bosom of ocean, lay strewn on the shore!
> Let the gem be the emblem of hours that are *gone*,
> And the cord that must tighten with every throb
> Of the heart that is aching, the first ray of *dawn*
> That calmed the dark tremor and silenced the sob.

We think it right to give a fair specimen or two of the strains that run through this little volume before pronouncing them commonplace—we might often say twaddle—in jingle. Verse, however, which presents "law" as a rhyme for "bore," and "gone" as a rhyme for "dawn," scarcely attains the dignity even of jingle.

Humour is a quality difficult to define. What amuses A will seem pointless to B; but it may be safely asserted that the following quotation cannot much amuse any one, unless, indeed, it be the author himself, whose ideas of slyness, to judge from 'Sly Ballades,' must be somewhat singular:—

> I think that if I had a farm
> I'd be a man of sense;
> And if the day was bright and warm
> I'd sit upon the fence,
> And calmly smoke a pensive pipe,
> And think about my pigs,
> And wonder if the corn was ripe,
> And counsel *l'homme qui* digs.
> And if the day was wet and cold,
> I think I should admire
> To sit and dawdle over old
> Montaigne, before the fire;
> And pity boobies who could lie
> And squabble, just for pelf,
> And thank my lucky stars that I
> Was nicely fixed myself.

Mrs. Morison's poems are fairly successful in reproducing something of the old ballad manner, but the old ballad spirit, almost impossible to reproduce in these days, has not unnaturally eluded her. However, the legends are told in fluent and occasionally picturesque verse.

EDUCATIONAL WORKS.

The Training of Teachers. By S. S. Laurie. (Kegan Paul, Trench & Co.)—Most of the papers constituting this volume have already been presented to the public either as lectures or magazine articles; and although they contain much interesting matter, there is not apparently any very cogent reason for their reissue except the necessity laid on a Professor of the Institutes and History of Education of publishing something about the teachers and learners of the country. The fitness of the title assigned to the volume is questionable, for very few of the chapters deal directly with "the training of teachers"; and, indeed, the connexion between the subject-matter and the title is so loose, that we are not much surprised to find the author stating, about the middle of the treatise, that "it would be out of place here to enter into details as to the training of teachers." We have not to dip far into the volume to find that Prof. Laurie has a sound and elevated view of what national education should be, and what advantages are derivable from it. Our schools are, unhappily, far below the professor's standard at present, although we are, on the whole, groping and stumbling in the right direction. Several of the most readable pages in the book are devoted, sometimes in grim earnest, sometimes in clever banter, to pointing out the sins of omission and commission of the Education Department. Much of what Prof. Laurie writes is mainly applicable to the state of primary education and status of elementary school teachers in Scotland, where the relations between the elementary school, the training college, and the university are closer and more intimate than they are, or are likely to be, south of the Tweed. We most cordially agree with the professor that the better men and women the State can get as masters and mistresses of its schools, the wider their learning, the higher their culture, the purer their characters, the better it will be for the schools, and, as an inevitable consequence, for the nation. He certainly does not take too exalted a view of the dignity of the profession of teaching, and we should gladly see the members of the profession deserving and acquiring a better and more clearly recognized social position. We incline, however, to think that in the long run individuals find their own level in society, and gain as much consideration as they deserve. Certainly the world at large will be none the better if school teachers be enrolled members of a regular profession, whatever this may mean, even if it did not speedily crystallize into an aggressive guild. Mr. Laurie's enthusiasm has, we cannot but think, induced him to ignore the common error of teachers' champions—that State schools and the scholars in them have to a large extent, if not mainly, been called into existence to promote the interests of schoolmasters. The State is vitally concerned in the good training, moral, physical, and intellectual, of its children, but little, if at all, in the advancement of schoolmasters as a corporation. Prof. Laurie discusses with the wisdom that springs from experience the subjects that should be selected for primary instruction, and the manner and order in which they should be taught. His suggestions concerning school management are most valuable, and will, no doubt, be read with thoughtful attention by many of our most efficient teachers.

The New Code of Minutes of the Education Department; Instructions to Inspectors (1882); *and Official Forms and Documents.* With Explanatory Notes and a Copious Index. By T. E. Heller. (Bemrose & Sons.)—Mr. Heller writes for those who are too indolent to study the New Code and kindred official publications for themselves, or too stupid to understand them. On readers of this rather dull and uninteresting order he has expended—we had almost said wasted—a good deal of time and thought. The Code itself and the recently issued circular of instructions to inspectors, together with forms ix. and x., are presented *in extenso*. The copious, well-arranged notes clear up the difficulties in the last Code, which certainly excels the earlier ones in clearness and intelligibility; and no doubt torpid school managers and teachers will be grateful to Mr. Heller for relieving them of nearly all trouble of thinking while preparing for annual inspections under Mr. Mundella's new regulations. In certain cases Mr. Heller puts a gloss on the paragraphs of the Code which will hardly be accepted either by H.M. inspectors or by "my lords"; but there is little doubt that this annotated New Code, with its full and accurate index, will prove a most serviceable compilation to many interested in elementary schools.

OUR LIBRARY TABLE.

Longman's Magazine makes a promising start. Its first number opens with a new story by Mr. Payn, and it concludes with an amusing tale called 'The Black Poodle,' by Mr. Anstey. The most interesting article is one by Mr. W. D. Howells on Lexington. The only drawback to a paper excellent in tone and temper is that the author exaggerates the difference in "civic and social ideas" between America and England. The scientific articles are contributed by Prof. Owen and Prof. Tyndall. Altogether the publishers are to be congratulated on the success of their new enterprise. They give a great deal of excellent matter for sixpence.

The Thrift Book, sent to us by Messrs. Ward, Lock & Co., may be warmly recommended as a perfect encyclopædia of facts arranged for the benefit of people of limited means. It contains an immense deal of information on all points of household management and on a variety of kindred subjects. The information given is sound and sensibly worded, and the book will prove most valuable to its owner if he follow its advice.

XUM

He will soon save the price of the volume.—*Holy Thoughts on Holy Things*, sent to us by the same publishers, is a selection of passages from various authors made by Dr. E. Davies.

Mr. Mullens has done a wise thing in publishing a catalogue of the Birmingham books in the Reference Department of the Birmingham Free Libraries. Local history, antiquities, &c., should always be specially cared for in such libraries.

We have on our table *Wholesome Cookery*, by Madame M. de Joncourt (Kegan Paul),—*The Garden that Paid the Rent*, by T. Jerrold (Chatto & Windus),—*Episodes in the Life of an Indian Chaplain*, by a Retired Chaplain (Low),—*The Foreign Freaks of Five Friends*, by C. A. Jones (Kegan Paul),—*No Longer a Child*, by Maud J. Franc (Low),—*Theatrical Anecdotes*, by J. Larwood (Chatto & Windus),—*From Lock to Lock*, by A. T. Pask ('Judy' Office),—*A Book of Boyhoods*, by A. R. Hope (Hogg),—*A True Story of the Western Pacific in* 1879–80, by H. H. Romilly (Longmans),—*A Summer in the Azores*, by C. A. Baker (New York, Dillingham),—*Wee Dan*, by A. R. Taylor (J. Heywood),—*The Hoosier School-Boy*, by E. Eggleston (Warne),—*Queen Mab: Gems from Shakspeare*, by C. W. (Griffith & Farran),—*Molière's Le Misanthrope*, edited by G. E. Fasnacht (Macmillan),—*Our Holiday among the Hills*, by James and Janet L. Robertson (Blackwood),—*Songs of Many Days*, by K. C. (Marcus Ward),—*Meditations in Sonnet Verse*, by a Bible Student (Parker),—*The Little Monitor* (Simpkin),—*Sixteen Favourite Hymns, with New Tunes*, by W. Hamilton and W. Hume (Glasgow, Hamilton),—and *Avanturine*, translated from the French by E. Baker (S.P.C.K.). Among New Editions we have *The Prophecies of the Brahan Seer*, by A. Mackenzie (Inverness, 'Celtic Magazine' Office),—*Ruhle's French Examination Papers* (Nutt),—*An Englishwoman in Utah*, by Mrs. T. B. H. Stenhouse (Low),—and *Progress and Poverty*, by H. George (Kegan Paul). Also the following Pamphlets: *Euphrates Valley Route to India*, by Sir W. Andrew, C.I.E. (Allen & Co.),—*The Defences of the Kingdom*, by Major A. Parnell (Mitchell),—*Our Great Peril*, by T. M. C. Symonds, G.C.B. (Kent & Co.),—and *The Clergy, or Truth and Unity*, by W. H. Trenwith (New York, Pratt).

HOMERIC CRITICISM.

THE sacred keep of Ilion is rent
With shaft and pit: vague waters wander slow
Through plains where Xanthus and Scamander went
To war with gods and heroes long ago:
Not yet to dark Cassandra, lying low
In rich Mycenæ, do the Fates relent;
The bones of Agamemnon are a show,
And ruined is his royal monument.

The awful dust and treasures of the Dead
Has Learning scattered wide; but vainly thee,
Homer, she measures with her Lesbian lead,
And strives to rend thy songs: too blind is she
To know the crown on thine immortal head
Of indivisible supremacy. A. Lang.

THE REGISTRATION OF TITLES.

I SINCERELY hope that the subject of compulsory registration of titles will not be allowed to drop. As matters stand at present it is almost impossible to find a title which has not already been used, and perfectly impossible to discover whether a title is new or not. Of course there is no danger of using the title of a well-known work; no one is likely to write a book and call it 'The Confidential Agent' or 'The Trumpet-Major.' The difficulty lies in the issue year after year of countless books written for children, many of which have very attractive titles. These books have their run, and then are, for the most part, clean forgotten, dead, and buried, until an unlucky writer hits upon the title of one of them. Then, after he has had his title announced, and perhaps advertised at great expense, he is warned off by the publishers or the author of that little defunct book with the same title. It may be assumed that in all cases where a book is a success everybody gets to know about it. Therefore, when a title is chosen which has already been used, it is, presumably, the title of an obscure, dead, and utterly forgotten work, which can suffer no injury whatever. Nor do I believe that damages could be obtained in any court of law in such a case were it to prove the subject of an action. At the same time, one would not desire to steal even so much as the forgotten title of a dead book, and if such an Act as that proposed by Mr. Hogg could be passed it would be a great help to everybody. All that is wanted is that no title should be copyright which was not registered at the same time as the book was published.

Some five or six years ago Mr. Charles Dickens, for whom, with my late partner, I wrote a Christmas story, after the title had been advertised everywhere—I believe even after the thing had appeared—received a letter from some one informing him that he had himself once written a story with the same title. He further intimated that unless substantial damages were at once paid him he would do dreadful things. Mr. Dickens, after ascertaining that the story spoken of was long ago dead and buried, wisely intimated that he might go and do his worst. And nothing came of it. Another story. A certain firm of publishers with whom I am acquainted once received a letter warning them that a work of theirs, then in the press and already well advertised, bore the title of a novel once written by himself. The writer went on to add that he contemplated issuing his book in a cheap form, so that unless—same threat as above. He gave as his address a public-house near Drury Lane. It was pretty evident from the tone of the letter what kind of man he was and what he wanted. He had, in fact, published a novel under the title named, which fell flat, and was long since as dead as can be desired for any book, so that the use of the title would injure him in no possible way. However, these publishers, desiring to injure no man, invited him to an interview. He came, bringing with him a printer, who was good enough to testify that he had commenced negotiations for the reprint of the novel in question. While the partners were thinking how much they could offer the man of unappreciated genius in order

to preserve their own title, he happily brought the matter to an issue by offering to "square the job" for a guinea. Upon this he was ejected with his printer, and has never since claimed any damages. In fact, I do not believe that where it can be proved that no one is injured any damages could be obtained. But, to prevent disputes, let us register our titles.

Again, a title ought not to be registered unless it belongs to a book; no one ought to have copyright in so unsubstantial a thing as a mere title. Yet I have heard a story which, if true, shows that there was, or is, such a copyright. It is related of the late Mr. Hain Friswell. He once met a publisher who confided to him that he was about to bring out a new religious weekly, but wanted a title. "Why not," said Mr. Friswell, "call it ——?" The publisher grasped his hand warmly and left him in haste. Thereupon Mr. Friswell, repenting that he had so carelessly parted with a good title, called a cab and hastened to register it at Stationers' Hall. While the ink was still wet, a clerk arrived from the publisher on exactly the same errand. If registration of a title ten years or so ago secured its copyright, does it not secure that copyright still? And if there has been no registration, is the title the property of author or publisher? I have only to add that I am again a victim, and am informed that the title I had chosen for a new novel belongs to a little book written for children and published five years ago.

Walter Besant.

DR. BURNELL.

Rarely has Oriental scholarship had to mourn the loss of a pioneer so gifted, so indefatigable, so self-sacrificing as Dr. Burnell, who died at his brother's house, West Stratton, Hants, on the evening of the 12th inst. A lingering illness, the consequence of years of overwork, for which he sought relief at home in the spring of 1879, returned with renewed virulence soon after he resumed his official duties at Tanjore in the autumn of the same year; and he found himself reluctantly obliged to quit India for good in the following spring. Though he had arranged to pass only the summer months with his relatives in Hampshire, while he spent the remainder of the year in the more genial climate of San Remo, his native air appeared too keen for a constitution already weakened by long illness and specially prone to pulmonary affections. An inflammation of the lungs, brought on by a sudden chill, carried him off in the forty-second year of his age.

Arthur Coke Burnell was born July 11th, 1840, at St. Briavels in Gloucestershire, being the eldest son of the late Arthur Burnell, of the Hon. E.I.C.S., and a grandnephew on his mother's side of the late Sir William Coke, Chief Justice of Ceylon. Owing to his delicate health, he received his early education at home, and soon conceived a liking for books and for the study of languages. His inclinations in this way were much encouraged by a relative, the late Sir William Tite, who, it will be remembered, was a great bibliophile and possessed a splendid library. It was at Tite's suggestion that Burnell when still a boy began the study of Chinese. After passing with great success through Bedford Grammar School, then flourishing under its head master Dr. Brereton, he was sent at the age of seventeen to King's College, London, where the lectures of Profs. Browne, Brewer, and Pearson opened to his view altogether a new field, while his frequent intercourse with George Borrow gave a fresh stimulus to his linguistic pursuits. While still a student at King's College he made the acquaintance of Dr. V. Fausböll, of Copenhagen, who was the first to turn his attention to the languages and antiquities of India, and to whose teaching and encouragement he always acknowledged himself indebted for such success as he achieved in these studies. Though he had the prospect of a family living should he care to enter the Church, his natural inclination was to study medicine. Circumstances, however, rendered it advisable for him to seek an appointment in the Indian Civil Service, and to this scheme possibly the hope of literary activity in connexion with his favourite studies lent a certain charm. After passing the competitive examination in July, 1859—the Oriental language in which he passed was Arabic—and devoting the remaining year to the vigorous study of Sanskrit, under the late Prof. Goldstücker, and of Telugu, in which language he passed with credit at the final examination in July, 1860 (the examiner being the late Prof. Dowson), he set sail for Madras in September of that year, and from the time of his arrival made the best of his opportunities in the Malabar, Tanjore, Chingleput, and Nellore districts (where he successively served as a magistrate and revenue official), in collecting, or having copied for him, manuscripts of rare Sanskrit works. It was natural that the law books should engage his attention first of all; and it is a proof of the thoroughness with which he worked at them that his first publication on Hindu law did not see the light till 1868. This was a translation (he modestly calls it an essay) of the section on inheritance from Mâdhava's commentary on the Parâs'ara-smriti, made from a *grantha* and two other MSS. His second book on the subject appeared in 1872 under the title 'The Law of Partition and Succession, from the MS. Sanskrit Text of Varadarâja's Vyavahâranirnaya.' The spirited preface to it shows how deeply he had grasped the very essence of Hindu law, how well versed he was in its extensive literature. Lastly, in 1875, he brought out at Mangalore in text and translation a brief summary of the Hindu law of inheritance and partition called the Dâyadas'as'loki. The preface is remarkable for the outspoken criticism he passes on the then current English manuals of Hindu law. He was always wont, especially in his later years, to call a spade a spade. It is to be hoped that three larger books of his, which have long been announced as in preparation, and on which he had evidently bestowed years of deep research—an annotated English translation of the Sarasvativilâsa on inheritance, a metrical translation of Manu, with an introductory essay, and a work on 'The Law of Strîdhana considered Historically'—may eventually be published.

When Burnell visited England in 1870 he had for some time been deeply engaged in Vedic studies. He had become aware that the literature of the Sâmaveda and Black Yajurveda is richer in the south of India than elsewhere, and possesses peculiarities well worth the most careful investigation. He drew attention to these facts in his account of the Vedic MSS. in his possession (1869), as well as in the prefaces to the five Sâmaveda-Brâhmanas published by him between 1873 and 1878. His preface to the 'Vams'a-Brâhmana' (1873) has this additional interest, that he endeavoured to establish in it, by a brilliant combination of arguments, the identity of Sâyana and Mâdhava, and gave the fullest account we possess of that commentator's works. He also brought out the 'Rîktantravyâkarana,' one of the Sâmaveda-Prâtis'âkhyas, with a valuable introductory essay (1879). The 'Talavakâra,' the most lengthy but also the most readable Brâhmana, an old copy of which he discovered only after long search, was made over by him to Prof. Whitney. He published only an extract from it with an English translation in 1878, as a specimen of the legendary lore contained in the book. But Dr. Burnell's most important and most useful publication in the domain of Sanskrit literature, the one in connexion with which his name will longest be remembered, is his 'Classified Index to the Sanskrit MSS. in the Palace at Tanjore' (1880). It had long been known that the Sanskrit literature current in Southern India embraced many works or recensions of works not found in other parts, but the few existing descriptions of such works were either untrustworthy or otherwise unsatisfactory. In the descriptive account of the Tanjore collection, which, comprising upwards of 12,000 MSS., may be said to be fairly representative of the whole class, Dr. Burnell has given a scholarly survey of the literature which constitutes the Sanskrit learning of the South. The mere arranging and classifying of such a vast number of MSS.—most of them written on palm-leaf and in the various sets of characters used for writing Sanskrit in South India—must have been a work of untold labour which no other Sanskrit scholar could so successfully have achieved. His work 'On the Aindra School of Sanskrit Grammarians' (1875), which deals with the early history of Sanskrit grammar, has the additional merit and interest of drawing attention to coincidences never pointed out before, in technical terms and arrangement, between the Sanskrit system of the 'Kâtantra,' the Pali of Kaccâyana, and the oldest Tamil grammar, the 'Tolkâppiyam.' Of the vernaculars of South India Burnell had made a profound study, and not for practical purposes only. He was in constant literary communication with the Basel missionaries of Mercara and Mangalore, whose linguistic publications he liberally assisted by donations of MSS. and money. He himself printed all his books (with the exception of the 'Sâmavidhâna-Brâhmana,' the Tanjore catalogue, and Beschi's 'Treatise on High Tamil') at the Mangalore Mission Press. Not the least interesting of his various contributions to South Indian philology is his series of 'Specimens of South Indian Dialects,' amongst which he also included those of the Southern Konkan. The prefaces of these small tracts are invaluable. On his return to India in 1870 he began to arrange and add to his materials towards a work on South Indian palæography as an introduction to the study of South Indian inscriptions and MSS. This work was published in 1874. In it Burnell did for the history and development of the numerous kinds of writing used in books and inscriptions in South India since the fourth century A.D. what J. Prinsep had attempted to do forty years before him for the palæography of Northern India. A second edition, much enlarged and improved by the results of his journey in Java in 1876, appeared in 1878. The book was dedicated to the Philosophical Faculty of the University of Strasbourg, in grateful recognition of the honorary degree conferred on him by that body in January, 1874. The document in question describes him as "virum eximiæ doctrinæ atque liberalitatis, cum de universis litteris Indicis explorandis promovendis augendis, tum de commentariis juris veterum Indorum et de libris Vedicis eorumque interpretibus colligendis describendis edendis illustrandis tam egregie meritum, ut jure virorum Sanscrite doctorum inter principes volgo numeretur." In fact, he appreciated this honour and similar marks of distinction bestowed on him by foreign academies and learned societies all the more highly that his literary labours, though they had earned him a world-wide reputation, met with little favour or encouragement on the part of the government under which he served, and he did not look upon the feeble token of approbation which was at last conferred on him with the same kindly feeling which had no doubt prompted his government to bestow it.

In the last years of his residence in India historical studies in reference to South Indian civilization appear to have engaged him more deeply than any others. Even so far back as in 1873, he proved in a short pamphlet, from Pahlavi inscriptions in South-East and South-West India, that there must have been early Christian (Manichæan) settlements from Persia in those parts, which possibly might not have remained without influence on the Vedantism of the South. He had proposed to embody the results of his researches on the subject in a

larger work 'On the Religions and Philosophies of the South of India: being an Attempt to Trace these Systems to their Native and Foreign Sources, as also the Causes of the Spread of North Indian Civilization among the Dravidian and Polynesian Races.' But this book has never seen the light, and it is doubtful whether the MS. is in a sufficiently finished state to go to press. The same doubt applies to the 'History of the Portuguese in India,' from original sources, materials for which he had been collecting for years. The few private friends of his who possess his "tentative" list of books relating to the Portuguese in India (of this important bibliographic work only ten copies were printed at Manga e in 1880) will have been astounded at his familiarity with the extensive literature on the subject. Another book of his, bearing on the same subject, and likewise printed for private circulation only, is a reprint, from the unique copy in the Marciana at Venice, with notes and introduction, of Dom Manuel's letter (1505) about Cabral's voyage. It was his firm conviction that the importance of the part played by the Portuguese in India had never been properly understood or duly appreciated.

Turning away with a heavy heart from so much promise left unfulfilled through his early death, we have the satisfaction that at least the Anglo-Indian glossary, on which he had been engaged for many years jointly with Col. Yule, will not share the same fate. It is true he had not completed his part of the work at the time of his death, but we are at least to have all he did contribute towards it, and, as he was singularly well qualified for this task by his familiarity with the old travellers as well as by his astounding linguistic attainments, we have reason to anticipate, independent of the value of Col. Yule's share in it, a work of the highest merit. His attainments in that respect went, indeed, far beyond Europe and India. He knew Tibetan, which he studied under Mr. Jäschke on their joint voyage from India in 1868; he knew Kawi and Javanese; he knew Coptic and Arabic. But with all this breadth and depth of linguistic and antiquarian learning he was singularly modest and unpretending, and he prized modesty and ingenuousness in others as highly as he despised all cant, selfishness, and pretence. In his books and in his numerous contributions to the *Indian Antiquary*, whether he records a new discovery or communicates a novel view or theory, he entirely merges his own self in the purely scientific and literary object he wished to serve. There could not have been a more helpful or a more disinterested votary of Oriental scholarship than he was. Numerous as were the applications which were made to him for MSS. or information, he always tried to satisfy them to the best of his ability and regardless of expenditure. The invaluable collection of Sanskrit MSS. which he had made since his arrival in India up to 1869—nearly 350 volumes, most of them on palm-leaf—were presented by him in the following year to the library of the India Office, as he well knew that they would there be more accessible to Sanskrit scholars than in any other great library.

During his prolonged residence at San Remo, the last year or two, Burnell took up with great zest the study of the writers of the Renaissance, especially of "that grand old poet and philologist Cardinal P. Bembo." "The more," he wrote in March last year, "I learn of the giants of the Renaissance, the more I admire them and their times. They were quite free from cant, hypocrisy, and sentimentalism." His intention of writing the life of Cardinal Bembo was one of his last *pia desideria*.

Burnell was a great lover and connoisseur of books and an indefatigable collector. As he was unmarried and held a post of emolument—viz., that of district and sessions judge in the Cuddapah, South Canara, and Tanjore provinces—he had the means of gratifying his tastes to the full. The catalogue of the immense library which he has brought together, and which by the terms of his will is to be sold by auction, if it be at all drawn up with care and accuracy, will serve as a nearly complete bibliographical guide to the literature on Southern India, while it will be a record of the wide range of his reading and a memorial of the vast erudition which through his early death has been lost to the world of letters.

R. Rost.

FIELDING'S PORTRAIT.

Porth-y-Felin, Ealing.

Your correspondent W. C. R. has, I see, revived Murphy's story respecting Hogarth's portrait of Fielding. Permit me to say that, although the anecdote is, unfortunately, "well known," and although the lady's name has even been given, it is by no means above suspicion. In the first place, it is in itself improbable that Hogarth, whose eye-memory was phenomenal, should have required the stimulus of a profile cut in paper to enable him to reproduce such distinctive features as those of Fielding. In the second place, the story is expressly contradicted, first by George Steevens in Nichols's 'Biographical Anecdotes of William Hogarth,' editions of 1781 *et seq.*; and secondly by John Ireland in his 'Hogarth Illustrated,' vol. iii., 1798, p. 291. The former, after referring to Murphy's version, says: "I am assured that our artist began and finished the head in the presence of his wife and another lady. He had no assistance but from his own memory, which, on such occasions, was remarkably tenacious." The latter gives as the "simple fact" the following: "Hogarth being told, after his friend's death, that a portrait was wanted as a frontispiece to his works, sketched this from memory." Now Ireland, though sometimes careless, is infinitely more trustworthy than Arthur Murphy, and he was in frequent communication with Mary Lewis, of Chiswick, Mrs. Hogarth's cousin, in whose arms Hogarth died. Without the evidence of Steevens, his account would, therefore, deserve great consideration. He tells us, moreover (p. 292), that the sketch was held to be "a faithful resemblance" by persons who had known the original. At the same time, if it represents Fielding, as stated, at the age of forty-eight, it could scarcely show him at his best. In 1754 his health was wholly broken (cf. Introduction to the 'Journal of a Voyage to Lisbon'), and he must have been but the shadow of the handsome Harry Fielding who wrote farces for Mrs. Clive and "heard the chimes at midnight." There is, besides, some pretty strong evidence that in 1752 he had lost his teeth, a circumstance which perhaps exaggerated, although it cannot account for, his peculiarly underhung appearance. It would also apparently increase that "length of chin and nose" on which his enemies were wont to rally him. Matters of this kind should be borne in mind by those who propose to reconstruct his image.

The "miniature likeness" W. C. R. mentions is probably the side-face copied in Hutchins's 'History of Dorset' and Nichols's 'Literary Anecdotes.' I am inclined to suspect that this miniature is based upon Hogarth's sketch—an impression which Ireland's statement that "no portrait of him [Fielding] was ever painted" seems to support. I may add that there is a bust of Fielding in the Upper School at Eton, but the sculptor's name is not upon it.

Austin Dobson.

A NOVELIST'S ENGLISH.

2, Gordon Place, Campden Hill, Kensington.

Will you allow me to correct a mistake made by your reviewer? A criticism of my novel, 'A Fearless Life,' appeared in the *Athenæum* of last Saturday, and in this criticism these words occur: "It may be observed that 'I would be agreeable to her' is not a classic method of conveying the notion that 'I would agree to her marriage with my son.'" The phrase alluded to is on p. 245 of vol. ii., and stands as follows: "He would be agreeable to her."

Your critic has quite misunderstood my meaning. The sentence is part of the parson's reflections, and means that he purposes to make himself agreeable in manner to Catherine, in whose presence he was at the time. The phrase is distinct from any previous reflection, and is not in the least meant to convey "I would agree to her marriage with my son."

I trust you will find a place for this explanation in your next issue, as I am unwilling that it should be assumed—on your reviewer's statement—that I have written a phrase in English which none but the most illiterate could make use of.

Charles Quentin.

RAM MOHUN ROY.

33, Hamilton Road, Highbury, N., Oct. 20, 1882.

The want of an adequate biography of the Rájá Rám Mohun Roy, the founder of the Bráhmo Somáj, has long been felt by a great variety of persons who from different standpoints are interested in the religious life of India. Having been a warm admirer of the Rájá ever since his visit to England about fifty years ago, and having worked in connexion with the Bráhmo Somáj for the last thirteen years, I have gradually become acquainted with many Bengálí friends and correspondents among the members of his own church. From some of these I have received very valuable information concerning him which is scarcely known out of his own country, and (with the entire concurrence of these friends) I have decided upon compiling a biography of him which shall combine the substance of these Indian materials with other original information which I have been so fortunate as to procure from English sources. But there are—or, at any rate, there have been—two collections of papers in England which have hitherto baffled all my efforts to discover, and I write this in the hope that some of your readers may be able to assist me.

Rám Mohun Roy was domiciled for nearly two years (1831–33) in the house of Messrs. John and Joseph Hare, of 48, Bedford Square, London, brothers of the well-known educationist David Hare of Calcutta. The Rev. James Long (formerly of Calcutta) has informed me that he was told, in 1847, by Mr. John Hare that he had then in his possession a quantity of valuable papers which would be of great service to any biographer of the Rájá. About eighteen or nineteen years later, after the three Hare brothers were all dead, the late Miss Carpenter, of Bristol, received a somewhat similar intimation, which she thus described in the appendix to her 'Last Days in England of the Rájáh Rámmohun Roy' (pp. 254–55), published in 1866:—

"During the preparation of this work, information has been received from one of the family of the late Joseph Hare, Esq., 'of whom the late Rájáh was the intimate friend and guest, that she has in her possession letters and documents which are of the utmost importance for such a work.' These have not, however, been entrusted to the editor. A box of papers, labelled 'Rámmohun Roy,' exists also in the keeping of a widow lady, the father of whose late husband was an intimate friend of Rámmohun Roy, who entrusted them to him. It is thus possible that important writings of Rámmohun Roy's may yet be discovered, and given to the world."

I have consulted Miss Carpenter's relatives and friends concerning both these statements, but they are unable to identify either of the parties to whom she referred. Who was the "widow lady," no one can conjecture. As to the Hare papers, I have traced out a solitary surviving member of the family, but she has no knowledge whatever upon the subject, and can give me no clue to the identity of Miss Carpenter's informant. It is now sixteen years since this last

assurance was received of the continued existence of these papers, and what has become of them no one can tell. But as all private search has failed, I write this letter in the chance of its meeting the eyes of some person who may be able to throw light on the subject. If either of these collections of papers have been preserved, it must surely have been in the hope of future use. Should their unknown possessors read this letter, I earnestly request them to communicate with me at my above address. I think I can give sufficient proof that I have been honoured with the confidence of Rám Mohun Roy's real friends in India as well as in England, who encourage me in the project of compiling his biography, and will rejoice if I am permitted to look over these precious papers, and take copies of all that may be useful for my work. One document which I especially want is the journal which he kept of his Western voyage and travels, with the express intention of publishing it for the benefit of his countrymen.

There are two other documents which I very much want, which have been printed, but appear to be now inaccessible: (1) those numbers of the *Sangbád Kaumudí* in which the Rájá published his recollections of his early travels in Thibet; (2) the English translation of the discourse (not by himself) which was delivered at the opening of the first Bráhmo Somáj in November, 1828. Of this discourse the Rájá presented copies to Capt. Froyer, Mr. James Pattle, and Dr. Tuckerman, of Boston, U.S., as is recorded in letters to those gentlemen; but the discourse itself I have not been able to obtain. Yet this (either in English or Bengálí), and also his Thibetan reminiscences, may be preserved in some Indian library, in which case I beg of their possessors to let me borrow them.

For any well-attested facts or personal reminiscences of the Rájá with which any of his Indian or English friends will be so kind as to supply me, I shall be extremely grateful.

SOPHIA DOBSON COLLET,
Editor of the 'Bráhmo Year-Book.'

COPYWRONG.

24, Colville Road, W., Oct. 24, 1882.

A FRIEND has sent me a cutting from a paper called the *New York Star*. The article is apparently a long one, for only one column of it has reached me. The writer heads it "Fiction and its Votaries. The old school of novelists and the new. Dickens and Thackeray giving place to Blackmore, Besant and Rice. Cooper making way for Clark Russell. Cheap editions all the rage." And he proceeds as follows:—

Passing pensively down to Franklin Square with his mind full of the changes which had taken place in the story-writing world since he stole down into the barn at his country home to avoid his Methodistic mother's eyes while he revelled in James and his solitary horsemen, the reporter entered the great house of Harper & Brothers, where a member of the firm introduced Mr. F. A. Nast, superintendent of the corresponding department, as the very man to interview on the subject in hand.

"Well," said Mr. Nast, "the market for fiction was never more brisk than it is now. Good stories, whether long or short, find a ready sale and plenty of readers."

"What are the best selling novels of the year?" inquired the reporter.....

"Clark Russell's sea stories," answered Mr. Nast, rattling on about the brain products in which the firm dealt as a dry goods man dilates on the quality and cost of muslins and laces. "Clark Russell's sea stories go off like hot cakes. Of his 'Wreck of the Grosvenor,' 'A Sailor's Sweetheart,' 'An Ocean Free Lance,' and so forth, Harper & Brothers have sold and are selling immense editions."

"As to sea stories," suggested the reporter, with the air of a Conservative rising to ask a question of a Radical ministry, "I thought Cooper—"

"Oh, Cooper is laid on the shelf; he has had his day," resumed Mr. Nast, with just a touch of impatience. "Cooper is now sold only, or mostly, in sets. People buy him to help furnish their libraries. It is the correct thing to do; but the present generation scarcely knows that the author of 'The Pilot' and 'The Red Rover' ever existed.....

"Yes," continued the fiend of the great book factory of Franklin Square, "Russell's marine yarns take the first prize. Now, here 's our list of new novels, fresh from the press."

I quote this because, referring to me as it does, it enables me to say that for "obliging Cooper to make way," for "novels which have sold and are selling in immense editions," for "Russell's marine yarns taking the first prize," I have never, as I live to swear it, received one single farthing from America, never been honoured by even so much as a "Thank you"! Is it not time that authors stood up for themselves, since no living creature out of their sphere has a word to say for them? Were books hardware, were brains iron, were the fruits of the intellect coal—why, if the great American republic treated Sheffield, Birmingham, and Newcastle as it treats British authors, the music-halls would resound with howls over new editions of "Here stands a post," and nothing could appease our imperial indignation but a general call to arms. It was Charles Mackay who wrote of America as the land of the free. He mistook. It is the land of those who make free—the land of the free and easy.

W. CLARK RUSSELL.

Literary Gossip.

MR. COLQUHOUN hopes to bring out in January the account he is writing of his remarkable journey through Southern China. Besides information about trade routes, which will be of use to those engaged in Eastern commerce, the work will contain many matters of interest to the general public. The traveller proceeded not through Central China, with which most books on China deal, but through the border lands, which have been comparatively recently conquered, and where the inhabitants outside the cities preserve a character of their own and have been little affected by Chinese civilization. Then the author, from the time of leaving Canton till he reached the Irawadi, was successful in taking a series of photographs, which, in spite of the rains he encountered during the latter part of his journey, he has brought back uninjured. This is the first time that the camera has penetrated any distance from the coast; and the photographs, some hundreds in number, include, besides pictures of scenery, portraits of mandarins, Chinese traders, and aborigines, the interiors of houses, &c. The book will be illustrated from these photographs as well as from the author's sketches and from aboriginal drawings which the traveller has brought over, and which are said to be curious. Mr. Colquhoun is to address the French Geographical Society on December 3rd.

MUCH surprise has been expressed that the negotiations for a copyright convention between the United States and this country have broken down, notwithstanding the desire of American publishers that the convention should be concluded. The truth we understand to be that the Typographical Union has brought so much pressure to bear upon the State Department as to hinder the convention from being transmitted to the Senate for consideration and ratification. The Typographical Union has the active support of all the protected interests throughout the country, the concession of international copyright being regarded as a breach in the protective system. So long as uncompromising protectionists rule in the councils of the Union there is but little hope that the just claims of alien authors will receive any consideration in the United States. However, as American publishers are now most anxious for international copyright, they are not likely to remain passive under the rebuff which they have sustained.

MR. HERBERT SPENCER will soon return from the United States. His visit has not, we are sorry to say, proved beneficial to his health. The newspapers have written about him in a most complimentary strain, while entering into personal details which were till lately never seen in our journals. The following specimen of American newspaper comment may amuse Mr. Spencer's friends: "He is nearly sixty, and wears a fringe of dark hair and whiskers streaked with grey. His nose and mouth are prominent, forehead high, and his eyes full of 'sweetness and light.'"

WE called attention some time ago to the interesting discovery made by M. Paul Meyer of an Anglo-Norman poem containing a very graphic account of the life of William Marshal, Earl of Pembroke. The extracts given by M. Meyer himself in the eleventh volume of *Romania* sufficed to show that it was not only a production of high literary merit, but a new and very valuable authority in an important era of English history. M. Meyer has now, in the annual *Bulletin* of the Société de l'Histoire de France, printed some further extracts from the same poem, relating to the truce made by the Papal Legate between Richard Cœur de Lion and Philip Augustus in 1199; and he points out that while the poet's account confirms in the main that of Roger of Wendover, it adds details of very considerable importance which are altogether new. We trust it will not be long before he favours us with a complete edition of the poem.

THE Dante Society of Cambridge, Massachusetts, intends to print some further literary illustrations of the 'Divina Commedia,' collected by Mr. Longfellow in the later years of his life.

MISS MATHILDE BLIND'S monograph on George Eliot, which we mentioned some time ago, will contain a good deal, it is said, of information given by the novelist's friends, relatives, and her own correspondence that will be new to the public. It will also furnish information about, and give extracts from, her anonymous writings.

NO one will be surprised to hear that Mr. Joynes's visit to Ireland in company with the author of 'Progress and Poverty' has resulted in his writing a book, which will be published next week by Messrs. Kegan Paul, Trench & Co. It is styled 'Adventures of a Tourist in Ireland.'

MESSRS. CHATTO & WINDUS have in the press a work on Arabian society in the Middle Ages and to-day, by the late E. W. Lane, the author of 'The Modern Egyptians' and the Arabic lexicon. It is an arrangement of all the more important notes appended to Mr. Lane's translation of the 'Thousand and One Nights.' Scholars as well as ordinary readers have often expressed a wish that the notes could be obtained in a separate and convenient form; and to meet this wish and render the notes more widely serviceable, Mr. Stanley

XUM

Lane Poole has arranged them in a series of chapters, which is intended to form a complete picture of the manners, beliefs and superstitions, social habits, and literature of the Mohammedans, and will constitute, in short, a kind of Moslem encyclopædia.

Mr. E. B. Nicholson, the librarian of the Bodleian, is about to publish at Oxford a series of fasciculi entitled "New Homeric Researches," containing his investigations on the metrical peculiarities of the Homeric poems and the light they throw upon Homeric questions and upon the earlier stages of the Greek language. The first of these will be 'On Supposed Metrical Mimicry in the Homeric Poems,' and will be ready in a few days.

The fourth part of the series of 'Facsimiles of National Manuscripts of Ireland,' edited by Mr. John T. Gilbert, F.S.A., under the direction of the Master of the Rolls in Ireland, will, it is understood, be published early in December next.

The Burns relics mentioned in the *Athenæum* of the 14th inst., and formerly in the Edinburgh Select Subscription Library, have passed into the possession of the Earl of Rosebery. We may also mention here that the valuable antiquities of the Shetland Literary and Scientific Society have been disposed of to the Edinburgh Antiquarian Museum.

Mr. John Tweed, of Glasgow, will shortly publish a volume of biographical sketches of the provosts of that city, together with other information on its municipal affairs from the passing of the Reform Bill to the present time.

A year ago the Edinburgh Guildry took steps towards the preparation of a history of their institution. The project, it would appear, has been abandoned, on the ground that there does not exist suitable material for such a work.

Messrs. Cassell & Co. intend to take advantage of the occasion of the political jubilee of Mr. Gladstone, which will occur shortly—Mr. Gladstone having been first returned to the House of Commons for Newark on the 13th of December, 1832—to issue immediately a jubilee edition of Mr. G. Barnett Smith's 'Life of Mr. Gladstone.' The whole of this work will be issued in an edition published at one shilling, and several new chapters will be added by the author, bringing the biography down to the present date.

The history of Thomas Gent, the famous York printer, who wrote histories of York, Ripon, and sundry other places, is related in an article which will appear in the November number of the *Bibliographer*.

The Porte, having discovered that the books composed for Greek schools by its Greek functionaries and printed at the Imperial Press were provided with seditious passages, has caused a new set of school-books to be prepared by Aristokles Effendi, Zakhariades, Khurmuziades, and other professors of the Phanar. They include a geography by Mr. Hamadopulos, which gives a detailed description of the empire. Mr. Hamadopulos, who is attached to the Patriarchate, is also the author of a history of the late Russo-Turkish war written under the auspices of his patrons.

Messrs. Macmillan will shortly publish a selection of sermons, mostly preached in Harrow School Chapel, by the late Rev. T. H. Steel, well known through his long connexion with Harrow. They will be preceded by a memoir by Prof. H. Nettleship.

The deaths are announced of Mr. Carthew, the learned Norfolk antiquary; of Miss Frederica Rowan, the well-known translator from the Danish, who expired on Monday last after a lingering illness; and of Janos Arany, the most popular of the Hungarian poets of the day. Among his most noted works are 'The Gipsies of Nagy-Ida' and 'The Conquest of Murany.' He translated several of Shakspeare's plays into Magyar.

SCIENCE

Text-Book of Geology. By Archibald Geikie, LL.D., F.R.S. (Macmillan & Co.)

It is strange that until the appearance of this volume Prof. Geikie had not included among his numerous writings a systematic treatise on geology. Many scientific men—especially the younger professors—seem to think that the sooner they prepare a text-book of their special subject the better for their reputation: their own students, if no others, will be certain to make use of such a manual. But Prof. Geikie, during his long tenure of the geological chair in the University of Edinburgh, wisely withstood the temptation of adding to our list of geological handbooks—a list which he probably thought, as we think, already too long rather than too short. He wrote, to be sure, a neat little 'Primer,' but that was too slender to count for much, and in editing Jukes's well-known 'Manual' he made such important additions that it was almost equivalent to writing a complete treatise. Still the fact remains that until Dr. Geikie had resigned the Edinburgh professorship and had taken up his new position as head of the Geological Survey, he had been so self-denying as not to publish any independent treatise on his favourite science.

The basis of the handsome volume which has just been issued is to be found in the admirable article on geology which Prof. Geikie contributed some three years ago to the 'Encyclopædia Britannica.' That article, however, has been so amply extended and so fully illustrated that it has developed into a very imposing volume—a large broad-backed octavo of nearly a thousand pages with more than four hundred woodcuts. It needs considerable powers of intellectual digestion on the part of a student to assimilate so solid a mass of matter; yet an author is not responsible for the rapid outgrowth of his subject, and, moreover, if any man can make a tough bit of geology at all tender by clear and attractive writing, that man is undoubtedly Prof. Geikie. His literary power, though sorely fettered in the preparation of a text-book, asserts itself in dealing with even the dullest themes.

Especial interest attaches to this work inasmuch as it opens to us the matured views of an ex-professor. The method which the author follows in treating his great subject is that which his experience in Edinburgh has led him to regard as the most advantageous method for enabling a student to acquire a firm grasp of the principles of geological science and an intelligent interest in its details. The volume is divided into seven books. In the first of these the student is invited to view geology in its cosmical aspects; in the second he investigates the materials of the earth's crust, describing and classifying its minerals and its rocks; in the third book he inquires into the great changes which are being wrought upon the surface of the earth, partly by hypogenic agents acting from below, partly by epigenic forces working from above; the fourth book deals with the architecture of the earth's crust, or what may be called geotectonic geology; the fifth book is palæontological; the sixth stratigraphical; and the seventh physiographical. By this comprehensive arrangement every branch of geology is brought under the attention of the reader, and is discussed with sufficient fulness for all ordinary purposes. In fact, the student who can master so elaborate a treatise may look with calmness and confidence in the face of the most severe examiner. Further, the book contains numerous references to original sources of information, thus rendering it a valuable work of reference on all matters geological.

There are at least two points in which this text-book differs notably from most manuals of geology in common use. One of these points relates to the attitude which the geologist should assume towards cosmogony. The fanciful speculations which disfigured the early works on geology led to a strong reaction, and for many years it was the fashion for geologists to hold that their science had no concern with any hypotheses as to the origin of the earth, but should limit its scope to so much of the history of the globe as is distinctly revealed by the record of the rocks. It was, we believe, Prof. Huxley who in recent times first broke the spell in this country, and showed with characteristic force that no geological system can be regarded as approximately complete unless regard be paid to the probable beginnings of the earth's history. Cosmogony, in fact, stands to geology in much the same relation as embryology stands to zoology. And as all modern naturalists recognize the supreme value of embryological research, so the geologist, though he never expects to find any relics of the earth's primitive crust, is beginning to feel that he ought to question the astronomer, the physicist, and the chemist as to the origin and early development of our planet. It is pleasant to note that in Dr. Geikie's pages the most recent answers to such questions are clearly set forth.

Another point of novelty in this text-book is the prominent place assigned to microscopic petrography—a branch of geology which has sprung into being of recent years. We are disposed to think that this fascinating study is apt to lead the geologist to place too much reliance upon his instrument, and to under-estimate the value of the old-fashioned methods of observation; at any rate, there are students who, like children with a new toy, are disposed to carry the use of the microscope to excess. Nevertheless, the value of the instrument as an auxiliary to petrological work is beyond question, and no geologist can nowadays afford to be ignorant of its application. Owing to his attention to microscopic studies, Dr. Geikie is admirably qualified to intro-

duce the student to this modern method of research, and it is satisfactory to observe that he has included in his text-book an excellent outline of the present state of microscopic petrology.

Prof. Geikie reminds us in his preface that the geologists of this country are apt to be twitted with being somewhat insular in their conceptions, knowing and caring but little about what passes in the geological world outside their own islands. While it must be admitted that there was a time when this charge might have been sustained, we doubt whether there is much force left in it at the present day. Certainly the best of our English geologists are fully alive to the work which is being done by their continental and American brethren. In these times there is perhaps rather too great a tendency, at least among the younger men, to air their knowledge of foreign geology, and sometimes to obscure the classification of our own rocks by introducing unnecessary modifications and new-fangled nomenclature from abroad. But for all that, it is pleasant to find that Prof. Geikie presents to his students the broadest possible view of the science, based upon illustrations not confined to the land we live in, but extending to all lands where the footsteps of the geologist may be traced. From America especially he draws many an excellent and telling illustration. The generous manner in which the works of the American surveys have been scattered throughout this country has made the main features of the geology of the United States familiar to most English readers of geological literature. Still, it is a great advantage to a student who is not likely to have an early opportunity of reading ponderous reports that the leading facts which they contain should be introduced to his notice, especially in the clear and winning way in which Prof. Geikie always contrives to convey his information. Moreover the frequent references to American geology will render the book especially serviceable to the American student. In fact, we venture to predict that Prof. Geikie's new volume will be quite as highly appreciated on the other side of the Atlantic as on this. And on this side it will certainly step at once into the foremost rank among our standard text-books.

Brehm's Zoological Atlas: Classified in Fifty-five Sheets. (Edinburgh, T. Ruddiman Johnston.)—The introduction is as follows: "As Brehm's 'Thierleben' enjoys the foremost place amongst works on natural history, it was thought that a selection from the illustrations printed by the original producers of the work, properly classified, and with English titles, would be a valuable addition to our list of educational works. This idea has been carried out in the present form, the classification having been revised and the English popular names supplied by an eminent naturalist." The remainder of the page is filled with laudatory remarks, doubtless well merited at the time that they were penned, from various naturalists and travellers of eminence, all, however, relating to the illustrations of the larger work, and to be taken in connexion therewith. We will only quote one of these as rendered by the translator, "from the naturalist Dr. A. Girtanner, of San Gallen: 'The eyes of any well-bred person can only with delight rest upon these numerous pictures. Complete knowledge of physical life, of external appearance, and of mental emotion is evident.'" After this warning against risking our social position, we prefer to echo the encomiums bestowed upon the illustrations, and will not even take exception to the one which represents a litter of *nine* playful fox-cubs contemplated by the vixen with a satisfaction which we should fully share if we could only believe in them. The points to be criticized are rather the value of this atlas as an educational work, and the accuracy of the revision and adaptation by the eminent naturalist, respecting whose identity we cannot even give a guess. The first and second sheets represent the apes of the old and the new world, but not a single illustration is given of the order *Lemures*, comprising the large family *Lemuridæ*, the *Nycticebidæ*, the *Galaginidæ*, and the *Chiromyidæ*, the sole representative of the last family being the wonderful aye-aye of Madagascar. The omission of this entire order does not say much for the scientific attainments of the eminent adapter, but looking at the matter from the lowest point of view, Brehm's pictures of the members of this group are really very pretty, and quite as likely to prove attractive to children as the somewhat hackneyed cuts of gorillas and chimpanzees. Turning over some more sheets, we find that in this work put forward as adapted for educational purposes another order, that of the *Monotremata*, is also omitted, thus depriving the rising generation of the chances of learning something of the outward and visible form of the ornithorhynchus, or "beast with a bill" of the old 'Swiss Family Robinson' days of our childhood. Coming to the minor point of nomenclature, the usual name of *Thylacinus cynocephalus* is not the zebra wolf—a misleading term—but the Tasmanian wolf, an appellation which, however objectionable, at least shows that the animal comes from Van Diemen's Land, and is consequently a marsupial and not a member of the *Canidæ*. There is not much revision of the original classification shown in following Brehm's example in placing the *Pinnipedia* or seals with the *Sirenia* or dugongs, the former being now located amongst the Carnivora; and it is quite wrong to call *Otaria jubata* the "sea-lion *or* fur seal," the two species being totally distinct. On the same sheet is an illustration of the "sea-bear," which is really the fur seal, *Callorhinus ursinus*, although the reviser does not say so. Neither is "rock-eagle" the English equivalent of "Stein-adler," which should be "golden eagle"; and it is ludicrous to see *Passer domesticus* and *P. montanus* translated "house" and "hedge sparrows," the latter instead of "tree sparrow," the "hedge sparrow" so called being, as the merest tyro knows, not a *Passer* at all, but an *Accentor*, and far away from the *Fringillidæ*. The arrangement of the birds is, however, beyond serious treatment. The first sheet contains *Scansores* or climbers, meaning the parrots; the next is *Insessores* or perchers, comprising the nightjar, kingfisher, cuckoo, turaco, hornbill, swift, and toucan; the following sheet goes back to *Scansores* and *Insessores*, and gives us the humming-birds and the woodpeckers. This arrangement is not to be found in Brehm, so the eminent naturalist must accept the responsibility for it. It would be "breaking a butterfly" to continue our criticisms further. We are even sorry to have said so much.

ASTRONOMICAL NOTES.

THE following are the places of the great comet at six o'clock (Greenwich mean time) on the following mornings, as computed by Dr. Hind from the elements published by him in *Nature* of the 12th inst.:—

Date.	R.A. h. m. s.	N.P.D. ° ′
Oct. 28	10 2 8	108 11
„ 30	9 59 7	108 56
Nov. 1	9 55 59	109 40
„ 3	9 52 43	110 24

The comet's tail, as seen in the neighbourhood of London on Monday morning last, the 23rd inst., was about 19° in length.

According to Dr. Hind's elements, when the perihelion passage took place on the 17th of September, the comet's distance from the sun's centre was 0·00806 in terms of the earth's mean distance, or about 740,000 miles. We are enabled to state, on the authority of Mr. Neison, that this comet cannot be identical with those of 1843 *and* 1880, since if the period had so greatly diminished through close approaches to the sun as to reduce it from thirty-seven to less than three years, the eccentricity of the orbit must have correspondingly decreased, which does not appear to have been the case. As regards the comet of 1668, the tail only was visible in Europe, and our knowledge of its orbit is derived solely from some very rough observations made in the East Indies and in Brazil, so that the elements which have been computed are exceedingly uncertain, and it is impossible to form any decided conclusion with regard to them. Some Carmelites near San Salvador, Brazil, saw it first in the morning; it was afterwards observed by Father Estanzel during a few evenings early in March.

The number of the *Comptes Rendus* for the 16th inst. has a note by MM. Schulhof and Bossert, giving the result of their complete discussion of the observations of the comet of 1812 made in that year. They point out that Encke, when he determined the period to be about 70·68 years, was not in possession of the observations made by Flaugergues at Viviers, and by Blanpain at Marseilles. Availing themselves of all the observations, they find that the most probable length of the comet's period is 73·18 years, and that the effect of planetary perturbation will be to advance its return by about 445 days, and bring it to perihelion again on or near the 4th of September, 1884. Whether this comet was ever observed previously to its return in 1812 it is, they remark, premature to decide until its mean duration of revolution is better known. It was certainly not observed at any of the three returns immediately preceding 1812; but in the years 1528–30, and on previous occasions, comets were seen, some of which may have been identical with Pons's discovery of 1812.

Appendix I. of the Washington *Astronomical Observations* for 1878 contains a very interesting monograph, with drawings, of the central parts of the nebula of Orion, by Prof. Edward S. Holden, of the United States Navy, Director of the Washburn Observatory, Madison, Wisconsin.

SATURN'S RING.

Blackheath, Oct. 23, 1882.

I HAVE seen the copy of the first volume of the *Philosophical Transactions* which Mr. Symons, F.R.S., kindly sent to the Royal Society. It appears however, as mentioned in your last issue, that one of the copies belonging to the Royal Society, which happened to be at the binders' when I first called there, *did* contain the drawing which is missing in so many copies; and I have just received a note from Mr. A. C. King, F.S.A., Keeper of the Educational Library of the South Kensington Museum, informing me that the plate with the drawing in question is given in their copy. In last week's *Knowledge* the editor informs us that the copy referred to by him and engraved the week previous was sent by Mr. Ward (meaning, I presume, Mr. Isaac Ward, of Belfast).

It is very remarkable that the plate should have been omitted from so large a number of copies as I have before mentioned; and it is, perhaps, still more so that so many persons should have accepted as positive fact the conjecture (for it is only given as such) founded by Dr. Wallis upon the drawing of the Balls without consulting the drawing itself, which we now know is contained in a few, though only a few, copies of the *Philosophical Transactions*, and which shows clearly that the Balls suspected nothing of the real division in Saturn's ring, and that the conjecture (arising from some optical illusion) related to something totally different.

XUM

Capt. Noble, in *Knowledge* for September 29th, traced what is probably the first attribution to the Balls of the discovery of the duplicity of Saturn's ring to a work published by William Kitchiner in 1818, intituled 'Practical Observations on Telescopes, Opera-glasses, and Spectacles'—a curious book, which ends, in the author's quaint style, with the remark that if any one objects to it that not a page in it is worth a farthing, he is reminded that less than a farthing is charged for it, as the price of the whole, with its 470 pp., is only nine shillings. In this work, at p. 355, reference is made to the Balls' observation and the remark of their correspondent upon it, viz., that it "has induced the supposition that Saturn is surrounded by not *one* circular body or figure only, but *two*." This mere supposition or conjecture has led many subsequent writers to state that those observers saw the dark marking on the breadth of the ring which was really first noticed by Cassini, and which led to the discovery of the principal division. Thus Prof. Rudolf Wolf, of Zurich, in his valuable 'Geschichte der Astronomie,' published in 1877, writes (p. 676): "Schon um 1665 bemerkte der Engländer William Ball eine dunkle, gewissermassen den Ring in zwei Theile zerlegende Linie, welche dann 1675 auch Cassini sah, und etwas später sein Neffe Maraldi els eine eigentliche, durchgehende Theilung erwies."

In conclusion, I must remark that the editor of *Knowledge* is incorrect in ascribing the first notice of this matter to Capt. Noble, as my letter of September 15th to the *Observatory* (printed in their October number) was sent to the press before Capt. Noble had written on the subject, and I had, indeed, requested attention to the point long before that. W. T. Lynn.

P.S.—Having addressed to Mr. Walter White, Assistant Secretary of the Royal Society, a note inquiring whether the location of William Ball (respecting which there has been some doubt) could be found in the archives of the Society, he kindly replies in a letter dated October 25th, from which the following is an extract:—"On a document in our archives he states his place of residence to be Mainhead, near Exeter, Devon. The *i* has a distinct dot. But at the head of the same document the word is distinctly Mamhead." There can be no doubt, then, that this village, between Exeter and Dawlish, was the *locus observandi* of the brothers Ball. Mr. White also states that in the earliest archives of the Society the name is spelt Balle.

SOCIETIES.

Numismatic.—*Oct.* 19.—Mr. W. S. W. Vaux, V.P., in the chair.—Mr. E. K. Burstal exhibited a gold coin of the British prince Andoco(mius), found at Thame, and a rare half-groat of Henry VI. (light weight).—Mr. R. A. Hoblyn exhibited a set of the touch-pieces struck by the Stuarts, viz., Charles II. (in gold); James II. (in gold); James II., from a different die (in silver); the Chevalier St. George as James III. (in silver); the younger Pretender as Charles III. (in silver); Henry, Cardinal of York, as Henry IX. (in silver); Anne (in gold). Before the reign of Charles II. no coins were struck specially for touch-pieces, the gold "angel" having been used for the purpose. The touch-pieces are all similar in design. Those of the Pretenders, however, which were struck abroad, are of much better work than those made in England. Mr. Hoblyn remarked that Anne was the last English sovereign who touched for the "king's evil," George I. having been, it is said, in the habit of referring all applicants to James Edward, the elder Pretender. These touch-pieces (all of them perforated) are curious relics of a superstition which had existed for many centuries, and was only stamped out on the accession of the Brunswick dynasty.—Prof. Gardner read extracts from a paper describing the coins of the island of Samos, and discussing the historical facts to be gleaned from them.

Hellenic.—*Oct.* 19.—Prof. C. T. Newton, V.P., in the chair.—Prof. Jebb read notes of a recent visit to the Troad, where he examined Dr. Schliemann's excavations at Hissarlik. In his opinion and that of his companions, two of whom were architects, the remains do not warrant the theory of seven successive cities assumed in 'Ilios,' or the corrected hypothesis of six cities which has since been put forward. Nor can any scientific proof of such a theory be founded on the pottery or other objects found in the diggings. On this point attention was invited to the evidence of M. Albert Dumont. Prof. Jebb proceeded to define the only sense in which Hissarlik can be identified with Homeric Troy. It was possibly the site of a town of which the siege gave rise to the tale of Troy. It may also represent the position of Troy as generally conceived by the poet, though no one site in the Troad suits all the topographical data of the Iliad. But the town of Troy, as indicated in the Iliad, cannot be recognized in any remains found at Hissarlik. The poet's town of Troy was a creation of his fancy, influenced by handsome cities of his own time. Prof. Jebb concluded with an appreciative tribute to Dr. Schliemann's energy and perseverance. The paper will appear in the next number of the *Journal of Hellenic Studies*.—After some discussion, in which the Chairman, Mr. W. M. Ramsay, Mr. F. Pollock, and others took part, Mr. L. R. Farnell read an exhaustive paper on the altar frieze lately discovered at Pergamon, which represents the battle between the gods and giants. Referring first to the treatment of the subject in Greek literature, the writer proceeded to compare the Pergamene work with other known representations of the Gigantomachia both on vases and in sculpture, and showed how in fulness of conception and boldness of execution this was a remarkable advance upon the earlier treatment of the subject, and constituted an invaluable contribution to the history of the later development of Greek art. This paper also will appear in the forthcoming number of the *Journal of Hellenic Studies*.

MEETINGS FOR THE ENSUING WEEK.

Mon. Education, 7½.—'Relative Value of External and Internal Examinations,' Mr. F. Storr.
— Royal Academy, 8.—'Anatomy,' Mr. J. Marshall.
Wed. Entomological, 7.
Thurs. Chemical, 8.—'Halogen Compounds of Acetylene,' Dr. R. T. Plimpton; 'Dihydroxybenzoic Acids and Iodosallerlic Acids,' Dr. A. K. Miller; 'Crystalline Molecular Compounds of Naphthalene and Benzene with Antimony Chloride,' and 'Additional Evidence that Quinoline belongs to the Aromatic Series of Organic Substances,' Messrs. W. Smith and G. W. Davis; 'Orcin and some of the other Dioxytoluols,' Mr. R. H. C. Neville and Dr. A. Winther.
— Linnean, 8.—'Ants, Bees, and Wasps,' Part X., Sir J. Lubbock; 'Medicinal Plants of Queensland,' Mr. W. A. Armit; 'Malformation Leaves of *Begeria opaca*,' Mr. J. G. O. Tepper; 'Hybridization of *Salvia fontinalis*,' Dr. F. Day; 'Teratological Notes on Plants,' Mr. H. N. Ridley; 'Remarks on Marine Fauna of Norway.' Prof. Lankester.
Fri. Philological, 7½.—'English Words in the Anglesea District,' Mr. W. Jones.
— Royal Academy, 8.—'Anatomy,' Mr. J. Marshall.

Science Gossip.

The death is announced of Mr. Robert Slimon, a Scotch man of science, of whom little is known in this country. The deceased was a surgeon at Lesmahagow, and had attained the age of seventy-four years. His researches into the upper silurian system were rewarded by the discovery of the crustaceans in the rocks of this system, a discovery which has rendered his name familiar to geologists. His collection of these crustaceans was unique, and Sir R. Murchison, who visited it, made special mention of it at the meeting of the British Association in Glasgow in 1854. Mr. Slimon published a valuable monograph entitled 'A Geological Account of Lesmahagow.' The discovery of the pterygotus and Sir R. Murchison's visit to Lesmahagow became the subject of a song from the pen of the late J. W. Salter, which is duly recorded in the 'Booke of the Royal Hammerers.' We give a verse or two:—

Then Huxley and Salter they shook their wise heads,
And dreamt of these fossils as they lay in their beds;
Says Salter, "I've found out his eye and his jaw,"
But Huxley said nothing, he thought all the more.

Then he called for a pen, this philosopher bright,
And showed Harlan was wrong and M'Coy wasn't right;
And that Roemer, Burmeister, and all of the batch
Had mistaken the claws of this ugly old scratch.

He could bite like a vice with the end of his horn,
And he measured six feet the day he was born;
His eyes like a seal, and a spike on his nose,
And cocked up his tail in a state of repose.

Then here 's Mr. Slimon, who told where they 'd laid him,
And little John Rhind, who so nicely has made him;
The Director and Ramsay, who found out his stations,
And Huxley and Salter, who found his relations.

The memorial to Prof. F. M. Balfour was well started at the influential and representative meeting at Cambridge last Saturday by the donation of 3,000*l.* on the part of the family of the late professor, and of 1,000*l.* by Dr. Michael Foster, Sec. R.S., which had been left to him by the deceased for the promotion of biological study, to be applied according to his discretion. It was resolved to establish a Balfour Fund for the promotion of research in animal morphology, the fund to be offered to Cambridge University, under suitable conditions, including provision that a studentship of not less than 200*l.* a year be founded, not restricted to Cambridge men nor awarded by competitive examination.

Part XV. of the fourth edition of Yarrell's 'British Birds' will appear next month. Mr. Howard Saunders, our readers may be aware, has succeeded Prof. Newton, F.R.S., as editor.

The programme of technological examinations for the session of 1882–83 of the City and Guilds of London Institute has been issued. It differs but slightly from previous programmes. It, however, acknowledges that there is much difficulty in obtaining good technical teachers. The Institute now holds examinations in forty-two different subjects. The central building in Exhibition Road is rapidly approaching completion, and it is expected that when opened it will largely increase the supply of good technical teachers.

M. Théophile Moreau, of the Bureau Central, has been appointed to superintend the self-registering magnetic instruments invented by M. Mascart, and fixed at Parc St. Maur Observatory, twelve miles from Paris.

Prof. C. W. C. Fuchs has published in Tschermak's *Mineralogische und Petrographische Mittheilungen* his seventeenth annual report on earthquakes and volcanic phenomena. The total number of earthquakes for the year 1881 is reported as being 297, and volcanic eruptions as 10, the most important being that of Mauna Loa in Hawaii, from which very large lava streams flowed.

Mr. Thomas Coats has presented the town of Paisley with his observatory at Oakshaw Hall, which is said to have cost its donor the sum of 10,000*l.*

M. Deprez communicated the result of his experiments on the transmission of power to a great distance to the Académie des Sciences on the 9th inst. He used two telegraph wires between Miesbach and Munich, a distance of fifty-seven kilomètres. In a first experiment work equal to half a horse power per second was got directly at Munich, with a velocity in the Miesbach machine of 1,500 turns a minute. More than 60 per cent. of the work expended was recovered, the receiving machine working a centrifugal pump to feed a cascade.

M. d'Abbadie has observed that the elephant hunters who frequent the miasmatic districts of the Soudan protect themselves from fever by the daily use of a fumigation with sulphur. He has also found that near the sulphur mines there is a remarkable absence of miasmatic fevers. It has been asked, If sulphur fumes are a prophylactic against zymotic disease, may not the coal smoke of London have a sanitary value?

Mr. W. Le Conte Stevens has prepared, by especial request, a summary of the results of his investigations with a view to the elucidation of his 'Theory of the Stereoscope,' which appears in the *Journal* of the Franklin Institute. This paper is well deserving the attention of all who are interested in the phenomena of binocular vision. The same writer also communicates to the *American Journal of Science* an interesting paper 'On Vision by the Light of the Electric Spark.'

Mr. R. L. J. Ellery, the Government Astronomer at Melbourne, sends us the Monthly Records of Observations in Meteorology and Magnetism taken at the Melbourne Observatory in August and September, 1881.

Prof. Ben. K. Emerson has in the *American Journal of Science* the commencement of an article 'On the Deepfield Dyke and its Minerals,' in which the peculiarities of Prehnite, found in fissures at Cheapside, south of the river, are most carefully examined.

XUM

FINE ARTS

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

NEW PRINTS.

We are indebted to Messrs. T. Agnew & Sons for an artist's proof from a plate mezzotinted with rare success by Mr. Atkinson from Mr. Millais's portrait of the Bishop of Manchester. The figure is shown nearly to the knees, and, like the face, in three-quarters view to our right. Mr. Millais's likeness is perfectly veracious, full of animation, and a happy rendering of character. The composition is extremely simple and unpretending; the chiaroscuro is excellent. Mr. Atkinson has been exceptionally fortunate in rendering the face, the tone-arrangements, and the attitude and general air of the figure. The tone of the coat is first rate, and noteworthy because the engraver has made its richness interesting.

From Messrs. Mansell & Co. we have received an artist's proof of an etching by Mr. Kennington from a picture called 'The Rivals,' painted by Mr. E. Hughes. It represents two lovers in a sunlit balcony, watched by a jealous man from a shadowy inner room. The vivid illumination of this design is very fortunately rendered; next in merit is the grace of the female figure. We cannot say much for the rest of the work.

THE PRIVATE COLLECTIONS OF ENGLAND.

No. LXXIII.—GALLERIES IN AND NEAR LIVERPOOL.

At Mr. S. H. Thompson's house, Thingwall, near Liverpool, are a few pictures and drawings which we have been kindly permitted to describe. The most important are as follows. Drawings:—Among these is Mr. Absolon's smooth and elegantly pretty triptych illustrative of 'Tristram Shandy.' Pictures in oil:—A capital 'Interior of a Church,' by P. Neefs, probably Antwerp Cathedral, giving a view straight down the nave, is bright and carefully and smoothly finished, but, as usual with the artist, rather hard and thin in painting. It contains the figures which are frequent in such subjects and is in perfect condition. By Mr. Parrott we have a bright and attractive modern picture, curiously contrasting with the Neefs, and representing the Arch of Titus in a clear sunlight effect. By R. Wilson is a delightful study of Richmond Bridge with white houses on our right—a solid and well-toned picture, marked by charming freshness and solidity. There is at Thingwall a landscape by Wynants or a good copyist, with figures attributed to A. Van de Velde. It depicts a river, and displays well-composed masses of trees in sunlight. It is a well-preserved picture, but it has a metallic surface, which is unusual in good examples of Wynants's skill. A superior Moucheron, a landscape, with figures introduced by Berchem, shows on our right lofty rocks surmounted by a ruined fortress, and charms us by its fine, tenderly painted, misty blue distance. The figures in Moucheron's pictures were usually by other hands than his; see what was said on this subject in No. LXIV. of this series of papers in regard to the prevalence of a similar practice among the group to which Moucheron belonged, including Wynants, Lingelbach, Beerestraeten, Weenix, Berchem, and Karel du Jardin, who formed "la bande des joyeux peintres italianisants" of M. Havard. Hackaert and Wouwermans produced the agreeable woodland subject comprising hunters pursuing deer which we noticed in this house. The scene includes many excellently handled rocks and much good foliage painting. The whole is clear, neat, and delicate. The figures seemed to us not quite so good as Wouwermans's, but they may be due to that clever artist Falens or to Simon du Bois, who, with half a dozen more men of equal skill, delineated the figures in scores of works of this class. By Canaletto, or Canalettino, is a capital picture of 'Morning on the Adriatic,' including the Bucentaur all draped and beflagged and placed in front, the ducal palace in bright light, and many gondolas shooting past us in the scene. A similar picture gives the Rialto in the near foreground and represented from a near standpoint, with dark shadows and strong illumination. A very acceptable work is Slingelandt's 'Woman peeling Carrots,' with a large and cleverly painted copper pot at her side; the whole is brightly, firmly, and neatly executed. By Ruysdael we found a very dark picture of a cascade rushing where two lofty pines are grouped in the middle of a characteristically studied composition of rocks, gloomy clouds, trees, and pools. A cottage is on our right; ponderous clouds appear beyond a cliff-like hill. Ten Kate's characteristic 'Dividing the Spoil' represents an interior, with figures breaking open a coffer and removing valuables and family relics from it despite the prayers of the despoiled owners. This work is made attractive by its clever and animated design.

The following are modern English productions, and in oil. Wright of Derby's Italian pictures always charm by means of their brightness, tasteful classic sentiment, and a nameless, but obviously cultured grace, which go very far to redeem a slight deficiency of spirit and force. His simple, if not severe manner of painting is most happily shown in the 'Tivoli' which belongs to Mr. Thompson, and depicts, in fine and brilliant sunlight, a mass of rocks, adapted with classic feeling which is not unworthy of Wilson, the cascade in full view in front, and a good sky and atmosphere. By Morland is a very noteworthy 'Scene in Windsor Forest,' comprising a huntsman in a red coat galloping a white horse in a furious storm of rain and wind. The "mossy," or rather lichen-like, impasto and peculiar touch of Morland are very happily illustrated by this unusually careful and solid work. By S. Williamson, a capable Liverpool painter, is a good and effective picture of Liverpool from Bootle Sands. A little vignette by Creswick represents, with characteristic neatness and a certain specious grace and spirit, his ideas of the plain of Marathon. It was engraved to illustrate Lord Byron's 'Childe Harold,' and, besides being very pretty, has the charm of expansiveness in the sun-flooded blue atmosphere.

The next paper of this series will be devoted to an account of antique sculptures, statues, fragments, and reliefs preserved at Ince Blundell Hall, near Great Crosby, Liverpool, which the owner, Mr. Thomas Weld-Blundell, with extreme courtesy, allowed us to examine at leisure. These relics comprise more than four hundred fragments and inscriptions, vases, and miscellaneous objects, a large proportion of which are beyond our present scope of studies. We shall, therefore, select for comment the more beautiful, important, and interesting instances of art. At Ince Blundell Hall are some fine pictures, including a gem-like little John Van Eyck, four large pictures by Wilson, and several other good examples which we hope soon to see exhibited by the Royal Academy. Meanwhile our notes may interest the reader.

NOTES FROM ROME.

One of the most noteworthy additions to the Capitoline epigraphic collections is a marble tombstone, discovered some months ago in the territory of Tusculum, between Frascati and Monte Porzio, at a place called Fontana Candida. It contains the following inscription:—

D M
CRESCENTI
SILI · ITALICI ·
COLLEGIVM
SALVTAREM (*sic*).

The interest of this marble is concentrated in the name of Silius Italicus, the famous poet of the Punic wars, born about A.D. 25, consul A.D. 68 (the last year of Nero), who starved himself to death at seventy-five years of age. His full nomenclature was Tiberius Catius Silius Italicus, but on this Tusculan tombstone (as in Pliny, 'Epist.,' iii. 7, and in Tacitus, 'Hist.,' iii. 65) the last two names only are mentioned, which were the diacritic names, and the most commonly used. The question is whether the Silius mentioned here as the *patronus* of Crescens is the celebrated one, or one of his sons. As the palæography of the inscription belongs to the beginning of the second century, I am inclined to consider him a near descendant of the poet, who is known to have had two sons (cf. Pliny, *l.c.*, "Minorem e duobus liberis amisit, sed maiorem.....consularem reliquit"). The date of the suffect consulship of Silius the younger is not known, although from indirect evidence it may be attributed to A.D. 89, or thereabouts.

The discovery of the tombstone shows, at the same time, that the poet owned a villa or a farm in the territory of Tusculum, of which property Crescens was the overseer. Silius was fond of handsome villas; and Martial says expressly that grounds formerly belonging to his favourite masters, Virgil and Cicero, had been purchased by him: "Silius.....jugera facundi qui Ciceronis habet." The site of Cicero's Tusculanum has been the subject of long and still unsettled disputes, there being an equal amount of evidence in favour of the upper portion of the Villa Ruffinella and of Grottaferrata. The tombstone of Crescens affords, unluckily, no additional evidence, because it belongs to a public cemetery, and has no connexion whatever with the property of which the deceased was the intendant and the overseer.

The Roman Forum, in the present stage of the works, resembles more a battle-field than that peaceful retreat where we used to admire the glory of the past, and mourn over our own wickedness and nullity. Houses and substruction walls knocked down, mines exploded, Vignola's gardens blown up, long lines of carts, hundreds of workmen moving about, give rather a lively idea of the activity which prevails in Roman archæological quarters. As I announced in my last letter, the scheme of the Minister of Public Instruction, Commendatore Guido Baccelli, is as grand and admirable in conception as it is expensive and difficult in execution. He contemplates enclosing in one archæological group the valley of the Coliseum, the valley of the Forum, the palace of the Cæsars, and portions of the Velabrum and the Circus Maximus. To carry on the scheme it is necessary first to open new lines of communication between the populous quarters of the Subura and the Transtevere, and to find new outlets for the tide of daily traffic; it is necessary to purchase and demolish private property of great value; and to excavate and remove three millions and a half cubic mètres of earth and rubbish. If the vicissitudes of a constitutional kingdom will allow Commendatore Baccelli to remain in power for the next three years, what now appears to be the dream of an excited mind will become a matter of fact. It will be the greatest conquest ever achieved in archæology since the fall of the Empire.

Accidental discoveries of works of art in the past few weeks have been as frequent as they are likely to be in the busiest winter months. In the cellar of a house—72, Via Vittoria—a statue has been found representing Abundance, with the cornucopia in the left hand. The head is still missing. Another statue was discovered in Count Stroganoff's garden, between the Via Sistina and the Via Gregoriana; a bust of M. Aurelius under the well-known house in the Vicolo delle Palme in which the Vatican Apoxyomenos was found thirty-three years ago; a statue of an old shepherd in the Piazza Vittorio Emmanuele; a sarcophagus, with the figures of

XUM

Tragedy and Comedy, outside Porta Tortese; and so on.

The under librarian of the university, Costantino Maes, has been inundating the town with pamphlets, books, articles, petitions, protests, on the subject of a certain obelisk, which he declares to be buried across the Via Giustiniani, with the top under the Patrizi Palace and the base under the Giustiniani Palace. His assertions rest on the authority of one single individual, Pietro Rosini, who wrote in 1693 a guide-book called 'Il Mercurio errante delle Antichitá di Roma.' The passage relating to the obelisk runs as follows: "Of the Needle near S. Luigi de' Francesi, under ground. This is one of the largest needles, covered with hieroglyphics, and buried across the street, between the Giustiniani and the Patrizi palaces. I saw it on one occasion, when the conduits which supply the fountain of the Piazza Navona, and which run under this street, were restored." There is reason to believe that Rosini was deceived by the discovery of a square pillar of the Thermæ Alexandrinæ, which he might have mistaken for an obelisk. At any rate, the controversy will have a prompt solution, the municipality having decided to build a drain at the depth of nineteen feet under the Via Giustiniani.

On the west side of the Piazza Vittorio Emmanuele one of the most interesting relics of prehistoric Rome has been found, the grave of a primitive settler on the seven hills. It is a kind of pit, six feet long, three wide, excavated in the soft, superficial bed of tufa known as *cappellaccio*, with the sides and cover made of rough irregular stones. No bones or ashes were found, but the *suppellex* shows that the deceased belonged to the transition period between the age of stone and the age of bronze. There are flint arrow-heads, bronze fibulæ ornamented with amber beads, and pottery made by hand and baked in the sun. The surrounding district between the Via Merulana and the railway station is covered with these archaic graves, buried far below the ancient level of the fifth region, Exquiliæ. As they are found equally outside and inside the Servian embankment, it is evident that they must have preceded the building of the ramparts—in other words, that they are at least twenty-five centuries old. Putting together what has been discovered during the last twelve years in the deepest strata of early Rome, and comparing these discoveries with accounts given here and there by ancient writers, it is evident that the foundation of the town took place in the early stage of the bronze period of rude Latium. The use of iron was formally excluded from religious rites and ceremonies. Appuleius remarks: "In hodiernum diis immortalibus simpulo et catino fictili sacrificant," especially to such antique deities as Vesta, Palatua, *dea Arva*. The cup of Numa, made of black clay baked in the sun, was preserved and almost worshipped in imperial times. The 'Acta Fratrum Arvalium' mention very often expiatory ceremonies celebrated by the venerable brotherhood because, for some reason or other, iron tools had been used within the precincts of their temple. The same Arvales worshipped prehistoric pottery—"ollas precati sunt." When the King of Prussia excavated their grave, some years ago, at La Magliana, eighteen ollas were found, exactly identical with those found in the necropolis of Alba Longa, buried by the volcanic eruptions of the Alban craters.

Before closing this subject I must refer to a recent publication by Prof. Ignazio Guidi, inscribed 'The Foundation of Rome,' in which, by etymological evidence, he shows what a humble and matter-of-fact origin must be attributed to the Eternal City. Rome was founded by a handful of shepherds, frightened away from the hills by the fury of volcanic eruptions, whose gods were Faunus Lupercus, the scarer of wolves, and Palatua, the goddess of shepherds, whose feast, the Palilia, fell exactly on the birthday of Rome, April 21st. They named their new lands Latium, "the plain"; they named their village Roma, "the city of the river" (Rumon); one of their gates Romanula, "the river gate." The name of their leader Romulus means "the man from the city of the river." Such were the humble origins of the Queen of the World. It is hard to give up the beautiful legends which Dionysius and Livy have made popular and which were so dear to us. At the same time, if we must cease to admire the alleged political foresight of the founder of Rome, who knew nothing beyond sheep-farming, we can duly admire the vigour, the wisdom, the strength of that handful of men who from shepherds of cattle became, as Homer says, ποϊμένες Λαῶν, shepherds of nations, and whose huts on the Palatine became the *regia* of the world.

RODOLFO LANCIANI.

THE ART TREASURES OF NUREMBERG.

Nuremberg, Oct. 18, 1882.

ALLOW me, while here on the spot, to direct attention to an act of injustice to Nuremberg. The rare old German pictures known to all travellers in the small Moritz Capelle have recently been removed with benefit to the capacious Germanische Museum on the opposite side of the town. But to my astonishment I find that advantage has been taken of what ought to have been a simple transit to secure certain panels for Munich. This awkward business has naturally been hushed up, and with some difficulty I discover that thus have been appropriated five representative works, viz., 'The Birth of the Virgin,' an important example of the Cologne school; two pictures, severally of St. Margaret and St. Ursula, by Zeitblom; also two panels, each with a couple of saints, by Culmbach. These rare treasures, strictly the heritage of Nuremberg, were quietly put into packing cases and sent off by rail to the Pinakothek of the capital city. The Government, it is pleaded, has herein but exercised a vested right; yet what should we say in England of an edict transferring to the London National Gallery the masterpieces of Gainsborough and Etty possessed by Edinburgh? Surely Munich might rest content with the Boisserée collection; she is little enriched by the spoliation which beggars the poor provincial town.

J. BEAVINGTON ATKINSON.

Fine-Art Gossip.

FROM a letter of M. Maspero's we learn that not a scarabæus is missing at the Boulaq Museum. The jewellery had been taken out of its place of concealment two or three days before his arrival and restored to its place. The old rooms are almost in order, only encumbered by the royal mummies. In about a fortnight one of the historical halls will be completed, and that for the royal mummies is well advanced. The Græco-Egyptian Room is nearly complete, and the place of each monument in the garden already laid out. The catalogue is being rapidly finished, and is expected to be complete by January, and printed in February.

THE fine-art exhibition season has this autumn set in early and with unusual severity. On Saturday (to-day) there will be not fewer than three private views. The Dudley Gallery comprises cabinet pictures in oil as usual, and, we believe for the last time, will open its doors to the public on Monday next. So will the French Exhibition, containing British and foreign paintings, Mr. McLean's gathering of water-colour drawings, and Mr. Tooth's Gallery in the Haymarket. The most important work in these three exhibitions is M. Bastien Lepage's 'Le Père Jacques,' which we noticed at the last *Salon*. Mr. M. Colnaghi has opened an exhibition of continental pictures at the Guardi Gallery.

MR. HODGSON will lecture at the Royal Academy at eight o'clock on the evenings of the 8th, 11th, 15th, 18th, 22nd, and 25th of January next. His subjects will be 'Greek Art,' 'The Dark Ages,' 'Mediæval Times,' 'The Renaissance,' 'The Seventeenth and Eighteenth Centuries,' and 'The Nineteenth Century.' In each case the lecturer will endeavour to illustrate the influence of contemporary opinion and history on the successive developments of art.

THE exhibition of pictures illustrating Venice, of which we lately made mention as promoted by the Fine-Art Society, will be opened at the gallery in New Bond Street early next month.

THE restoration of the church of St. Peter, Mancroft, Norwich, which was undertaken originally by the late Mr. Street, and to which we have more than once referred, is, we understand, now almost complete. The *flèche* of the tower is the principal addition remaining to be made. More space is to be given by the demolition of an old public-house, which long ago encroached on the churchyard.

WITH much regret we record the death of Mr. Lewis Pocock, the well-known honorary secretary to the Art Union of London, a great authority on certain developments of art, and long renowned for his collections of Johnsoniana, including prints and drawings. Mr. Pocock died on the 17th inst., aged seventy-five.

AMONG other articles that are to be published in the *Art Journal* early in the coming year will be a series of anecdotical and illustrative essays on artists and pictures as represented in the early catalogues of the Royal Academy. Materials gathered for the Catalogue of Satirical Prints in the British Museum will be used for these essays. Mr. F. G. Stephens will write the letterpress, and it will be enriched by engravings of novel character and interest.

IT ought not to escape notice by those interested in the architecture of the metropolis that the scheme for widening London Bridge, the total estimated cost being 1,205,000*l.*, has been revived in plans submitted to the Metropolitan Board of Works by Sir J. Bazalgette. The estimate for new streets in London proposed during this year alone is nearly three quarters of a million (732,000*l.*). This is apart from Thames bridges or tunnels east of London Bridge.

THE most hideous church ever erected, that of St. Paul at Haggerston, has lately been improved by the addition of a spire.

THE latest development of "restoration" concerns the north and south aisles of Chiswick Church, which are to be re-erected in a style later than that of the (restored) tower "in order to show that they are additions to the original structure." Restoration has thus taken a departure very different from, but quite as ingenious as, the fashion which aimed at "harmonizing" the elements of a design by pulling down all the features which did not assort with those supposed to be original, and rebuilding the destroyed portions in the one favoured style.

THE death is announced of the historical and animal painter of Berlin, Adolf Eybel. One of his most noted pictures represented Richard Cœur de Lion listening to Blondel.

MUSIC

THE WEEK.

BRISTOL MUSICAL FESTIVAL.
CRYSTAL PALACE.—Raff's Symphony in D minor.
ST. JAMES'S HALL.—The Popular Concerts.

READERS of the *Athenæum* will probably have been surprised that our last issue contained no notice of the festival held last week at Bristol. The explanation of our silence is that at an early period of the proceedings it became evident that there was so much on which it would be our duty to

comment unfavourably that it seemed only just to the committee of management to wait until the close of the festival before making any criticisms, not only that we might judge of it as a whole, but also that we might not write under the immediate influence of feelings which we believe all our readers before they have finished this article will acknowledge to be perfectly justifiable under the circumstances.

And first let it be said, to avoid misapprehension, that though the festival just closed has been marked by more serious and lamentable shortcomings than any other musical gathering within our recollection, we heartily give the committee of management credit for the best possible intentions. We honestly believe that they acted according to their lights; but unfortunately the light that was in them was darkness. In such a case, where

> Evil is wrought by want of thought
> More than by want of heart,

it is the obvious duty of those on whom rests the responsibility of leading public opinion to point out the errors committed, with a view to their future avoidance. In what we shall have to say we are so far from being actuated by hostility, that our only wish is that the Bristol Festival should rank, as it ought to do and easily might do, among the first of our provincial meetings. This, however, as we shall endeavour to show, will only be possible by a radical change in the policy of the direction.

There are two plain duties imposed upon the managers of any musical festival. In the first place it is their duty to see to the selection of the music to be brought forward, and, while neither ignoring nor neglecting acknowledged masterpieces, to give due recognition to the claims of native and contemporary art; and secondly, it is no less their duty to see that the works brought forward shall be properly prepared and, as far as possible, adequately rendered. These responsibilities cannot be shifted on to other shoulders; and we regret to say that, either through want of experience or want of consideration, the Bristol committee have failed grievously in both. In the first place, it is said that, instead of selecting their programmes for themselves, they virtually left the whole selection to their conductor, Mr. Halle. Of course the conductor's opinion must necessarily have great weight in the selection of the music for any festival. It is only right that this should be so; for he is the person responsible for the musical arrangements, and it would be absurd to expect him to conduct music which he disliked, or which he considered unworthy of a place in the scheme of concerts. To refer to a well-known instance,—for reasons into which it is needless to enter, Sir Michael Costa has always declined to conduct the first performances of works of English composers; but it is no more than just to him to say that he has never, so far as we know, objected to their introduction into the programmes of the Birmingham festivals; and at the last (in August), three of our foremost English musicians (Messrs. Cowen, Stanford, and Parry) appeared on the orchestra to conduct their own works, while Mr. Gaul's cantata was conducted by Mr. Stockley. Unfortunately Mr. Halle's past record shows little or no sympathy with English music. We have before us as we write the published lists of all the compositions performed under Mr. Manns at the Crystal Palace during twenty-four years, under Mr. Riseley at the Colston Hall, Bristol, during six years, and under Mr. Halle at Manchester during twenty years. We have taken pains to analyze these lists carefully, with the following result. We find that Mr. Manns has brought forward 808 works, of which 137 are English, being an average of 16·9 per cent.; Mr. Riseley has given 48 English works out of 297, or 16·1 per cent.; while Mr. Halle, out of 655 works, has produced only 29 English, or 4·4 per cent. The past history of the Bristol Festival points in the same direction. Since 1873 no English work of importance has been performed there; and when at last English art had a chance of being worthily represented by Mr. Mackenzie's 'Jason,' the treatment that work received was simply disgraceful. Under these circumstances it is impossible to acquit the committee of blame for entrusting the selection of their programme to their conductor.

The want of adequate rehearsal of the music of the festival was another glaring fault, and it led, as might naturally be expected, to disaster. With the chorus no fault is to be found on this score; they had been carefully trained by their choir-master, Mr. D. W. Rootham, who deserves the highest praise for their efficiency. Their share of the work did them the greatest credit, and it is only just both to them and to Mr. Rootham to say that they maintained their high reputation. But of the orchestra a different tale must be told. They were the unfortunate and innocent victims of arrangements with which they had nothing to do, but which rendered it impossible for them to do justice to themselves. They did their best under the circumstances, and deserve, as they will doubtless receive, warm sympathy. At all other festivals at least two days are given to the work of preliminary rehearsal; at Birmingham this year there were five days thus spent. Will it be believed that at Bristol the rehearsal only began at one o'clock on the day before the festival? The larger number of the band left Manchester at five in the morning, and after the fatigue of a long railway journey rehearsed from one till nearly eleven at night, with only a short interval for refreshment. At this rehearsal the whole of Rossini's 'Moses in Egypt,' Beethoven's Mass in D, and Gounod's 'Redemption,' as well as a part of 'Jason,' were gone through. It is even asserted that the members of the orchestra had until that time never seen a note of Rossini's, Gounod's, or Mackenzie's works. Mr. Halle is a conductor of at least twenty-five years' experience, and it would be an insult to him to suppose that he does not know perfectly well that it is impossible to rehearse four such works properly in half a day. It is true that there were rehearsals before the morning concert on each day; but this, of course, fatigued the members of the band before commencing the actual day's work, and thus again prevented them from doing themselves justice. In this matter the committee must share the blame with the conductor. If he was content that the work should be done in a perfunctory manner, they should have insisted on that adequate preparation of the music without which the reputation of a great festival cannot be maintained.

The festival commenced on Tuesday week with a very good performance of 'Elijah.' In music so familiar the want of rehearsal was, of course, not noticeable. The Bristol chorus sang excellently, and the chief solo parts were perfectly safe in the hands of such artists as Miss Anna Williams, Madame Patey, Mr. E. Lloyd, and Mr. Santley. On the same evening Beethoven's Mass in D was given. This stupendous work, though no longer regarded as impracticable, can never be heard with feelings of unmixed pleasure, because Beethoven has so flagrantly disregarded the capabilities of the human voice. He has so persistently written for the upper register that it is impossible to sing the music without a strain and a constant effort which produce an absolutely painful effect on the hearer. The Bristol choir gave the best performance of the choruses which we have ever heard, and it may be said that they covered themselves with glory; but the band, from want of sufficient rehearsal, played in a manner which it would be a suppression of truth to describe by any milder word than discreditable. Not only was there a total want of that finish which can only be the result of complete familiarity with the music, but wrong entries and omission of important passages were of not infrequent occurrence.

Gounod's 'Redemption,' on the Wednesday morning, naturally attracted a crowded audience, every seat in the large hall being filled. The work unquestionably improves on acquaintance; its deep earnestness becomes more than ever apparent, while certain points in the method of treatment, which from their novelty at first produced an impression not altogether favourable, reconcile themselves to the ear as they become more familiar. We refer more especially to the narrative portions of the oratorio, in which there is, it may be remembered, an unusual prevalence of chromatic harmony. It is, however, as a whole, and not from isolated portions, that the 'Redemption' must be judged; and the surest test of a great work is that which when applied in this case is found not to fail—that it impresses more deeply on a second than on a first hearing. The performance of the oratorio, though good on the whole, was far inferior to that at Birmingham. The soloists were to a great extent the same as on the first production of the work; the soprano music being shared by Madame Albani and Miss Anna Williams, while Madame Patey sang the alto solos, Messrs. E. Lloyd and Robert Hilton were the narrators, and Mr. Santley sang the music allotted to the part of Christ, the smaller parts being filled by Messrs. Harper Kearton and Worlock. The whole of the solo music was excellently rendered, and high praise is also due to the chorus, who were thoroughly familiar with the work. The band played as well as could reasonably be expected, considering that they had only seen the music two days before; but with such material as Mr. Halle has at his disposal a very different result would have been obtained had the music been properly rehearsed. Mr. Halle also impaired the effect of some of the movements —notably the march to Calvary and the

grand final chorus of the second part—by taking them considerably faster than they were taken by the composer himself.

Passing over the concert of the Wednesday evening as requiring no detailed notice, and merely recording a generally good performance of Rossini's 'Moses in Egypt'—in which Mesdames Albani and Trebelli, Miss Anna Williams, and Messrs. Lloyd, Kearton, Santley, Hilton, Worlock, and Morgan took part—on the Thursday morning, we come to the only actual novelty of the festival, Mr. Mackenzie's 'Jason,' which was produced, under the composer's direction, on the Thursday evening. Before noticing the performance we must speak, more briefly than its merits warrant, of the work itself. The libretto, which is from the pen of Mr. William Grist, one of our best writers for music, is exceptionally good. It is divided into six scenes, which deal with the building of the Argo, the departure of Jason and his band for Colchis, the vision of Medea, the arrival and welcome of Jason, the fight for the golden fleece, and the final triumph. Mr. Grist's verses are vigorous, diversified in rhythm, in many parts truly poetical in feeling, and admirably fitted for musical setting. Mr. Mackenzie is no novice in his art. He has already distinguished himself by the production of a pianoforte quartet, two Scotch Rhapsodies for orchestra, various songs and pianoforte pieces, and the cantata 'The Bride,' produced last year at the Worcester Festival. He has also, as we recently announced, completed an opera for Mr. Carl Rosa, which is to be produced in London next Easter. We regret that our space will not allow us to analyze 'Jason' in detail. Mr. Mackenzie's style. though not free from signs of the influence of Schumann and Wagner, shows considerable individuality; of direct reminiscences there are very few. Among the best portions of his new work are the vigorous and spirited opening chorus, broken by a charming tenor solo; the chorus "See, the All-father approves from above"; the following intermezzo for orchestra, entitled "On the Waters," a lovely instrumental picture of which any living composer might be proud; Medea's *scena;* the duet between herself and Jason; the chorus of armed men; and the whole *finale*. On the other hand, some parts of the work are inferior in merit, and Mr. Mackenzie has in a few instances shown an unaccountable want of judgment in his setting of the words. He sometimes breaks the flow of the music so as to destroy the sense of the text entirely. For instance, in the scene of the conflict the chorus sings,—

Fills the sky with—lurid glare;

and again,

Grapples with the—rage-mad pair.

Yet, after making all deductions for shortcomings, we can honestly pronounce 'Jason' to be a work of which English musicians may be proud, and which it would have been an honour to any festival to bring forward.

One would have imagined that the Bristol committee, having at length summoned up the courage to produce an English work, would at least have made it a special feature of their festival. On the contrary, they treated it in such a way that it is very difficult to write dispassionately on the subject. In the first place, they did not even take the trouble to announce it by its right name. It appeared on the bills of the festival as 'Jason and Medeia'; and although the composer wrote asking the committee to make the correction, no notice was taken of his request, and the incorrect title remained on the bills until the day of the performance. Furthermore, though the composer came over from Italy specially to conduct the work, this fact was not announced either on the bills or in the advertisements in the daily papers, though it is true that at the last moment a slip to that effect was inserted in the book of words of the concert. It would almost seem as if the committee were ashamed that an Englishman was to be entrusted with the baton at their festival! But what will be said when we add that the by no means easy music was never fairly rehearsed at all? It was nearly ten o'clock on the Monday night when Mr. Halle resigned his post at the conductor's desk to Mr. Mackenzie; and by that time both band and chorus were so fatigued that, after taking the first few numbers, further progress was found to be physically impossible. At subsequent morning rehearsals the work was scrambled through somehow; but from the first it never had a fair chance. Of course the direction of the rehearsal was left to Mr. Halle; of his share in the blame we prefer to allow our readers to form their own opinion; but the committee must be held responsible for the acts of their agent; and we say deliberately that the course pursued with regard to 'Jason' was not an honour to English art, but a direct insult—doubtless unintentional, but none the less an insult. The result was what might have been foreseen. In spite of the efforts of the soloists, Miss Anna Williams, and Messrs. Lloyd and Santley, who all sang admirably, and in spite of the utmost good will on the part of the band and chorus, who were naturally indignant at the treatment Mr. Mackenzie had received, the performance was by far the worst ever heard at an important festival, resulting in one instance in a complete breakdown. Attempts have been made to throw the blame for this on to the shoulders of the conductor. Naturally, as he and his band were strange to one another, it was the more difficult to make a new work go well; but such a band as that at Bristol would have pulled the music through under a far worse conductor than Mr. Mackenzie had it been properly rehearsed. The more unfamiliar the conductor and his orchestra, the more need there was of careful preparation, and the more discredit to those who allowed such a performance as that actually given to be possible. It is gratifying to be able to add that, in spite of the miserably inadequate rendering, the reception of the cantata was enthusiastic, each number being warmly applauded, and the conductor being tumultuously recalled at the end of the work. A performance of the 'Messiah' on the Friday morning concluded the festival.

A painful duty is now discharged. It is with feelings of the deepest humiliation that we look back at the festival now past; such a spectacle has never been seen before in an English concert-hall on the occasion of an important musical gathering; and we are filled with shame for our country that it should have been possible. We have written severely, for it is no trifling matter that English art should be degraded as it has been at Bristol; but we speak without the slightest feeling of ill-will towards those who have brought about this signal catastrophe. They meant well, no doubt; but good intentions are not sufficient; and a critic would be failing in a clear duty did he not condemn the policy they have pursued. The present is unquestionably a crisis in the history of the Bristol Festival. We have pointed out the errors of the committee: it will be easy for them, if they are so disposed, to find the remedy. Will they follow the example of Birmingham on a somewhat similar occasion three years ago, and set their house in order, or will they persevere in their present course? Let them give one more festival such as that just ended, and the very name of Bristol will become a by-word among musicians. On the other hand, if they will be wise in time, a glorious future is before them. They possess resources of their own second to no provincial city; they have it in their power to make their festival a worthy rival of those of Birmingham and Leeds. They have only to think more of efficiency and less of economy, and to honour and advance, instead of insulting, English art, to raise their musical reputation to a height of which they may be justly proud. We trust that, for their own sakes and for the sake of our national music, they will make the needful reforms, and we conclude our remarks with the earnest wish that at the next festival, in 1885, they may not only recover their lost reputation, but far surpass everything they have yet achieved.

The late composer Joachim Raff may not deserve a place among the greatest musicians, but he possessed ability of no ordinary kind, and no one would venture to question the appropriateness of an *in memoriam* performance of one of his works at the Crystal Palace. A better choice than the Symphony in D minor, No. 6, could not have been made for the purpose. The work was a novelty, and further it bears a motto applicable enough to any deceased musician who has laboured earnestly according to his lights, and left the world richer by some beautiful creations than he found it. Raff was not generally content to allow his music to tell its own tale. Of the ten symphonies he wrote, only two (No. 2, in C, and No. 4, in G minor) bear no superscription, but these are, on the whole, the finest of the set. The present work is inscribed with the words "Gelebt, Gestrebt, Gelitten, Gestritten, Gestorben, Umworben," and it may therefore be looked upon in the light of an elegy. The objections taken by some to the illustration of such subjects as form the basis of the final movements in No. 3, 'Im Walde,' and No. 5, 'Lenore,' cannot apply in the present instance, and the D minor Symphony may be regarded as perfectly sound and legitimate music. Its performance last Saturday was in some measure an agreeable surprise, for it proved to be a far more interesting work than the later symphonies which have already been heard at the Crystal Palace. The first movement, *allegro non troppo*, is masterly throughout. It is rich in the quantity and quality of its subject-matter. In form

it is not altogether orthodox, the first part, after the manner of Beethoven's Ninth Symphony, closing in B flat instead of F, the relative major. But the structure of the movement reveals the able use of complex contrapuntal devices without any sense of labour or dryness. There is even a greater display of science in the next section, a *scherzo* in B flat with trio in E flat, the cleverest device being a triple combination of the principal theme in its original and augmented forms with that of the trio. In beauty, however, this part of the work cannot compare with the first movement. The slow movement, a *larghetto, quasi marcia funebre*, is in some respects the finest portion of the symphony. There are one or two reminiscences of Beethoven's 'Eroica,' but on the whole it is both original and impressive, and the orchestration is splendid. Its extreme length is not felt to be a disadvantage, as the interest is progressive to the last. We may note especially a very effective variation of the principal theme, and the pathetic close of the movement. The *finale*, though clever, is the least interesting section of the symphony. The subjects are neither striking nor beautiful, and the general effect, some passages excepted, is at once laboured and trivial. On the whole, however, the Symphony in D minor deserves to take high rank in the series, being surpassed in merit only by Nos. 2 and 4; though, of course, lovers of the picturesque and the sensational in music will place it also below the 'Im Walde' and the 'Lenore.' The performance was as near perfection as possible. The Crystal Palace orchestra has seldom been heard to greater advantage, and ample proof was thus given that its quality has in nowise deteriorated. The rest of the concert must be passed over without criticism. Madame Ida Bloch played Mendelssohn's Concerto in G minor, and Miss Ella Lemmens was the vocalist, both ladies being *débutantes* at the Crystal Palace.

The season of the Popular Concerts has opened as quietly as usual, and so far there has been little on which to comment. The first Saturday programme included Schumann's Quartet in A minor, Beethoven's Sonata in E flat, Op. 27, Locatelli's Violoncello Sonata in D, and Mozart's Sonata in F, for pianoforte and violin. Mdlle. Janotha was the pianist, and Mr. Santley the vocalist. On Monday Signor Piatti introduced a Violoncello Sonata in F by Porpora, to which he had added a pianoforte accompaniment from the figured bass. There was evidently little vitality in Porpora's compositions, even in the periwig epoch of music; but as a temporary rival of Handel, a preceptor of Haydn, and one of the greatest singing-masters who ever lived, even if we reject the preposterous story of Caffarelli and his one sheet of *solfeggi*, he must always remain an interesting figure in musical history. The sonata played on Monday is a favourable specimen of the old Italian school, without many of those trills which displeased the Emperor of Austria. Mdlle. Janotha was not heard to the fullest advantage in Beethoven's Sonata in E minor. The lovely *allegretto* was taken so fast as to destroy its sentiment and charm, besides being inconsistent with the composer's direction, "Nicht zu geschwind und sehr singbar vorzutragen." For an encore she played Thalberg's 'Home, sweet Home,' a singular choice, but one which can be explained by the light of recent events. The concerted works at this concert were Beethoven's Quartet in E flat, Op. 74, and Schumann's Sonata in A minor, Op. 105, for pianoforte and violin, Madame Norman-Néruda being the leader. For to-day the same executants are announced to take part in Schubert's Quartet in A minor, Op. 29; Rubinstein's Sonata in D, Op. 18, for piano and violoncello; Corelli's Violin Sonata in D; and Beethoven's Variations in C minor; Miss Spencer Jones will be the vocalist.

Musical Gossip.

The programme of the two concerts which Herr Richter announces at St. James's Hall next month are now issued. At the first, on November 9th, the introduction to the third act of the 'Meistersinger'; Mr. Villiers Stanford's Serenade, composed for Birmingham; Liszt's Hungarian Rhapsody in F; the Introduction to 'Parsifal,' and the 'Eroica' Symphony will be given; while the second will include the Overture to 'Euryanthe'; Brahms's new concerto, to be played by Mr. Dannreuther; the Introduction and closing scene of 'Tristan und Isolde,' and Beethoven's C minor Symphony.

Mr. Henry Holmes will give the first of his Musical Evenings for the present season at the Royal Academy Concert Room next Wednesday, when he will be assisted by Messrs. W. F. Parker, A. Gibson, and E. Howell, and Madame Haas. The programme will include Beethoven's Quartet in C, Op. 59, No. 3; Bach's Piano Concerto in D minor, with quartet accompaniment; and Haydn's Quartet in F, Op. 77, No. 2.

The London Church Choir Association will hold its tenth annual festival in St. Paul's Cathedral on Thursday evening next, when the anthem "Sing to the Lord," by Henry Smart, a service by Berthold Tours, and a new prize Te Deum, by A. H. D. Prendergast, will be sung.

Mr. Brinley Richards delivered an interesting lecture at Swansea on the 19th inst. on Welsh national music, in which he exposed the errors into which Welsh historians have fallen with regard to the antiquity of certain of their melodies.

On Wednesday evening last the Walworth Choral Society opened its season by a successful performance of Dr. Sloman's cantata 'Supplication and Praise.' A selection from 'Israel in Egypt' and Mendelssohn's "Hear my prayer" formed the second part of the concert.

The publication by Messrs. Remington & Co. of Mr. W. Alex. Barrett's 'Balfe: his Life and Work,' follows opportunely upon the recent unveiling of the composer's monument in Westminster Abbey. Mr. Barrett's volume is far less bulky than Mr. Charles Lamb Kenney's biography of Balfe, published some few years since; but it contains all the information needful to enable readers to form a fair idea of the work which the composer did in connexion with his art. The author writes in an interesting and eminently readable style, and his book abounds in anecdote. While we cannot help demurring to the epithet "genius" as applied to the composer of the 'Bohemian Girl,'—at least, if that term is to be taken in its ordinary acceptation—we think Mr. Barrett's estimate of of Balfe, on the whole, fair and reasonable, due allowance being made for the natural prepossession of an author in favour of his chosen subject.

Otto Jahn's invaluable work on Mozart has just been published in English by Messrs. Novello & Co. The translation has been made by Miss Pauline D. Townsend, and Mr. George Grove has written a preface. We hope shortly to notice the work in these columns; meanwhile we content ourselves with an expression of satisfaction at a most important addition to English musical literature.

Curiously enough, the Introduction to Wagner's 'Parsifal' appeared simultaneously in the programmes of three concerts in Paris last Sunday—those of MM. Lamoureux, Colonne, and Pasdeloup.

At the Bohemian Theatre in Prague a new opera, 'Dimitri,' by Anton Dvorák, has been produced with success. The libretto, written by a lady, Madame Czerwinka, is founded on Schiller's unfinished tragedy 'Demetrius.'

DRAMA

'MUCH ADO ABOUT NOTHING.'

Neath, Oct. 18, 1882.

In your notice of the production of 'Much Ado about Nothing' at the Lyceum you say that no specially noteworthy revival of the play can be recalled. May I remind you of the revival of the play by Mr. Macready at Drury Lane, in the year 1841 or 1842, I believe, when it was produced with the care and accuracy for which his Shakspearean revivals were celebrated? The cast was a very strong one, and as far as I remember it was as follows:—Don Pedro, Mr. Hudson; Claudio, Mr. Anderson; Benedick, Mr. Macready; Leonato, Mr. Phelps; Dogberry, Mr. Compton; Verges, Mr. Keeley; Beatrice, Mrs. Nisbett; Hero, Miss Fortescue; and I think Mrs. Keeley played Margaret. Mr. Macready also produced 'The Two Gentlemen of Verona' (in which he played Valentine; Mr. Anderson, Proteus; and Miss Fortescue, I think, made her first appearance as Julia) and 'The Winter's Tale' with a remarkably strong cast.

J. H. Rowland.

*** The performance to which our correspondent alludes is doubtless that given at Drury Lane on the 24th of February, 1843. No accessible record of it is, however, preserved, beyond the fact that Macready in his 'Diary' says: "Acted Benedict very well." In addition to the actors named, Lynne, W. Bennett, G. Bennett, Selby, Mr. Ryder, and some others of less reputation were included. 'Comus' was given the same evening, with Miss P. Horton as the Attendant Spirit, Miss Helen Faucit as the lady, and Miss Romer as Sabrina.

Dramatic Gossip.

Rather more than average interest attends the experiments recently made at the Imperial Theatre. Miss Calhoun's performance of Rosalind in 'As You Like It' is full of promise. Regarded as interpretation it has slight claims to attention. No trace of any clear or definite conception of Rosalind is apparent. Miss Calhoun has learnt the words of the character and is familiar with the conventional business. She speaks the text with a pure and agreeable accent, but assigns it no special significance, and mars its beauty by misplaced or needless emphasis. The measure of her success is accordingly that of her natural gifts. As Rosalind she stands well, filling the stage with a gracious presence, and speaking with a soft and musical voice. She displays much tenderness and some very attractive coquetry. For these things the public is thankful. Miss Calhoun is, however, very far from being an ideal or even an acceptable Rosalind. Her comic style is unformed and her performance is unequal. In spite of these defects Miss Calhoun is an actress at least *in posse*. Before appearing again in Rosalind, however, she ought to read carefully the character with some competent teacher, and should unlearn some portions of

what has been told her by self-elected teachers of histrionic art. It is probable that Miss Calhoun will win more easily a position in domestic drama or in melodrama than in comedy. Even in comedy, however, success is attainable at the usual cost of labour. So little promise of high results is there in the coming generation of actresses, it is to be hoped that the experiment Miss Calhoun has made may secure her an engagement on the London stage. Taken as a whole, the company by which 'As You Like It' is supported is the worst that has been seen in London during recent years in a piece of this character. It is appreciably feebler than the company which supported Mrs. Langtry.

'Poor Relations,' a version of 'Jane Eyre,' has been revived at the Standard Theatre, with Miss Stella Brereton and Mr. E. Leathes in the principal characters. After twelve representations it will be withdrawn to make room for a new drama by Mr. James Willing, entitled 'The Ruling Passion.'

Among the latest victims to typhoid fever, which is epidemic in Paris, is Montbars, the well-known low comedian of the Palais Royal. The deceased actor was thirty-five years of age.

'La Maîtresse Légitime,' the comic masterpiece of M. Louis Davyl, has been revived at the Odéon. Madame Tessandier now plays the principal feminine *rôle*, created by Mdlle. Léonide Leblanc. M. Porel resumes his original part of Jean Dulac, and is the only one of the original cast who reappears.

To Correspondents.—C. Q.—S. G. P.—S. K.—M. D.—H. L.—H. W.—An Ardent Geologist—R. S.—J. G.—B. T.—D. O.—H. M. C.—D. S.—J. M. C.—G. W. W.—G. W.—J. C.—J. M. G.—received.
